KENT HAMPDEN.

IN SEVEN CHAPTERS.—CHAPTER I.

The Package.

ONE cold evening in September, nearly seventy years ago, two men were walking up one of the four hilly streets of Wheeling. Now a large manufacturing centre, Wheeling was then only a quiet village in the northwestern part of Virginia. Its four streets straggled along the slope of high, wooded hills. In front of them the Ohio ran, while a wide creek of a peculiar emerald clearness cut them in two, and emptied its green flood into the muddy river.

Two or three steamboats from some point down the river usually lay at the little wharf, which was piled with cotton bales brought from the South, or with freight which had been brought in wagons along the new National Road. The wharf was faced by large warehouses for the storage of this freight, and during the day was alive with joking, leisurely groups of merchants, clerks, and negroes. The little town then put on an air of lazy industry.

But now, in the twilight, wharf and streets were deserted, and through the windows of the dwelling-houses shone the red lights of the huge coal fires within.

The wind blew sharply down the gorge, behind the town. The men buttoned their long frogged surtouts tightly.

"What a pull up that hill!" said one, a man with an unctuous voice that smacked of sixty years of good meals. "I'm glad, on the whole, that Duff isn't going, and that we can get Hampden to take the package to Philadelphia for us. My legs are giving out and —"

"And you smell Mrs. Hampden's supper," said Jarret, laughing. "I am of the same mind with you, judge. Let us go in."

They turned into the cross street. Their change of plan, as they thought, affected only the question of supper. But, in fact, it determined the fate of more lives than one.

The house to which they now hastened was a plain brick building, standing near a church. A row of locust-trees grew before it. At the side and back was a large garden, shaded by lilacs and huge cherry-trees.

Little Carey Hampden was perched in one of these trees. She scrambled down when she saw the men. Mr. Jarret nodded to her.

"Queer child! They are a peculiar family, judge; not like Wheeling people. Hampden himself never seems to be quite one of us."

"Hey? Well, now, Jarret, that never struck me. There is not a more popular, hospitable fellow in town than Ralph, and his wife is one of the finest women I know. Why, I'd trust her eye to choose venison as soon as my own! Oh, I see what you mean! Hampden likes to dress, to give game suppers? You think he's an airy, feather-headed fellow, hey?"

"No; not that precisely. His easy ways are not to my liking—but these make him popular. Why, they talk of electing him to be Mayor instead of Coles! Now, Coles's grandfather took up a tomahawk claim here by the side of Zane and Wetzel; but who is Hampden? Had he ever a grandfather? I went down to Orleans rafting one summer, and when I came back, here was Hampden, established, and everybody's friend!"

"Oh, yes! He began as a bookkeeper, and soon pushed his way up, opening a forwarding-house. He's a capital fellow, is Hampden."

"Of course, he's a capital fellow! Everybody says so. But *who* is he? We old Wheeling people know each other—the Zanes, the McCulloks, the Chaplines, and the rest. But did you ever hear Hampden, with all his jokes and stories, allude to a single day in his life before he came to Wheeling?"

"N—no; though it never occurred to me before. Why do you bring this up now, Jarret? Have you any fears about entrusting the package to him?"

"No, of course not! But I saw to-day in the *United States Gazette* a mysterious advertisement for a certain Ralph Hampden Stoughton. It struck me that he might be a kinsman of Hampden's, and that we might get a clue to his early history."

"Just so! There certainly is something a little mysterious, perhaps, about him! Now I think of it, he is talkative about everything but that. Have you that newspaper about you?"

"It's in my pocket."

"Aha! Read it to him to-night. Mind you, when I am there."

Next to a piece of venison pie, the judge relished a racy bit of gossip.

They had been standing not far from the steps as they talked. They knocked, and Kent Hampden opened the door. He was a boy of fifteen, with much of his father's cordial, winning manner; but the boy's eyes were dark and slow-moving, while Mr. Hampden's blue ones kindled with every changing thought.

"We saw you coming," the boy said, leading them to the supper-room. "Mother is pouring your coffee now."

They met a hearty welcome. When Judge Morris shook hands with his host, and looked up into his handsome, beaming face, the small cloud of suspicion melted from his brain as fog does in broad sunshine.

"Ha! A bear-steak!" he exclaimed, glancing expectantly at the table. "I did not know that any trappers had been in town to-day. You think too much of the good things of this life, Ralph. And waffles! We all know Mrs. Hampden's waffles. We did not intend to make this foray upon you, madam; we started for Captain Duff's. We had heard he was going with you to Philadelphia to-morrow, Ralph, and we thought we would ask him to —"

"To transact a little business for the bank," interrupted the cautious cashier. "But we have learned that he is not going, and so we must ask you to do us this favor."

"Command me in anything, gentlemen," said Mr. Hampden, courteously. "Try a spiced pear, judge. Have you read Mr. Calhoun's speech on the tariff?"

The conversation drifted into politics. Mrs. Hampden and Kent exchanged anxious glances. They guessed the business which had brought the officers of the bank to the house.

There were no express companies or telegraphs in those days. The mails were carried in coaches, or on horseback, and were not used as they are to-day. It was a universal custom to entrust large sums to individual travellers. A journey across the Alleghany Mountains was a serious event, talked of long before it was undertaken. The traveller was usually encumbered with parcels and letters.

"Father will have to take the great trunk, now," said Kent, when he was alone with his mother.

"No. It is probably money that they wish him to carry. It will not be bulky. But —" she stopped significantly.

"I wish you or I could go with him, mother."

"He has twenty commissions already," said Mrs. Hampden.

"I TRUST NO BUSINESS SECRETS TO BOYS."

"Father would lose the nose from his face! Excuse me, mother! I did not mean to be impertinent," Kent added, hurriedly.

"You forget yourself," his mother said, sternly. "If your father is careless about trifles, it is because his mind is occupied with matters which children cannot understand."

Kent sat down to his lessons, while his mother, her sewing in hand, entered the parlor. Mr. Jarret stopped speaking as she came in.

"Go on," said Mr. Hampden. "I have no secrets from my wife, gentlemen. She is the balance-wheel of this household. My dear, Judge Morris wishes me to take charge of a package of money for a bank in Philadelphia. You must stitch it in a belt to be worn under my clothes."

"You have so many commissions already, Ralph," she ventured timidly, "and Captain Duff is going."

His face clouded. "One would think you were afraid to trust me, Sarah. You will give our friends the impression that I am careless. Captain Duff has changed his plan, and is not going. Send the package to me to-morrow, judge."

He walked with an irritated air up and down, stirred the fire and threw up the window-sash. Then, his vexation suddenly gone, he seated himself, smiling affectionately to his wife. Judge Morris hastily brought out the tariff again for discussion.

Mrs. Hampden saw that Mr. Jarret's eyes were fixed upon her husband with a keen scrutiny. He had taken an old newspaper from his pocket, and was slowly unfolding it. Then he waited.

Mr. Hampden had begun to relate an amusing anecdote of General Jackson. He was an excellent story-teller, even for that day, when men studied conversation as the first among personal accomplishments. His wife watched his dramatic action and sensitive, animated face, and glanced with secret pride at Mr. Jarret to see if he were listening.

There certainly was something peculiar about the cashier. He was a spare little man with hair, skin and eyebrows all of one sandy hue, and a pair of round, watery gray eyes, which were now staring admiringly at her husband. But the mouth was the aggressive feature of his face. It never was at rest. Now the teeth were grinding together, now he smiled, now he bit his dry lips, puckered them to whistle, wet them with his tongue or showed his teeth like a wolf. The mouth seemed to have escaped from his control, and to act for itself. Carey, watching him through the glass door, made a picture of him on her slate as an ogre.

He flattened and patted his newspaper, until the story was finished.

"What a wonderful memory you have, Hampden!" he said. "Ahem! I observed a singular item in the *United States Gazette* to-day, on which I thought you might be able to throw some light. Let me see! Where was it?" He ran his finger down the rows of tiny black pictures of houses, horses, and runaway slaves in the advertising columns.

Mr. Hampden tossed back his curly hair and smiled. He liked to be consulted, or asked for advice.

"Oh, here it is! It is an inquiry for a man who left Maryland about the time you came here. I thought from the name, he might be one of your kin."

He peered up, his finger pointed to the advertisement. Hampden was not smiling now. His face was quiet, and void of expression.

"What is the name?" he asked.

"Ralph Hampden Stoughton. Oh, you have heard it before! I thought he must be one of your family. Hampden's an uncommon name, and so is Ralph."

Mr. Hampden raised his hand to his hair, and let it fall as if with uncertainty, but said nothing.

"Eh? A relation? You never have told us anything about your people, you know."

"No," said Hampden; "I have no kinsman of the name of Ralph Hampden Stoughton."

"Oh?" The busy mouth gave a slight incredulous curve, while the rest of Mr. Jarret's body was bowing deferentially. "It was just a notion of mine. Would you like the paper?"

"No, thank you." But Jarret thought he saw an alarmed eagerness in the way in which his eyes followed it.

"Well, I must be off," said Judge Morris, rising. "Good luck, Ralph! Eat some terrapin at the Indian Queen for me. *Bon voyage!*"

As he and Jarret went down the hill, he said, "I suspect that this missing man is related to our friend, and that Ralph is ashamed of him."

Jarret did not reply directly. "I had no idea," he said, after a few moments, "that Hampden was so successful a man. He has just bought that house. He will no doubt be elected Mayor, and I hear he is going to ask Colonel Congdon to appoint Kent cadet at West Point. It seems to me that is a good deal of headway for a man

whom nobody knows. Mind, I like Hampden; I trust him. But," he lowered his voice, "after what we have seen, I am sure that many people would suspect that the missing Ralph Hampden Stoughton is our friend himself."

"Absurd!" growled the judge. "Hampden is as honorable a man as any in Virginia!"

He was crusty with Jarret the rest of the way, feeling that the cashier was unduly suspicious. Yet he was secretly uneasy, and almost wished that Duff had not decided not to go.

Mrs. Hampden, after they were gone, sat silent, furtively watching her husband over her sewing. She hoped he would say something about the advertisement. Why had he evaded Jarret's question? At last, she threw down her sewing and went to him. "Ralph, is this missing man one of your family?"

"I said that he was not, Sarah."

"Yes, but—you kept something back! You have always kept a part of your past life hidden from me!"

It was said at last! Hampden turned away. His unnatural quiet showed how deep the blow had sunk. He looked at her presently with an expression on his face which she had never before seen there.

"Sarah," he said, taking both her hands, "you must trust me. That is all I can say."

She was wholly repentant. Was there ever a nobler soul than that which looked out of his kind eyes? Had she not known for sixteen years how honest and true he was?

And yet, that night there came into her mind many stories of good men who had been tempted to errors and sins in their youth.

No secret crimes, apparently, clouded Mr. Hampden's spirits the next morning. He went gaily about the house, singing as he packed his things in a great carpet-bag before starting on his journey, while Carey trotted at his heels. He sent her away presently.

"What shall I bring the child, Sarah? I thought of a crimson silk frock, or a chinchilla turban with a gold buckle."

"Nonsense! You fill the child's head with vanity, Ralph. We cannot afford such finery!"

"No, I suppose not," he said, with a vexed, boyish laugh. "But I'd like to give you and her and Kent all the good things of this life! I often think, what if I should find a great fortune—a pot of gold, say? I would build a house with —"

"Hadn't you better finish your packing?" said Mrs. Hampden, dryly. She opened the carpet-bag. "What a mess it is in! Coats, shirts, papers, all jammed down together! I will pack it for you, Ralph."

"You are a good soul, Sarah. Is that Kent playing hockey with the young Jarret yonder? I'll go stretch my legs with them."

But the boys met him in the hall. "My father is coming," said Josiah Jarret. He was a slow, quiet lad, with his father's gray, lack-lustre eyes.

"I have brought the package," said the cashier, as Mr. Hampden ushered him into the parlor. "It is very kind in you to burden yourself with it. Ten thousand dollars. Count it, if you please. Wait—one minute!" He closed the door leading into the dining-room, and drew the curtain over the upper half, which was of glass.

"Nobody there but Kent and Si," said Mr. Hampden, as he counted the notes. They were of large denominations and easily counted.

"I trust no business secrets to boys," said Mr. Jarret. "Nobody knows from me that you have this sum in charge. The amount is correct?"

"Yes. Will you have some cider? I keep nothing stronger."

"Cider, eh?" said Jarret. "I observed last night that there were no decanters on your beaufet. You are a queer fish, Hampden! No—no cider for me. Oh, here is the receipt. Just put your name to it."

This formula was unusual in those easy-going days. Mr. Hampden's color rose as he signed his name.

"Well, good-by, and good luck!" said the cashier, pocketing the receipt. "Come, Si, to your dinner."

The boy hung back. "Let him stay," said Hampden, courteously, though he wished to be alone with his wife and children. His father gave his consent, and took his way down the hill.

Mr. Hampden turned to meet his wife. "That pettifogger asked for a receipt!" he exclaimed, as the boys left them. "As if he were likely to forget that he gave me the package, or that I had taken it. Feel the weight of that!"

The notes were folded in an oblong bundle, wrapped in heavy foolscap, and again in several thicknesses of brown paper. The whole was put into a case of black oilcloth.

Mrs. Hampden, like Jarret, shut the door. "It is very cumbrous," she said. "They are afraid of dampness, I suppose. Wait, I can manage it."

The chief treasure of her wardrobe was a crêpe shawl, brought to her by a sailor uncle. It was kept wrapped in Chinese silk paper. She ran upstairs, and brought down this paper.

"How clever you are, Sarah!" He stood by, praising her deftness while she folded the notes in the light, tough web, and tied them in a sheet of the brown paper, replacing them in the oil-cloth case.

"You can hang it by a strap to your shoulder, under your coat, Ralph."

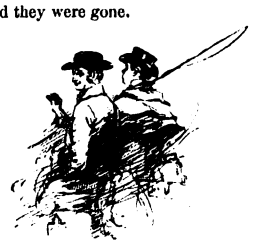
He made a wry face. "It wouldn't do to put it in the sack? There, there! Don't lecture me! I'll not let it go out of my sight once. Ten thousand dollars! Why, here is the pot of gold! I could buy that house now."

"Do not talk so idly, Ralph. If any one should hear you!"

"Any one would know I am not a thief," he said, quietly. "Let us have dinner. The stage-coach will soon be here."

The meal was hurried and quiet. The journey was as much as a voyage to Europe is now. All the neighbors were on the watch to see the departure. Mr. Hampden had not left the table when the great red coach, with its four white horses and its many-caped driver, dashed around the corner and stopped at the door.

Mr. Hampden ran upstairs to get a forgotten parcel, followed by his wife and Carey. When they came down again, Mrs. Hampden brought the package out of the parlor. "You would actually have forgotten it!" she said, reprovingly, "but for me. Promise me, Ralph, you will not let it go out of your sight again!"



He kissed her, laughing. "Possess your soul in patience with me, Sarah."

Carey was under his feet, Kent and Si were dashing madly in and out, clamoring for leave to ride on the boot as far as the toll-gate.

"How many passengers, boys?" asked Mr. Hampden.

"Three, sir. A lady, a clergyman, and a blind man. The driver says there's not one to Philadelphia but yourself."

"All aboard!" The bugle blew, the horses strained their huge flanks, the neighbors waved their hands. Mr. Hampden kissed his hand from the coach roof—there was a great cloud of dust, and they were gone.

"God send him home safely," murmured Mrs. Hampden, as she wiped away her tears. "But oh!—that money!"

REBECCA HARDING DAVIS.

(To be continued.)

For the Companion.

THAT NEW YEAR TREE.

It was the Sunday before New Year that old Mrs. Rideout came out of the aisle of the village church, tapping the floor sharply with her gold-headed cane, and stationed herself upon the porch. Evidently she was waiting for some one.

Looks of expectancy and amusement were exchanged between neighbor and neighbor, and nobody, it seemed, was in a hurry to depart. Upon the porch, upon the steps, and all around on the snowy ground, the congregation of the chapel found places—not even Jerry Williams, who seldom attended church, being absent.

Mr. Thompson, the minister, stopped short as he reached the door, wondering what was the occasion of the pause on the part of the congregation. He had been well satisfied with himself, apparently, for delivering a fine sermon without so much as a glance at the notes which he always kept on hand in case of need.

The minister looked graciously upon his flock, and smiled. He was exceedingly glad that Jerry Williams had been there to hear that sermon.

Mrs. Rideout's gold-headed cane gave two imperative taps upon the porch floor, and the old lady turned to the minister, and regarded him for a long minute through her spectacles.

Jerry Williams's wide mouth widened perceptibly, little Harry Lovett chewed noiselessly upon the edge of his mother's overskirt.

"I heard your sermon," said Mrs. Rideout, "and I waited to tell you that I put the cap on, and it fits me pretty correct."

The minister's face flushed. "I meant nothing personal," he said. "I declare to you positively, Mrs. Rideout, there was nothing personal to you in anything that I said in my sermon."

"Is there anybody around here that's proud exceptin' *me*?" inquired the old lady, in her sharp, shrill voice. "Is there anybody around here but *me* that don't belong to the societies?"

The minister rubbed his hands one over the other. His self-complacency had vanished. "A man of God does not take advantage of the pulpit to hurl personalities at his congregation, ma'am," he said, a little loudly. "I wasn't thinking of you at all; I was speaking generally, not particularly."

Mrs. Rideout bowed low. "I have put the cap on and it fits pretty correct," she repeated. "It's about as comfortable as these snoods the girls are wearin' round sleighin'!"

She made another bow, lower than the first, and, drawing her green veil over her face, passed down the steps and along to her wagon, while the minister glared in astonishment, and the others suppressed their smiles and turned to bid him a pleasant good-day.

"Mrs. Rideout has made a great mistake," he said.

"She's as spunky as she's proud," muttered Jerry Williams, admiringly, but under his breath.

"Well, if it fits, let her wear it," said Mr. Thompson, with energy. Bowing to everybody, he tramped down the road toward the parsonage. "Perhaps my sermon may do more good than I anticipated," he said to himself. "How foolish we are to lose our tempers so easily!"

When Mrs. Rideout reached home she ate her dinner in silence, though her woman, Almira Peacock, who attended another church, made overtures to compare sermons with her.

After the modest meal she betook herself to her parlor, and sat down in her favorite chair. Although she allowed Almira to sit at table with her when she would else be alone, she did not suffer her to remain in the parlor unless she herself was in a very talkative mood. This afternoon her talk was for herself; and it was of a sneering and unkindly character.

"I'm to throw my bread upon the waters!" she said. "And to enter all the societies! Feeding the hungry and clothing the naked means taking care of them what have folks to take care of 'em, but who drink."

Then her voice changed. Her proud old face looked mockingly about the room. "Have they ever asked me to enter the societies? Have they ever come to me and asked me, politely, to enter the societies? Haven't they kept away from me, and talked at me, knowing all the time that I could buy and sell every one of 'em?"

She leaned back in her chair and smoothed out her black gown. Then suddenly she burst into a satisfied cackle.

"I'll go in for helping the negroes," she said. Again her sharp laugh rang through the sombre room. "The negroes are kept out of the societies as well as me."

What Mrs. Rideout said was true. The society for bestowing gratuitous clothing upon the poor in the neighborhood never made any pretensions to assisting the colored people who lived in the "Porter's Lane" region.

These colored people were neat and industrious, but they had a hard time to get along. The men's services were sometimes indispensable, and the women took in what washing they could get; but they were expected to give full measure of work for the money they were paid. Their small houses were overflowing with children. Gratuitous garments of any kind would have been a godsend to them. But they had their merry-making and their music, and would not, under any consideration, be miserable. So the society never even gave them a thought.

The old lady, sitting in her high-backed parlor chair, got a great deal of enjoyment out of her thoughts in the next half-hour. She would take such a departure upon charity's wide road as to set all her sisters in the church talking afresh. She would "*spite*" them as sure as her name was Maria Rideout.

Her mind once made up, she set to pondering the best way to carry out her intentions. She was determined that not only the right hand, but all her neighbors, should know what the left hand was doing.

"If it were Christmas, I'd give 'em a tree. I'd be equal to the society," she said, with a grim look and something like a mocking laugh, as she added, "I'll give 'em a New Year tree!"

She took great pleasure in telling Almira Peacock, at the supper table that evening, that the sermon was more eloquent than usual, and that, thinking about it, she had decided to give a New Year tree to the negroes. Miss Peacock's indignation was boundless. "In the house?" she screamed. "Is your minister crazy, Mis' Rideout?"

"Is your minister Christian, Almira Peacock?" retorted her mistress. "Did God or man make some folks black?"

"It were a curse," said Miss Peacock, solemnly. The next day Almira declared that she wouldn't make the cakes. "I've lived with you fer thirty-five year," she said, "without any fuss, but I've never yet ben ast to make cakes fer the negroes!"

"And have I asked you now?" cried Mrs. Rideout. "Is hunting the pans making the cake?"

She fancied that she could hear already the neighbors whispering how she gave a tree to the colored folks, and made the cakes herself. She had not performed this duty for many years, and she discovered, or rather remembered as she drew the pans out of the oven, that ginger cakes scorch easily. Almira sneered openly. Her ginger cakes were her special pride; but Mrs. Rideout said, quite cheerfully, that scorched cakes were good enough for the purpose.

The colored man who was employed to cut Mrs. Rideout's firewood was ordered to bring a Christmas-tree, and put it up in the dining-room. She was glad to have it there early, for Almira's contemptuous sniffs during meal-time lent zest to the affair.

The old lady was not altogether sure what she ought to hang upon the tree. She had no intention of spending any money. She went up into the garret to make search.

Mrs. Rideout's garret was full of things. Every summer her daughter came home, bringing the children to enjoy the country air, and every summer added to the stock of miscellaneous articles in the garret.

Mary Rideout "that used to be" was not mean; she was rather extravagant. When small holes appeared in the children's stockings, she threw them aside. She never mended a white apron. She thought it foolish to rip and turn her small boy's cravats. Her mother gathered together the cast-off clothing and put it away, telling Mary that when a rainy day came she'd be glad to see all these things. This was the way in which the garret came to be full of cast-off garments.

Mrs. Rideout looked them over very particularly; she would not take the best. She picked out the stockings with the largest holes, and the torn aprons which she felt sure, even on the rainy day, Mary would refuse to mend. She had gay petticoats and bright frocks from which to choose, but she resolutely picked out the worst.

"Good enough for colored folks," she said, and carried down her arms full to deck the tree.

She wondered how Almira would act when the day came; whether she would seek the refuge of her room, or prefer to remain in the kitchen and watch the proceedings.

The tree, when it was finished, was a ludicrous sight. The old clothes dangled from the green branches, a pair of brass-toed boots which Mary's little son had bought with his own money showing conspicuously. She had been to no expense in the way of candles; a lantern was placed at the top of the tree, and a

Digitized by Google

colored glass shade threw the light downward. But, to increase Almira's disgust, Mrs. Rideout had brought out some of the parlor ornaments, and fastened them securely to the boughs.

One disappointment happened to the old lady. The day before New Year, after she herself had driven down to Porter's Lane and announced to the dazed but grinning colored people that she had come to invite them up to a New Year tree in her dining-room, and that they were to enter by the back hall door, and to be sure to wipe off their shoes, Almira Peacock was taken ill.

When Almira announced that she was ill, and was going home, her mistress laughed scornfully, and told her sharply for pity's sake to go, and not to come back until she was ready.

But it was not necessary that Almira should be on hand on that eventful evening in order that the news of the New Year tree should be bruited far and wide. The shrieks of delighted mirth that rang out from Mrs. Rideout's old dining-room told their tale more forcibly than Almira, at her strongest, could ever have done. The colored people were vastly pleased.

Mrs. Rideout did her part well. She acted the part of a pleasant, charitable hostess, handing around the old garments in quite a Lady Bountiful way. She saw her guests to the back door, holding the lantern to light them, and she heard them screaming and laughing as they went on down the road.

Then she closed the door, and wondered grimly what the neighbors would have to say. She was going to give her little chuckle, because she herself always expected it after a sarcastic speech, but instead she set the lantern down hurriedly, and sank beside it on the lower stair step. Putting her wrinkled hands over her face, she moaned out, "Oh dear, I'm afraid I'm goin' to have a fever!"

For two days Mrs. Rideout managed to rise, but on the third day she kept her bed. Her room was cold and comfortless; there was no one to get her breakfast, but she was too wretched to care for that. The man who cut her wood had not made his appearance on the previous day.

Suddenly, as she lay there in bed, she heard the sound of the axe rapidly chopping—so very rapidly that for a moment curiosity surmounted all other feelings, and she drew aside a corner of the curtain from the window at the head of the bed. Tim Moon's never cut wood like that.

There, at the woodpile, was a small colored boy. She was far-sighted without her spectacles, and could see him distinctly. He was chopping briskly, and whistling as he worked.

The boy had a little straw hat perched on the back of his head; he wore a blue cravat, and his thin red stockings were patched at the knees with red Turkey calico. As Mrs. Rideout watched him curiously, the wind blew off his summer hat, and he ran after it and thrust it back upon his head. A sudden pity awakened in the sick woman's breast. "He ought to have a comforter over his ears," she muttered. "He can get cold, if he is black."

About noon Mrs. Rideout heard a strange sound, first in front of the parlor door, then down at the end of the passage, and then just outside her own door. It was the sound of a bashful giggle.

"Come in," cried the old lady, with feverish irritation. The door was opened hesitatingly, and a young colored girl entered. The sight of Mrs. Rideout in bed covered her with fresh confusion, but by degrees she managed to blurt out her sentences.

"Josh, he said some'n' must be de matta. He come up to cut de wood, 'cause Tim Moon wa' sick. An' he aint done fo'got dat New Yeah tree. I'se sent up to see ef some'n' wa'n't de matta. Josh, he say Miss Peacock sick, too. I kin cook," the girl went on rapidly, "I kin do mos' anything. We didn't all know you wa' in bed, or we'd ben up soona." Then for an instant she showed her gleaming teeth. "I aint done fo'got dat New Yeah tree, needer, Mis' Rideout."

Mrs. Rideout was very ill. She was in bed for three weeks, and the doctor said that if she had not had such excellent nursing she would never have recovered. Old Aunt Sake, who "hadn't fo'got dat New Yeah tree, needer," constituted herself head nurse. Lindy crept around the house, suppressing her laughter, and Jeff got Jim and John and Jonas to help "tote de woodpile way out in de lot," so that the noise of chopping would not be heard at the house.

But the old lady, lying back among her snowy pillows with all this kindness about her, was enduring a horrible nightmare. "Dat New Yeah tree," with its worn and warmthless garments, would wave its branches perpetually before her eyes. Only when she recovered sufficiently to arrange her thoughts did it disappear.

Then another tree arose before her. New, woollen garments, made with her own hands, hung upon it, and there was the glory of light about it, and the beauty, too, which doesn't cost too much. She had thrown a few scorched ginger cakes upon the water, and what had come back to her?

To the colored people down in Porter's Lane, a new life was opened. By reason of the fame of her nursing of Mrs. Rideout, Aunt Sake's services were greatly in demand. Jeff, as a wood-chopper, was without an equal. They would never have understood Mrs. Rideout's horror of it, for all their prosperity commenced with "dat New Yeah tree."

LOUISE R. BAKER.

For the Companion.

THE CHAINMAKER'S DAUGHTER.

In one of the low sheds near the iron factories at Cradley Heath, England, a man, two boys and a girl were at work making chains. The man wielded, with brawny arms, an immense hammer, as he fashioned a cable chain, while the sweat stood in great beads on his toil-worn face. Dave, his son, a rather sullen, heavy-featured boy of nineteen, perhaps, with a smaller lad, was working the bellows. The man's daughter, a tall, slender girl of fifteen, was rapidly fashioning a smaller chain.

"Yes, dad," she said, "I'll soon finish it now."

The three fires were almost unbearably hot, yet no one thought of complaining. These four human beings worked almost as mechanically as so many machines.

The last link finished, the girl threw the chain over her shoulders, staggering a little as she did so, and went out, bareheaded, into the daylight, now fast melting into dusk.

It was a strange, dreary world that Grissel Sandys came out into. There stood the great iron factories with their glowing furnaces; here the outbuildings back of the rows of red cottages,—these last with streams of sewage in front of them,—while the ground the girl walked on was rough and uneven from the excavations of the collieries beneath, which made the buildings tottering and unsafe, even though they were "tied" by iron girders.

Although it was early spring, there was no sign of it in the landscape. Everywhere were heaps of old iron and black mud. Here and there were groups of ragged, dirty, quarrelsome children.

The slight, unformed girl hurried on in spite of the burden she carried, until she reached a house somewhat superior to those around it. Slackening her pace, she went around to the back door.

It was opened by the "fogger" himself. He was the middle-man who stood between the iron-masters and the chainmakers, and wrung profit from the poor people who were at his mercy.

He glanced at the girl suspiciously, as he carefully examined and weighed the chains. Grissel accounted for every pound of iron used, and for her week's work she was paid five shillings, which she held tightly in her hand.

She walked on, when once outside, but not toward her home. Her head throbbed, and she felt that it would burst if she went directly home to get the meagre supper. As she hurried on at her rapid, nervous pace, a voice called her name.

She turned, and saw, running after her, a girl near her own age.

"Prim, is it you?" asked Grissel, with a cheerful tone in her tired voice.

"I was so 'feared you'd not hear!" said the other, panting, as she took Grissel's arm in hers. "Have you been to the fogger's?"

Grissel nodded. Then she burst forth, as they walked on together, "I hate it all! Nothin' but iron everywhere; an' I works at it so much till I feels sometimes I'm a part of it, too, and dad and Dave. We oughtn't to feel and think. I wish we were just machines, Prim. Nothin' but work, work, work! I've never knowed nothin' else, an' I must go on this way till I die. Somehow, when I feel so dead tired, Prim, and my head aches so, I'd be glad to die. I wouldn't be afeard to."

The pale girl by Grissel's side shivered. "Don't talk so!" she said. "We can't help it; we has to stand it; our mothers did."

"Yes, until they died," interrupted Grissel, "when they couldn't bear it no longer. But I aint a-goin' to stand it. I'm a-goin' to live my life, and get some'at besides hard times out of it. I'll just go crazy if I can't get out of this misery. Folks says they has green fields and flowers and sunshine at Malvern, and I know I could walk to Malvern."

"When would you get the time?"

"If I goes away, I don't come back. I'd rather die!" said Grissel.

"O Grissel, don't go without me!" Prim begged, holding her fast.

"Yes, yes, you must go if I do," Grissel replied. With a hurried good-night, the elder girl left her companion, and walked back toward home. It was a miserable hut that she entered. Lighting a candle, she prepared, in a short time, the scanty evening meal. Her father, brother and cousin did not come in till it was ready. Grissel handed her wages to her father at once. The meal was eaten silently; there were no jokes, there was no laughter. Enoch Sandys's face, hard, thin and stern, looked as if want and never-ceasing, monotonous labor had turned him, as Grissel said, into iron.

"We're goin' to work to-night, Grissel," he said, as the three men left the bare table; "but you can stay at home."

Grissel's worn face brightened. After her work was done, she went into her close bedroom, and soon fell into an exhausted sleep.

Next day Grissel ventured to ask her father the question she had had in her heart for weeks. It was at the evening meal, and with her heart in her mouth she said, suddenly, "Dad, why couldn't I go away from here, and get work some'rs else?"

"Gals don't get any good," her father said, with no change in his stolid face, "gaddin' from home. Do as other gals do, and don't be frettin'. Mind yer business, and don't get notions! You'll never get away from here, so that settles it."

He shut his thin lips together, and strode out of the house, followed closely by his nephew, Roger.

Grissel covered her face with her hands. She had not known until now how much hope was in her heart.

"Don't be frettin', Grissel. What 'd I do if you was to go? I'd never stand dad and the work with you gone."

The girl lifted her face in sheer amazement. There stood Dave, his usually dull face kind, and with an awkward yet real interest in his gray eyes. Before she could answer, the young fellow was gone.

Grissel could not afford the luxury of idle misery. Her chains awaited her—but her mind was made up.

Late that night she stealthily left the house, and with her heart beating rapidly, went on her way. She had little to carry or wear. Her dress was ragged, her shoes full of holes. When she reached a cottage at the other end of the town, she tapped quickly on the casement. A m more, and Prim English's dazed face appea the little window.

"If you want to go with me, come out said Grissel, in a strained whisper, "a quick!"

Almost in an instant Prim came out. G glanced at her critically. "Where's yer sh she asked.

"I aint any," Prim replied. "Dad sol for gin."

On went the two forlorn figures. Prim dered, and drew closer to Grissel as they p one of the many public houses in Cradley H "Dad's there now," she said, as shouts drunken laughter floated out to the girls' ear

The two went on in silence. Tired as were with their long day's work, and in spi the black mud clinging to their feet, they n good speed. Toward morning a teamster ; them a lift, and two hours later they were sight of Malvern, only a few miles from Crad Heath, and yet what a glorious miracle had wrought! Loveliest green grass everywhe even now sweet smells in the air, and the sing of birds! Above, the blue sky, and everywh the sunshine.

It was the first glimpse of spring these girls ever had. Prim sank to the grass in a kind ecstacy, which ended in a flood of tears.

"I do' know what makes me cry," she sobb "only I'm so glad!"

Grissel's eyes were dry. She spoke in strained tone of half-suppressed excitem "Come, Prim," she said, "we must get on Malvern."

Prim dried h eyes, clutched handful of gra and walked on Grissel's side.

"What are yo goin' to do?" s ventured, timidly.

"I do' know, bu something," sa Grissel, in her reso lute voice. "An I'll take care o you, Prim, neve fear."

A party of young ladies and gentlemen came down the broad drive of a beautiful villa, all mounted on fine horses. As they entered the road, Grissel, with a sudden impulse, placed herself in the way of a beautiful girl.

"Oh, please, miss, do you know any work we could find?" she asked, with an intensity that made the girl draw rein. As her eye swept over Grissel's ragged, travel-stained clothes, she drew back.

"Indeed, you must go to the proper authorities," she said, hastily, and rode on, laughing. The gay party passed by, absorbed in their own pleasure, and Grissel, with her whole soul filled with dismay, and faint with fatigue and hunger, took Prim's hand, and led her out of the town to the side of the road under a tree.

"We have green grass and sunshine, Prim," she said, brightly.

"Yes, I don't mind anything as I did at home," Prim replied. But her voice was weak, and it was not long before, to Grissel's satisfaction, she was fast asleep; but Grissel could not sleep. She felt more helpless and discouraged than she was willing to own to herself. The sight of those young people in their ease and prosperity, so carefree and merry, roused many thoughts which had been unknown to her before. The difference—the cruel difference—between them! She only asked for work; she did not care if it was hard, with a little breathing space, fresh air, and a chance to feel herself a human being.

It was poor Grissel's first sight of so wide a contrast in worldly circumstances, and she was human.

Here was Prim dependent upon her, and yet where could they find even the meanest kind of labor? Must they finally go back to the slavery they had left? No; she would rather die.

Something made Grissel look up. At a little distance from her she saw a young girl dismounting from a white pony. Holding her dark blue riding habit in her hand, she came straight toward Grissel. She glanced at Prim, fast asleep, and beckoned to Grissel to come further on.

"My cousin just told me of you," she said, quickly. "Are you very tired?"

The tone was the kindest Grissel had ever heard. Her resolute mouth and chin quivered, but she said, "We're tired, miss, but we're wantin' work."

"And what can you do?" asked the girl.

Grissel's face fell. "Nothin' but chain-makin', but oh, we could learn *anything;* we'd try so hard!" she said.

The earnest appeal, perhaps her appearance,

"ARE YOU VERY TIRED?"

Digitized by Google

seemed to affect the young lady. She said, in a voice that trembled a little, "Come with me; or stay, we must not waken your—sister?"

"No, it's just Prim," said Grissel. "But she's awake now, miss."

Prim sat up, staring with all her eyes.

The young lady mounted her horse, and the two girls followed her into the town. But before they reached it she stopped, and turning suddenly to Grissel, asked:

"Are you from Cradley Heath?"

"Yes, miss."

"Is it such a dreadful place, and are the people as—do the rest of the people have as much trouble as you must have had?"

"More, miss," said Grissel, briefly, while Prim, forgetting her shyness, added, impulsively, "And oh! it's so hard, 'cause we never has good times, and it's all so dark, and everybody's so tired, and hasn't time to be kind nor nothin', and the fogger grinds us all so hard."

Did Grissel fancy it, or did a change come over the girl's earnest face at Prim's last words? Surely that deep flush was not in her cheeks before!

There was silence until they reached a pretty villa in the town. "This is my home," said the girl, as they turned into the drive. "You must come in and see my aunt. She will know what to do—she always does."

Giving her horse in charge of a groom, she led the two girls into a comfortable room, and telling a maid to let them bathe and tidy themselves as best they could, but above all to give them food, she hurried upstairs and rushed into a pretty room where, by the window, an elderly lady sat reading.

"O Aunt Pen," she said, "I have something to tell you. We came upon two miserably poor young girls as we were riding. Something made me turn back after Cecilia told me that they asked for work. I felt that I *must* help them in some way, for they are from Cradley Heath, and are very wretched. The younger girl said their misery was so increased by the fogger's injustice. Aunt Pen, cannot I do something to atone for my father's hardness toward these poor people? Must I always have this to remember and bear? Sometimes I feel that I cannot suffer it, and to-day it has been brought home to me again! The elder girl is strong and proud—how it must all cut her—and the younger is pretty, or would be if her face were not so drawn and white; and she is timid and gentle."

Marian burst into the tears she had been struggling to repress.

The older woman soothed her. As Marian had said, she would know what to do. Her plans were soon made, though she assured Marian that her new charges must only be taken on trial. Before her arrangements could be carried out, the girls must be properly clothed.

"I shall see to that," said Marian.

After telling them what her aunt proposed to do, she said, bravely, looking past Prim into Grissel's determined face, "Won't you let me give you clothes?"

Grissel was about to refuse, but Marian seized her hands and said: "Listen; you must let me help you. My name is Marian Darrow." She scanned the girl's face, but it did not change. "I—I am the fogger's daughter. Don't hate me, but let me do something for you!"

The fogger's daughter! The words echoed in the girls' ears, but it was hard for them to associate this bright, warm-hearted girl with the hard-visaged, grinding man who seemed to them the embodiment of all evil.

While Prim looked on in silent amazement, the other appreciated somewhat of Marian's desire, and a warmer feeling came into Grissel's heart.

"You can't help bein' kin to him," she said, quickly, "and you're good to us, and please, Prim and me'll take clothes as a loan, miss."

No one but Grissel knew what these words cost her. She was born with a horror of charity in any form.

"I was never allowed to live in Cradley Heath, and my two sisters and I were sent away to school," Marian explained, briefly. "Then when my mother died, relatives took charge of my sisters, and Aunt Hastings adopted me. But do not let us speak of painful things again."

Mrs. Hastings's shrewd yet kindly eyes seemed to look, as Prim said, "to the soles of their shoes,"—for by this time Prim had shoes,—but she was not unwilling to make a trial of the girls. It was arranged that Prim should stay at the villa and be trained in a maid's duties.

Grissel was taken on trial, at Mrs. Hastings's request, by the landlord of the hotel in Malvern as a waitress. She had been offered the maid's place at the villa, but yielded it at once to Prim; it was the easier employment.

Grissel was awkward and uncouth at first, but never did waitress try harder to learn, and never was girl more patient and obliging, and she succeeded.

Within a few weeks one would scarcely have known either girl. The sad, drawn look had gone out of their faces. Prim sang softly about her work. She never tired of looking at the grass and flowers, and always had a bunch of violets or primroses in her room. Burying her face in them, she seemed to draw from them comfort, and fresh inspiration for living.

Some months passed, with Malvern a paradise for both girls. One warm September evening, Prim was awakened by the calling of her name softly outside her open window. She looked out and saw, in the half-moonlight, the figure of Grissel.

"Can you come down without waking anybody, Prim?" she asked, in a low tone.

Prim threw on her clothes, and, her mind full of misgivings, hurried downstairs to Grissel.

"Oh, what is it?" she asked. Grissel's face had something of its old, hard look.

"Come and walk with me, Prim. I felt as if I couldn't go without seein' you," said Grissel, as they walked on.

"What do you mean—go where?"

"I've been thinkin' for weeks, Prim, and I've been full of worry and trouble. You see, mam said to me, when she was dyin', 'Don't forgit Dave—don't let him go to the dram-shops like most of the men does,' and before I come away, Dave himself said he'd never bide with dad without me. But I went away and left him, and dad, too. Dad hasn't got no heart, I know, but he don't drink. But it's Dave that's on my mind. Prim, I'm a-goin' home!"

"Home?" echoed Prim, in a tone full of dismay. "O Grissel!"

"I must. I give the landlord warnin', and he's got some one in my place, but I didn't want nobody else to know, for fear I'd turn back if a word of coaxin' was said to me. It was the preacher as finished me, Prim, when he said that people mustn't turn their backs on home work and near duties. And I says, 'Grissel, that p'ints at you.' Now, Prim, be a good girl, and don't say a word. I must go."

Prim was sobbing softly. When she could speak she asked, "Do you think I'd oughter go back to dad, too, Grissel?"

"No, no—your dad can't miss you. He's too far gone with drink all the time. No, you stay here—it would break my heart to have you leave."

There was a long embrace, and the girls parted.

Grissel walked on, carrying her bundle, her mouth twitching with long repressed crying. But she dared not trust herself with another sight of Prim. She tried to divert her thoughts by remembrance of the little gifts she had bought for her father and Dave. Why, they'd never had a present in all their lives!

But as the miles behind her increased in number, and she drew nearer to Cradley Heath, the girl's heart almost failed her. She fancied she could see the desolate, dreary place—all the more unbearable after Malvern. She could feel the stifling heat of the room where she must work days and often nights. Then, what reception would her father give her? Perhaps he would beat her, or even refuse to let her in.

The wear of mind she had endured for many days was telling upon her. Her head ached—she was faint. She would lie down under these haystacks and rest.

Grissel awoke with a start and a terrible shock, as if she had fallen. Everything was dark about her. She groped with one hand, and felt earth beside and above her. Was she dead and buried? Where could she be?

She tried to move, and uttered a groan. What was the matter with her left arm? She must try and help herself. Another attempt—another groan.

At that moment a man's voice called from somewhere. It seemed above her.

"Is any one down in the hollow?"

Dave's voice! "Is that you, Dave?" Grissel called back.

"What! Grissel?"

In a moment more Dave was beside her, full of questions and wonder.

"I was goin' back to you, Dave. I oughtn't to have left you," the girl explained, as she briefly told her story.

"And I was a-huntin' you now," said Dave. "You see, dad's got married —"

"What do you mean, Dave?" interrupted Grissel, forgetting her arm in her surprise.

"Yes, he's got another wife, Grissel, and I wasn't wanted, and I was that lonesome without you, and she has a temper—whew!"

"But what'll dad do without you blowin' the bellows?" asked Grissel, anxiously.

"Don't fret," said Dave, coolly. "Her son takes my place, and he's got his mam's airs and temper. And oh, Grissel, but you ought to 'a' seen how mad dad was when you left! 'I hopes the baggage'll stay away,' he says; 'she'll come to no good.'"

"Perhaps I oughtn't to have gone," said Grissel, thoughtfully.

"It was as well," said Dave. "Dan Storey told me dad was a-goin' to marry her all along, and you'd 'a' died livin' there now."

But the next thing was to get Grissel out of this place, which was a deep ravine in the meadow. With the weight of her journey upon her mind, Grissel had risen in her sleep and fallen into a deeply furrowed gully.

Daylight was faintly visible, and the brother and sister could see each other's faces. Dave looked intently at Grissel, and then exclaimed: "Why, Grissel, you're a-gettin' pretty!"

Grissel blushed. It was her first compliment.

"Oh pshaw, now!" she said; but she was not displeased.

Indeed, this meeting with Dave gave the girl new strength and courage. She bore the intense pain in her arm without a sound, as with Dave's help she climbed up the steep sides of the hollow.

The two reached Malvern, how, Grissel hardly knew. The old landlord at the hotel took them both in. He had learned to trust and like Grissel, and Dave was given work at the stable. Though Grissel was disabled for a time with her broken arm, she soon returned to her old duties.

Prim still lives at Mrs. Hastings's pretty villa, and is devoted to Marian, who, as she grows older, devotes herself more and more to good works.

DAISY R. CAMPBELL.

THE NEW.

Only a night from old to new;
Only a sleep from night to morn;
The new is but the old come true:
Each sunrise sees a new year born.

For the Companion.

A CRACK IN A WINDOW.

"Hi, there, M'r'arty!"

Moriarty turned around and went back. At the door of the modelling-room he stopped, and placed his roll of paper against the wall, and looked in.

Moriarty was early that morning—there were still fifteen minutes before school-time. There were only two students in the room when he looked in, Brastow and Jim Parker. They were in their working garb—the long, clay-colored coats and jaunty white caps that distinguished the modelling class from the rest of the art school.

Brastow stood before his easel, drawing rapidly upon the surface of damp clay before him. He was at work, as Moriarty knew, upon a portrait in low relief of his chum, Jim, who sat perched on a table close at hand.

It was Jim who had given the sharp call, "Hi, there, M'r'arty!" It was he, too, who spoke to Moriarty when he appeared in the doorway.

"Here you are, M'r'arty! Brastow wants you to gaze at his masterpiece."

Moriarty stepped in front of the easel, and looked at the clay. For five weeks now he had been in and out at the art school as the errand-boy from the store of Wirt, the dealer in art materials. Already he had become a critic.

He began at once to find fault with the nose of the portrait of Parker. He said it was altogether too long. Brastow declared it was rather short. At last, in the excitement of the discussion, Moriarty seized a modelling tool, and drew Jim Parker's nose in one corner of the clay.

This decided the matter. Moriarty's drawing was plainly right; but Brastow was much bewildered.

"I say, Moriarty," he began, "where did you learn to draw?"

"Why, I don't know," said Moriarty. "It's easy enough. You only just put down what you see."

"Well, here now, draw something else; anything, I don't care what—here in the corner."

Moriarty laughed. "Why, what for? I aint got time. I've scratched your clay all up now, that's enough. Well, I must be going. Good day!"

He hurried across the room, shouldered his bundle, and went softly down the hall. As he left the studio, Jim Parker slipped off the table, and stood looking at the clay.

"Moriarty's a bright fellow," said he. "I've watched him sometimes—the way he looks at the pictures when he comes in. If it was so he could have a good training here at the school, he'd make his mark."

"Wonder if he ever thought of it?" said Brastow. "How old is he, do you think?"

"Oh, fourteen or so; I don't know. All I know about him is this: I saw him coming up the avenue one day with a big load of canvas for the life class. It was about as much as he could manage,—he's a slight chap, you know,—so I helped him along. Since then he's been pretty neighborly with me. He came from somewhere up country this spring. I've an idea he's got a father up there that keeps a store.

"I've rather thought Moriarty might have gone into an art store with some notion of working up, because of his interest in pictures. But I think the fellow's lonesome. That's why I called him in this morning."

"Then we'll have him in to-morrow morning," said Brastow.

So the next morning, when Moriarty went past the door of the modelling studio, he was greeted again: "Right along here, M'r'arty! Exhibition in here to-day! Free to artists!"

Moriarty's eyes gleamed at the sight of the portrait. This time his criticism was all favorable.

After this he did not wait to be called, but came in every morning of his own accord to see the improvement. Sometimes he made a suggestion, sometimes he made none. In either case he refused to draw. He was always "too busy." The boys laughed at him about this, but nothing moved him. He obstinately refused to touch a modelling tool of any kind.

One morning he came into the studio unusually early, just as the boys were getting into their coats. His whole face was radiant.

"What's up, Moriarty?" said both of the boys. Moriarty gave a merry little leap, and caught Jim gently by the arm.

"You know what next Saturday is—the seventeenth of June? I'm going up home for over Sunday, and I can go Friday afternoon if the work comes out well. There's a fellow down there who's going to help me out if he can. There's just one train goes up in the afternoon,—that's at two o'clock,—and I'll get home by four o'clock, and father and I'll go fishin'. Aha, now!"

He was as happy as a boy could be.

"Hum!" said Brastow. "You're a nice boy, running away because you can't draw as well as I can. I see through you!"

"Look out now!" retorted Moriarty. "Maybe I'll do something when I get back! Well, good luck! See you next week!"

"I don't know whether you will or not," said Jim Parker. "I may be roasted by that time. At this rate I shall be. Here I sit smothering in this stuffy old corner, and every time I turn my head round inside my collar, Brasty calls to me to 'keep the pose.' I'm sure I shall before long smash a hole in that window!"

Moriarty looked up at the great plate-glass window behind the easel.

"Can't you open it?" he asked. "Let me try." He sprang lightly upon the sill, and stood for a moment fumbling with the catch, his agile little figure in picturesque relief against the light.

"Get down, M'r'arty," said Brastow. "The catch is out of order, and it won't go either way. Billy says every day he'll fix it, but he's something like you; he can talk, but he don't practise. Get down, child! I want to work, and you're in my light."

"Oh!" said Moriarty, and down he jumped. "If you wait till Billy gets round —"

Billy was the janitor. He was no favorite with either the students or Moriarty.

"I sha'n't wait much longer," said Jim. "I'm afraid I shall throw a chunk of clay through the window before you get back. Never mind, I'm all right! Good-by! Catch a lot of fish!"

Moriarty sped away on his errands. It seemed to Brastow that he had taken the luck with him, for all day long the portrait failed to improve. Brastow complained to Jim on their way down the corridor after school. The other students had gone, and in the silence of the long hall Brastow upbraided Jim for his sober face. "You make me spoil it all," he said.

"I can't help it—I feel sober," said Jim. "I tell you I have a headache every minute—sitting on that table in that hot old—*oh*, I forgot —"

He ran back into the studio. There was a crash and a clatter, and then Jim came out again quite flushed and breathless.

"My color-box," he explained. "Wainwright brought it back to me on his way out, and I forgot, and left it on the table. I was going to put it away, but it tumbled down to the floor, and the paints rolled in every direction. But they've just got to stay there till to-morrow."

"I thought you'd thrown something at that window!" said Brastow. Jim laughed a little, and they went on together down the street.

The next morning, as it happened, Brastow was late in coming to school. His first thought, as he went up the steps of the building, was that he had lost his morning call from Moriarty. Then he remembered that Moriarty was not to be there that morning, and went in, whistling softly. In the hall he encountered Wainwright, who spoke to him roughly.

"I say, Brastow, one of your friends 's been getting into trouble."

Brastow stopped whistling, and looked hard at him.

"You know it don't hardly do for boys to go round staring in windows."

"Stop your nonsense, Wainwright, and tell me what you're talking about."

"Well, then, Parker's going to be up before the faculty for smashing in the big window in your studio; that's all I know. Billy tells a straight story. He says Parker was the last fellow in the room last night. After Parker left, he locked that studio door directly, without going into the room. This morning the crack was there. There are two great spidery cracks just across the upper light. All I wonder is it didn't break the glass right out. Billy thinks Parker did it just out of spite—you know he's been making complaints about that window all along."

"Well, but what does Jim say?"

"Jim says he doesn't know anything about it. Only he says Billy must have been in the room after he left, because he left his paints all over the floor, and this morning they were all picked up in the box. That's the box I borrowed, you know."

"If Jim says he didn't do it," said Brastow, "he didn't."

"So I think," said Wainwright. "But it makes a lot of talk. You know Jim has got that twinkle in his eye. There are some of them think he really did do it for the fun of the thing."

"Nonsense!" said Brastow.

Yet, as he hurried to find Jim, he did not feel as cheerful as he looked. Of course Jim did not smash the window if he said he did not. But it was a disagreeable experience, to say the least. There was that clatter in the studio the night before.

Brastow was extremely annoyed, but he spoke to Jim as brightly as possible.

"What have you been doing, Jimmy?"

"Nothing," said Jim.

"Been a bad boy?"

"No," said Jim, indifferently.

"Then you didn't crack it?"

"No, of course not. It makes a lot of talk now, but it'll blow over all right. They know me better than to think I did it. I didn't do it. I don't know who did unless it was Billy, trying to pry open the catch. I don't understand why he should want to lie about it if he did. The less said the better. Come, get to work."

Brastow said he didn't feel like work—his luck had gone with Moriarty.

But Moriarty was not yet so very far away. All the morning long he had been running about the city. There was so much to be done before two o'clock! Moriarty had a confidence in his ability to put his work through, and felt every moment that he should fish, that afternoon, in the little trout brook at home.

At one o'clock help came to him. Hardy, his mate in the store, said to him quietly, "Here, 'Rarty, I'll fix the rest of your work somehow. Go get a square meal, and then scud for your train. Trot, now!"

So Moriarty dusted off his brown jacket, and his much-worn boots, and put on his new straw hat with more care than usual. All the money that he owned was in one of his pockets. He patted that pocket confidentially as he strolled out through the store into the street. One of the clerks said good-by as he passed. Moriarty touched his hat and smiled, with all the importance of one who starts forth upon a summer of holidays.

Digitized by Google

Two whole days and a half a day were his! Great things could be done in that time!

But first there was his dinner—a real "square meal" it should be, as Hardy had told him. Down town he sauntered, and dropped into a restaurant that he had never noticed before. He felt like an explorer. He ate a very wonderful dinner indeed. He was rich in time, for once. He lingered over that dinner until a quarter before two o'clock. That left just time to get to the station. He came out from the little restaurant, and ran directly against Hardy.

"Oh!" said Moriarty, hurriedly. "It's you! Where have you been?"

"I thought I'd strike you round here somewhere," said Hardy. "Getting tony, aren't you! Say, hold on! I've some news for you. I've just been up at the art school, and that Parker fellow you tie to is in hot water, and no mistake. They've got him up in the principal's office for smashing a window. Some don't think he did it, but a good many do. Isn't that great now? By-by!"

Moriarty bounded after him. "Hardy! *Hold on! Hardy!*"

But Hardy had vanished. Moriarty stood quite still on the corner of the sidewalk. His face had lost its brightness. Already five minutes had passed. Two street-cars came clattering along, one toward the station, the other toward the art school. Moriarty sprang into the car that was going toward the art school, and sat down to think.

He had lost his train; but he said to himself that he had had no choice.

At the art school building he jumped from the car, and ran in and on upstairs to the principal's office. School was over, but the sound of voices was still to be heard within.

Moriarty stepped noisily to the door and knocked. He took off his hat and brushed back his damp hair from about his face. He heard the principal's quick questions, the answers of the janitor, and now and then the sturdy, deep voice of Jim Parker. He knocked again. The principal's chair banged against a desk, and the principal himself hurried to the door and pulled it open.

"Well, my boy, what's wanted? I'm busy now." Moriarty stepped back a little, and stammered for a moment.

"I—I want—what I mean is—I mean about that crack in the window—sir. Parker didn't crack it. *I—cracked it*—sir."

"What?" said the principal. He closed the office door and led Moriarty gently into the corridor.

"Come this way. You're the boy from Wirt's, aren't you? Yes, yes, I see. Well, now, how is it? How did it happen?"

"I'll tell you how it was," said Moriarty. "That's the corner where Parker sits when Brastow's doing him in clay. When I'd be in with the bundles, I'd stop to see how it was getting on. They were good fellows. They tried to get me to draw for 'em some. I guess they thought I couldn't, and they had a good deal of fun to themselves about how I couldn't draw.

"Parker, he got tired in that hot corner—sitting still so. He said he'd a mind to smash in that window. That was yesterday. Well, this morning I came up here with a package. I was in a big hurry, and I came up before it was time for the boys to get here. I came in at the janitor's door, but I didn't see him nor anybody—only I went right up stairs.

"Coming back I thought I'd look at Jim—I mean the things Brastow's making—the *relief*—for goodness, like. I was going up home to-day. Then I saw Parker's paints all dropped out onto the floor, and I went to pick 'em up for him, and then it all came into my head how they laughed at me because I couldn't draw, and what Parker said about how he'd crack that window before I got back; and I thought what a joke it would be on him, and I never thought but what he'd see through it in a minute. But I just grabbed the paint-box and the brush, and I got up on the window-sill, and I painted cracks all over the pane—and—and that's all."

There was a deep silence in the hall.

"I can wash it out, sir," said Moriarty.

Then the principal spoke. "Well, my boy—well—well! I see how it is—but you know, really, it doesn't do to go round painting cracks on other people's windows."

"No, sir," said Moriarty, meekly.

The principal retreated into the office. Moriarty heard laughter—he was sure of that. Presently out came Jim Parker and Brastow, and they were certainly laughing. And then, almost for the first time, Moriarty realized keenly that his fishing was lost.

"Here's the boy who can't draw!" shouted Jim. "Get down on your knees, Brastow, quick."

"The floor's dusty," said Brastow. "But I tell you I'm proud of you, Moriarty, in more ways than one."

Moriarty's responses were rather subdued.

"I'm sorry I got you into it, Parker," he said. "I thought sure you'd see through it in a minute, and rub it right out."

He moved slowly away down the stairs.

"Where are you going?" demanded Brastow.

"To wash it off," said Moriarty.

"Nonsense! Hold on here—*stop!*"

Moriarty sprang headlong down the stairs, and fled into the modelling room. When Jim and Brastow reached him the crack was gone.

"That's too bad!" said Jim. "That's too bad, Moriarty. It ought to have stayed—it was the best thing out. I declare, that's too bad. I say, M'r'arty, what paints did you use?"

"I don't know," said Moriarty, carelessly. "I just took the brush, and then dabbled round in the paint-box, and made streaks on the window. Nothing to know. Well, good day."

Then Jim remembered.

"O M'r'arty, your fishing! That's a shame! I say, M'r'arty, come on down town with us—we'll have some soda."

And down town they went, Jim and Brastow and Moriarty. The next morning Moriarty went home for Sunday. He was back again Monday, brisk as ever, bringing the luck with him. Brastow's portrait in clay was finished that very morning, and Moriarty approved it.

Then came the close of the school year. Moriarty bade good-by to the boys with many parting jests and much advice. The long summer vacation came and went. On the first day of the fall term, as Jim Parker ran up into the art school hall, he saw Moriarty standing on the stairway above him, his brilliant hair shining in the sunlight.

Moriarty did not stir, but stood quite still and smiled. He had no bundles and no hat.

"Why—M'r'arty! Glad to see you! Aren't you late?" said Jim.

"*I belong!*" said Moriarty.

Then he explained, with a good deal of dignity in his manner. "I talked things over with father that Sunday, and I put in and worked all summer, and here I am. I've seen Brastow. He says the crack in the window will bring me good luck after all. That's true, I guess. It was what you and Brastow said to me, going for that soda, that made me think of coming here to school, anyhow."

"Good!" said Jim. "Now go ahead, Moriarty, and make your mark—but not on window-glass, mind you!"

"I'll make it, somewhere," said Moriarty.

THE LATEST DISCOVERIES IN SCIENCE.

I.—THE EARTH.

By Prof. N. S. Shaler,
Professor of Geology, Harvard College.

The branch of knowledge known as geology, which, in plain English, means the science of the earth, has come into existence in relatively modern times. Long after the students of nature had won their way to a tolerably correct understanding of the relations of the far-away heavenly bodies, they were still in almost complete ignorance of the history of the earth beneath their feet. They knew nothing of the past ages, in which the globe had been slowly growing to the stage in which we now find it; nothing of the slow and stately processes by which the great lands had been fashioned, or the living creatures which dwell on the continents or in the seas gradually had been led upward from the simplest beginnings to the present variety and beauty that we find in the animal and plant life of the world.

It was, in truth, much harder for naturalists to understand the past of the earth than to unravel the mysteries of the stellar spaces. The planets and fixed stars are displayed to every eye. With the aid of the telescope, observers were able to sound far into the depths of space, to determine the form and much of the peculiarities of the spheres of our solar system, and to explain the order of the remoter fixed stars. By means of many mechanical inventions, and with the aid of mathematical science, itself one of the oldest branches of human contrivance, men gained their first great triumphs in the way of learning in the realms of the sky, and left the nearer world about them to be interpreted in later days.

To explain the past history of the earth requires far other means than those which have availed so well in the realm of the stars. The geologic ages, once all as living as our own time, have left but faint traces of their events, and these fragments of their history are commonly buried deep in the rocks.

Early Views of the Earth's Formation.

Very naturally the early students of the earth were generally convinced that this planet had endured for only a few thousand years; it was a long time before they could be brought to the assured conviction that it had existed for ages to which all recorded history appears but a moment of time.

Believing that all the beds which compose the earth's crust had been formed in a short time, and that the vast elevations of the mountains were even of more recent construction, they were in a way compelled to the opinion that in the earlier ages of the planet we had a succession of convulsions, each of which had hurriedly led to vast changes in its conditions.

Moreover, when, in time, they found the remains of animals and plants in successive layers of rock, one bed above another, to the thickness in all of many thousand feet, they did not dare to believe that the remains were indeed the buried forms of creatures which had once lived on the earth. These early students were led to fanciful notions as to the origin of these fossils, such as would make it possible to account for their occurrence without supposing that they were once alive.

Thus arose some very curious notions concerning petrifactions which resemble animals and plants. One school of philosophers held to the theory that all the matter of the earth was striving to take on the living form, and that these fossil remains were, in effect, instances in which the earthy matter had taken certain steps toward the higher state of living, but had failed to gain the breath of life. Other speculators held the idea that the stars, by some mysterious influence, quickened the lime or clay of the earth, and shaped it into semblance of animated beings.

We may note with profit the fact that we owe to the great painter, Leonardo da Vinci, who died in 1519, the first clear and conclusive arguments in favor of the theory that fossils were the remains of creatures which had once lived on the surface of the earth. Leonardo was not only one of the greatest of painters, but also a very skilful engineer, and an inventor of distinguished capacity. It was while employed in constructing canals in Northern Italy that he probably found the chance to observe the nature of fossils.

It is less than three hundred years since the students of the earth came generally to believe that fossils were the remains of creatures that were once alive. When this point was settled, another at once arose. It was for a long time held that these remains were all due to the flood of Noah. It required more than a century of debate to make it clear that such could not have been the origin of the vast succession of deposits, in which we have preserved endless generations of remains, belonging to creatures which evidently lived and died on regions of the sea floor which have now become land.

The Record of the Rocks.

It was only about two hundred years ago that Dr. Robert Hooke, of England, first called attention to the fact that the rocks contained many fossils which had no kindred among the living animals and plants, and that different groups of strata seemed to have peculiar species of these remains. Hooke suggested that, by a study of these petrifactions, it might be possible to determine a chronology of the earth, or, in other words, to divide the past into successive ages.

It was not until about the beginning of the present century that naturalists began patiently to follow this plan of explaining the record of the rocks, aided by the light their fossils afford. It is, indeed, the triumph of our own age to have divided the twenty miles or more of the layers which generally compose the outer part of the earth, into district divisions, each of which was formed in a geological period in which time lived peculiar animals and plants, that contributed enduring monuments to the strata.

To this task of interpreting the ages of the past through the record written in the leaves of the great stone book by fossil remains, many hundred men have devoted their lifetime of labor. Slowly the inscriptions have been made intelligible, and from their story we have been able to form some general idea of the processes which have led to the growth of the continents, as well as the steps by which organic life has climbed the long ascent in the grades of being which have led up to man and the other highly organized creatures of the world. Gradually the panorama of the ages has been unrolled, until we now behold a succession of vast periods, extending backward into an immeasurable past.

Geologic Periods.

It seems clear that not less than one hundred million years have elapsed since the germs of life appeared in the ancient seas. Such a duration eludes the imagination quite as much as does the depth of the stellar spaces. The reader may, however, gain some faint idea of what is meant by a million years by the following simple contrivance: Let him draw on some straight road or plain a line one mile in length; let this line represent in space the duration of one million years; then let him consider that the oldest living man can recall at best only the events of a single century.

On this line of a mile in length a period of a hundred years would be represented by a little more than six inches. To have the line denote the duration of geologic time which has been interpreted by students, we should have to extend it away for at least a hundred miles.

Further into the past, beyond the time when living beings were first introduced upon the earth, lie yet greater ages, in which the sphere was cooling from the original fiery state and taking the shape which would fit it to be the dwelling-place of animals and plants. Into this portion of the planet's history we can only grope our way, for we are denied the help which is given by the fossils, which have aided us so much in understanding the later ages.

As yet naturalists know little of those far-off periods from any evidence which the earth itself affords; they are forced to interpret the history of these stages of this planet's development by the aid of the revelations of astronomy.

By means of the telescope, it has been pretty certainly determined that the stars in the far spaces, as well as the planets and sun of our own solar system, were, in the early stages of their growth, and often still are, in the form of exceedingly hot masses which require a great lapse of time to cool down to the state in which life could exist upon their surfaces. In the case of our earth, the unrecorded ages which elapsed after it became a distinct planet, and thence down until it was fit for the occupation of living creatures, were doubtless vastly greater than the part of the records which we can explore.

All these earlier stages of its history are lost. The rocks which may have been formed in these olden times have been so changed by heat, that they are no more to be interpreted than the ashes of a printed page after they have been scattered in the fireplace.

Much fruitless effort has been given to the task of unraveling the history of the earth in the period before life began. Geologists are now generally assured that the matter is beyond their means of search. They have, therefore, of late limited themselves, in the main, to the study of problems which seem likely to reward their labor. Of these the world is yet full, and it will require centuries to explore the evident mysteries of the fields which we can see before us.

The Continents.

Among the problems which are now the most general subjects of inquiry we can note only the most important. First among these, we may place the history of the successive stages of growth which have led to the formation of the great continental lands.

It was, until recently, supposed that the lands frequently changed place with the ocean. Modern studies are making it plain that this is not the case; and that, instead, the continents have risen upward in a tolerably continuous manner from very early ages, portions of their surfaces from time to time sinking beneath the sea, but soon recovering their place above its surface. In a word, these great dwelling-places of the higher life have grown steadfastly, and in something like the orderly development which marks the growth of the living creatures which dwell upon them.

The true reason for the growth of those singular corrugations or foldings of the rocks that we term mountains, is still an unsolved geological problem. It seems clear that they are mainly due to very great strains, which compress the rocks into a smaller area than they originally occupied, much as if the reader should press the pages of this paper from the sides so that the sheet folded in ridges and furrows.

It has long been supposed that these foldings were altogether due to the fact that the central part of the earth is losing more heat than the outer parts, for the good reason that it has more heat to lose; and that in consequence the inner part shrinks more than the outer portion, which is compelled by its weight to fold in the manner of mountains.

This seems a simple explanation, and, in fact, it has been found too simple fully to account for the facts. There is clearly a great deal to do before we shall have a satisfactory account of the causes which lead to the formation of mountain ridges and valleys.

Perplexing Subjects of Inquiry.

Again, the changes in the climate of the earth, which are shown by the history recorded in the rocks, afford most perplexing subjects of inquiry.

A few thousand years ago—in the geological yesterday, as we may say—the northern part of North America was generally covered by great fields of ice, which were a mile or more thick in their deeper parts, and extended south as far as Central Pennsylvania and Northern Kentucky.

In a somewhat earlier time, but still in the modern days of the earth, delicate plants, such as would probably not now grow in the open air north of Tennessee, flourished in Greenland within about seven hundred miles of the north pole.

How shall we account for such vast changes of climate? This is a question which is still troubling the thought of many naturalists.

Then again, there are the problems of volcanoes and the great question of the condition of the deeper parts of the earth's interior which are still in the stage of debate; and as each of these or many other questions have light thrown upon them, new regions of inquiry are dimly seen beyond the field which has been illuminated by intelligence.

In fact, the naturalist is in the position of all others who journey forward; as fast as he climbs each near-by height, he sees still other heights beyond. The higher the elevation he attains, the wider the field which invites his zeal for exploration.

No part of the realm of labor which is open to those who devote their time to the study of the under-earth has attracted so large a number of students as that which pertains to the commercial needs of man. Geologists have from the beginning of their science been effective helpers of the miners. Their science may, indeed, be said to have had its firmest foundations laid on the mines of Europe.

This ancient and crude knowledge concerning the arts of winning subterranean wealth has been combined and shaped by science, and vastly increased in amount, so that the geologists, who originally owed much to the untrained laborers in the dark realm of the under-earth, have repaid their debt a hundredfold. Gradually the most important work of the miner and quarryman has come into the domain of the geologist. From this collaboration of science with practice, civilization has made great gains in its most important arts.

Although natural science is full of resources which aid every department of human activity, it is perhaps more useful in the fields of the under-earth than in any other realm. Where, but for learning, there would be only darkness, science often affords sufficient light to guide the laborer's way. From this association of science with the work of the miner, it has in good part come about that modern States are vastly richer in material resources than those of a century ago. The men of to-day use on the average, each year, ten times as much iron and steel as our forefathers of the Revolution could command. And by the use of this, the most profitable, if not the most precious, of all metals, they command the land with their railways, and the sea with their steamships.

While the people of two centuries ago won about a score of products from the under-earth, we make use of hundreds derived from the pit and mine. Each year sees this relation of men to the rocks beneath their feet become the closer, and the profit greater.

In every step of this marvellous advance the students of the earth, by combining the knowledge won in a thousand different fields, serve as guides and captains in the great work of subduing the under-earth to the needs of mankind.

BOYS' TELEGRAPH.

The present generation is so accustomed to the electro-magnetic telegraph that it is hardly remembered that there were various forms of telegraphing, that is, of communicating messages instantly to a distance, before the Morse telegraph was invented. Perhaps it will interest the readers of *The Companion* to be told how two boys reinvented one of these forms of telegraphing when they could not put up a wire to be worked by a battery.

These boys, Tom and Eugene, were sons of a physician, and lived in the backwoods of North Carolina, far from railroads and towns. Eugene attended a school in the neighborhood, while Tom was older, and a clerk in a country store near by. There was often a need of a means of communication between the store and the doctor's residence, especially after dark, and as the distance was nearly a mile, these boys conceived the idea of constructing a telegraph line between the two places.

As a preliminary to this work, they learned to

Digitized by Google

write in the telegraphic alphabet, which, as every boy knows, is composed of dots and dashes, thus:

— . . . . . — . . — .

This is called the Morse code, because it was invented by Prof. S. F. B. Morse, and they soon became quite expert in writing it and in spelling sentences to each other by the sound of rapping on a table with a key or pocket-knife. They were now ready for the wires and instruments, but were astonished to find that the necessary outfit, at that time, would cost them upward of twenty-five dollars, a sum far beyond their means.

Since their leisure time was mainly after dark, they concluded to try some means of signalling to each other by using a lamp. The apparatus they finally made was so simple and effective that any boy, handy with a jack-knife, can easily make one.

By referring to the cut, it will be seen that it consists of a lamp inside a small box, with a hole on the side at the height of the flame, and a means of opening or closing the hole easily and rapidly. The box was an ordinary cigar box, and the lamp a small one burning kerosene oil. Several small holes were made in the bottom of the box to admit air, and a large one in the top just over the lamp-chimney.

When closed the light was entirely concealed, except when the cover to the opening on the side was pushed back. This cover was shaped as seen in the cut, and made of thin cigar-box wood also. It had a single screw at the bottom, and a small knob to push by. The movement of the cover or shutter was from side to side, like an inverted pendulum. There was a tack on each side, one to keep the shutter from going too far one way, and the other to stop it exactly over the hole, when closed. A small spring of whalebone or a rubber band served to hold the shutter in its closed position.

When this box and lamp were used at night, the opening and closing of the shutter served to show the light as a succession of quick or long flashes, which look at a distance exactly like a firefly. To open and close the shutter very quickly makes a spark to represent a *dot*, and to make a dash the shutter is held open about half a second. For a long dash, representing an I, the shutter is simply kept open a trifle longer than for the regular dash.

A little practice will soon enable one to make the short and long flashes corresponding to the characters of the Morse code, and the signals are easily read, even at a distance of several miles. Of course the operations must take place between stations visible from each other, and the box must be turned in the direction of the distant observer. For very long distances a larger lamp and reflector will be better.

With such a box under his arm, while out of doors, or at a table near a window looking in the proper direction, Tom would telegraph long conversations to Eugene, and read his replies in the distant sparks. On cold, dark or rainy nights these boys were able to talk with each other, and were sometimes able to send messages of importance, which saved them many steps.

The main drawback to the system was the want of a means of attracting the other's attention, or to "call," as the telegraph men say. This was done by setting the box open, and showing the light till noticed at the other station. The "call" would soon be seen by the other boy, because he would occasionally glance in that direction.

They also agreed upon a system of signals, meaning "Repeat," "Do not understand your last word," "All right," "Go ahead," etc.

Many a boy or girl may thus find a means of amusement in communicating with friends, even across wide rivers, or at long distances in a hilly or mountainous country, with such a home-made telegraph. There are situations where a couple of enterprising boys might make considerable money out of it.

T. C. HARRIS.

YANKEE EXPRESSIONS.

Writing about the "Pine-Tree Coast," Mr. S. A. Drake says that whole neighborhoods are found there where there is but a single surname. It has an odd effect to hear the neighbors speak of each other, the surname being dropped, as Miss Mary Clem, Aunt Sally Josh, Aunt Hannah Eben, or Aunt Sam Paulina; but if all these several people are Toothakers, or Sidelingers, or Kennistons, it is hardly worth while to add the surname every time one of them is mentioned.

If the traveller is of a philological turn, he will be gratified by hearing in daily use archaic words and strange idioms.

One day Mr. Drake, while walking to Portland Head, was overtaken by a thunder-storm, and sought refuge under a shed. He found there two natives, who also were waiting for the rain to cease.

"Well," said one to the other, "Felt's dead; died this morning. They found him hanging to a beam in the barn. Shed was piled full of wood he'd been choppin' all the week. Seems as though he must have thought of somethin'."

"Well, Felt was always forehanded, that's a fact."

At Biddeford Pool, Mr. Drake asked a man scrubbing fish-scales from the inside of a wherry, if he would set him across the gut to Wood Island.

"I haint no objection," answered the man, barely looking, but not pausing in his work.

"Is there anything worth seeing at the island?" asked Mr. Drake.

"There it is; see for yourself."

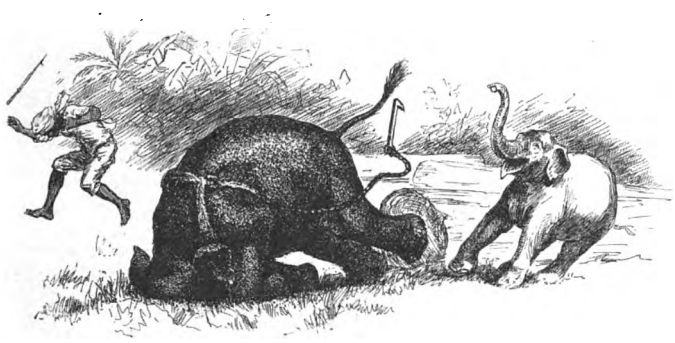
"But is there anything about it worth knowing to a stranger?"

"Yes, sir—ef you're a stranger, you want to keep well off to the nor'ard, so as to keep off'n the rocks."

"Did anything ever happen there that you know of?"

"Oh, that's what you want to know, is it?" said the fellow, straightening himself up, and drawing his wet sleeve across his perspiring face. "Well, yes; Tom Cutts caught a lobster there that weighed one hundred pounds!"

"I hear that lobsters are becoming scarcer and scarcer. I suppose those men must think of Tom with regret," said Mr. Drake, pointing to several great hulking fellows mending their lobster-pots.



"You needn't pity them," answered the man; "small ones sells now for as twice as much as big ones used to. Them that's under lawful size, they darsen't sell, but they eat themselves. Them that has eggs, they scrape the eggs off on, and nobody knows the difference."

For the Companion.

A DAY WITH THE ELEPHANTS.

Those who have seen the elephant only as a part of a menagerie can have but little idea of the wonderful sagacity of that enormous animal. It has been my good fortune to come across him in a field where his instinct and strength are made to serve the purposes of man, and where they are displayed to much better advantage than they can possibly be in a menagerie.

For over two years the vessel in which I had shipped in the capacity of able seaman was engaged in the East India timber trade, carrying teak, or "Indian oak," from the timber ports in British Burmah to the navy-yard at Bombay, and returning in ballast.

A Naughty Young Elephant.

It was anything but a pleasant trade, especially during the southwest monsoons or rainy season.

Occasionally, in port, we had a "liberty day," as the sailors call it, leave of absence for twenty-four hours, with a month's pay to squander in that rapid and foolish manner which only Jack ashore fully understands and appreciates, and we had the Sundays to ourselves. It was on a Sunday, which with the Burmese is not a day of rest or worship, that I first saw the elephant in all his wonderful strength and sagacity.

Our ship lay at anchor in the Salwin River, about five miles below the busy town of Maulmain, in Burmah, and opposite a large timber-yard. A bend in the river hid the town from view, but adjoining the mill was a little village of perhaps fifty houses, almost buried in a grove of cocoanut palm, bamboo, banana and other tropical trees and shrubs. The gilded dome of a small pagoda, built on a slight eminence in the centre of the village, showed above the foliage. Far as the eye could reach was a dense jungle, bounded only by the dim peaks of the distant mountain ranges. It was but a dull lookout for our first Sunday in port.

Our Day Ashore.

Since our arrival we had been busy discharging ballast and getting ready to take in cargo. The bow-ports, two on each side of the stem, had been taken out, and there were now holes in the bow of the vessel through which one could almost drive an ox-team.

Great coils of spare line were lying on deck, ready for use in mooring the rafts of timber as soon as they should be brought alongside, and tackles had been rove off and derricks rigged out over the bows to hoist the logs up to the ports.

In our spare moments during the past week we had been eagerly scanning the shore in the neighborhood of the mill for a sight of those enormous animals which, we had been told, were the necessary adjuncts of every Burmese timber-yard.

We had seen their huge forms moving among the piles of slabs and tiers of logs, and had watched them taking their evening bath in the river after the day's work was over. Now, Sunday morning, with the decks washed down and our breakfast hurriedly swallowed, we hailed a *sampan*, or native boat, and six of us were speedily landed. It was a busy time at the yard, and the mill was in full blast, Sunday though it was, so we had an excellent opportunity of viewing the elephants.

Elephants at Work.

There were seven full-grown elephants, all of them over eight feet and a half in height, and each capable of lifting logs that fifty coolies could hardly move. The teak is cut in the forests some hundreds of miles above, and rafted down the river. Near the yard was a wide creek, into which the timber was floated, and the entrance was guarded by a boom.

From this creek a couple of elephants, harnessed with a breastplate and tugs like a horse, were busy hauling the round logs to the mill, about one hundred yards distant. A pair of iron timber dogs, or hooks, were driven into the wood, and the chains attached to them were hooked to the elephants' traces. The animals were driven by *mahouts*, or native drivers, who, perched on their shoulders, guided them by pressure of the feet on their necks, occasionally using the *ankus*, which is a sharp iron goad.

When the mill was reached, the animal, at a sign from his driver, stepped back, and kicked the dogs out with his hind feet. He then proceeded to the further end of the log, and with one forefoot and his tusks, pushed and guided it upon the carriage which fed it to the saw. The slabs cut from the log were picked up by him and piled in a stack, and the finished log was laid carefully away on one side.

Remarkable Intelligence Shown.

The animals seemed to understand everything the drivers said to them, and without hesitation, would pick out the particular log or slab that was wanted at the slightest hint.

It was wonderful to see the careful manner in which they picked their way past the machinery of the saw-mill, carrying loads of slabs twenty feet in length, often along paths scarcely wider than themselves. This latter feat was accomplished by turning the pile as nearly lengthwise their bodies as possible.

While we were there rafts were being made up to be floated off to the vessel at high water. Each of these rafts consisted of ten logs fastened together by cross slab pieces and small chains. Some of the elephants were detached for this work; and they dragged the logs, sometimes two at a time, to the sloping banks of the river, using their forefeet and tusks to place them in position at right angles to the current, with their outer ends square with each other.

The log was hauled to high-water-mark, and then, the hooks being cast off, the elephant would go to the other end and push upon it, glancing along the log as a marksman would along a rifle barrel, and pushing more gently each time, until the logs were all as carefully aligned as a carpenter would lay the planks of a floor.

When high-water came, which happened before we went away, an elephant was stationed at each of the two inshore corners. With a whistle and a push the two great animals put their tusks to the huge raft, weighing from thirty to forty tons, and slid it off into the water as easily and steadily as a vessel glides down her ways at launching.

The most amusing part of our day's experience was connected with the young elephants, of which there were two in the yard. These little animals, not more than four feet in height, were as lively and frolicsome as kittens. The cows, their mothers, were at work, and the youngsters gave them no peace.

A Ludicrous Trick.

I saw one of the calves play a most ludicrous trick on its mother. The older animal was hauling a heavy log from the creek to the saw-mill, quite unsuspicious of any guile in the bosom of her offspring.

The youngster took a turn with his trunk around one of the chain traces, and pulled back with all his might. This additional weight caused the mother to stop and look behind her; but, on discovering the cause, she gravely shook her head, and prepared to resume her task of drawing the log to the mill.

Now this halt was just what the little imp expected; and, before the strain was put on again, he had kicked out the iron dog which fastened the chain to the log. As the mother again began to pull, he held back with all his strength on the chain until all her muscles were in full play, and then suddenly let go.

The effect was disastrous in the extreme. Down went the old elephant on her knees, and the *mahout* described a most graceful and prolonged curve before he landed on the ground. But, like a cat, he struck on his feet, and, blurting out some heavy Burmese exclamations of wrath, he whispered a few words in the ear of the amazed victim of this unfilial practical joke. She seemed to understand him at once, and there ensued one of the most exciting chases it has ever been my good fortune to witness.

Another Naughty Young Elephant.

The calf scented danger the moment he saw the *mahout* whisper to his mother, and he placed a large stack of timber between the enraged animal and himself as speedily as possible. Elephants seem too clumsy to do much running, but these two coursed up and down the yard in a manner which would have put to shame many professional racers. The youngster could turn much more quickly than his older and bulkier antagonist; but at last he was cornered.

Then his whole demeanor changed. With a shrill little whistle he trotted up to his mother, and rubbed up against her. But he was not to get off so easily. Giving him a butt with her head, she turned him about, and brought her trunk sharply across his loins four or five times.

The first time he felt the maternal chastisement he uttered a shriek of defiance, but at the second stroke he dropped on his knees, and took his punishment bravely and patiently.

A few minutes later he walked past us to his shed; but his trunk was drooping, and the great tears were coursing silently down his india-rubber cheeks. I was sorry for the poor little fellow, and I noticed that at dinner-time his mother was gently rubbing him down with her trunk, and manifesting many signs of affection.

Knocked His Hat Off.

In the meantime, the other youngster had been engaged in an affair of his own, which resulted much more to his advantage than did the little joke of his companion. One of our company wore a large Panama straw hat of which he was very proud.

Elephant calf number two took quite a fancy to Joe's headgear, and slipping up quietly behind him, swept the hat from his head with a graceful flourish of his trunk.

Then he turned round, kicked it with his fore feet, charged and kicked it again, and then finally put his foot on it.

This was more than Joe could stand. To have his hat knocked off his head by an elephant was bad enough; but to have it crushed into a shapeless mass was carrying the matter too far, and was more than he would endure.

Seeing a stout club on the ground near at hand, he picked it up and made a rush at the offending calf. To his astonishment, the calf did not turn tail and flee before him. Far from it! Instead of fleeing, he charged to meet him. In fact, Joe had just time to turn the corner of a shed when the calf rushed past him like an avalanche.

Running for His Life.

Now the mother of this calf happened to be standing within sight when Joe took up the cudgel, and as soon as she saw her bold offspring charge on the offender, she gave a shriek and bore down on the scene. The American superintendent of the mill, who had been showing us about, perceived the man's situation, and told Joe to make for the creek, which was but a few rods distant. This he lost no time in doing, and reached the shore end of the boom of floating logs before the elephants could turn to make a second dash at him.

This boom, which was used to prevent the timber floating out of the creek into the river, was composed of large squared logs, floating end to end, and fastened together by small rafting chains. The first log of this floating bridge was a very large one, nearly fifty feet in length; and our shipmate, who, with all his faults, was "every inch a sailor," found no difficulty in running out to the end of it.

Now the elephant, although such a brave animal, is extremely cautious, and his very sagacity makes him test the strength of every structure before he trusts his ponderous avoirdupois to it. When the elephants arrived at the water's edge, they looked at their game, then at the log, and then up and down stream; but they did not essay the boom nor did they plunge into the water.

Our friend on the other end of the boom observed their hesitation, and threw his arms about his head and gave vent to several prolonged shouts of triumph.

They were his last. The calf looked at his mother, then, putting one foot on the edge of the log, suddenly threw all his weight on it. The log gave a heavy cant to one side, and over went the sailor, head first, into the water. The elephants looked at each other, threw their trunks over their shoulders with derisive whistles, and trotted quietly off to their shed; and we almost thought we could see their huge sides shaking with laughter as they passed us.

Our shipmate easily climbed upon the log again, for the water was quite shallow at that stage of the tide; but he was a most woebegone object. Though there was not much water, there was plenty of mud, and it took him the rest of the day to make himself clean.

I heard the superintendent tell him that it was lucky he did not hit the calf, for they would have chased him to the death. Their *mahouts* can do almost anything with them, but a stranger must beware how he offends them. They will remember an injury as long as they live, and repay it with interest, if possible, some day. Our friend did not venture ashore again at the yard during our stay.

But at last the day draws to a close with tropical suddenness, and we see the flag which signals our recall hoisted to the peak. From the village come the sounds of the tom-tom, cymbals and castanets, as the village orchestra takes up its nightly refrain. Soon the strange and weird chorus of the tropical night begins, and above, below and all around us we hear the chirp, mutter, whispering, humming and screaming of innumerable creatures, while afar off in the jungle echoes the wild and unearthly cry of the jackal in search of his prey.

We jumped into our *sampan*, all but Joe well pleased with the experiences of a day with the elephants; and, after haggling with the boatman

Digitized by Google

about his fare, we found ourselves once more aboard the old ship, with the consciousness of a day well spent, but with dire misgivings as to our ability to handle, on the morrow, those enormous logs of which our friends the elephants made so little account.

For the Companion.

AT LOS VALLES GRANDES.

IN SIX CHAPTERS.—CHAP. I.

Going to the Station.

After two years' service in the Army of the Potomac, I was ordered, in the summer of 1863, to join my regiment, ——th United States Infantry, in the Territory of New Mexico. The companies composing the regiment were scattered over a tract some three hundred miles in one direction by two hundred in another.

At that time there were no telegraphs nor railroads west of the Missouri River. The swiftest means of communication between military posts were mounted couriers, the stage-coach, and the army ambulance, while all stores and supplies were moved by ox or mule-trains over long stretches of plain, and through rugged, winding mountain defiles.

Two companies of the regiment were stationed at Fort Marcy, at Santa Fé. Here were the regimental headquarters, as well as the headquarters of the department. The Civil War was still in progress.

Many of the company officers held commissions as colonels, and even generals, of volunteers, so that at this time both my captain and first lieutenant were in the East, leaving me, the second lieutenant, autocrat of the company.

A few of us had served brief periods in the East, and had been sent West at the time of Sibley's invasion of New Mexico from Texas. After the check and retreat of the Texans, we took no further part in the Civil War, but turned our attention to punishing the Navajo and Apache Indians, who had been carrying on a war of reprisal with the New Mexicans for many years.

The Navajos.

The home of the Navajos lies between the Rio Grande on the east, the Rio Colorado on the west, the San Juan on the north, and the Colorado Chiquito on the south, but from time immemorial they had roamed east and west to a considerable distance beyond these borders.

They have always been known as a pastoral race, raising flocks and herds, and tilling the soil. They owned, at the time we began making war upon them, sheep and horses by the thousand, and raised large quantities of corn, wheat, beans, and other products.

They numbered about twelve thousand, and could put three thousand mounted warriors in the field. They were industrious; the men did all the hard work, instead of putting it upon the women, as do the Indians of the plains and most of the marauding tribes. They manufactured all their wearing apparel, and made their own weapons, such as bows and arrows and lances. They wove beautiful blankets, often very costly, and knit woollen stockings, and dressed with greater comfort than did most other tribes. In addition to a somewhat brilliant costume, they wore numerous strings of fine coral, shells, and many ornaments in silver, and usually appeared with a handsome blanket thrown over the shoulder.

How the War Broke Out.

These Indians and the New Mexicans were almost constantly at war. Expeditions were frequently fitted out in the border towns by the class of New Mexicans who possessed neither land nor stock, for the sole purpose of capturing the flocks and herds of the Navajos; nor did they refrain from taking the Indian children, to be sold to the wealthier citizens to serve as household drudges or *peons*. There were few prominent families in the Territory, at the time of which I write, who did not possess one or more of these servant-captives.

The Navajos retaliated in kind, making raids upon the settlements and pasture lands, and driving off sheep, horses and cattle to the mountains. Complaints were made by the property-holders, and war was declared against them.

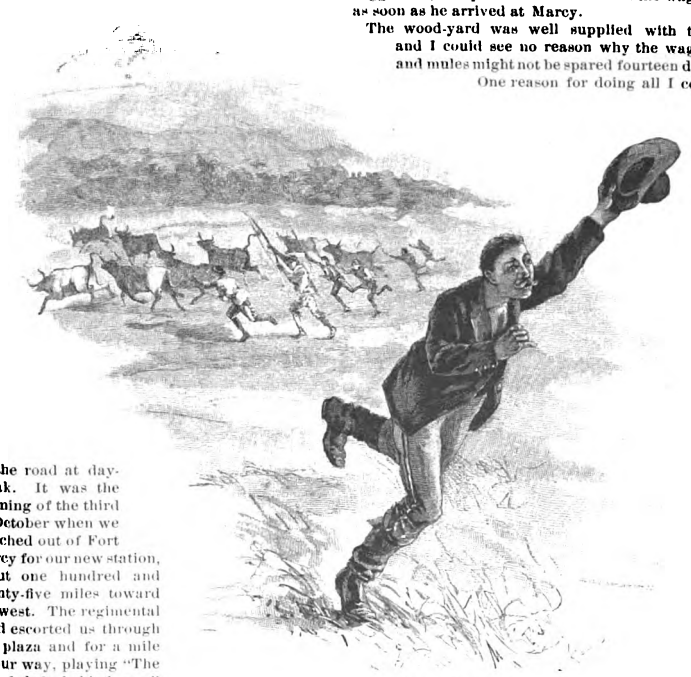
Their chiefs, in an interview with the United States department commander, assured him that they considered the Americans as their friends; that they robbed and fought only those who robbed and fought them.

It was explained to them that, since the war with Mexico, the New Mexicans were a part of the great American nation, and that their interests were ours. They were also assured that, if they would refrain from retaliating, the government would protect their interests, and prevent depredations in the future. The chiefs retired, promising to preserve peace if the Mexicans kept out of their country.

But the irresponsible *griso* had little to lose and much to gain in an Indian war, and kept up his thieving forays, in spite of military vigilance. The Navajos retaliated, and war was ultimately begun. The government determined to conquer the Navajos, and remove them to a reservation at the *Bosque Redonda*, on the Rio Pecos, five hundred miles east of their homes.

The department was in good condition to carry on a successful war, having, besides our regiment of regular infantry, two regiments of California volunteer infantry, and one regiment each of California and New Mexican volunteer cavalry. The New Mexicans were under the command of the celebrated Kit Carson.

When the Navajo went upon the war-path he was terribly in earnest, and his methods of waging war were like those of the red man everywhere. With the knowledge that the American soldier was an ally of his old-time enemy, and that the Mexican was wearing the uniform of the "Great Father," he no longer hesitated to look upon us as his enemies, but resolved to combat us up to the very walls of our posts.



No road in the Territory was safe to the traveller; no train dared move without an escort; towns were raided and women and children carried into captivity. Frightful cases of mutilation and torture were constantly occurring throughout the Territory. Troops took the field, and prosecuted with vigilance a war in which there was no glory, and plenty of suffering and hard service.

Every band of Indians captured was taken to the *Bosque Redonda*, where a large fort had been built and was occupied by six companies of infantry and two troops of cavalry.

Social life at Santa Fé was very pleasant. Parties given by the ladies of the civil and military departments of the Territory, and the leading Mexican families, helped to make Fort Marcy a desirable station for the young officer who was socially inclined.

I was thus inclined; and I was not overjoyed when, one evening, I received an order to leave the city with my company to take post at Los Valles Grandes, The Great Valleys, there to relieve a company of California infantry, which had been watching an Indian trail which passed through there.

The order was peremptory. We packed our baggage during the first hours of the night, and were

Giving an Alarm.

on the road at daybreak. It was the morning of the third of October when we marched out of Fort Marcy for our new station, about one hundred and twenty-five miles toward the west. The regimental band escorted us through the plaza and for a mile on our way, playing "The Girl I left behind me," after immemorial custom, and "Aint you glad you've got out of the Wilderness?"

On the morning of the eighth, after four days of gradual and constant ascent from the valley of the Rio Grande, we began the slow ascent of the most difficult portion of our march.

The woods were full of wild turkeys and mountain grouse, made fat on the pine nuts, and our company huntsmen were given permission to shoot a supply for the first meal in our new home.

It took us from early morning until noon to reach the highest point of the road. What with the frequent halts for the men to aid the over-taxed mules up the steepest places by means of drag-ropes, to fill gullies and sloughs with stones, logs and earth, to pry the mired wheels up to firm ground, and repair broken harnesses and wagons, we were over half a day in going a distance which could have been accomplished in two hours by soldiers unencumbered with a baggage and supply train.

First Glimpse of the Valley.

The downward march on the western slope was made rapidly over a good road and without halt. From the lower limit of the forest we caught the first view of Los Valles Grandes. The valley before us was fourteen miles long, and of a nearly uniform width of eight miles.

It was almost surrounded by mountains; in fact, while there were many trails leading out of it, there was but one practicable wagon-road—that by which we had entered. But at the southern extremity there was a precipitous cañon, through which flowed a considerable stream. To the west was another cañon called La Puerta, the doorway, which led into the valley of San Antonio.

The great valley, on the eastern edge of which the company now halted for a few moments' rest and observation, was lower through the centre than at the sides, not unlike an oblong platter, and was perfectly treeless, except that opposite us a bold, wood-clad point jutted out from the mountains about three miles, like a headland into the sea.

The whole valley was verdant with thick grass. This feature made a marked impression upon the soldiers, for New Mexico is a dry territory, where the land is cultivated only along the water-courses, where it can be irrigated. The arid higher country bears a grass which grows in tufts, and never covers the ground with a sod or turf.

From where the road left the forest to the camp of the volunteers, the distance was six miles, a gentle descent all the way. The encampment was at the end of the wooded point, detached from it and a little less than half a mile to the south, on a small flat enclosed by a gently sloping ridge of horseshoe shape. The ridge was, in fact, a veritable horseshoe in shape, the row of sixteen cabins stretching across the curve, and looking out of the opening toward the eastern side of the valley. Fifty yards in front of the cabins, stretching across the horseshoe from point to point, flowed a crystal stream of water, sixteen feet wide and two feet deep, which rose from forty-two springs near the northern end of the valley. The ridge enclosing the encampment was nowhere more than fifteen feet above the level parade.

The cabins were of pine, flanked on the north by the kitchen and stable, and on the south by a storehouse. Behind the row of huts, at the centre of the horseshoe curve, two-thirds the way up the slope of the ridge, and overlooking the encampment from the rear, stood the guard-house, in front of which paced a sentinel.

Glad to be Relieved.

Resuming our march, a brisk step soon brought us to the encampment. At the brook before the parade I was met by the volunteer officer, a tall, graceful lieutenant, who seemed overjoyed at the prospect of leaving what he considered a life of unbearable exile. Even before the customary civilities were passed, he asked me if my animals were in a condition to warrant his loading the wagons with his company property as soon as I discharged mine, and making an evening's march toward Santa Fé.

I told him they were, provided he took the two wagons belonging to the camp in addition, so that the loads would be light. He approved of my suggestion, and promised to send back the wagons as soon as he arrived at Marcy.

The wood-yard was well supplied with fuel, and I could see no reason why the wagons and mules might not be spared fourteen days. One reason for doing all I could to hasten the departure of the Californians was that my men desired to move into the cabins at once.

With my first glance at the encampment, it had seemed to me too open to surprise. The adjacent forest-clad point crept up near the left flank, offering an effectual screen to an attacking party, and the overlooking sentinel at the guard-house did not have a range of vision to the rear of more than fifty yards.

He was not on the summit of the ridge by at least half that distance, and walked along the side of the guard-house next the parade. He could see nothing of the surface of the valley to the west of the ridge, and when passing along the front of the building, as he paced back and forward, he saw nothing to the rear of his beat.

I expressed my opinion of the situation to the volunteer officer, but he replied, "Pshaw! you might as well take the sentinel off for all the good he does as a lookout for Indians."

"Have you seen no Indians?" I asked.

"Not a redskin except an occasional Pueblo since I have been here."

"I suppose you have scouted the country thoroughly?"

"There isn't a trail within thirty miles or more that we do not know, and in some directions we have scouted twice that distance. These bundles of wolf-skins and other pelts you see going into the wagons are pretty good evidence that my men know the country."

We walked to the kitchen and found, hanging on the walls of a store-room, a dozen quarters of venison, the carcass of a bear, and several bunches of wild fowl.

"We are not obliged to kill our cattle here to supply the men with meat," added the lieutenant. "We kill them only when we desire a change from wild meat."

"I suppose you intend to take all this game to Santa Fé?"

"Not if you will accept the gift of all but a couple of quarters, which we will take in, with a few turkeys, to friends."

"Thank you and your men. We shall be grateful for a change from beef, mutton and pork."

We went back to the parade, and stood looking at the surrounding mountains in the deepening twilight.

"What other ways are there in and out of the valley, besides the one by which we entered?" I asked.

"Well, on the east and south sides there is a trail between all the peaks, four in all, and one good bridle-path to the Indian Pueblo of Jemez, which descends from the valley level to the Jemez River bottom, a perpendicular distance of nearly three thousand feet in a distance of twelve miles."

"And to the west and north?"

"To the north there is a trail to Abiquiu, rarely travelled, and to the west there is only La Puerta into which all the other trails concentrate, for parties going west. It is to watch La Puerta that this camp was established."

"You have seen no Navajos or signs of them since you came?"

"Yes, signs; but we have seen no Indians. Parties have gone through here in the night, but none of them were driving stolen stock."

I learned all I could from the lieutenant, while his men hurried their baggage and stores into the wagons; but he was so much excited over the prospect of leaving the Valleys, and so curious to learn of events in Santa Fe that I met with little success. When the guard of regulars relieved the volunteer guard, I placed my sentinel on a beat a dozen yards in the rear of the guard-house, which enabled him to see several hundred yards back of the ridge, and yet not show himself prominently to an approaching foe.

The company under my command at the time I entered the Great Valleys consisted of but forty-five men, and ten of these were general prisoners in charge of the guard—three of them wearing ball-and-chain riveted to the left ankle—under sentence of courts martial for various infractions of discipline. These prisoners went to the guard-house, while the other men spent the afternoon in making the cabins comfortable for the night.

The inner walls of the cabins had been neatly hewn smooth with an adze, and the names of the former occupants had been carved with a pocket-knife, or burned in with a hot poker along the upper courses of the logs. Each had a broad, open stone fireplace and chimney set in one corner, after the Mexican fashion.

No uniform plan had been observed in the construction of the cabins, but the occupants had followed their own ideas as to what would be comfortable. The height, width and depth were variable, but their fronts made a perfect alignment.

The hut which fell to my lot, simply because it had been built for and occupied by my predecessor, was about the shabbiest of them all. It stood at the extreme right of the line, far from kitchen and stable, and was built of poplar, the only one not of pine in the row. It was ten by eight feet on the ground, and five feet high. This house I occupied only until a more spacious one was built for me, a little more retired from the vicinity of the men.

The first cabin had no windows, but its ample fireplace furnished so much heat that the door stood open most of the time to admit the daylight; and at night the pitch-pine flames made candles useless. There were no sawed boards in camp. Doors and floors were made of puncheons. The doors were hung on creaking wooden hinges, and fastened by wooden latches raised by leather thongs.

Preparations for Winter.

The day following our arrival was spent in making arrangements for passing the winter in the valley. The men were busy filling bed-sacks, cutting firewood, and repairing the cabins. Ten head of beef-cattle had been turned over to me with the other property of the camp, and I had placed them in charge of a soldier, with orders to herd them in the valley immediately in front of the opening, where they could be plainly seen from the parade as well as the guard-house.

At noon two Mexican hunters, father and son, rode up to my door, the former mounted on a mule, and the latter on a *burro* or donkey. The elder said their names were José and Manuel Cordova, of Cañoncito; that they were looking for deer, and would like permission to make the camp their place of rendezvous. I gave them permission to do so, and their two animals were turned loose with our stock.

At about four o'clock in the afternoon, tired with superintending the work of repairing and arranging the quarters, a work to which, in the case of my own cabin, I had lent my personal assistance, I sat down with my feet to the fire, and my back to the open door, to read.

Half an hour had passed in this way, when I was startled by a shouting, out in the valley. I went quickly to the centre of the parade, where the men were fast assembling with their arms, and saw the herder running toward camp at the top of his speed, waving his hat and shouting. Behind him the steers were running in the opposite direction, driven by six Indians on foot, who were waking the echoes with their war-whoops.

CAPT. C. A. CURTIS, U. S. A.

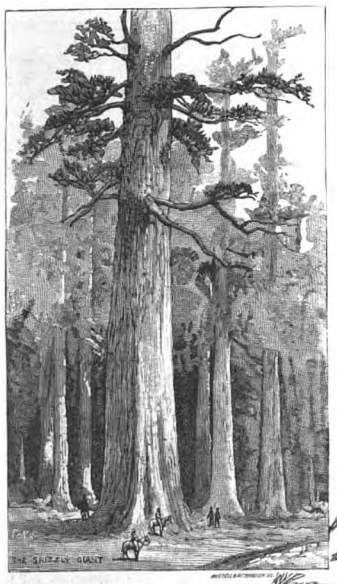
For the Companion.

THE BIG TREES OF CALIFORNIA.

The Big Trees of California represent the largest growth known in the vegetable kingdom of the world, with the exception of a species of the Eucalyptus of Australia.

One who has never seen these great monsters can have no just conception of their immensity, nor of the impression made by them upon the mind. In the Eastern or Atlantic States, we think we have seen monsters in the tree world when we have stood beneath a pine or an oak which measures four or six feet in diameter, and is a hundred feet high. But the largest trees in California have limbs that are six and one-half feet in diameter, one hundred feet from the ground.

"The Grizzly Giant," one of the most famous of the trees in the Mariposa Grove, has its first limb one hundred feet from the roots. The limb is six and one-half feet in diameter.



Nine feet from the ground the tree is twenty-seven feet in diameter, and below that height its thickness increases. The tree stands grim and grizzly, far apart from any of its companions, with a sublime solitariness in its grandeur.

All the largest and most prominent of the Big Trees have their distinguishing titles. Each of the States has its representative among the names;

Digitized by Google

and many of America's most famous men are honored in the appellations. General Grant has a namesake, as grim and stolid as the great General—who was present, I believe, at the christening of the tree.

One of the greatest of the trees lies fallen on the earth. It is called the "Andrew Johnson,"

or the "Fallen Monarch." The title was given at the time of the impeachment of President Johnson. It is estimated that the "Fallen Monarch" was, when standing, about four hundred feet high, and nearly forty feet in diameter. The bark and sap are now gone, but the tree still measures nearly thirty feet in diameter as it lies prone on the earth. A long ladder is used in mounting to its crest.

The very largest of the Big Trees of California are in what is known as the Calaveras Grove, which is owned by private parties. Among these there is a dead and fallen tree, which is supposed to have been forty feet in diameter, and four hundred and fifty feet high when standing. It is estimated that it has been prostrate a thousand years. The sap and bark of this tree are gone, but the diameter of its trunk still measures thirty-four feet.

The tallest tree standing is called the "New York tree;" it is thirty feet in diameter, and three hundred and sixty-six feet high. There is another tree, not so tall, which is thirty-seven feet in diameter, and the bark alone measures thirty-one inches in thickness.

In the Mariposa Grove there is a tree known as the "Telescope." The trunk is a hollow cylinder, open at the top, about one hundred feet away. The cavity at the base is large enough to shelter half a dozen men on horseback. One of the largest of the fallen trees is also hollow. One may ride in at the lower end, and go out at a knot-hole one hundred feet up the trunk.

One of the most remarkable of these gigantic trees stands directly over the broad roadway which has been constructed through the grove. There is an archway for the drive, cut through the base of the very tree itself. This archway, which was bored and burned through, is some ten feet in diameter and twelve feet high, and on either side there yet remains ten feet of solid wall of wood which supports the tree. Into the archway, under the vertical trunk of the tree, a stage-coach drawn by four horses may be driven, and can find there secure shelter from rain or storm above.

There are in all some six hundred of these Big Trees in the Mariposa Grove. The lands—twenty-five hundred acres—have been withdrawn from sale by the general government, and they are now kept as a National and World's Park, held in trust forever by the State of California for the people of the world. The reservations include the Yosemite Valley.

The regions are visited during the summer—for they are inaccessible usually during the winter and spring in consequence of the deep snowfall there—by tourists from all parts of the world, and especially by people of the Old World, who find these stupendous phenomena of very great interest. In the travelling party with me during my visit there were representatives of England, Scotland and Australia. In a party of seventeen making the tour to the reservation there were only three Americans.

The big trees are botanically known as the *Sequoia Gigantea*, though they have also been called by some botanists *Sequoia Washingtonia*, honoring our greatest and most illustrious name. The tree is oftenest called in England, Europe and Australia the *Wellingtonia*, in honor of the Iron Duke, though the correct name, *Sequoia Gigantea*, is replacing all other appellations.

The wood is a variety of the cedar. The Redwood of the Pacific is of the same family. Some of the trees standing in California are estimated to be, at least, four thousand years old. Some suppose they are old enough to have been growing at the time of the Deluge.

The heart of the tree is supposed to be indestructible by the decay that is usual in other woods exposed to atmospheric influences. This certainly does not rot under ordinary climatic action. Furthermore, the wood does not shrink like other timbers, since it contracts from the ends and not from the sides or edges, as is usual with other varieties.

Specimens of these trees are not allowed to be taken by tourists from the National Reservations. Not even a twig or shrub or flower is permitted to be plucked. There, policemen and guards are stationed throughout the parks to prevent spoliation by tourists. However, licensed parties live upon the reservation who have for sale the seeds of this species of wonder-wood. Foreigners are usually the heaviest purchasers.

Many young trees of the Big Tree species have been started in various parts of California, and are now growing thriftily. They are found in the streets of Los Angeles, San Bernardino and other Southern California cities. Though it might be supposed that a tree whose age is reckoned so great would be of very slow growth, the young *Sequoias* are found to grow quite rapidly. The Californians of one thousand years hence may see them in their full prime.

Cone and foliage
⅓ size

Within the reservation an English artist has established a studio, in which he devotes himself almost exclusively to painting the scenes in the Yosemite. His pictures have become famous.

THE IRISH CRISIS.

Just at the time that the British Parliament assembled for its autumn session,—it met on November 25th,—a sudden and exciting crisis occurred in the two parties which for four years have been allied in the support of Irish Home Rule. The crisis arose from the exposure, in a court of justice, of conduct on the part of Mr. Parnell, the leader of the Irish Nationalists, which cast a stain upon his personal character.

The immediate result of this exposure was that Mr. Gladstone, as the leader of the English Liberals supporting Home Rule, declared that he and his party could no longer remain in alliance with the Irish Home Rulers, unless Mr. Parnell ceased to be at their head.

Before, however, Mr. Gladstone's letter, making this declaration, was given to the public, the Irish party had met, and in spite of the stain upon Mr. Parnell, had unanimously re-elected him as their chief.

But Mr. Gladstone's declaration, as soon as it was made known, quickly brought about a sharp division in the ranks of the Irish Nationalists. One section strenuously advocated sustaining Mr. Parnell, in spite of the attitude of Mr. Gladstone and the English Liberals.

But another, and as it proved, much larger section of the Irish party, wishing to maintain the alliance of the Gladstonians as the best hope of obtaining Home Rule, as earnestly favored rejection of Mr. Parnell as the Irish leader, and the choice of some other to take his place.

After a week of most exciting incidents, the latter section carried the day. Mr. Parnell was repudiated by a decided majority of the Irish members, and Mr. Justin McCarthy was chosen by them to take his place.

All the Irish envoys visiting America, except one, issued a statement in which they resolved to repudiate Mr. Parnell, and to stand by Mr. Gladstone and the English alliance; and soon after, the Irish Roman Catholic archbishops and bishops published a declaration to the effect that, in their opinion, Mr. Parnell should no longer remain at the head of the Irish party.

Thus the Irish Nationalists, who for four years have stood shoulder to shoulder, a perfectly united body, and who have followed Mr. Parnell during that period with disciplined obedience and harmony, have been split into two bitterly hostile factions; and thereby the cause of Home Rule, which seemed on the eve of victory, is probably postponed for a long period.

One important incident of the crisis was a manifesto issued by Mr. Parnell, in which he professed to repeat a conversation between himself and Mr. Gladstone over a year ago, as to the provisions of a Home Rule Bill.

He declared that Mr. Gladstone proposed that, in the event of an Irish Parliament being established, the judiciary, the land question, and the control of the constabulary, should still remain in the hands of the English Parliament.

But this would not be a satisfactory measure to Ireland. Mr. Parnell declared that, for effective Home Rule, these three matters should be given over to the Irish Parliament, when it was established. Mr. Gladstone denied the Irish leader's accuracy in reporting the conversation.

The disruption of the Irish party, and the confusion which the events described have brought into the party of the Gladstonian Liberals, will lend a deep interest to the transactions of British politics in the coming weeks and months.

LIVING KINDNESS.

Ah, friends! dear friends—if any such there be—
Keep not your loving thoughts away from me
Till I am gone;
I want them now to help me on my way,
As lonely watchers want the light of day
Ere it is morn.

—*D. F. Hodges.*

THE POST-OFFICE.

No adjunct of modern civilization has had a more rapid development than the carrying and distribution of the mails.

The United States surpasses all other nations in the amount of its mail matter carried, in the number of its post-offices, and in the proportion of post-offices to the population. While the United Kingdom of Great Britain and Ireland has some eighteen thousand post-offices, or one post-office to about every two thousand of population, and France seven thousand offices, or one for each five and a half thousand people, we have in the United States more than sixty-two thousand post-offices, which means that the average number of people to every post-office is about one thousand.

The United States post-office handles many more letters than any other country. While somewhat more than a million and a half letters were delivered in the United Kingdom in the last reported year, in our own country nearly one million nine hundred thousand were transmitted.

There is one important difference between the administration of our post-office department and that of most European countries. There is no attempt on the part of our government to make a profit from the carrying of the mails. While the British Government derives a net revenue of several millions of dollars each year from its post-office department, our own was operated during the last fiscal year at a loss of somewhat less than six million dollars.

The reason for this is plain. No government of a civilized modern State really desires to make money out of the business of carrying the mail of the people, and all such governments have gradually reduced the cost of postage. But the great majority of the European nations have expenses which exceed their revenues, and their governments are pressed to obtain revenue wherever it is practicable.

In the United States, on the contrary, our national revenues have for several years been in excess of the needs of the government. This surplus revenue has been an excellent occasion, therefore, for the extension, improvement and cheapening of the postal service.

The deficit in the post-office department is not due, indeed, to any loss of money in the actual carrying of letters. As a matter of fact, there is a yearly profit of nearly thirty millions of dollars from letter-postage. But it takes all this profit, and more too, to transport the other and cheaper classes of mail, to carry the immense mail of the government itself, and to extend mail facilities over newly settled regions.

The development, extension and improvement of the postal service has by no means reached its limit. Many proposed new steps in advance are discussed in the postmaster-general's annual report, lately submitted to the President. The early reduction of letter-postage to one cent is one of these measures; and it is shown that the existing deficit, which now hinders a farther reduction of letter-postage, could be removed, or very nearly removed, by legislation which would prevent certain large losses in the administration of the department.

Other changes or improvements looked forward to are a postal telegraph system, under which the government would take to itself the business of telegraphic communication in the same way in which it takes the carrying of letters; the use of pneumatic tubes for messages in large cities; the establishment of savings-banks at post-offices; the establishment of house letter-boxes, where letters can be received and mailed; and free delivery in smaller places than any which now have delivery by carriers.

DRAW IT OUT.

A Pennsylvania farmer, ignorant of modern science, was lately watching an electric motor at work.

"Where does the power come from?" he asked. "I see machinery, but no power to drive it. Where do you get this tremendous force?"

"It is latent in the earth," he was told, "in the air, the iron, the wires. We simply call it forth, set it to work."

Is not the same fact true in the world of mind as of matter? There is a power, an energy for good, latent in every human soul, which, when called out, controlled, set to work, can move the world; but how few men know how to reach or master it!

One woman may pass through her life as sister, wife and mother without influencing the destiny of a single human being. She feeds the people near to her, makes their clothes, pays them their wages, but she and they touch each other only as the cold iron does the cold earth. The force is latent in both, but no spark calls it forth into strong, useful action.

Another woman will sweep her whole family with her up into happy, loving thoughts and high endeavor.

This boy, warm and genial, influences every comrade on the play-ground; that other remains morose, cold and friendless.

The same story can be told of nations. The Puritan came to New England, and the Scotch-Irishman to Pennsylvania, and too often saw in the Indian only a savage, who must be slaughtered or burned to keep him from slaughtering or burning. The Moravian and Quaker, and some Puritans as well, found in the same Indian a man and a friend, who welcomed them to his hearth and gladly knelt at their altar.

These last found the secret light-giving force in the red man's soul, while the others never knew that it was there.

It exists to-day in every human soul, no matter how degraded or debased.

The electrician draws his mysterious motive power out of every object in nature, however seemingly dead. Let us not be blind to the lesson which he teaches us.

ESCAPE-VALVES.

A clergyman from New York, whose standards in literature, art and music are high and severe, passed his vacation last year in a town which has grown into some importance by reason of its attractiveness as a summer resort.

During the season an exhibition of pictures and a concert were given for the benefit of some charity. Our critical friend listened to the very ordinary music and looked at the rather crude paintings with impatient contempt. The next time he met the village minister, he asked:

"Why do you encourage your people to sing without better instructors, and to dabble with paints when they have neither knowledge nor talents? It is a pure waste of time. Of what use can music or pictures be to them?"

"They are escape-valves," was the wise pastor's prompt reply. "They are a vent for the fancy or the impulses or the passions which might otherwise get the mastery of them. The lives of these people are mainly spent in labor. These poor songs and pictures make their holiday, and are, to a large extent, the safety-valves of their lives."

Busy Americans who are still influenced by Puritan asceticism are apt to neglect too much the "escape-valves" of life. Nature has provided some such relief for many men and women from the strain of overwork, in a taste or fancy which is often oddly at variance with their occupation.

Anxious parents sometimes regard with disfavor the hobbies of their children, the rage for photography, sketching, animals or collections of all kinds, which they fear "will take their minds from their studies."

If the pursuit is a harmless, healthy one, and followed with moderation, it will probably keep their minds fresh and vigorous for study.

The parents themselves would often find their own minds and tempers in more healthy condition if they had some escape-valve for their energy and imagination.

GIRLS WHO WOULD BE BOYS.

The few girls who wish they were boys are about fourteen years old. From babyhood they have enjoyed the freedom of boys in their play, and still love their freedom. They have climbed high trees, clambered over great stone walls, vaulted fences, played various kinds of ball, swam, skated, rolled over with the dog on the grass, played games in the summer evenings, and tumbled into bed as tired and thoughtless as a boy.

But they have reached the mature age of fourteen years, and now begins what they call their slavery. Their mothers insist on lengthening their dresses a little, and have new ideas about arranging their hair, both of which are hindrances to freedom of movement. They discover that there is a precious thing that goes by the name of complexion, of which they had scarcely heard before, and they find it a perfect despot. Elder sisters object to the vaulting of fences and the climbing of tall trees, as no longer proper, and maiden aunts are shocked at the running of races on the sidewalk.

Gradually the truth forces itself upon the minds of these girls that they cannot have quite the liberty that boys continue to enjoy all their lives. They still believe that they ought to enjoy it, and

Digitized by Google

will enjoy it in the future, but at present they are obliged to conform to the usages of their country, and they do not like it.

What would they have thought if they had lived half a century ago, when almost every innocent exercise of girls was looked upon with disapproval, and girls were in reality "slaves" to an erroneous idea of decorum! Many of them, as a contemporary remarked the other day, were "carefully bred as if for residence in a consumptives' home."

At present, a girl of good sense can enjoy, not, indeed, the full freedom of a boy, even the breezy, muscular brother whom she likes best would not approve of that, but freedom enough for the full development of her bodily and mental faculties.

A girl who in summer swims, plays tennis, rides, rows, sails, and in winter does a fair share of household labor, and takes her daily outdoor walk for exercise, need not suffer for want of freedom. Nevertheless, there will always be girls who wish they were boys, and they will generally be about fourteen years old.

MAGNANIMOUS.

A good book might be written on the amiable traits of great men; and for such a book a good chapter might be drawn from Darwin's reminiscences of his famous contemporaries among men of science.

The tone of the reminiscences is of itself a fine illustration of the magnanimity, the spirit of kind and generous appreciation, which ought to characterize men of genius and scholarship. He loved to dwell upon the best and strongest points of his fellow-workers, and even of those who might be thought his rivals.

Darwin felt, as he says, a high reverence for Sir John Herschel, whom he met at his home at the Cape of Good Hope, and afterward in London. "He never talked much, but every word he uttered was worth listening to." Darwin was doubtless a good listener.

In all history there is probably no finer display of mutual generosity and magnanimity than occurred between Darwin and Wallace in connection with the publication of their theory of descent, now commonly known as Darwinism, or the doctrine of natural selection. Darwin had been experimenting and reasoning upon the subject for twenty years, and had already communicated his hypothesis to Lyell, Hooker, Asa Gray, and others, when Wallace, who was then in the Malay archipelago, sent him a manuscript essay in which was embodied the very theory on which Darwin had so long been laboring.

Lyell at once urged that the two essays, Darwin's and Wallace's, should be published simultaneously, and this was finally done; but it is pleasant to see how handsomely Darwin refers to the matter.

"I was at first very unwilling to consent," he says, "as I thought Mr. Wallace might consider my doing so unjustifiable, for I did not then know how generous and noble was his disposition."

Great intellect, great industry, great success, these must always be objects of admiration; but by themselves they can never touch men's deeper feelings like simple greatness of soul.

SUGGESTIONS.

Our readers will observe that, with the beginning of the new year, the Historical Calendar, which has occupied a conspicuous place at the head of the sixth page of *The Companion* during the last three years, is displaced, and is succeeded by a new department of brief "suggestions."

There will be found in this place, every week during the present year, something to study up and think about—useful hints that will, if followed up, train the powers of observation and of thought. Our readers will see, as the weeks go by, that the topics suggested cover a wide range, and open fields in all branches of knowledge. They are intended to be such that any bright boy of twelve or fourteen years in any part of the country can follow the suggestions.

We wish it to be understood that we do not ask or expect any answers to the questions proposed, nor do we intend to give answers to the questions. In short, the new department is not a puzzle column, but what it purports to be, a collection of suggestions for the boys and girls to ponder upon. But if any readers wish to keep a record of the number of points suggested which they have investigated, and send us the result at the end of a year, we shall be glad to learn the fact, and to recognize publicly the merits of those who answer the largest number of questions.

UNWELCOME REPLIES.

A partisan inevitably weakens his position when he gives the other side a chance to retort. Such an opportunity was unwittingly afforded by an English clergyman, who hoped that three noted statesmen, in whom he believed, might "all hang together."

"Amen!" fervently responded a member of the opposite party.

"I mean," said the minister, in haste, "that they may hang together in accord and concord."

"It doesn't matter what sort of a cord it is," was the immediate reply.

A Russian gentleman of distinction once dined with Sir Stafford Northcote, at a time when England was supposed to aim at interfering between Russia and Turkey in their disagreement. In the course of conversation the Russian became very loud in abuse of England, and Sir Stafford made no response until his guest exclaimed, "You English are like the pigs which hunt in dirt for truffles."

"Say rather, monsieur," remarked Sir Stafford, "the dogs which drive the pigs away."

During the rest of the dinner England's sympathy for Turkey was a forbidden subject.

"I have at least one mercy to be thankful for," said an irate Englishman one day, in the course of a dispute with a patriotic Frenchman, "and that is that I was born on this side the Channel!"

The Frenchman looked him over with a dawning smile.

"I, too, am glad, monsieur," said he, sweetly. "We are the most civilized nation on earth. You would have died of homesickness."

OBJECTED TO TIGERS.

When commercial treaties were entered into between Japan and the Western Powers, the Japanese objected to the admission of foreign goods so far as they could. It was necessary to prepare schedules of articles to be imported, and the rate of duty imposed. All "unenumerated articles" were detained by the customs officials, who made the best terms they could with the consignee. The English Consul writes of the business at Yokohama in 1860:

Among the curiosities of imports, I found duly entered two tigers! Worth about one hundred dollars in the Straits, they sold here in Japan for purposes of exhibition for three or four thousand dollars. And in this, as in other things, the appetite appeared to grow by indulgence, for the tigers led to an order for a brace of elephants.

But even here there was an impediment to be got over on the part of the Japanese authorities, and the following story was in circulation:

Whether they objected because tigers were not in the tariff, or on some other equally valid ground, certain it is they did object. As the importer was a Dutch subject, it became a matter of discussion with the Dutch Consul, who solved the difficulty with great readiness.

When the Japanese Custom-house and the Consul seemed to have come to a dead-lock, the question arose, What was to be done with the article? The Custom-house would not pass it, the ship could not take it back—what was to be done with the beautiful beast?

"Oh, very well," said the Consul, seeing it was time to make a last stroke for his countryman's merchandise; "since you say it is impossible to allow it to be entered and sold, there is nothing left but for the merchant to lose his money and let the beast out."

"Let it loose!" exclaimed the officials, in various tones of horror and dismay; "why, it will eat us all up!"

"Really, I don't know. Perhaps he is not hungry. In any case I cannot compel the merchant to keep him."

It is not necessary to add that the interdict on his sale was soon removed, and, instead of making a meal of the Japanese, he served to feast the eyes of thousands at so many cash per head.

THANK YOU, SIR!

Mr. Balfour, in his "Leaves from My Chinese Scrap-book," says that a most amusing chapter in the history of official etiquette in China might be written under the heading of "The Emperor is Thanked." He says he is reminded by this Chinese formality of a pedagogue who always insisted on his pupils' thanks on every occasion. If he asked a boy what time it was, the proper form for his reply was, "Half-past two, sir, thank you!"

The constitutional maxim, "The King can do no harm," might, in Chinese official language, be translated, "The Emperor can do nothing that is not benevolent."

An amusing incident occurred not long ago, in connection with a Manchu officer of high rank, Wulahsich-ungah, the President of the Board of Ceremonies. This gentleman returned thanks for the honor of having been invited to a sacrificial feast by the Emperor, and the next day a terrible snubbing was administered to him.

It appears that the Emperor had not invited him at all, and was much astonished.

"His name," says the Decree, "does not appear in the list of guests approved by Us, and in thus thanking Us he has been guilty of a great piece of carelessness."

The Committee of the Board of Punishments allotted a penalty to poor Wulahsich-ungah, who should, according to etiquette, have been grateful for that also, though his thanks are not recorded.

TEN MUSES.

With many people, all other considerations must yield to their notions of symmetry, which often turn out to mean mere balancing or measuring of one part with another, and not the higher harmony of parts which sometimes involves a little irregularity. The artist finds that the symmetry of his picture is helped by making the objects which he represents at one side of the canvas higher than those which he depicts on the other.

Not so, however, was it with a worthy man, by occupation a carpenter, who once had charge of the arrangements at an exhibition given at a country town in aid of a charity. A tableau was to be given in which the editor of the local newspaper, who was a poet of no little reputation in the country around, was to be shown seated in a chair and surrounded by the muses.

At the rehearsal, the young ladies representing the muses came upon the stage, and took their places, five on one side of the editor and four on the other.

"See here," said the director of the exhibition, "there has got to be another of those girls."

"Another muse!" said one of the ladies; "why, there are nine of us. Didn't you know that there were only nine muses?"

"Can't help that," said the carpenter; "symmetry requires ten muses—five on each side!"

So another young lady was decked out, largely in copies of the editor's newspaper, and made to represent the muse of Journalism!

THE SHORT-STOP.

The base-ball field is not the place where one looks for literary wit, yet now and then it happens that a good pat saying is heard there which shows not only readiness, but familiarity, with literature.

It was on an occasion when a college nine was playing the nine from a fitting-school, and the short-stop of the latter was an absurdly tall and thin fellow, named Brown, apparently some ten years older than the boys with whom he was associated. He played very badly, muffing and fumbling, until it was suggested that he was only put on the nine for the joke of having so long a man as short-stop.

"He is like the Ancient Mariner," one of the college nine said; "he is 'long and lank and Brown.'"

"He is more like the Ancient Mariner," quickly and wittily returned the friend to whom the remark was made, "because 'he stoppeth one of three.'"

Good Housekeepers are fast finding out that a pure Extract made by Joseph Burnett & Co., costing a cent or two more a bottle, goes farther and makes the most delicious of dishes. Avoid goods only recommended by their cheapness. [Adv.

The correct writing papers for society, foreign, and every-day correspondence.

On Two Conditions:

First: That you mention THE YOUTH'S COMPANION.

Second: That there is no dealer in your city or town who keeps them.

With full information as to sizes, Envelopes to match, cost of stamping from Crest, Monogram, coat of arms, address, etc.

These papers have gained an unprecedented reputation in every State and Territory in the Union on account of their superior quality and reasonable price. We make it for the interest of dealers everywhere to sell our goods. Correspondence solicited.

SAMUEL WARD COMPANY, 49 & 51 Franklin Street (Entire Building), Boston, Mass.

Gold Rings.

No. 412.

No. 301.

On page 590 of THE PREMIUM LIST will be found illustrated and described fourteen Rings. Nos. 412 and 301, here shown, are the most sought for.

No. 412 is chaste in design, yet it is very beautiful, being engraved with Forget-me-nots. It is solid gold. Price is only $1.00.

No. 301 is solid gold. We import the Garnets and have the Rings made in large numbers for our subscribers. Price, $1.25.

Any COMPANION subscriber sending us one new subscriber can have either one of these Rings.

Postage 6 cents extra.

THE YOUTH'S COMPANION, Boston, Mass.

HOME STUDY. Do you wish to succeed in business? If so, you must have a good business education. This may now be obtained during spare hours, at your own home, at small cost. The best instruction is given by mail in BOOK-KEEPING, BUSINESS FORMS, PENMANSHIP, ARITHMETIC, BUSINESS LAW, LETTER-WRITING, GRAMMAR, SHORT-HAND, ETC. Adapted to boys and girls and middle-aged persons. Low rates. Satisfaction guaranteed. Established six years. Students and references from every State. Catalogue Free. HOW ANIMALS EAT.

What domestic animals have no upper teeth? Note how they chew their food.

How does a horse draw hay and grain within reach of his mouth?

Observe that the ox has another way.

How do birds masticate their food?

Observe a kitten's tongue when raising milk from a saucer.

For the Companion.

THE OLD YEAR AND YOUNG YEAR.

I.

Said the year that was old,
"I am cold, I am cold.
And my breath hurries fast
On the wild winter blast
Of this thankless December:
Ah who will remember
As I shivering, go,
The warmth and the glow
That arose like a flame
When I came, when I came?
For I brought in my hands
From Utopian lands,
Golden gifts, and the schemes
That were fairer than dreams.
Ah never a king
Of a twelvemonth, will bring
Such splendor of treasure
Without stint or measure,
As I brought on that day
Triumphant and gay.
But alas, and alas,
Who will think as I pass,
I was once gay and bold?"
Said the year that was old.

II.

Said the year that was young—
And his light laughter rung—
"Come, bid me good cheer,
For I bring with me here
Such gifts as the earth
Never saw till my birth;
All the largess of life,
Right royally rife
With the plans and the schemes
Of the world's highest dreams.
Then—Hope's chalice filled up
To the brim of the cup,
Let us drink to the past,
The poor pitiful past,"
Sang the year that was young,
While his light laughter rung.

NORA PERRY.

For the Companion.

PASS IT ON!

The farm-house was on fire. It was ten miles distant from the nearest town where there was a fire-engine. The neighbors collected, and according to old country usage, formed lines to the nearest well. The full buckets were passed from hand to hand to the burning dwelling, and the empty ones back to the well.

Deacon Payne was in the first line; but the old man was absent-minded and slow. His thoughts were on his own house. What if it should take fire? So he took the pails hesitatingly, passed them on slowly and awkwardly, and finally dropped one, and spilled the water it contained. The farm-house would have burned to the ground had not some of those who stood near the deacon told him that he had better get out of the line, and leave the work to be carried on without him.

There are many Deacon Paynes in the world. There is always some house on fire in our sight, a case of poverty, or sickness, or misery; a burning evil which hearty and well-directed effort might put out.

But there are men and women in every community and family who make no effort. They have the help in their pockets, or in their brains, or their hearts, but it does not go out. The currents of sympathy and aid stop with them. There they stand, cold and passive, in the crowd which each day is becoming more generous and cordial and helpful.

The young reader of these lines probably thinks that they are meant only for middle-aged or gray-headed people. Let us see.

Whatever your age, you have some blessing given to you fresh each morning from God. Pass it on.

Is it youth, with its strength and light-heartedness? Do not keep it for the ball-field. Give your tired mother some of it in a hearty kiss and tender word, or such gentle help as you can render.

Do not disdain to brighten the breakfast table with school gossip and jokes. It will cheer your father all day to feel that his boy takes him into his young life. Let every one who comes near you be the happier because you are young and happy.

Or, you have a sweet voice and a talent for music? Do not keep them for display, that they may bring you applause. Sing at home, or in church, or beside lonely and neglected children, or wherever your music will carry comfort or peace.

Or, you have studied and read much? Whom does your knowledge help? Do you use it simply for yourself, or to make your little world brighter and better?

You are, perhaps, a professed servant of Christ. You ponder long upon your sins. You read your Bible. You pray morning and night. You go to church. You are intent on saving your soul. But what help do you give to the souls of your brothers?

God does not give you the water of life to be thrown upon the ground. Pass it on! The man who stands in the line, but does not work, is worse than useless. He is a positive hindrance.

THE STORY OF NEESIMA.

The romantic and touching history of the Japanese missionary, Neesima, and his chrysanthemums, which have now grown famous, is told by Mr. F. Schuyler Matthews in "The Golden Flower," a book about the chrysanthemum which has lately been issued. It is a story of a great service repaid with flowers—but with flowers which became famous, and have themselves made famous a beautiful life.

Neesima was the name of a Japanese who was born in the city of Yeddo in 1844. As a boy, he was disposed to studiousness, and before he was twenty he received from a friend a small tract, called "The Story of the Bible," which was written by a Christian missionary in China.

The reading of this tract was the beginning of a new life for the young man. He determined to learn more of the "Light which shone in the East," and to this end resolved to find his way to America. This was no easy task in those times in Japan, for the strictest watch was kept over the people to prevent their going to foreign countries.

Neesima left his home, however, and went to the seaport town of Hakodate, where he remained for a season, planning a means of escape. By the help of a friend, he concealed himself in a little boat, laden with supplies that were being taken to an American vessel in the harbor.

As the little boat left the quay, an officer caught sight of it, and called, "Who goes there?" "*Ore da?*" (It is I!) shouted the boatman, and the craft was allowed to pass.

Neesima reached the vessel in safety, and the captain concealed him in a closet while the Japanese officers made a tour of the boat before she sailed. At Shanghai he was transferred to a ship belonging to the late Alpheus Hardy, of Boston. He told the master of this ship that he wished to go to America to be educated, and was brought across the ocean by the kind-hearted captain. At Hong-Kong he supplied himself with money by the sale of his sword, the badge of his social rank in Japan, and bought a Chinese New Testament.

On his arrival in Boston, young Neesima was taken to Mr. Hardy, and told him of his desire to learn more of the "Light in the East." Mr. Hardy assured him that there was indeed a Light in the East, and that it should shine for him and his people. He gave Neesima an education at Phillips Andover Academy, at Amherst College, and at the Andover Theological Seminary.

Joseph Hardy Neesima, as he was now called, was ordained to the ministry in Boston in 1874, and went to Japan soon after to found the school of the Doshisha, or "The One Purpose," in Kioto, and he was connected with the school to the time of his death.

In 1887 Neesima sent to Mrs. Hardy, in Boston, a collection of some thirty varieties of the chrysanthemum. These were given by Mrs. Hardy to two gardeners to propagate, and from them came some of the most wonderfully beautiful flowers ever seen, of forms hitherto unknown in this country, whose fame has filled the Western world.

In the midst of the celebrity attained by the great white, frosty flower, called the "Mrs. Alpheus Hardy," came the news of the death in January, 1890, of Joseph Hardy Neesima in Japan. With its comrades, the flower was a dying token of light and love from the man whose tongue had often repeated the words:

"The dayspring from on high hath visited us, to give light to them that sit in darkness and in the shadow of death."

ARMY BALLOONS.

Recent French newspapers describe the public drill of one of the army balloon companies, consisting of one hundred and twenty-seven men, with new and greatly improved apparatus. The crowd of spectators was intensely interested in the proceedings, which were certainly very novel and curious. The company was provided with a train of wagons, each adapted to its special purpose. One of them contained the balloon and its appurtenances; another was loaded with ready-made gas, compressed in vessels, but capable of immediate expansion when wanted. The nature of the vessels and the mode of storing away the gas in them are secrets that belong to the French war department.

At the word of command a connection was made between the gas-vessels and the empty balloon, which filled with a rapidity never before seen. The French reporters say that the inflation was almost instantaneous. The balloon was then attached to a third wagon, in which were a capstan and a small steam-engine, the balloon being connected with the capstan by a rope six hundred yards long. The steam-engine was to provide the force with which to draw the balloon downward.

All being ready, one of the most skilful members of the corps took his place in the car, and the balloon was allowed to rise to the extreme length of the rope. Four horses were attached to the wagon, which was drawn up and down the plain at the direction of the commanding general seated next the driver. By means of a wire that formed part of the rope which held the balloon, the general conversed freely with the aëronaut through a telephone, and he was thus enabled to observe the "enemy" from a height of six hundred yards.

It was a striking spectacle, the course of the wagon, drawn by four horses going at full gallop, over rough and smooth country, plowed fields and grassy levels, up hill and down, with a balloon following in the air hundreds of yards above it.

After a run of a few miles, the wagon came to a halt, the balloon was wound down by the steam-engine, and again ascended, bearing the chief of staff and other officers. The commander-in-chief finally made an ascension, after which the balloon was emptied of its gas, and the gas put back again into the reservoir for future use.

The weather was perfect for ballooning, and all the experiments of the day appear to have been successful. Each balloon corps is accompanied by twelve wagons, several of which contain the materials of which the gas is made, though gas enough for one inflation is always kept in readiness.

BRAVE LITTLE GIRL.

Gentleness often proves more effective, with a man who is out of temper, than hot argument, harsh words, or even force. The New York *Sun* says that a coal cart was delivering an order the other day, and the horse, after two or three efforts to back the heavily loaded cart to the spot desired, became obstinate.

The driver began to beat the animal, and this quickly collected a crowd. He was a big fellow, with a fierce look in his eyes, and the bystanders were chary about interfering, knowing what would follow. "I pity the horse, but don't want to get into a row," remarked one.

"I'm not in the least afraid to tackle him," put in a young man with a long neck, "but about the time I get him down, along will come a policeman and arrest us both."

The driver was beating the horse, and nothing was being done about it, when a little girl about eight years old approached, and said:

"Please, mister."

"Well, what yer want?"

"If you'll only stop, I'll get all the children around here, and we'll carry every bit of the coal to the manhole, and let you rest while we're doing it."

The man looked around in a defiant way, but, meeting with only pleasant looks, he began to give in, and after a moment he smiled, and said:

"Mebbe he didn't deserve it, but I'm out of sorts to-day. There goes the whip, and perhaps a lift on the wheels will help him."

The crowd swarmed around the cart, many hands helped to push, and the old horse had the cart to the spot with one effort.

For the Companion.

HUMAN NATURE.

If life were not so sad a thing,
Who then could think of being merry!
If God's will would bear altering,
His plans we should not try to vary!—
Were we once free from pain and care,
We straight would seek some cross to bear!

If upon love a seal were set,
How many seals would then be broken!
If gentle speech were hard to get,
How many kind words would be spoken!—
If Heaven were once denied us all,
How we should then to Heaven call!

MARY A. MASON.

PROMPT ACTION.

There is a famous quickener of enterprise which is commonly known as "the spur of the moment." Under its influence many great things have been accomplished. Mr. Irving Montagu, in his "Camp and Studio," has a chapter entitled "Links in the Chain." As one of the links he describes an interview with Mr. Thomas Cook, whose name as an "excursionist" is familiar to all readers. Mr. Montagu was then a young man, with his reputation as a painter and a war artist yet to make.

I was passing Mr. Cook's office, when it suddenly struck me—not a new idea by any means—how delightful it would be to go to Paris, if I could only afford it. The advertisements in his window had doubtless suggested it. Pondering thus, I went some distance in the direction of Charing Cross, when, without being actually uttered, the words "Art and enterprise, art and enterprise," so tickled my tympanum that I was constrained to return to that office.

Was Mr. Cook in?

He was. Was my business of a private nature?

"Yes; certainly."

"Oh, then I'll go up and see," said the clerk in the lower office.

He presently reappeared, and directed me to a room on the first floor, where Mr. Thomas Cook was seated.

"I have an idea with reference to art and enterprise," I began.

"Art and enterprise!" He evidently thought I was either a harmless lunatic, or else supposed myself to be speaking to some other Mr. Cook. "Art and enterprise! Isn't there some mistake?"

No, there was no mistake, though I had some difficulty in putting the idea into practical form. It was this—that if Mr. Cook was half as anxious to be possessed of pictures of foreign places as I was to see foreign places, a combination of art and enterprise might be effected by which we should mutually benefit. I gave him a case in point.

"I want to go to Paris, but can't afford it. You, on the other hand, would like a picture, say, of Notre Dame by moonlight. You give me a return ticket to Paris—Notre Dame by moonlight will be added to your collection on my return."

"And, pray, when did this enter your head?"

"Five minutes ago."

"And you put it in practice at once?"

"Yes; why not? I'd nothing to lose."

"On the contrary, everything to gain," said he.

"Just so."

At this point Mr. Cook said something down a speaking-tube, and a few moments afterward a clerk entered and gave him a blue envelope, which he handed to me.

"What's this?" I said, inquiringly.

"A first-class return ticket to Paris."

I was wonder-struck.

"But you don't know me, Mr. Cook. My name even is—"

"Exactly so. I'm quite willing to lose a return ticket to Paris, if I am wrong in my conjecture that you are right. I believe you to have had a bright idea, and I put it at once, as you say, into practice. To justify my good opinion remains with you. Good morning."

I went away fully determined to produce the most marvellous moonlight that had ever been painted; and perhaps, from certain points of view, it was unique. Suffice it to say, for years I travelled over all parts of Europe by a mutual arrangement of this kind with Mr. Cook; and it was undoubtedly the experience thus obtained which gave me a zest, and fitted me for the profession of my choice.

WHERE IT WAS.

The crowd of loafers in the little country store at Spurville had just listened with great interest to Job Landers's account of his recent sufferings from a large boil on his leg. Various comments expressive of sympathy were offered by one and another, but these were suddenly interrupted by Andrew Criler, who began:

"A bile's a mighty mean thing fer a man ter have, 'n' no mistake." After a short pause, he continued:

"I don't s'pose I shell ever furgit one 't I had more 'n twenty year ago. 'Twas on my right arm jest above the elbow, 'n' I couldn't do anything ter speak of, fer nigh onter three weeks. How it did ache! Why! I couldn't sleep a wink no more 'n if somebuddy 'd been borin' right inter that arm with an auger; 'n' it swelled up so 's 't I couldn't git my shirt-sleeve down over it. I had ter keep it wropped up in an old shawl of Lyddy's all the time.

"It got so bad finally 't I jest couldn't stan' it any longer; so I went over ter old Doctor Coblet 'n' got him ter look at it.

"'Wal,' says he, 'that's a pooty bad arm, but it aint ready ter be opened yit. Ye'll have ter come agin in a few days.' So home I went, mad enough ter kill. I jest walked the floor all that night, 'n' I shouldn't wonder if I said some bad words 'long to'ards mornin', fer that bile did ache wuss 'n any toothache.

"Wal, next day I went ter old Coblet agin, 'n' told him he'd jest got ter open that bile right off. So the old feller cut it open, 'n'—wal, mebbe I didn't holler! I thought fer about a minute that I'd give up the ghost. Wal, the bile got well pooty soon after that, but it left a big scar 't I s'pose I'll alluz kerry."

"Le's see it, Andrew," cried the crowd, anxious to behold even the traces of so famous a "bile."

Nothing loath to display the memento of his past sufferings, Andrew pulled off his coat and drew up his right shirt-sleeve. No sign of a scar, or blemish, of any kind was to be seen.

A trifle disconcerted, he exclaimed: "Thar! It's queer I sh'd furgit 'twas on t' other arm, but I guess 'twas."

Up came the other sleeve, and the crowd again pressed forward to see the scar. Alas! this arm was as unblemished as the other.

Andrew tried to look perfectly dazed at this result, but a moment later, with a twinkle in his eye, he said: "Wal, I vow! It is queer how a man's mem'ry sometimes deceives him, aint it? I remember now jest ez plain 'z day, that bile wuz on *brother John's arm*."

UNSOLICITED.

A correspondent of *The Companion* was not long ago sitting in a street-car next to two young ladies. Presently one of them said to the other, "It's Fourteenth Street, isn't it?" "Yes," said her companion, anxiously, "and I wouldn't miss it for the world." To the involuntary listener it seemed plain that they intended to alight at Fourteenth Street. When Fourteenth Street was reached, and the two ladies seemed oblivious, our correspondent signalled to the conductor, who brought the car to a halt.

"This is Fourteenth Street, ladies," said the gentleman, politely.

"Thank you," answered one of the young ladies, with freezing courtesy. "We know perfectly well where we wish to alight."

Then it became evident to the man that he had not divined their intentions correctly, and had received the usual reward for unasked advice.

Last summer, at Atlantic City, a ludicrous scene was witnessed by the few people who happened to be at the shore end of Georgia Avenue early one August morning.

Among the strollers on the beach was a stalwart man from Ohio. He had arrived the night before, and was taking his first sniff of salt air, accompanied by a large dog.

All at once he paused, and his face assumed an expression of horror. A few yards from shore a stout man was floating in the surf. He was enjoying himself hugely, but the Ohio man jumped to the conclusion that he must be either drowning or drowned, and called to his dog.

With half a dozen great leaps, the huge animal had the supposed "floater" by the collar of his bathing robe. The Ohio man, regardless of his clothing, waded in the water up to his waist, and between them they hauled the "floater" upon the beach.

In the operation the man was so choked by the dog and strangled by the water that for a moment he was unable to speak; but when the rescuer began to roll and pound him, according to the rules of the Humane Society, he found his tongue, and fell to berating the man from Ohio.

The man who had been rescued was a German who knew but little English, and could not be convinced of the good intentions of his rescuer. While he stormed and threatened, the Ohio man explained, the big dog growled, and the crowd roared with delight, until a policeman appeared, and marched rescuer and rescued to the police station. Matters were satisfactorily explained, of course, but the Ohio man now belongs to the grand army of people who never give advice or aid unasked.

STEADY NERVES.

An incident which recently took place at Plymouth, Massachusetts, called for the possession of a good deal of pluck on the part of the two actors. A young man of about twenty was leading a bull that had always been peaceably inclined, when the animal seemed to be seized by a sudden fury, and made a lunge at him.

The stick which was fastened to a ring in the animal's nose snapped short in the young man's grasp, and almost before he knew what had happened, he was thrown into the air from the bull's horns.

His clothing was torn nearly from his body, his cheek was cut open, and he was much bruised, but when he fell, almost under the feet of the bull, he had presence of mind enough to realize that his only safety lay in keeping so close to the head of the animal that he could not be thrown up again. He managed to get three fingers of his left hand into the ring in the bull's nose, while with his right hand he grasped one of the horns.

Meanwhile the farmer who owned the animal, and who is an excellent shot, had got a rifle from the house, and hastily put into it two cartridges. The young man, finding his strength failing, called out to the other to shoot.

"Fire, for pity's sake," he said. "I can't hold on much longer."

The bull, astonished by the clutch of his victim, had for a moment stopped, but when he should again start there would be small chance of the life of the young man. The animal stood so that his forehead was presented to the farmer, but the young man's head was within a few inches of the spot which the bullet must strike.

"If I fire," the farmer called, "the ball may flatten on the bone, and kill you on the rebound."

"Fire any way, and quick," the other cried out, as the bull showed signs of moving.

The farmer put his rifle to his shoulder, and fired. The shot was so true, that the bull dropped in his tracks without a struggle.

BIG LOAD.

The History of Templeton, Mass., contains an interesting account of what was long known in that neighborhood as the "great load of wood." In January, 1822, Colonel Leonard Stone, who lived in the north part of Templeton, and had a saw-mill on Otter River, was drawing a load of hard wood as a present to his minister, Mr. Wellington.

As the sled was crossing the common, Colonel Ephraim Stone saluted his brother with the question, "Why don't you take the minister a *load* of wood, while you're about it?"

Colonel Leonard replied, "Don't the size of this load suit you? Well, I've been sawing out lumber down 't the mill, and there's any quantity of slabs there. You may take a load of them, as big as you like, to the minister. I'll give you all you can haul."

Colonel Ephraim stirred up the people to make a full acceptance of the offer. A sled was improvised with runners thirty or more feet long and placed eight feet apart, with a tongue for the attachment of oxen in front of each runner. This sled was taken to the mill, and the slabs were eagerly piled on.

Eighty yoke of oxen were attached, and the load was easily drawn around through Baldwinville, well up to the more level ground. Then common sleds were brought into service, and the men hauled and piled on more slabs until the supply at the mill was completely exhausted.

All the men and boys, to the number of two hundred, more or less, turned out to assist in this wood-hauling. It was night before the sled was fairly loaded; so the men repaired to their homes, and returned the next day to finish the work. The next day they drew it to the minister's door, where it remained several days before it was unloaded, and people from far and near came to see it.

For the Companion.

WHO IS HE?

A jolly little stranger
Is in the town to-day.
He came last night at stroke o' twelve,
So I hear them say;
And every one is smiling
As merry as you please;
Pleasant words are flying, too,
Like leaflets in a breeze.
People, calling here and there,
Walk and drive about;
Young folks, old folks, boys and girls,
All are mustered out.
No one thinks to give a frown;
Skies and eyes are bright;
E'en the prim old gate-posts,
Having donned their caps of white,
Wear the jaunty, pointed things
With an air of glee,
You would laugh, as well as I,
If you chanced to see!
Every face is full of fun,
Every heart is gay;
All small quarrels are forgot—
Forgotten let them stay;
Rub the old score out, my dear,
Begin anew to-day.

ARKIE'S HILL.

Mamma Burke was bustling about her sitting-room, dusting and putting it in order, and Arkie was rocking away in his little chair, and singing in a way that would do your heart good to hear, when the bell rang with a great "jang-lang-lang!" that made them both jump.

"That must be the expressman," said mamma; "no one else pulls the bell so hard." So she hastened to open the door, and presently returned with so big a package in her arms that Arkie ran to her, crying: "O mamma, let me help carry it. It must be so heavy it will break you in two!"

"No, it won't," said mamma, laughing, "for it isn't very heavy. You may help me untie it," she added, as she placed it on the floor.

"What does it say on this card," asked Arkie, eagerly, as he caught sight of a tag attached to one end of the package.

"A Happy New Year to Arkie Burke," said mamma, stooping to read the card. "It must be a New Year's present from Aunt Amy."

"How splendid! how splendid!" shouted Arkie. He was so much excited, I am afraid he was not of much use in untying the cords, but when mamma's deft fingers had loosened the last cord, he was not long in tearing off the paper, and a fine, new red sled appeared, with "Snowbird" painted in beautiful white letters on top.

For one minute Arkie stood spellbound with delight, then the corners of his mouth went down, down, down! and his voice went up, up, up! in one long wail!

"O mamma, mamma, how awful! to have such a lovely sled and no hi-hi-hill!"

Mamma didn't know whether to laugh, or be vexed with him. It was so absurd to see a small boy stand and cry beside his new sled!

"Never mind, dear," said she. "Auntie has never lived in Dakota, and she did not realize there are no hills here, but papa will draw you about on the snow, and you will enjoy it in that way. Auntie would feel badly to see you feel so, when she meant to give you so much pleasure, to find she had caused so many tears instead."

"I didn't think 'bout her part of it," said Arkie, trying to dry his tears. "I'll just *try* not even to *think* how fast it would go down hill!"

The next morning, when he opened his eyes he found both papa and mamma looking very smiling and bright. Arkie ran to the window, as he always did in the morning, to scratch a little place through the thick frost, so he could look out and see what sort of a day it was.

"No matter about that this morning," said papa, hurriedly; "just see how quickly you can get yourself dressed, and when you have had your breakfast, I will take you out of doors and show you the surprise the New Year has brought you."

So Arkie hurried, you may be sure, and he hurried his breakfast, too! And then mamma helped him to put on his "out-door things," which were all warming by the stove. First, there were his leggings that reached to his waist, then his chamois-skin jacket, and muffler and fur-overcoat and cap, and last of all the warm, fleece-lined rubbers, for when one lives in Dakota, and the thermometer stands about twenty degrees below, as it did that morning, one needs warm clothes and a good many of them, you may well believe!

Then papa, who had been busy getting into his own wrappings, took his little son by the hand, and together they went out into the sunshine, which shone so bright on the snow-covered ground Arkie could hardly see at first, but as soon as his eyes got used to the light he stood still in astonishment.

"Why, papa, what is that? It looks like—it is a hill! and oh, what a big one! Who moved it here, papa?"

"The wind did," said papa, laughing heartily, "and nothing else, for it is just a big snowdrift packed solid against the barn. See that bit of roof peeping out at the top."

Arkie did not wait to hear any more, he ran for his sled, and presently he and papa were both trying to make their way up the hill, but it was so hard and so slippery they could make no progress, till finally Arkie got down on his knees and began to *crawl* up.

"Here, here!" called his father. "That will never do, you would make holes in both your knees and mittens, which means lots of stitches for your mamma; run and get the hatchet, and I will show you a much better way than that."

Then papa fell to work, and cut steps up the side of the hill, one—two—three—oh, there were dozens before he reached the top.

"There," said he, when the last one was done. "This is a regular toboggan slide, and there isn't a better one in the country!"

And oh, how swiftly the "Snowbird" flew down with the happy little boy on her back, down, down the long hill, and far out over the plain!

Arkie had never known so delightful a morning, and when he was called to dinner he could talk of nothing but his good time.

And chirruped sweet and clear:
'A merry, merry greeting
To you this bright New Year.'"

For the Companion.

WISHES WITHOUT HEART.

"I wish you a Happy New Year, mamma," cried Belle, as she bounded down stairs on New Year's morning. "A Happy New Year to you, grandma! Lots of Happy New Years to you, baby!" she added, kissing the baby's soft cheek.

"Does my little girl know how to help make the New Year a happy one to us all?" asked her mother.

"Oh, yes!" snapped Belle, pettishly, "by being a good girl, of course. That's what you always say." And I don't know what more she might have said, but just then she heard her father and brother coming in, and ran to meet them and be the first to give them the greetings of the season. "A Happy New Year to you, papa! A Happy New Year to you, brother Will!"

"I'm going out to slide till school-time," she said, after breakfast.

"I wish you'd sew these buttons on to my gloves," said her father. "I want them to wear this morning, and your mother is dressing the baby."

"Oh, dear!" pouted Belle, throwing down her hood, and going in search of needle and thread, "that's always the way. I never can have any fun as other girls do."

"Won't you wear your cloak to school instead of your shawl?" grandma asked Belle, not long after. "I like the shawl so much to put over my shoulders these cold days."

"Well, yes, I suppose I can," was the ungracious reply. "The cloak is so old and faded that it looks like a fright, and the shawl is new and pretty."

And Belle put on her cloak with so much *vim* that she tore off two buttons and burst out a buttonhole.

Noon time came. "I'm as hungry as a bear!" said Belle, coming in from school.

"Please hurry off your things, and set the table," said her mother. "Dinner is a little behindhand. I've had so much to do, and baby has fretted a good deal."

"I think it's too hard to have to study all school-time and work the rest of the time," said Belle. "I wish you'd keep a servant to do the housework; I don't like it."

Baby was fretful after school that night. "She is cutting a tooth," said mamma, "and feels badly. Can't you play with her a little while, Belle, to amuse her, and help her forget her little aches and pains?"

"I don't think there's any fun playing with babies," Belle said, crossly. "They don't know anything. Come along, then, if you must, you little bother," and Belle took her so roughly, and spoke so crossly, that baby just made up a lip and cried aloud.

"Come and have a game of checkers with me, Belle," said Will, after tea.

"Oh, checkers! You always want to play checkers, and you *know* I hate 'em. I'll play Mother Goose with you."

"That's too simple a game," said Will. "Come, be a good girl, now."

"I'd rather read," was the selfish reply.

And so, before twelve hours from the time Belle wished each of the rest a Happy New Year, she had grieved every one of them by her selfishness. How much heart was there in her good wishes, do you think?

Now all is still:—yet while I * * * *,
I hear a sound. What is it? * * * *!
Unless some vision me beguiles,
Small hoofs are trotting o'er the * * * * *.
Now down the chimney,—what a noise!—
Comes Santa Claus, with books and * * * *.
The night is dark. The hour is * * * *,
But Santa ne'er forgets the * * * *.
He stops not, e'en to warm his * * * *,
But fills with gifts the row of * * * *;
A rocking-horse to Teddy's * * * *,
Then upward through the chimney * * * *.
When morning broke all hearts were glad;
And wasn't Ted a happy * * *?
"Papa, my dream's proved true," he * * * *,
"I'll ride all through * * * * * * * * * *."

SPEAKING OF GUNS.

The first thought of almost every one, on hearing a good story, is to find some one else to whom it can be told. Some people make a few stories stand them in good stead for a long time; and a tale is told of a Vermont man who had just *one* story, and who told that on every possible occasion.

It was an excellent story, without doubt, the story of a gun which had once belonged to a friend of his, and he told it well, though, perhaps, it might have been improved by a little condensation. But his anxiety to bring forward this tale never abated. One new listener in a group of people was quite enough to encourage him to give his "gun" story in all its details.

It is said that he always brought the conversation around to guns, as soon as possible; then he would say, "And speaking of guns reminds me of a good story," and then begin his narrative.

There is a legend in his native town, that on one occasion, a number of people who were well acquainted with this thrilling tale endeavored to keep *guns* out of the conversation, at a dinner, given by a club of which he was a member, to a "distinguished visitor."

In vain the gun man tried to bring the talk round to his favorite weapon, and as time went on, his expression became gloomy in the extreme. As the guests rose from the table at last, so the story runs, he stamped violently on the floor as he approached the distinguished guest, and then said, "Just a little cramp from sitting so long, my dear sir; but that *sounded* almost like a gun; and speaking of guns, reminds me—" and linking his arm in that of the visitor, he bore him triumphantly from the room, to the music of his cherished anecdote.

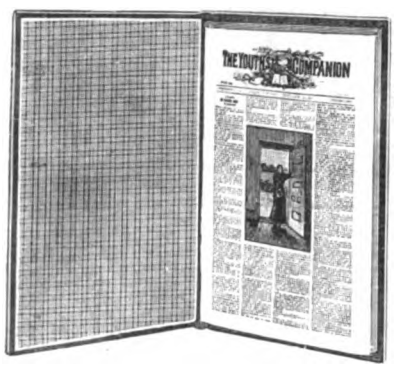
MOST IMPORTANT.

The painful incidents of life will come. They are guests that cannot be denied. Happy are we, however, if some ray of the ludicrous or incongruous appears also, to brighten their gloom. Says the author of "Recollections of a Private:"

One comrade, whom I will call Jack, had been saying last words to his mother, a little woman with a sweet, care-worn face. At the final moment, though she had tried hard to preserve her composure, she gave way, threw her arms about her boy's neck, and said, between heavy sobs:

"My dear boy, my dear boy, what will your poor old mother do without you? You are going to fight for your country. Don't forget your mother, Jack. God bless you, God bless you!"

There was a touch of nature in this homely sorrow which drew tears of sympathy from all our eyes. One warm-hearted comrade actually sobbed, and his eyes refused, as he expressed it, to "dry up," until, as we were moving off, Jack's mother came rushing after us, with a bundle tied like a wheat-sheaf.



"Jack! Jack!" she called, in a pathetic voice. "You've forgotten to take your pennyroyal!"

We all laughed, and so did Jack, and I think the laugh helped him more than his tears.

About Bird-Cages. No. 19.

If a cage, like anything else, is made of the right material, in the right way, the result is right. This material is hard brass spring wire; this way is to rivet to solid brass bands (no solder anywhere). This is the Hendryx way. [*Adv.*

The Youth's Companion Binder.

A good Binder is a great economizer of time, because you always know just where to find your COMPANION. When your paper is first received, insert it in your Binder, and your papers are always clean and fresh-looking. This is the most simple, durable and practical Binder that is made. It will hold fifty-two numbers of THE COMPANION. Each issue can be easily inserted. Stiff cloth covers and gilt embossed title. Size, 12 x 17¼ inches. Binding Pins sent in separate package.

We will send one of these Binders to any address, postage paid, for 70 cents.

BOUND VOLUMES

NOW READY FOR 1890.

THE YOUTH'S COMPANION for 1890 makes a large volume of more than 700 pages, with several hundred illustrations. It is bound in green and gold.

Price, $3.00. Postage, 60 cents additional, or it may be sent by express.

THE YOUTH'S COMPANION, Boston, Mass.

GOLD MEDAL, PARIS, 1878.

WRESTLING WITH A BUCK.

Tom Donohue, night-watchman at the Central Park Menagerie, sends to the New York *Herald* an account of a "tough tussle with a vicious buck deer," which he says he shall long remember. He was making his customary rounds, when he heard an unusual noise in the cattle building. On hastening to the door, he discovered that a certain buck, the terror of the collection, had been doing his best to get out of his enclosure. He already had the gate nearly off its hinges, and would soon be at large unless something could be done to stop him.

Dropping my lantern, I went down on my marrow bones in front of the gate, and tried to hold it in place with my hands. My presence seemed to redouble the buck's fury. His fighting blood was up, and he butted me with his horns till my shins were barked in a way that was anything but pleasant.

I was in a very tight place. My strength was no match for the buck's, and it was plain enough that I couldn't hold the gate long against him. But if I let go and took to my heels, the chances were that the fellow would have the gate down, and be after me before I could get to shelter. Then, with his sharp horns, he would make short work of me, and the reporters would write some brilliant description of how Tom Donohue met his death.

I must hold on to the gate anyhow. And hold on I did; but I managed to get my whistle between my teeth, and blew three shrill blasts upon it, the understood signal of alarm. Again and again I whistled, and after a few minutes my signal was answered, but still no one came to my help.

Meanwhile I was getting very tired; I should have to let go pretty soon, whether or no, and trust to luck and my legs. Just then the buck got his horns fouled in the fence. That was my opportunity. I let go the gate, and made for the other end of the alley, where there was another gate.

It was not fastened. I had just time to swing it open, jump through, swing it to, and brace myself against it, when the buck came dashing up.

Then there was another tussle, and again my strength began to fail me; but as luck would have it, I noticed a chain swinging overhead. This I managed to seize, and with it I took a few turns round the gate post, making it temporarily secure.

At this moment, when I was at last out of danger, assistance came. My whistle had been heard, but the men could not for a time locate the sound.

We got the buck back to his cage after a while, "shining" him with the lantern, and nobody was much hurt.

SAVING THE PINE.

At a dinner-party in London, the centrepiece is often a large pineapple, which by its fragrance and beauty justifies its position. But it is whispered that the pineapple is not unfrequently hired for the occasion, and that the butler has been ordered to preserve it from being sliced by the guests.

Many years ago, when Queen Adelaide assisted her stupid, good-natured husband, William IV., to stimulate the social life of England, the Lord Mayor of London was informed that Her Majesty would lunch at the Mansion House on a certain day. At the feast the Queen sat at a small circular table with the Lord Mayor and the Lady Mayoress, while the other guests were seated at a large table adjoining that of royalty, on which stood a magnificent pineapple. So attractive was the pine that it drew more eyes than the Queen.

Her Majesty declined to partake of the pineapple, and it remained uncut when she rose to leave the table, and many of the guests congratulated themselves on the fact that there would be more slices to go round.

The Lord Mayor, a canny Scotchman, anticipated his guests' thoughts, and, as he gave the Queen his arm to escort her from the hall, said to a young friend, also a Scot, "Oblige me by saving the pine." No sooner had the Queen left the room, than a rush was made for the pine. The young Scot seized it, held it out of the reach of a score of guests eager to slice it, and by the aid of the butler conveyed it to the pantry.

"Have you saved the pine?" asked the Lord Mayor, on re-entering the hall.

"I have," answered the young man.

"I presume, Mr. Mayor," said one of the guests, "that the pine is to be sent to Her Majesty."

"Nothing of the kind," answered the Mayor.

"Why, then, is it not to be eaten?"

"It was to be eaten by the Queen, not by you," the Mayor rejoined; "but as Her Majesty declined to partake of it, I intend returning it whence it came. I arranged to pay two guineas for the loan, or seven guineas had it been eaten; as it is, I save five guineas."

"Well, to be sure!" exclaimed another disappointed guest, "here is a specimen of Scotch economy for you!"

"Yes," joined in another, referring to the nativity of the Mayor and his young friend, "and how these Scotchmen do play into each other's hands!"

TOO SLOW.

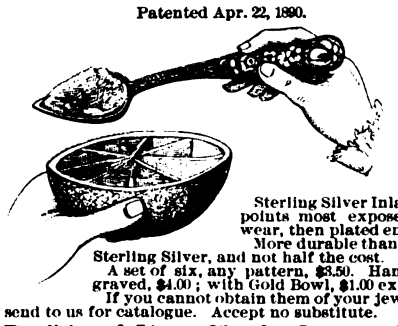
Indians have their own way of watching, and when serving with white soldiers, do not take kindly to sentry or picket duty. An anecdote of a Pawnee Indian picket on Powder River, reported in "War-Path and Bivouac," illustrates the red man's distaste for the methods of the pale face.

One afternoon in March, Lieutenant Schwatka was ordered to make a detail for picket duty, and as the Pawnee scouts were doing nothing, it was thought expedient to give them a turn. A sergeant took half a dozen of them with the regular guard, and having placed the picket post, explained to the Indian chief, as well as he could, that he and his men would have two hours on and four hours off duty until the guard was relieved.

"I'll lend you my watch," said he to the Pawnee, and striking a match, he pointed to the dial. "It's now six o'clock. When the shorter hand moves two points, your first watch will be relieved. Do you understand me?"

"Hey, hey, good!" answered the Indian, and stalked away on his rounds. The sergeant, being fatigued, dropped into a fitful sleep by the low watch-fire of the main guard. Suddenly he was aroused by the Pawnee's hand. The chief was standing over him, the watch in his hand.

"What do you want?" asked the sergeant.



"Injun heap cold; much heap stiff," replied the chief. "Ugh! That thing (indicating the watch) much lie. Long finger (the minute-hand) been all right. Short finger (the hour-hand) him heap tired."

The laughing sergeant tried to show the chief his mistake, for he had been but a short time on guard. "Ugh!" was all the disgusted brave would say, and he would have nothing more to do with picket duty.

To cleanse and preserve the teeth use "*Brown's Camphorated Saponaceous Dentifrice.*" Microscopical examinations have proved that the use of soap is the only safeguard against the accumulation of animal and vegetable parasites on the teeth. Camphor strengthens and relieves soreness of the gums. Price, 25 cents a bottle. Sold at drug stores. [*Adv*

The Holmes & Edwards Silver Co., Bridgeport, Conn.

DONALD KENNEDY

Of Roxbury, Mass., says:

Don't write to me when taking the first bottle of my **Medical Discovery.** I know how it makes you feel, but it's all right. There are certain cases where the **Discovery** takes hold sharp, but it is the diseased spot in you it has taken hold of, and that's what you want. The **Discovery** has a search warrant for every humor, from backache to scrofula, inside and outside, and of course it makes a disturbance in your poor body, but the fight is short, you are better by the second bottle; if not, then tell me about it, and I will advise. I will, however, in the future, as in the past, answer any letter from a nursing mother. Sincerely yours,

DONALD KENNEDY,
ROXBURY, MASS.

MANY YOUNG LIVES

Have been saved by the timely use of Ayer's Cherry Pectoral. Safe, effective, agreeable to the taste, and always ready, it is universally popular. For the relief and cure of colds, coughs, croup, asthma, bronchitis, and consumption,

Ayer's Cherry Pectoral

has long been the favorite remedy. It removes hoarseness, soothes the inflamed membrane, promotes expectoration, and induces repose.

"The merits of Ayer's Cherry Pectoral cannot be over-estimated. It allays inflammation and soreness of the throat and lungs, and cures a cough as no other medicine can. I speak from an extended experience with those affections and their remedies."—H. L. SMITH, *City Editor "Helena World," Helena, Ark.*

"I have always had a weakness of the bronchial tubes, and in consequence, during changes of the weather, have been subject to inflammation of these organs, causing a distressing cough. Of the numerous remedies I have tried, Ayer's Cherry Pectoral affords the promptest and surest relief. I have used it over thirty years, and should be afraid to be without it."—V. KELLER, *Monroe, Ala.*

"I have been subject to bad colds all my life, but last February I had the most severe cold from which I ever suffered. When everything failed, I tried Ayer's Cherry Pectoral, and, in a brief time, was cured."—CHARLES KEARFUL, *St. Joseph, Mo.*

"During a period of thirty-five years, I have suffered at times from lung trouble, but I invariably find Ayer's Cherry Pectoral gives relief."—H. W. KING, *Augusta, Kans*

Ayer's Cherry Pectoral

Prepared by Dr. J. C. Ayer & Co., Lowell, Mass. Sold by Druggists.

POPULAR OPINION

Has decided that Ayer's Sarsaparilla is the best of all blood-purifiers. Among the numerous complaints for which it is the specific are pimples, boils, carbuncles, scrofulous sores, eczema, humors, headache, dyspepsia, nervous prostration, catarrh, rheumatism, and scrofulous consumption. For all diseases originating in impure blood, medical men recommend Ayer's Sarsaparilla in preference to any other. Safe—pleasant—economical.

"For ten years past I have prescribed Ayer's Sarsaparilla and find it highly efficacious in the treatment of all disorders of the blood."—R. R. BOYLE, M. D., *Philadelphia, Pa.*

"I regard Ayer's Sarsaparilla as the best blood medicine on earth, and know of many wonderful cures effected by its use."—J. W. SHIELDS, M. D., *Smithville, Tenn.*

Ayer's Sarsaparilla

Prepared by Dr. J. C. Ayer & Co., Lowell, Mass. Sold by all Druggists.

Has Cured Others, Will Cure You.

ALLCOCK'S

POROUS PLASTERS.

ALLCOCK'S POROUS PLASTERS are the only reliable plasters ever produced. Fragrant, clean, inexpensive, and never failing; they fully meet all the requirements of a household remedy, and should always be kept on hand.

For the Relief and Cure of Weak Back, Weak Muscles, Lameness, Stiff or Enlarged Joints, Pains in the Chest, Small of the Back and around the Hips, Strains, Stitches, and all Local Pains **Allcock's Porous Plasters** are unequalled.

Beware of imitations, and do not be deceived by misrepresentation. Ask for **ALLCOCK'S**, and let no solicitation or explanation induce you to accept a substitute.

Dry Goods at a Sacrifice.

GREAT CLEARING SALE
BEFORE
STOCK-TAKING.

Bargains are offered at prices unparalleled in the history of the New York Dry Goods Trade. As this is to be a Clearing Sale in the fullest meaning of the word, all will find it to their advantage to purchase, even if they do not require the goods for immediate use.

It will pay you well to send your name and address, and receive Price List. (Mailed free.)

LE BOUTILLIER BROTHERS,
48, 50 and 52 West 23d Street,
New York City.
Established Half a Century. Satisfaction guaranteed.

You hear a great deal about self-acting machines. The "Pittsburgh" is about as near that as can be.

Fill and wipe it once a day and trim it once a week—that's all.

Drop us a line and we'll tell you all about it.

Pittsburgh, Pa. PITTSBURGH BRASS CO.

For Boys

This shoe was first made by us for use in families of a few of our personal friends who failed to find in the stores neat and stylish shoes for the boys, which would stand hard wear.

A boy's shoe should be made to stand rough usage; this can be done, and at the same time its style may be preserved, but it costs a little extra.

Isn't it worth something?

Ask your retailer for a pair of the Heywood Shoes for Boys—if he doesn't keep them, we will send them to you. Button or Lace—Sizes 13 to 1½, $2.75, 2 to 5½, $3. Three widths.

Send a 2-cent stamp for our circular, telling you how to secure a pair for yourself **FREE.**

MANY VERSIONS.

Most of the jests which have been current in England for centuries are known also throughout Europe. Students of folklore assure us that, to a far greater extent than is generally understood, these jests are of Asiatic origin, many of them having come from as far east as China and Japan. Some of them are thousands of years old, and who made them first is a question that can never be answered.

There is the well-known story of the impudent Irishman in a coffee-house, who looked over a gentleman's shoulder while he was writing a letter, and when he read, "I have much more to say to you, but a fellow is looking over my shoulder, and I can't tell what he wants," cried out, "Sure, sir, I haven't read a word!" This story is found in the *Bahâristân* (Abode of Spring) of Jâmi, the last of the great Persian poets of the fifteenth century.

The story in the "Wizard Mirth" of John Taylor, the water poet, of the countryman in London who tried to take up a stone to throw at a savage dog, and finding them all fastened hard in the ground, declared that these were strange folks, who thought to grow stones, is found in Arabic, and is told in the thirteenth century by the illustrious Persian poet, Sa'di.

Mr. W. A. Clouston, in the *Asiatic Quarterly Review*, traces a familiar tale, from the ancient Hindoo fables, through Persian, Arabic, and Hebrew, through various versions, in many centuries and languages.

The Hindoo tale is, in brief, as follows: A rich man said to his treasurer, in the hearing of a musician who had entertained him, "Give him a couple thousand panas." The treasurer said, "I will do so," and went out. The minstrel asked him for the money. The treasurer replied, "Formerly, in the rich man, he received this reply: 'Waiting, he you give me that I should make a return.' You gave a short-lived pleasure to my ears by playing on the lyre, and I gave a short-lived pleasure to your ears by saying, 'Wait.'"

In Gladwin's "Persian Moonshee," a poor poet recites verses in praise of a rich man, who promises him a quantity of grain, but later says to him, "You are a blockhead! You delighted me with your verses, and I rewarded you like manner. Why, then, should I give you grain?"

Lucian tells of a philosopher who complained to his pupil because his fees were eleven days in arrears, and was thus answered by the youth's father: "Why, sir, what do you complain of? Has the beguiling you suppose you have had at our hands, since it simply amounts to this: We have given you words of you, and, till now, have paid you no higher coin?"

In "Jacke of Dover, his Quest of Inquirie for the Foole of all Fooles," an English jest-book of the sixteenth century, there is a tale almost precisely like the Persian narrative.

A Japanese story says that Kinsburo, a person of economical spirit, went to the fish-market to buy eels. The appetizing odor of fried eels entered his dining-room and reassured his host of the fact. He sent a servant to settle his bill for the odor of the fish. Kinsburo held the money, asked for on the bill and began to count it aloud. When the man was about to leave, Kinsburo put the money back into his pocket, replying to the astonished servant, "I have made payment for the smell of your fried fish. I do the same for the sight of my money." This story was known in Europe in the fourteenth century.

TRAPPED.

In "Joints in Our Social Armor," recently published in London, there is a characteristic and amusing anecdote of the cunning, cat-like Charles Greville. He was very old, and had gone to see a spiritualistic "medium," who was attracting fashionable London.

The charlatan looked at the gray, worn old man, and thought himself safe. Four other visitors attended the séance, but the "medium" bestowed all his attention on Greville. With much emotion, he cried, "There is an aged lady behind your chair!"

Greville remarked, acutely, "How interesting! She is very, very like you!"

"She has her hands on your head, Greville. She lifts her hands to bless you. Her hands are now resting on your head!" shouted the medium.

At last, the mischievous man said, with a slight tremor in his voice, "I say tell me who this mysterious visitant may be."

"It is your mother."

"Ah," said Greville, "I am delighted to hear that!"

"She says she is perfectly happy, and she watches you constantly."

"Dear soul!" muttered the unscrupulous one. "She tells me you will join her soon, and be happy together."

Then Greville said, gravely, in dulcet tone, "That is extremely likely, for I am going to take tea with her at five o'clock."

He had led on the poor swindler in his usual way, unconscious of the fact that his mother was nearly a century old.

TALL MEN.

Great stature, like exalted station, produces a kind of loneliness. Giants as well as kings may enjoy meeting now and then an equal. This is the point of a little anecdote of incident, which comes from New York.

In the Record building the other day, a man about six feet four in height entered the office to see another giant of similar proportions about inquiring him on with complacency. The two men looked each other over with entire frankness, and then the first said:

"You must be pretty well above three inches."

"Yes, four," said the other, inwardly.

"I've lost a shade under it," said the first man, with a sigh, as they stepped into the same elevator, leaving the other giant standing there with a man who was his companion.

"Now, you see, I can tell no two men address one another in that fashion," he said to his friend. "Men of unusual stature are always interested in looking down into the eyes of other men, that when they are suddenly confronted with a man who looks up into theirs, they are startled, and look at him in a brief way, the effect is almost startling.

"A little chat about unusual heights, and perhaps a number of course," continued the giant. "We men are generally good-natured, you know. You have probably had the same experience it is for me to meet a man of my own height. Sometimes I move along for a year in New York without encountering one."

To break up a cold or a chill no remedy excels "Brown's Household Panacea." 25 cents a bottle. [Adv.

For the Companion.

ONE OF GOD'S LITTLE HEROES.

(A True Incident.)

The patter of feet was on the stair,
As the Editor turned in his sanctum chair,
And said—for weary the day had been—
"Don't let another intruder in."

But scarce had he uttered the words, before
A face peered in at the half-closed door,
And a child sobbed out—"Sir, Mother said
I should come and tell you, that Dan is dead."

"And pray who is 'Dan'?"—The streaming eyes
Looked questioning up, with a strange surprise:
—"Not know him?—Why, Sir, all day he sold
The papers you print, through wet and cold.

"The newsboys say that they could not tell
The reason his stock went off so well;
I knew!—With his voice so sweet and low,
Could any one bear to say him 'No?'

"And the money he made, whatever it be,
He carried straight home to Mother and me:
No matter about his rags, he said,
If only he kept us clothed and fed.

"And he did it, Sir—trudging through rain and cold,
Nor stopped till the last of his sheets was sold:
But he's dead—he's dead! and we miss him so!
And Mother—she thought you might like to know."

—In the paper, next morning, as "leader," ran
A paragraph thus—"The newsboy, Dan,
One of God's little heroes, who
Did nobly the duty he had to do,—
For mother and sister earning bread,
By patient endurance and toil—is dead."

MARGARET J. PRESTON.

A BEAR'S TOE-NAILS.

One of the difficulties which the keepers of certain wild animals in museums and other collections have to contend with is the tendency of the claws to grow into the flesh, in the absence of the wear and tear which they receive in the animals' wild state. A wild bear, for instance, uses his claws so much in climbing that they are not only kept sharp for use, but are worn down to a proper length. Domestic cats know the necessity of this process, and may often be seen scratching vigorously on the bark of a tree for no other purpose than to keep down their claws.

Recently, in the Museum of Natural History in the Paris Jardin des Plantes, it became necessary thus to trim the claws of a young bear of great strength, cunning and irascibility. The animal would not permit himself to be touched. Strategy was resorted to. The cages of the museum communicate one with another by means of trap-doors. In the cage next to the one occupied by the bear, a movable partition was arranged in such a way that the moment the bear entered the cage the partition could be moved down upon him, fastening him between it and the bars of the cage.

Everything being ready, the sliding door between the cages was opened, and the bear invited to step into the adjoining apartment. This he declined to do. He plainly suspected something, and remained on his own side of the door, eying his keepers doubtfully.

Then upon the floor of the adjoining cage, on the spot where the treacherous machine was arranged to catch him, was thrown a delicacy of which the bear is passionately fond—some dried figs. The bear eyed these deliberately for some time, and then, stretching his paw to an almost incredible length, seized the figs deftly, and drew them through the open door to his own side, where he munched them with a satisfied air, nodding slyly to his keepers as he did so.

Having exhausted persuasion, the keepers tried force, endeavoring to induce the bear to go through the door by punching him with poles; but these weapons he hurled about the cage and through the bars with such violence that the men were glad to abandon this procedure.

Then a rope was brought, and, after many efforts, a knot was thrown over the bear's head, and drawn about his neck. Thus lassoed, the unfortunate animal was dragged by main force through the door, and the mechanical partition closed upon him.

The next thing was to get hold of his feet. Although held fast in the partition, with his feet in the air, the bear made such excellent use of his paws that an hour was spent in trying to pinion him. Several times three strong men found themselves unable to hold even one paw, and when a dozen men had at last succeeded in getting all the animal's paws within their grasp, he kept them moving so incessantly that it was impossible to cut the claws.

One by one, however, the legs were pinioned with ropes, and the plucky bear lay completely mastered at last.

Then an operator, armed with a great pair of sharp pincers, clipped off his toe-nails, one by one. The ropes were untied, the men withdrew, and the bear was freed from his vise.

He rose calmly, walked very quietly into his own cage, and sat down to watch curiously the queer movements of the men outside, who were mopping their sweaty brows after as hard a half day's work as they had done for a long time.

HIS WORKING CLOTHES.

Billy Brown, a tall, athletic Irishman, was summoned to appear at a trial in London, as a witness. The case being against his employer, the prosecuting counsel hoped to get some damaging evidence from him. Billy's daily employment was that of a carpenter; and he entered the witness-box in his ordinary work-a-day costume, very dirty and rather ragged.

The opposition counsel did all in his power to confuse "Mr. Brown," but that gentleman was not so easily thrown off his guard. During the examination he was asked if the clothes he appeared in were his best.

"Ah, sure, indeed and they are not, sir," said he.

"Oh, then you have better clothes which you appear in on a Sunday?"

"It's moighty thrue, sir."

"A white waistcoat, gray coat, knee-breeches and smart ribbons?"

"You've met me somewhere," said Billy.

"No," replied the barrister, "I have not, but since you confess that you have better clothes, are you not ashamed to appear in court in that disgraceful state?"

"Not at all," said Billy, pointing to the judge, "sure h's lordship's in his working dress, and I'm in mine."

"Stand down, Mr. Brown," was the barrister's natural order after this.

Itching Piles.

SYRUP OF FIGS

ONE ENJOYS

Both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers, and cures habitual constipation. Syrup of Figs is the only remedy of its kind ever produced, pleasing to the taste and acceptable to the stomach, prompt in its action and truly beneficial in its effects. Prepared only from the most healthy and agreeable substances, its many excellent qualities commend it to all, and have made it the most popular remedy known. Syrup of Figs is for sale in 50c. and $1 bottles by all leading druggists. Any reliable druggist who may not have it on hand will procure it promptly for any one who wishes to try it. Do not accept any substitute.

CALIFORNIA FIG SYRUP CO.
SAN FRANCISCO, CAL.
LOUISVILLE, KY. NEW YORK, N.Y.

Chapped Hands, Rough Skin, Salt Rheum.

A distinguished New York doctor says:

"If the skin is rough from work or exposure, or the hands are chapped, as frequently in cold weather, mild lotions are very useful. POND'S EXTRACT rubbed into the skin several times daily will tend to make it soft and smooth.

"If the skin is hard and scaly, that is Salt Rheum or Eczema. For this, bland ointments are best, as POND'S EXTRACT OINTMENT. Many cases have been greatly relieved by the fluid POND'S EXTRACT. It is well worth trying."

POND'S EXTRACT is unequalled for CHILBLAINS.

Refuse substitutes, probably worthless. Genuine made only by POND'S EXTRACT CO., 76 Fifth Avenue, New York.

ROSES SEEDS

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year.

Payment for The Companion, when sent by mail, should be made in a Post-office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

NATURE AS OUR KIND HELPER.

Nature is always on the side of the right and the good, whether in morals or in physics. Moral health and physical health are, in the higher and the lower sphere respectively, perfect well-being; and where there is an absence of moral or physical health, nature provides for its restoration. A bad man, not utterly lost, may become good. A diseased man, not too far gone, may become sound again.

The simplest form of physical recuperation is the healing of a wound. Bring the parts together, and keep them so, and soon the dissevered muscles and nerves and blood-vessels come again each to his fellow, and all the life processes go on as before. If it is impossible to unite the parts, nature, taking more time for it, fills up the gap with new flesh, and leaves nothing but a scar.

Even parts of internal organs, brain, stomach, liver, intestines, etc., may be cut away, and perfect healing take place. In the case of wounds or ulcers too large to be otherwise healed, bits of skin may be transferred to them from other parts of the body, or from the body of some other person, or even from some young animal, and each bit will become the centre of a new growth, and the wound thus be healed completely, and with little or no disfigurement.

And this power of recuperation is not confined to the flesh. Not only do broken bones readily grow together, but even if large portions are removed, new bone may fill up the space between the severed parts, and thoroughly reunite them.

Furthermore, nature often shows her kind helpfulness by bringing healthy organs to the relief of diseased ones.

If one kidney loses its functional power, the other will enlarge, and do the work of both. If both are more or less affected, the vessels of the skin may come to their aid, and pour out on the surface what would otherwise cause fatal blood-poisoning. On the other hand, when the pores are stopped by a chill, the kidneys come to the rescue, and do a large part of the skin's work. This explains why it is so dangerous for the sufferer from diseased kidneys to take cold.

Our eliminating organs are incessantly at work carrying away from the system waste matter, which would otherwise fatally poison it. What renders some diseases of the kidneys so fatal is the fact of their lost ability to eliminate this effete matter, which thus accumulates to poison and paralyze some of the great nerve-centres in the brain. No city in the world has a sewage system so elaborate and complete as that of the human body.

GUINEA-PIGS.

The secretary of the Selborne Society of England, an association of lovers of wild nature, has lately written an account of the guinea-pig. This creature, the writer says, stands absolutely alone, from one point of view. Do what you will, it is impossible to make a friend of him.

Titmice, robins, squirrels, wild ducks, cuckoos, even rats and mice, have been found amenable to kindness. Even Roman snails, Egyptian beetles, and butterflies have been taught to recognize their masters and show a friendly interest in them; and the snake has his likes and dislikes, his sympathies and his natreds.

A common field snake grew so fond of the writer of the article referred to—a lady—that it would glide in through the window of her drawing-room, coil itself around her dress, and, so far from objecting to be stroked and handled, would, each time that it was taken out and placed on the lawn, return to the drawing-room and submit to the same operation.

It was far otherwise with Fluff, the guinea-pig. He was simply stupidly harmless. "The guinea-pig," this friend of all animals writes, "is the only instance of an animal I have ever known that seemed to be literally without a single habit, apparently without affection, without a temper good or bad, and with no wishes or desires except to be let alone to doze away his aimless life."

The guinea-pig is an absurd little animal for a number of reasons, and one of the most remarkable absurdities about him is his name. He is not a pig of any kind, nor any relation to the pig, and he has nothing to do with Guinea. He is a kind of rat, and his native home is South America.

Why he should have been called a "pig" no one knows, unless it was on account of the slight grunting noise that he makes; and the word "guinea" in his case may be a corruption of Guiana, where the animal has sometimes been found, though it was first brought from Brazil.

His real name is the "cavy," and by that he should be called. In his wild state he is quite differently colored from the domesticated animal, and lacks the spotting of white, black and tawny color which the tamed cavy often has.

It used to be commonly supposed that the guinea-pig drove away ordinary rats, or rather caused them to go away on account of their extreme dislike of him; but even this negative merit is denied to the poor little animal. No one, however, is able to deny his gentleness and submissiveness.

HINDOO ASTRONOMY.

The Hindoo mind deals more with the supernatural than with what comes directly under its observation. As naturalists, Hindoos have never made any great discoveries. Mrs. King, the wife of an English official in India, asked her native servants one evening if they knew any of the stars. This led to an interesting conversation.

Venus was just rising, and they said that was Sukkar, and that he would not let any more rain fall. I reminded them that he was looking over the mountain lately, when that fearful three days' rain fell. Yes, they said, when first he comes there is heavy rain, but after that he puts a stop to it. The planet in the west is his brother, and one of them is always in attendance on the sun, not always the same, but turn and turn about.

They say there are twelve suns, brothers, who shine each for a month. I asked how they knew the suns were not the same, as they looked so much alike.

They said it was easy to know they were not the same. "Some are the elder brothers, and much stronger than the others—so strong that they can kill men. But this month we have a young sun-brother, and next month a still younger one, and then the two youngest, who are so weak that they can hardly even melt the snow."

I asked them what became of the sun-brothers who were off duty. They said they supposed they were at their own home, but did not know where that might be.

As to the fixed stars, they did not have any great opinion of them. They said their names were all written in the Brahmins' books, and some were bigger, some smaller; just like the sahibs, who were some generals, some judges, others captains, and small sahibs,—and who could remember their names?

SHE HIT THE MARK.

Sometimes a single homely phrase has in it so much truth that it sums up an entire situation. Mrs. T.'s cook is, in outward appearance, rather a stupid girl, but she is by no means without a homely wit and a goodly share of common-sense.

Not long since, Mrs. T. had occasion to talk with the girl in relation to a grocer, a man of remarkably plausible manners, but concerning the honesty of whose dealings grave doubts had arisen.

"He is certainly not honest in his weight," Mrs. T. said, "but he is very polite. There is at least that to be said in his favor."

"Oh, yes'm," the girl answered readily, "I always thought he was too sweet to be wholesome."

A MODERN QUEEN.

Four little girls who live in a suburb of Boston were playing together one afternoon, and at last one of them suggested, "Let's play we're queens, and have a court."

"I'll be Queen Elizabeth," said one, "and have a big ruff round my neck."

"I'll be Marie Antoinette, before it was time for her to be killed," said another.

"And I'll be Mary Queen of Scots, because she was so pretty," said the third.

"Who will you be, Elsie?" asked Queen Elizabeth of her five-year-old sister. "I shall have to tell her the name of some queen, of course," she remarked, confidentially, to Mary Queen of Scots.

"Nobody'll have to tell me," said Elsie, with dignity, "I shall be a Queen Anne Cottage!"

HARD TO SUIT.

People sometimes have good ground to complain of their grocers, and not unfrequently the grocers have reason to complain of unjust criticisms on the part of their customers.

One Saturday evening, when there was quite a crowd of purchasers in a grocery in one of the suburbs of an Eastern city, a gentleman came in in a blustering mood.

"See here," he said to the proprietor, "that fancy creamery butter of yours tastes of the firkin."

"I don't see how that can be," answered the grocer, "for I keep that butter in glass jars."

"Well," said the customer, sharply, "it tastes of the glass jar, then!"

RUSSIAN NEW YEAR'S CALLS.

The author of "The Russians at Home" reports a custom of that people which reflects credit upon their humanity, as well as upon their good sense.

The Russians have invented a very ingenious mode of avoiding mere ceremonial visits altogether. Those who do not wish to call on their friends at the New Year send three roubles to the poor; and on New Year's day the journals publish a list of persons who have given to charities the money they would otherwise have spent on cards. This is accepted by every one as a polite and satisfactory alternative.

In a New Haven primary school the music-teacher explained what was meant by "the space below." Then, pointing to the space above the staff, he asked what that was called, and a little girl answered, promptly, "The space behigh."

Neglect of a Cough, Cold, or Sore Throat, frequently results in an Incurable Lung Disease or Consumption. For relief in Bronchitis, Coughs, Asthma, Catarrh, Consumptive and Throat Diseases, "*Brown's Bronchial Troches*" are recommended, with fullest confidence in their efficacy. They are not new or untried, having been tested by wide and constant use for more than a generation, and have attained well-merited rank among the few staple cough remedies. *Sold only in boxes.* Price, 25 cents. [*Adv.*

Send stamp for illus. pamphlet **IN OREGON** to BOARD OF TRADE, Salem [State Capital], Ore.

The annoyance of breaking lamp-chimneys need not be borne.

Get tough glass chimneys.

Macbeth's "pearl top" and "pearl glass" are tough against heat; they do not break, except from accident.

They are also clear, transparent, not misty or milky; they fit and stand upright; shape and proportions are right to direct the draft upon the flame.

They cost a little more than rough and wrong chimneys of common glass that break continually.

A Success, and Why.

"It is a craze," some grocers say, surprised that they sell in a day as many canned soups as they used to in a week. A craze? No. A wonderful increase? Yes. But not surprising, for our sales indicate that people believe that we are giving them a better soup and at less cost of time, trouble and money, than they can produce at home. Be sure you ask for and receive a can of ours, otherwise you might think, you also, that "it is a craze" and that there is nothing in it.

KENT HAMPDEN.

IN SEVEN CHAPTERS.—CHAPTER II.

Hunting the "Hidden Foe."

Kent Hampden was president of a secret Society. There were five members—just enough to fill the offices: one president, two vice-presidents, a secretary and a treasurer. When Tom Congdon joined, there was no office for him; but his father being a representative in Congress, Tom had picked up so many ideas about the rules of debate, that the Society created an office expressly for him. He was made "parliamentary tactician."

The Society had its by-laws, passwords, a badge and a name. The public—that is, the remainder of the pupils of Mr. Hildreth's school—knew it as the O. W. B. S. Mrs. Hampden, who baked gingerbread for the members every week, alone knew them to be the Order of Wild Beast Slayers. There were bears, wolves and an occasional panther still to be found on the hills bordering the river. None of the boys had ever yet seen one; but hope sprang eternal in their breasts every Saturday, as they set out for slaughter.

Besides, ought not "wild beasts" to include the lynxes, wild-cats, gray squirrels, snakes and musk-rats which they really killed? The members were sworn to "rid their native land of all noxious creatures, the enemies of humanity."

One Friday evening, about five weeks after Mr. Hampden's departure, the six boys were assembled to watch Mrs. Hampden make their new badges. She was embroidering O. W. B. S. with gold thread on little tabs of black velvet, which were to be conspicuously hidden on their waistcoats.

"We must take a big lunch to-morrow," said Joe Doty. "We'll start early. Tom, you, Monroe and Will can go out over Hubbard's hill, and search that range. Kent, Si and I will take the north trail. We'll meet at McCulloch's Leap."

"I don't know that I shall go," said Kent. "This search is all tomfoolery."

His mother looked up, startled at his irritated tone. The faces of the other boys were red and excited; Kent's was annoyed and grave.

"What are you going to hunt?" she asked. "Squirrels?"

The boys looked doubtfully at each other. "Now, Mrs. Hampden," said Tom Congdon, "this is a serious thing—a secret. But we'll tell *you*, if you'll be as dumb as death about it."

"I see no use in bothering mother about it," said Kent.

But Tom hurried on, excitedly. "We have a Hidden Foe! We're going to run him to earth, and punish him dreadfully to-morrow. You see, we used to have the run of all the hills. We set out traps, and left our powder or tackle in our hiding-places just as safely as in this parlor. Why, Kent and I had a secret den where we kept our fishing clothes a whole summer.

"But for six months there's been a thief prowling on the hills. One week the traps are all robbed; the next, the powder is taken. My shot pouch, that I left in the den, is gone, and Si Jarret's brand-new wamus with it. We're bound to run that scoundrel down to-morrow, be he black or white! Come! You'll go, Kent!"

"I suppose so," said Kent, uneasily. "I'll shoot squirrels, and you can play sheriff."

Tom Congdon's badge was the last one finished. Carey, who had come in, was allowed to pin them on, and then she proudly surveyed the boys. "I should think," she said, earnestly, "you would want to go over the river to the Reserve, and fight Indians."

"What a bloodthirsty baby you are!" said Kent, kissing her. "Where are you going, Tom? It's early."

"I know, but my father came home this afternoon. I scarcely saw him, for your father, Si, met him when he got out of the coach, and stayed to have a talk with him."

Tom was an incessant talker, and never so happy as when he had a secret of his own or some one else to scatter broadcast over the town. He went on, gleefully: "Your father was talking all the time of *you*, Si. I listened to his account, and thought, 'Hello! Can this saint be Si Jarret?'"

Josiah wriggled uncomfortably, but said nothing.

"I asked father why Mr. Jarret was singing Si's praises, and—he told me."

Tom paused to glance around triumphantly at the interested faces about him. "He told me that your father asked him to appoint you to West Point."

The boys were too much surprised to notice the look which, at these words, passed between Kent and his mother.

The boys went out, all talking at once. Kent came back when they were gone, and stood by the fire.

"What is to be done, mother? Colonel Congdon will give the appointment to Si! Father has not written to him about me. You see how Mr. Jarret is pushing it. Met him at the coach door—"

"I can't bear that man Jarret!" said Mrs. Hampden.

"He's not to blame for working for his son." Kent was always more moderate than his mother or father. "There is no time to lose. Colonel Congdon said he would make the appointment this term for the next vacancy."

"What if you do not get this appointment?"

"There will not be another vacancy for four years."

"And your father will not be at home for two weeks! I cannot imagine why he has not written!" Mrs. Hampden's voice began to choke, and the tears came. "I declare, I don't know what to do!"

"I know!" Kent seized his hat. "I'll go to Colonel Congdon myself!"

"Oh, my son!" Mrs. Hampden started up. "That is ridiculous. But, no! If he sees you, he will know what a noble boy you are. Go! O Kent, hurry! God help you, my boy!"

Mrs. Hampden and Carey sat by the fire, crying and praying silently all the evening. They imagined a dramatic scene—Kent urging his claims, and the colonel, deeply touched by his gallant mien, consenting; but the meeting really was very commonplace. The colonel was called out of the parlor to see Kent.

"Colonel Congdon, I am Ralph Hampden's son," he said. "My father intended to ask you to appoint me to West Point; but he is out of town, and I came myself. I was afraid—

"That I would give it to Jarret's son to-night?"

The Representative laughed. "Your father not at home, eh? I hear he has been busy in the campaign. Stumping the district for Clay?"

"Oh yes, sir!" Kent said, eagerly. He had been taught from his cradle the fervent loyalty to Henry Clay shared by all Virginian Whigs. The country was just then agitated by the presidential campaign, in which Clay was a candidate.

The Colonel tapped Kent on the shoulder, smiling. "A pity you have not a vote, my lad: I hear that your father is taking a prominent part in local politics now."

Kent's eyes shone proudly. "You might have noticed the big posters, sir, all over town: 'For President, Henry Clay. For Mayor, Ralph Hampden.'"

The Colonel nodded. "Well, my boy, this matter of yours is not to be settled in a minute. I'll look into it."

Kent said good night, and went down the street, walking as if to triumphant music. No promise had been given, but he felt quite sure of his appointment. To be an officer, like Napoleon, like Washington! It had been the dream of his life! The whole future opened before him full of waving banners, of armies, of marching music. He passed the flaring red placards bearing Henry Clay's name and his father's. His father deserved to be ranked side by side with the great man of the country!

In this triumphant mood he struck across the wharf, making a short cut homeward, and passed his father's warehouse.

"Kent!" a voice called from the door. It was Pomeroy, the book-keeper. "Can you come into the office for half an hour?" he asked. "I must go home to supper, but I am coming back. Will you sit here till I return?"

"You'll not be long? I have some important news for mother," said Kent, as he sat down, reluctantly.

"Heard from your father? No? Very queer that he has not written!" grumbled Pomeroy, as he hurried away.

The warehouse was dark and vacant. A single lamp burned in the office where Pomeroy had been at work. Kent took up a paper, but was too much excited to read.

At that moment a hurried footstep sounded without on the cobble-stones, and a tall man, whose heavy cloak and fur cap showed that he was a traveller, stood in the doorway.

"Is Mr. Hampden here?" he asked. Kent rose. "No, sir."

"Shall I find him at his house?"

Kent came nearer as he answered. By the dim light he caught an uncertain glimpse of the stranger's face. His heart suddenly throbbed wildly. Could it be—

"Out of town!" The traveller paused, annoyed and disappointed. "This is vexatious! I have just arrived in the coach, and the boat leaves in a few minutes. I had a favor to ask of Mr. Hampden."

There could be no mistake! There was the towering forehead, the wide mouth; there were the searching eyes. The portrait of the stranger hung in every house in the town. Kent's voice trembled with his excitement.

"Mr. Clay," he said, "I am Mr. Hampden's son, Kent. Could I—can you make use of *me*?"

Mr. Clay lifted his hat again, and held out his hand with a quick, pleased smile.

"Thank you, my boy! The fact is, I find that I am out of ready money, and I wished to ask your father to cash a check for me. But—"

"Oh, I can do it!" exclaimed Kent, throwing open the desk, and drawing out some notes.

Mr. Clay hesitated, with the check in his hand. "But are you sure that you have authority?"

"Oh, indeed, yes! I act as cashier for father sometimes. He says that I am more careful about money than he is."

"That may be," said the visitor, laughing. "Hampden is no fonder of reckoning dollars and cents than I am myself. Well, here it is—one hundred dollars."

Kent counted out the notes.

"This is a real service," said Mr. Clay, as he strapped them into his pocket-book. "I could have asked any business man to cash the check, but I am tired, and wish to pass through the town quietly. Your father is a very old friend."

The bell on the boat rang, but he leaned leisurely against the desk, scanning Kent's face as though he had no other interest in the world.

"And you—what are you going to do with your life, my boy?"

"I intend—I mean I hope to go to West Point."

Mr. Clay was silent and thoughtful a moment. "Very good! I shall keep my eye on you, Kent. We shall be good friends, always."

Kent stammered out something, he knew not what, the words fairly tumbling over one another

In Wetzel's Cave.

Edward D Duffield Jan91

in his vehemence, and ending with, "Oh, if I only had a vote next month!"

His new friend laughed, shook hands warmly, and left him, having secured a faithful follower for life by a smile and a few words.

Kent heard the cheer as he reached the boat and was recognized. Then, Mr. Pomeroy appearing, he dashed homeward, bursting with his wonderful news.

Colonel Congdon, meanwhile, went in to supper, glad to thrust aside business and politics a while, and to chat idly with his wife and Tom. He soon had heard all about the Wild Beast Slayers, and took a keen interest in the hunt for their Enemy to-morrow.

"We were at just such pranks not very long ago," he said to Judge Morris, who was supping with them. "By the way, Tom, young Hampden also wants the cadetship. Which boy do you recommend?"

"Kent, sir," said Tom, promptly.

"But Jarret's son is at the head of his class?"

"Yes. But Si is a prig, and Kent is always a gentleman."

His father laughed. "Now, do you know, judge, that is what we want in our officers. The high, nice sense of honor—the untarnished character of a gentleman. I am anxious about this appointment. I want the boy sent to be a credit to Western Virginia hereafter. Tom," he said, after a moment's thought, "what would you say if the judge and I joined your hunt to-morrow? I should like to see those boys, behind the scenes. I want to feel a gun in my hands again, and dodge the politicians for a few hours at least."

The Wild Beast Slayers received Colonel Congdon the next morning with loud acclamations. Kent had told them that the Colonel had killed panthers and wolves on the Cheat Mountains.

They bagged a good deal of game during the morning, and then kindled a fire, broiled birds and made coffee. The boys told stories of hunting exploits, while the Colonel lay on the grass.

Tom Congdon had reverted several times during the day to the intended search for the thief who had stolen the game and other belongings of the Society, but each time he had been checked sharply by Kent.

"How will you set about such a hunt as that?" Kent said. "Where will you find his trail? Do you suppose he has hung the pouch and game on trees to blaze the path for you to his house?"

Tom took him apart at last. "What do you mean, Kent? Do you like to furnish both powder and squirrels to a thief?"

Kent looked startled, but he controlled himself. "I have a reason, but I cannot tell it," he said.

They were climbing a steep hill when the Colonel said, "Lewis Wetzel's cave used to be hereabouts. Don't you know it, boys?"

"No, sir! A cave?" They all crowded close except Kent, who hung back, pale and watchful. The Colonel stopped and took his bearings. "Due north from that rock; east of that great gum-tree—I have it. It must be behind that rock."

They climbed through the narrow passage. Tom shouted, "Here, father! Here's the mouth. Hurrah! I'm in first!"

The cave, which was about ten feet deep, was completely hidden by the rock and hanging vines.

"Wetzel used to hide here," said the Colonel, "and imitate the call of the wild turkey. When the Indian followed it he shot him, and—what have you found there, Tom?"

Tom dragged forward a dark mass. "Look at that!" he panted. "The powder-flask! The traps! Si's wamus! All jammed under this ledge. This is the thief's den!"

The boys were wild with excitement, searching for booty, but they found nothing more, and were at last persuaded by the Colonel to turn homeward. Tom observed that Josiah had suddenly grown grave and silent. "What's the matter with you?" he said, enforcing the remark by a thrust in the side. Si drew him behind the others.

"O Tom! look here! Look at that!" His hands shook as he held out a memorandum book, marked on the back, "Kent Hampden." "I found that below the ledge."

"The rascal has stolen it from Kent!" said Tom. "I'll call him —"

"No, no! Look at that!" On the last page was written, "The cave, September fourth, 1824. K. H."

"That is Kent's writing," said Josiah, with a scared face.

"It looks like it. Give it to me." He closed the book and put it into his pocket. "It looks like Kent's writing. But look here, Si Jarret! I wouldn't believe that Kent stole if I saw him do it! I wouldn't believe my own eyes if they made out Kent Hampden to be a thief. No! you'll not have the book. Stand off! I'll find out the truth of this, and if you tell about the book I'll break every bone in your body!"

He stopped Kent on reaching town to shake hands with him, to the surprise of the Wild Beast Slayers, who were not given to such ceremonial usages.

Kent, shouting good night, started to run down the street, for the lights of the house were in sight, and he was impatient to see his mother and Carey.

Candles were flaring in the hall. The doors stood open. What could have happened? He pushed into the parlors. Carey met him. "Father has come," she whispered, with a sob.

Mr. Hampden, still in his great-coat and cap, stood with his back to the fire.

"Yes. Here I am, Kent!" he said, with an unnatural laugh. "But you need not welcome me. I have lost that money!"

For the Companion.

LOTTIE'S ROMANCE.

In a far corner of the attic sat Lottie. Around her were her chief treasures—half a dozen fairy books much the worse for usage, some tinsel and spangled dresses, a game or two and an old stuffed doll, whose head had unfortunately been sewed on hind side before.

This attic was Lottie's retreat on rainy days, and she spent whole hours there, blissfully happy with her enchanted ogres and princes. But to-day her bright face was pouting, and she sat looking moodily out of the window at the farm wagons and people passing in the road below.

Well! who would not have been disappointed? It was her tenth birthday—the first time she could write her age with two figures, and she had no birthday party. She had been promised one long ago. There were to be little frosted cakes with colored candies on top, oranges and tiny three-cornered sandwiches. A hundred times she had told her little friends that they were to be invited, and had secretly shown them her red merino dress trimmed with fancy braid, which she was to wear on her birthday for the first time.

Just three days before, Nancy, the cook, had fallen and fractured her thigh, and Mrs. Harding had more than she could attend to, taking care of the invalid and cooking for the family.

"I am very sorry, Lottie," said the poor mother, who knew well the child's disappointment, "but I have not time to get ready for your party now. When Nancy gets well, you shall have a lovely one."

But Lottie refused to be comforted.

"It would not be a birthday party, coming afterward," she said.

For three days she had whined and pouted, and all the morning of this day which was to have been so merry, her small face was wrinkled in frowns.

Here it was after dinner, and Lottie had not seen a single little friend, had not tasted a frosted cake, and had not even glanced at the red merino laid away so carefully in her mother's drawer.

After a time she sighed, turned away from the window and looked for her "Arabian Nights." All at once her eye caught sight of a new book among the pile, and she lifted it curiously. It was larger than the others, with a gorgeous picture on the outside, and on the fly-leaf, in a round, boyish handwriting, were these words:

To LOTTIE HARDING,
ON HER TENTH BIRTHDAY,
FROM MOSES.

Moses was Lottie's brother, a good-natured, homely fellow, some years older than herself.

When Lottie saw her new gift she forgot her trouble for a time, and turned the pages with interest, wondering which story to begin. It was a picture that finally decided her. It represented a little girl taking leave of her weeping family, while just outside the door stood a magnificent equipage, ready to take her far away. Underneath the picture were the words:

"'Good-by,' said the little foster-child, as she turned to the door, 'you have treated me very kindly, and when I become queen, I shall send for you all to come and live with me.'"

It was a charming story about a little girl who lived with a humble wood-cutter and his family, always thinking she was his daughter. One day he called her to him and told her that her father was the king, and that when she was twelve years old he would send for her to come to him.

Lottie read it all with interest, and pondered long on the story. How strange it would seem to be a foster-child. What, now, if she were one, and some men in livery would drive through their little village, and take her far away to some splendid castle to live! She would wear her red merino, she thought, and all the family would weep when she was leaving. They would be sorry, too, no doubt, that she had gone without the birthday party.

In the midst of her meditations Lottie heard her mother calling her from below, and moving listlessly to the stairs, she answered, "What, mamma?"

"Come down, dear, and get dressed," said Mrs. Harding. "Your Uncle Sandy has come for you to go home with him, and stay all night with the girls. You can wear your red dress."

Now, ordinarily, Lottie would have clapped her hands and hurried to get ready; but the thought of the birthday party restrained her, and she went downstairs slowly, without saying a word. In the kitchen stood Uncle Sandy, a big smile on his sunburnt face.

"The girls and you will have a little party, after all," he said to Lottie, "and we will have muffins and maple syrup for supper."

The little girl did not reply, but went in her mother's bedroom, and silently allowed Mrs. Harding to brush her glossy hair and button the red merino. How bright and pretty it looked! But Lottie did not glance in the looking-glass. She put on her hat sullenly and moved slowly toward the door.

"Good-by, dear," said her mother, "be a good girl, and have a nice time!"

She waited for the customary good-by kiss, but Lottie turned away without it, and Mrs. Harding, with a sigh, resumed her work.

The old farm-wagon did not look like the gay barouche in the fairy story, but Lottie climbed inside quickly, thinking to herself as she arranged her bundles on the high seat:

"I'll pretend I'm going away forever, and this is my carriage."

Uncle Sandy lived three miles away, in the country. As long as she could remember, it had been a great delight to Lottie to visit there. There were three girls—one, Lottie's own age or a little older, and the others, twins, a year or so younger than herself. All three of them stood in the road as the wagon approached, waving their broad hats and calling out to Lottie in their high, childish voices.

When Uncle Sandy helped Lottie down from the wagon, she smoothed out her dainty merino, and walked with her cousins to the house. They looked at her birthday dress with open-eyed admiration, and Lottie held up her head proudly and smiled at their eager comments.

When she had left her package with Aunt Mattie, the children went out in a little arbor Uncle Sandy had built for them, and here Lottie told them fairy stories and related the adventures of Sinbad. She spread her little red gown around her on the bench where she was sitting, and looked down with pride on the pretty red shoes her father had given her.

Her little cousins, in their much-mended and faded calicoes, looked on her as some young princess, and stood a little in awe of their dainty cousin, till Lucy, who was small for her age, climbed up on the bench by Lottie's side and threw her arms around her neck.

"Tell us another, Cousin Lottie!" she cried, burying her own yellow head among Lottie's dark locks.

Lottie drew herself away from the child, and as she did so, the thought of the little foster-child came suddenly to her mind.

"I'm not your Cousin Lottie!" she exclaimed. "Didn't you know I was adopted?"

Lucy paused, startled, and the two others turned and looked at her in amazement.

"Why, Lottie!" said Mary, the oldest girl.

Lottie now grew enthusiastic.

"It was when I was very little," she said. "I have almost forgotten it myself. When I am twelve years old they are coming to take me away in a magnificent—" She stopped suddenly, for Uncle Sandy, hearing their voices, had drawn near the doorway, and now stood looking in upon them and smiling.

"What are you children talking about?" he said.

Lottie sought to speak, but the words stuck in her throat. She trembled with fright lest he had heard what she had been saying.

"O papa!" cried Mary, "Lottie has just told us she is an adopted child!"

Lottie's cheeks crimsoned, and with heart wildly beating she glanced at her uncle, to see the stern look of reproof she knew so well, in his face. But instead, his expression was one of intense surprise.

"Why, Lottie!" he said, "I didn't know that you knew that!"

There was a moment of silence, and then Mr. Marsh walked slowly away toward the house.

Lottie's heart had turned to lead. It was true then! The children all remained looking at her in silence. Finally one of them said, "When did you say they were coming for you, Lottie?"

Lottie started, and grew pale at the thought. When, indeed! They might come any minute, and, besides, who might the "they" be? Uncle Sandy had not said who her real parents were.

"Don't speak to me," she cried, "I want to be alone."

She ran quickly out of the summer-house, and took refuge at the end of the garden, where she sat down to think. Ah! the agony of the thought! To whom did she belong, then? Not to her mamma, who had loved her so well and worked for her so constantly? Lottie sobbed now, as she remembered that she had not kissed her good-by. Not to her father, who gave her the pretty red shoes, and sat up nights with her when she had the fever? No,—and not to Moses,—poor, dear, homely Moses, who always tried so hard to please her?

Lottie's heart seemed breaking. Who was she, then? And who were the people who might come for her? Perhaps they were on the way, even now. Maybe she must go to some horrid old woman like old Aunt Tabby, who lived near the mill, and even if it was a queen, thought Lottie, she would never, never want to go. She looked down the white road toward her home. Never had it seemed so far away to her before! And yet there was time to reach it before dark, if she walked quickly. Moses had done it often!

Eager now to lose no time, Lottie crawled behind some tall cedars, and there, out of sight of the children, climbed the low fence and was soon speeding down the road.

The day was warm and the roads were dusty. Lottie's little red shoes soon became white with dust, and pained her feet cruelly. Her eyes were blinded with tears, and her heart filled with dread and sad forebodings. At last she passed the Gilson farm, which was two miles from home.

She had not gone far beyond it, and was seated by the roadside to rest, when she saw a cloud of dust in the distance behind her, and in a moment recognized old Dan, her Uncle Sandy's horse, and behind him the high buggy. Her quick imagination told her at once what had happened. The children, perceiving her absence, had told their father, and he had started in pursuit. In a minute he would be upon her.

Lottie looked around in despair. Just back of her, on the other side of the fence, was a field of corn whose tall leaves seemed beckoning to her. Hastily crawling between the bars, she hid herself among the corn-stalks just in time to see the wagon pass, and Uncle Sandy's anxious face searching the roadside.

She waited till long after the buggy was lost in the distance, and then, rising from the ground, made her way through the corn toward the fence. Suddenly she heard footsteps behind her, and a harsh voice called out: "Stop there!"

Lottie paused, her knees trembling, and, turning, saw a rough-looking man behind her.

"Why!" said he, as he saw her face, "it is the little lady!"

"Oh! is that you, old Larry?" and Lottie drew a breath of relief.

"I couldn't see you well at first," explained the farmer, "and I thought it was some one stealing my corn. But, land sakes, child, what are you doing here?"

"I'm going home," said Lottie, faintly.

"Old Larry" looked at her curiously. He was an aged Swede, who worked from farm to farm, earning his livelihood, and Lottie had often seen him at Mr. Marsh's.

"You can't walk home," he said, kindly. "Come up to the house, and I'll ask Mr. Gilson to let me harness the horse and take you home."

"No," said Lottie, "I must not wait."

"You'll get there quicker," answered Larry, "and see—you're tired already. It's past supper-time, besides. Have you walked far?"

"From Uncle Sandy's."

Larry was going to ask another question, but perceiving the child's embarrassment, he did not. Feeling it useless to resist, Lottie allowed him to lift her over the fence, and then walked by his side toward the Gilson house.

"I wonder," she thought, "do they all know I am adopted?" After a moment she spoke to the farm-hand. "Did you ever know any adopted children, old Larry?"

He blinked hard at her. "Land sakes! yes, child. Why?"

"I've been reading a story about one," she said, quickly. "Are there any in our town?"

"I've heard tell of *one*."

Lottie's breath came short. "Tell me about her," she said. "It's a girl, isn't it?"

Old Larry waited a moment.

"I've sort of forgotten about it," he commenced. "Some one told me of it when I first come to these parts, five year ago. Seems to me, there was some wandering musicians come along here, long time ago, and the woman that played the harp had a leetle baby. They said she wasn't able to take care of it, being sick an' poor and her husband a drunkard, so some family took pity on her and 'dopted the child."

Lottie's heart sank lower and lower.

"Oh! Larry," she said, "was it a girl?"

"Why, yes," he answered, "seems so! I can't recerlect myself."

Lottie sat down by the roadside. "I'm too tired," she said, "too tired. I must rest awhile."

"Poor little lady," said Larry, kindly.

"Tell me more about her, Larry. Will they ever come back for her?"

"I dunno, like as not, I guess."

"And will she *have* to go with them?"

"Yes, I reckon so."

There was a long silence. Lottie heard the thump, thump of her throbbing heart. Larry finally broke the silence. "Are you rested now?"

"Yes," she said with an effort.

They soon reached the farm-house, and Lottie stayed with Mrs. Gilson while Larry harnessed the horse. The good woman besought Lottie to eat some supper, but the little girl stood silent and downhearted, looking out of the window.

Suddenly, far down the road a wagon appeared. Lottie saw old Sally, their mare, and she knew well who was driving. Motionless she watched it drawing near, till the earnest faces of Mr. and Mrs. Harding could be recognized. Then she saw old Larry come out in the road and hail her father, and a moment afterwards she was in Mrs. Harding's arms.

"My poor little girl," said the mother, tenderly.

"Oh, mamma, mamma!" Lottie sobbed, "do not let them take me away from you!"

Mrs. Harding stroked her hair lovingly.

"You are my own little girl, Lottie," she said over and over again. "Uncle Sandy has told me about it. He heard what you were saying, and

Digitized by Google

it was only to let you see how wrong it was in you to tell such stories."

Lottie looked up, questioningly, through her tears.

"But the wandering musicians and the little girl baby?" she cried. Her mother looked puzzled for a moment, then a light broke over her face.

"That was the little German girl, who lives on the hill," she said.

Then Lottie drew a heavy sigh of relief, and buried her head in her mother's shoulder.

"Oh, mamma, are you *sure?*" she asked.

Mrs. Harding, laughing now, told Lottie to stand on a stool so she could see their two faces in the square, old-fashioned mirror.

"See how much we look alike," she said, "two little black eyes, one little round nose and black hair just the same."

"But the mouth—the mouth, mamma," said Lottie. "Yours is straight, and mine is so curly."

"Ah, yes," replied the happy mother, "and underneath your papa's beard, his mouth is curly, too."

Lottie put her arms tight around her mother's neck, and kissed her.

"Forgive me, mamma," she said, "and I'll never want to be a little foster-child again."

FRANCES BOARDMAN.

PRESENT FIDELITY.

To-day, to-day, is Nature's song;
Build well to-day, the past forget;
Live for to-day, its joys prolong;
To-morrow is a dream as yet.

For the Companion.

AT LOS VALLES GRANDES.

IN SIX CHAPTERS.—CHAP. II.

Attacked by the Navajos.

To our surprise, the six Navajos who had captured our cattle, and who were driving them rapidly toward the southern end of the valley, made no attempt to shoot the herder, who was for some time within easy arrow range.

First Sergeant Cunningham had got the men into line with the first alarm, but had hardly "counted off" when we heard the report of the sentinel's rifle from the ridge, and his prolonged shout:

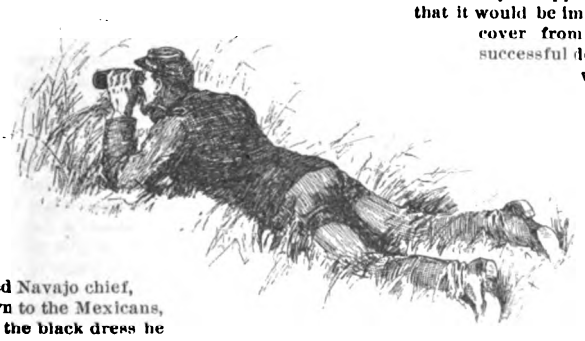
"Indians! Indians! This way! this way!"

Looking in the direction of the guard-house, I saw the sentinel and guard rapidly getting into line, and gesticulating wildly to us to come in their direction.

I broke the company to the rear through the intervals between the cabins; shouted to the ten prisoners to procure rifles and belts from the orderly-room and take their place in line; ordered a sergeant to break open an ammunition box with an axe, and distribute packages of cartridges to the men, who, when they fell in, had only the marching allowance of ten rounds; told the Mexicans to lend their aid, and we advanced rapidly and steadily up the slope.

As our heads rose above the crest of the ridge, we saw, scarcely two hundred yards distant, a compact body of about three hundred mounted Indians charging down upon us.

We deployed as skirmishers, the men sheltering themselves behind bowlders, logs and ridges.



The first result of our appearance and well-sustained fire was to cause a check in the charge, and then a break into two parties, one of which swung around by the right arm of the ridge, and the other by the left.

Death of the Chief.

To meet this change, I divided my men into two equal divisions, each of which moved along the interior slope, the men keeping pace with the running ponies, and loading and firing as they ran.

Before the break the Navajos had lost six men and seven ponies, and had been held in close column only by the efforts of a chief who had been conspicuous in the advance from the first.

Taking careful aim, Cordova fired, and this celebrated Navajo chief, known to the Mexicans, from the black dress he habitually wore, as *El Ebano*, or Ebony, toppled from his glossy black steed to the ground. With his fall the break occurred, and the two parties, without much pause, gradually swept past our two flanks, and reunited beyond rifle range in our front.

Looking at the Enemy.

No serious casualty had occurred to us. Kennedy, one of the men wearing ball and chain, had been shot in the left shoulder with an arrow. Sergeant Cunningham's scalp was grazed by the same kind of missile, and two privates were each cut along the ribs by bullets. A shoulder-strap had been torn from my left shoulder—a fortunate overshot for me.

In accordance with a time-honored custom where prisoners are used in a fight, I ordered the irons knocked off the three soldiers wearing them, and returned the ten to duty.

We now turned our attention to making the camp defensible against a possible renewal of the attack. The advantage of numbers was decidedly upon the side of the Indians, and if they could show the firmness and dash of white men, our chances of repelling an attack were small. Counting the Mexicans, we numbered but forty-eight to their three hundred.

Preparations for Defence.

We were in the centre of a large valley, with no knowledge of our surroundings, nor with any way out except the road by which we had entered, and with no chance of availing ourselves of that; for should we leave the protection of our ridge and cabins, and take to the open valley, we should be at the mercy of our foes.

Even supposing we could pass out of the valley with safety, there were the forests and defiles filled with natural ambuscades, which we could not hope to pass, and reach the Rio Grande alive. Again, the enemy might be reinforced, while there seemed to be no reasonable hope of assistance coming to us.

Only a few hours of daylight remained. Whatever was to be done in preparation for defence must be done at once and quickly.

In the wood-yard there were dry pine logs, many of them four feet in diameter, and all about twenty feet long. With drag-ropes and by rolling, we conveyed the logs to the points of the horseshoe-shaped ridge, and to each end of the guard-house. With them we made a very effective barricade.

While this work was going on, I occasionally looked through my field-glass at the enemy. The Indians had moved a mile to the south, on the western side of the stream. They had dismounted, and appeared to be holding an animated consultation.

After a considerable interval of time, four of their number mounted, and collecting the ten beeves, mule and burro, which were grazing near by, drove them up and down in front of the camp, beyond rifle range, making gestures for us to come and take them.

I did not respond to this invitation. I quite agreed with Private Tom Clary, who, as he placed his brawny shoulder to a big log to roll it up the slope, remarked to his "bunky," George Hoey, "That's an invitation, begorra, I don't fale like acceptin'."

"Ye'd niver make yer t'filet for another assimbly if ye did, Tom. I don't think the Liftinint intends to risk our hair in that way," replied Hoey.

An Attack Well Planned.

To have attempted a recapture of our stock would have necessitated a division of our force, and the main body of Indians stood ready to dash in and cut off a party going out into the valley.

This is precisely what they attempted to do in the first place. Three years later a Navajo chief, who took part in this attempt, told me that El Ebano had caused the valley to be thoroughly reconnoitred three days before the Californians were relieved.

It was his plan that a small body of dismounted Indians should creep up to the herd through the deep grass, whoop, and fire at the herder, taking care not to hit him, in order that the interest of his comrades might be centred in his escape, even if they did not follow the natural impulse to save the stock.

The Mexicans had been seen to enter the valley, and no notice had been taken of them, that the garrison might feel all the more secure.

The chief thought that the diversion of the soldiers in the direction of the cattle would permit the main body to approach so near before discovery that it would be impossible for the soldiers to recover from their surprise, and make a successful defence. Had the sentinel still walked on the beat made use of by the Californians, all that El Ebano planned might have happened.

The Indians knew nothing of the change of garrison, or the alteration in the beat of the sentinel, until too late to change their plans.

But for this almost accidental deviation in routine, the Navajos must have ridden out of Los Valles Grandes with forty-eight fresh scalps, and this true tale would not have been told.

Failing to draw us out in pursuit of our lost stock, the Navajos moved slowly away in the deepening dusk to a point close against the forest on the eastern side of the valley, and nearly opposite our camp. There they built a row of five fires, which soon became in the darkness the only evidence of their presence.

I caused the number of sentinels to be increased, and went to bed without undressing.

Half an hour before midnight the sergeant of the guard aroused me to report that strange sounds could be heard from the rear of the camp.

I went to the top of the ridge, and listened. A noise like the rushing of wind through branches came softly to my ear, with occasional pauses. I sent for the elder Cordova, and he listened long, with his ear close to the ground. He gave his opinion that the Indians were creeping up for another attack.

Orders were immediately sent to Sergeant Cunningham to wake all the men without noise, and assemble them under arms.

At midnight the moon rose over the mountains and bathed the valley in a beautiful light. I stood on the ridge, and saw the silvery sheen slowly descend the slopes of the western mountains, and the deep shadow drawn from the surface of the valley like a dark coverlet from a downy couch. The ripened grasses looked nearly white in the uncertain light.

As the moon cleared herself from the summits of the range, and her rays fell upon the line of the fading camp-fires of the Indians, my field-glass revealed the fact that the raiders had departed.

Ponies and riders were gone. In the whole length and breadth of the valley not a living being was in sight outside of the limits of our encampment.

An inspection made to the rear showed that the dead Indians had been carried away. That accounted for the rushing or creeping sounds we had heard.

Arrival of the Mail.

Accompanied by a dozen men I crossed to the Indian fires, but found nothing there except the horns, hoofs and entrails of the cattle. The meat had probably been packed on the mule and burro to ration a raiding party into the valley of the Rio Grande and beyond.

A well-defined and fresh trail went back through the woods, which Cordova assured me led to the town of Peña Blanca.

We went back to camp. I wrote an account of the attack and repulse, and despatched it by the Mexicans to the department commander at Santa Fé.

The general despatched a hundred troopers to Los Valles Grandes, where they came galloping into camp after dark, two days after my messengers left the Valleys. As Captain Wardwell sprang from his saddle and wrung my hand, he exclaimed:

"Bless you, old fellow, I came out here expecting to bury the bones of you and your men."

It seemed to have been the general opinion at Santa Fé that the Navajos would renew their attack. Perhaps I did not fully realize our danger, but I had not at any time been greatly concerned for our safety.

Life in Camp.

I was glad to see the California cavalry officers, and for the three days which they spent in the valley in order to rest men and horses after a forced march, I did the honors of the region to the best of my ability.

On the day that the troops departed the wagons returned loaded with supplies. With them was sent a fine saddle-horse and equipments for my personal use—a compliment of the chief quartermaster. Instructions were received to return all the wagons but one to headquarters. One was thought sufficient for our use.

With the departure of the cavalry and wagons, life in the Valleys settled down to quiet routine for some time. We rarely received visits from the outside world; the nearest Mexican hamlet was sixteen miles away, and representatives of the army seldom had occasion to visit outposts. The mail arrived from Santa Fé every Saturday afternoon in the saddle-bags of two cavalrymen.

It is difficult to convey any idea of the pleasure it gave us to see those two soldiers burst into sight again around the point of the ridge, and come galloping into the parade with jingling spurs and rattling carbines. One must be similarly isolated to appreciate the arrival of a weekly mail at its full value.

To the soldiers, life in the Valleys seemed to be pleasant. Duty was light, and there were no temptations to dissipation, or to be out of quarters at night. There were no confinements in the guard-house for disorder.

The evenings were spent over books and papers or quiet games, and the days in drill, building, providing fuel, hunting and scouting.

We were in a region of abundant game. Occasionally a bear, a panther or a wild-cat was killed. Floors were covered with skins, and beds were made more than comfortable by fine furs.

I must mention a valued friend who took a prominent part in our hunts, and who, later on, was the means of doing a most valuable service to two of us.

"Vic."

Just as I was about to leave Santa Fé for the Valleys, the regimental adjutant gave me a beautiful young setter, which I named Victoriana, and called Vic for convenience. She was white and liver-colored, with mottled nose and paws, and had a tail like the plume of Henry of Navarre.

She came to me with no education, but plenty of capacity, and I spent much of the time during the long evenings, and on the days when I did not accompany the scouting party, in training her.

She learned to close the door if I simulated a shiver, to bring me my slippers when she saw me begin to remove my boots, to carry notes to the first sergeant, the laundress, my servant or the cook, to go back to my cabin from long distances and bring articles I sent for.

She was an unerring setter and a fine retriever. She was taught not to bark where a sound might bring an enemy upon us, and she would follow patiently at my heels or the heels of my horse when told to do so, and never make a break to the right or left.

Our many scoutings made us thoroughly acquainted with the Valleys and all the trails leading out of them. I have already mentioned that we knew only one means of communication between our valley and San Antonio—that of La Puerta. Perceiving how great an advantage another road between the Valleys would be, I caused diligent search to be made for another route, and was at last so fortunate as to find one, which we cleared with a little labor, and made practicable for men and animals.

It left our valley to the north of the wooded point, and wound tortuously through the forest, threading defiles and climbing and descending many heights until it reached the opposite valley, not far from the western entrance to La Puerta.

We made no use of the new road, but reserved it for emergencies.

One morning, near the close of October, Cordova left the camp on a solitary hunting trip before *reveille*, in order to reach Los Vallecitos, four miles to the south of our valley, before sunrise.

He had been gone but half an hour, and I was sitting at my bachelor breakfast with a book in my left hand, indolently helping myself to food with my right, when I was startled by the rapid approach of some one running toward my door. Presently Cordova tumbled into the cabin, gasping:

"*Muchos Navajos, Teniente, muchos Navajos!*" (Many Navajos, Lieutenant, many Navajos!)

"How many and where are they?" I asked, leaving the table at once.

"Perhaps fifty—perhaps more. Half a league over the ridge," pointing to the south. "They chased me from the Vallecitos trail."

Without waiting for more definite information, I went to Sergeant Cunningham's cabin and ordered him to get the company into line without delay, and took my field-glass and went to the top of the ridge. Lying down before reaching the crest, I looked through the screening grass and saw a party of fifty-three Indians halted, and apparently in consultation.

They were in full war costume, painted and feathered to the height of Indian skill in terrific adornment.

CAPT. C. A. CURTIS, U. S. A.

(To be continued.)

For the Companion.

THE CHINESE NEW YEAR.

The thin crescent of the new moon that is visible to us on January thirteenth has already opened to the vast Empire of China the one grand holiday of the people—their New Year.

The length of the months is reckoned in China by the duration of the moon, each new moon beginning a month, which is known as the "First Moon;" the next is called the "Second Moon," and so on through the thirteen of the year. As a matter of fact, however, only twelve moons are numbered. After the fifth is an intercalary month, that is, the sixth month is not numbered at all, but the seventh is called the sixth, the eighth the seventh, and the ninth is styled the eighth, and so on until the thirteenth, which is called the twelfth.

The First Moon might be styled the Chinese Carnival, for business is suspended, the hum of industry is not heard in the land, and pleasure is the ruling motive of the hour with peasant and prince, with coolie and emperor.

The first day is ushered in with a liberal discharge of resounding fire-crackers. Unlike the more highly civilized Americans, the Chinese do not delight in the noisy fire-cracker merely for its flash and bang, but on account of their belief that the noise terrifies the evil spirits that are ever on the alert, conspiring to work harm. Usually, on these occasions, many bomb or "cannon" crackers are mixed with those of the ordinary kind, and the sound they make is deafening enough to cause the most evil-disposed spirit to decamp without delay, if it has any sensitiveness.

That the Chinaman should be anxious to have

Digitized by Google

his one term of holiday in the year unmarred by the powers of evil is not surprising, nor, considering his belief, that he should be very earnest in his endeavor to drive them away. The beating of gongs also adds to the frightful tumult.

The noisy side, however, is not the only one considered. For months, assiduous care has been given to flowering plants, in order to bring them into full blossom at the opening of the New Year as gifts to friends and offerings to the special household gods.

Chinese Salutations

Each grade of merchants and artisans has a special protective deity, whose image holds in the merchants' establishments a prominent place, usually in the public salesroom. Inscribed tablets hang behind and on either side of the idol, and in front is a table, which, in the New Year observances, is lavishly covered with sweets and dainties in small dishes, and also plants radiantly blooming. The eatables are finally given to the poor, by many of the "hongs."

The first duty of the people in the early hours of the New Year is to worship their ancestors in the various temples. After these duties, the joyous season is devoted to receiving and returning visits, and to feasting.

With the gentry the space of two moons, and even a longer time, is often given up to the merry-making. The poorer and lower classes cannot spare a month; but scarcely less than eight or ten days are taken by even the coolie—the common day-laborer.

The best possible attire is worn on these holidays, and if it is not owned it is hired from the pawn-shops, to be returned after the holiday season is over. Thus the coolie, accustomed to the coarsest of garments, arrays himself, if he has saved the money, in silks and satins like the highest in the land. But it is easy to see how unused he is to the dress, despite the satisfaction that overspreads his face.

The streets are thronged with the gaily dressed idlers and with messengers bearing gifts covered with red cloths, for red is the festal color of the Chinese. Low-bending salaams and "chin-chins," with which friends ceremoniously greet each other as they meet, are seen on every side. Each man tries to outdo the other in the lowness of his bows, till the two forms are almost prostrate. The quick nod and hurried passing on, customary with us, are not considered dignified or polite by the Chinese.

The opening day for general business, after the holidays, is selected by the astrologers at Pekin. It may fall on any day after the eighth or ninth of the First Moon; but it must be on a "lucky" day, which sometimes does not occur before the Second Moon. On the day decreed by the astrologers, the merchants meet in their respective guildhalls to settle upon the plan of business for the year, deciding what credit to give, and what rate of profit to charge. Then, in their own places of business, they open their books with much ceremony, burn incense before their presiding domestic idols, and close the important act with a feast.

A stranger in a Chinese city, who was not aware of all that depended upon the "Opening Day," and who was in haste to make purchases, entered a native shop during the closed period. The proprietor was quietly smoking with others. The stranger asked to see some material; but it could not be shown, for "The seals could not be broken." Over each keyhole and aperture of the receptacles holding the goods was pasted thin tissue paper to serve as a seal, and no inducement could avail to break it before the appointed time.

The official holiday lasts a month. The official seals are placed in a locked box on the twentieth of the Thirteenth Moon, and not taken out till the twentieth of the First Moon, when resounding guns at early dawn signalize the opening of the seals.

Goods transported through the Empire must pay certain duties at stations in the waterways, called "lekin stations," and "leakin'" they are said to be to the pockets of the trader. For a few hours after midnight of the New Year goods are allowed to pass these stations at certain points free. Boats loaded to their utmost, and crowded together in the eagerness to pass the greatest amount as quickly as possible, each trader anxious not to fall behind the allotted time, and the boatmen yelling at the top of their voices, make an indescribable scene of confusion and danger. Boats are often swamped, and lives as well as goods lost during this turmoil.

Though the Chinese New Year might be styled a carnival, it has a deeper significance to the people. The Chinese, like most of the people of the East, are, after a manner, made up of tribal villages, the people of each village having a family name. Sometimes many of the descendants still dwell in the ancestral village. At the New Year the widely scattered bearers of a family name, no matter how remote the ancestry, return to the "ancestral halls" as a sacred duty, bringing their offerings from a full store, or scraped from poverty, according as the world has dealt with them. Their ancestors must not be forgotten, whatever the condition of the descendants, whose position in life depends so much on what their forebears have been. A Chinese proverb, translated by a missionary, runs:

"On account of abounding ancestral merit,
Some miss the destruction they ought to inherit;
Others lose the promotion their virtues claim
Through the crimes which adhere to their ancestral name."

M. Georgine Hillman.

SMALL BUT MIGHTY.

The trifles of our daily lives,
The common things scarce worth recall,
Whereof no visible trace remains,
These are the main-springs after all.

THE FINANCIAL CRISIS.

During the last three months of 1890 there was a serious and general disturbance in the money markets of the world. The great financial centres, particularly London and New York, passed through a crisis, the evil effects of which, though great, were so much less than those which have repeatedly affected the business world that there is reason to be thankful that they were no worse.

The cause of all the difficulty seems to have been, as usual, inflation,—that is, over-borrowing and over-trading. But it was not inflation either in England or in the United States, but in South America. Enormous amounts of English money have been lent to the government of the Argentine Republic, and invested in private enterprises in that country.

It was the extremely bad financial condition of Argentina that led to the revolution last year; and when the crisis came, not only was there general ruin in Buenos Ayres, but disaster came to many people in Great Britain, whose fortunes were invested in the new Argentine enterprises.

The great house of Baring Brothers, who were among the foremost bankers of the world, was involved, and was only saved from wreck by the help of the Bank of England.

So intimately bound together are all the great commercial countries of the globe, that the consequences of these disasters were instantly felt in this country. The necessary result of the crisis was a surging movement of money to every point of danger—a movement that always takes place, and is as irresistible as the ocean tide.

But capital is timid; and when the crisis came, all those who had money which they could keep, kept it. They would neither lend nor invest it. Thus the scarcity of money and the high rate of interest were intensified beyond what natural causes would have produced.

Speculation was stopped, except speculation for lower prices. Railroad and other stocks and bonds dropped rapidly, for there were many to sell and few to buy. A panic and general ruin seemed to be impending.

If, at that time, the condition of business had not been good, if there had been an excessive expansion of credit in the mercantile world, if prices had been high as a result of excessive speculation, the consequences would have been terrible.

Fortunately, the crisis came when there was no general unsoundness in the condition of the commercial world, and after a sharp spasm the danger point was passed. The movement of money to the points where it was most needed became natural, and the rate of interest dropped to nearly the normal point.

These events are full of interest to those who will learn. One lesson they have which it is most important to impress upon all who are coming to a share in the business and the government of the country. It is this: Science, and the rapid transportation which is a feature of our modern times, have bound all the countries of the world together into one great commercial community.

No country can separate itself from the rest so as to be independent of the causes which affect others. Neither tariff laws nor currency systems can do it. England, which uses gold alone, was injured by the disaster in Argentina, which has a silver standard; and the United States, which uses both gold and silver, suffered as well.

It seemed, at the close of the year, that the most serious consequences of the great crisis had been met and overcome. But it must not be forgotten that the cause of all the evils was a real loss of capital, and prosperity can be fully restored only when that loss has been made up.

The catastrophe comes suddenly, because the evil condition which causes it becomes known suddenly. The recovery is always slow. We may expect a gradual improvement, but every one must be prepared to see several months elapse before the hopeful situation of last summer is restored.

EVERY YEAR.

The purer life draws nigher,
Every year;
And its morning star climbs higher,
Every year;
And earth's hold on us grows slighter,
And the heavy burdens lighter,
And the dawn immortal brighter,
Every year!

—*Every Thursday.*

FROM "DARKEST ENGLAND."

The chief of the Salvation Army, "General" Booth, has suggested, in a book that is exciting deep interest, a plan for the relief of what he calls the "submerged tenth" of Great Britain. Mr. Stanley's description, in "Darkest Africa," of the Congo Forest and its people seemed to General Booth so typical of the condition of East London, that he has called his book "Darkest England, and the Way Out."

It is possible here only to assert that the lives of the people of East London, that portion of the great city given over to the lowest and most hopeless classes, reach a point of misery and degradation almost beyond the belief of the more fortunate.

These classes throughout the United Kingdom, inclusive of London, number, according to General Booth, three million souls, nearly as many as all the people of Scotland. The extent of the evil shows the difficulty of dealing with it. In this work it is asserted, and by many admitted, that the Salvation Army has been most successful. Through an extension of its methods, General Booth would show the "submerged" the "way out" of their wretchedness.

His scheme is radical, and of great proportions. He proposes to attack the problem by means of three so-called colonies, the City, the Farm and the Over-Sea.

The plan of the City Colonies is derived in part from that of the Salvation Army Food and Shelter Depots, successful establishments, where all comers are received at fourpence a night in payment for supper, breakfast and a sleeping-place. Under the new arrangement, a Labor Yard will give the opportunity to pay one's way by work. Besides this, a Household Salvage Brigade is proposed for the purpose of collecting the vast waste of food, tins and other scraps that would be utilized by villagers, but must be thrown away in cities.

In these and other minor occupations the inmates, for whom those in charge have not found regular employment or returned to friends, may show their capacity for steady work. When it is sufficiently proved, they are ready to send to the Farm Colony.

The purchase of an estate of five hundred to one thousand acres near London, and close to a railway, is to provide for this second branch of the undertaking. Waste land and waste labor will thus come together. The farm itself is expected to train all capable men in agriculture of various sorts. The care of small fruits will give special opportunities to women.

An Industrial Village, the nucleus of the Farm Colony, will contain factories to convert the Salvage Brigade's scraps into useful articles, the bones into buttons, the tins into toys, and so on through the list. The waste food, such as is not fit for human use, will go to the pigs and other animals on the farm.

From service in this second grade of the enterprise, more persons will be restored to friends and the usual employments of men and women. Others still will show their fitness for promotion to the third and last settlement, the Over-Sea Colony.

In England's foreign possessions General Booth believes suitable tracts for this colony may easily be found. With some knowledge of farm-life, on land prepared by pioneers for settlement, granted to the colonists as their individual property under the sole obligation to repay the expense of their journey and outfit, ruled by good laws, the men and women rescued from Darkest England will have a fair chance to live their new lives.

For the endowment of the enterprise General Booth asks one million pounds, less than the cost of a single first-class ship of war. The evident advantages of the plan are that it begins in the core of the evil it would conquer; from the first it cultivates self-dependence instead of pauperism; throughout it is progressive, leading men on from strength to strength.

Of course objections are raised to the plan: that the cause of wretchedness and misery is largely in the people themselves; that other agencies to accomplish the same end are in operation; that the successful execution of the plan requires more ability of leadership than can be found.

Yet when all is said, the plan surely deserves serious consideration. Such a nation as England might afford enormous experiments, undertaken with reasonable hope of solving one of her gravest problems.

JUST FOR A GOOD TIME.

Lucile Gregg was a pretty girl, merry, and fond of a good time. Whenever there was any fun or mischief afoot, Lucile was a leader. She liked to do things a little daring, just a bit "shocking," and enjoyed seeing some of her friends open their eyes, and hear them exclaim, "O Lucile, how can you!"

"I'm not a Miss Prim," she would reply. "I'm not too strait-laced to have a good time."

Lucile had many admirers with whom she had what she termed "summery flirtations." "There's no harm in it," she said. "It's just for a good time."

Last summer Lucile went to a fashionable resort in the White Mountains. While there she made the acquaintance of George Martin, a young man of good family in New York. He showed Lucile attention, and sometimes she thought, with a little fluttering of her heart, that this might be more than a "summery flirtation."

One day George was joined by his mother and two sisters, and Lucile looked forward with mingled pleasure and anxiety to meeting them; but a whole day passed, and George did not offer to introduce her to his relatives. Lucile was somewhat annoyed at this omission, but did not suppose it was intentional until, just at dusk, she was sitting alone in a sheltered corner of the balcony, when she heard voices in one of the rooms.

In answer to some question, she heard George Martin say, "Oh, that's Lucile Gregg."

"Why, then she must be Belle Merrill's cousin," responded a lady's voice. "You must introduce us. You know Miss Gregg, of course?"

"Yes, I know her," George answered, "but I don't believe you'll care to make her acquaintance."

Lucile ought to have left without hearing more; but the temptation to learn more was too great, so, with burning cheeks, she lingered and listened.

"Why, she belongs to one of those old Boston families," the lady exclaimed, "and why shouldn't we care to make her acquaintance?"

"Well, she does well enough to talk with, and treat to ice-cream and confectionery, but she—well, she isn't the girl a man would like for a wife, or would like his sisters to choose for a companion. She's a little too loud —"

Lucile waited to hear no more. Hot with angry shame and humiliation, she fled to her room. And she had thought that George Martin esteemed her. She knew his real opinion of her now.

Wave after wave of wounded pride and mortification went over her as she recalled certain acts of her own; twice she had smoked cigarettes in George Martin's presence, and he had professed to admire her "splendid independence," and all the while he was thinking her *loud!*

Lucile did not spare herself in this humiliating retrospect. "I never will do so again!" she cried, at length. "No one shall ever have a chance to call me loud after this!"

Whether she keeps this resolution or not, Lucile Gregg will never think of certain events of that summer without a thrill of shame.

Without a thought of wrong, save in merry pursuit of a good time, many a young girl has been led to some foolish act which has left a stain on her reputation, and caused her hours of humiliation afterward.

WITH COLD SAUCE.

A man whose name is familiar to the readers of American magazines was speaking lately of one of his intimate friends.

"He always has a kind word for my work," said the writer, "but he invariably winds up his comments upon my last article, no matter what it is, by comparing it unfavorably with some one of my earlier efforts, and usually he adds an expression of surprise that I don't try something in a different line.

"I know very well that he doesn't mean to discourage me," the essayist continued, "but you can see well enough what is likely to be the effect of such remarks upon a self-distrustful person like myself. If he really desires to please me, and spur me on to better things, he ought to deal out his compliments and his critical suggestions in separate doses—and I have sometimes been moved to tell him so."

Here the speaker laughed good-naturedly, as if, after all, he were not utterly cast down, and went on with his discourse.

"Perhaps you have seen lately, in some of the newspapers, a little anecdote, invented perhaps, but very well invented, which bears upon this very point. It is given in the prevailing dialogue form.

"'Doesn't he praise your cooking at all?' said a young wife's mother.

"'Oh yes, he praises everything.'

"'Then what do you complain of?'

"'Why, you see, when I make a pudding for dinner he says he wishes I had baked pies; and when I bake pies, he wants to know why I didn't make a pudding.'

"That's just it!" exclaimed the modest author, after a moment's pause. "I know precisely how

Digitized by Google

the dear little housekeeper feels. Praise is good; but it shouldn't be served with cold sauce."

We need not fear that we shall be held accountable for the faults of our friends if we withhold the "cold sauce." There will be others to give it to them. Insincere praise is one thing; the gracious recognition of the good in others is quite different.

GENIUS AND PINEAPPLES.

The impracticability of many great men is well known, and it is doubtful whether there are any among them who are more impracticable than those who believe thoroughly in their own genius. Balzac, the novelist, was one of this class. His great literary success, after years of hard struggle, convinced him that "All things were possible to genius," and he repeated this formula at frequent intervals in conversation.

The journal of the late Alphonse Karr, also a novelist, but a famous gardener as well as a novelist, relates an amusing episode in Balzac's career. Talking with Karr once about gardening, Balzac suddenly remarked:

"I have bought, as you know, a little estate at Ville d'Avray. I am convinced that the people need nothing so much as pineapples, and plenty of them. But in order that they shall be able to eat them, they must be able to buy them for a franc apiece, and I am going to raise pineapples for the people on my estate at Ville d'Avray."

"But you can't raise them for a franc apiece!"

"Ha!" exclaimed Balzac. "I *can't!* Sir, nothing is impossible to genius! Don't you think that, if a man of the highest intelligence put his whole mind to the task of raising pineapples at a franc apiece, he could do it?"

That very day Balzac had taken steps toward hiring a small store in Paris.

"Well, what are you going to do with that?" Karr asked.

"I am going to sell my pineapples to the people in it."

"But," said Karr, "it takes three years to get your first pineapples after you begin to raise them, and what are you going to do with your store all those three years?"

"Bah!" exclaimed Balzac, contemptuously. "Three years! Why, don't you know, man, that nothing is impossible to genius? Don't you suppose that if a man of the highest intelligence gave his mind to producing pineapples in *one* year, he could do it?"

Balzac departed full of his project, but he had forgotten all about it within two days. Forgetting its own impracticable schemes is fortunately one of the things that is not impossible to genius.

EXACT.

John Ericsson, the inventor, had not only genius but the "immense capacity for taking pains" which sometimes accompanies it. All his work was so exactly done that he could demand from workmen the most rigid observance of details in the drawings furnished for their guidance, without fear that they might go astray.

When the steamer *Columbia* was built, its engines were put in according to his designs. It was customary at that time to get the length of the piston-rod from the engine itself, and a man was, one day, engaged in measuring it with a long baton. Captain Ericsson chanced to go on board, at that moment, and going up to the workman, he roared:

"What are you doing there, sir?"

"Getting the length of the piston-rod, sir."

"Is it not on the drawing?"

"Yes, sir."

"Then why do you come here with sticks? Go and get the length from the drawing, sir! I do not want you to bring sticks, when the drawing gives the size."

At another time, a workman was endeavoring to put in the engines of a steamship, and found great difficulty with a small connection which is described as being "crooked as a dog's hind leg." Finally he went to Ericsson, and informed him that the rod could not be put in place.

"Is it right by the drawing?" was his query.

"Yes, sir."

"Then it will go in."

And on another trial, it did. The master brain had left nothing to be supplied by the ingenuity of others.

WOOD MOSAIC.

An important innovation in decorative art is the invention of M. Bougarel, which reproduces as effectively as do tapestries or marble mosaics pictures of the most varied design and exquisite coloring, and employs a material which is in many cases preferable to wool or to marble cubes.

M. Bougarel has invented a process by which a durable mosaic can be made of cubes of wood which have been treated with a coloring matter that penetrates them thoroughly. One result of this thorough tinting of the woods is that if the surface of the mosaic suffers any accident, or if, in course of time, the colors fade, the original brilliancy of color is restored by slightly planing off the surface.

The mosaic is applied to a panel of four thicknesses of wood of different grains, which prevents any evil effects of contraction or dilation of the foundation. For large designs four hundred thousand bits of wood to the square metre are used, and for small patterns one million six hundred thousand pieces to the square metre are used.

The wood is cut by fine apparatus, is treated chemically to eliminate the gums, is colored, and then is subjected to pressure. The operator places the tinted cubes in an apparatus by which he easily puts them in position, fastens them, and presses them together as closely as possible. When the panel is finished, it is subjected to pressure, which makes the whole cohere sufficiently to resist any influence of temperature.

M. Georges Petit, who describes the invention in *La Revue Scientifique*, says, "It affords a wall and ceiling decoration easily kept in repair, and makes possible the popularization of the works of ancient and modern masters, which M. Bougarel may copy in the national museums, and preserve in indefinitely durable form."

MUSICAL ARTILLERYMAN.

"The 'Army of the Potomac' was the people in arms," says Mr. Warren Lee Goss, in the preface to his "Recollections of a Private," and in the body of his book he relates an anecdote which may be taken as an illustration of that saying. He was suffering from lameness, and while limping along, as best he could, in the rear of the army, he fell in with a congenial artilleryman, who had lost his voice. They called at a house belonging to an old man of sixty or seventy years, who was very noncommittal in his sentiments.

His wife was a ladylike old woman, and her two daughters had evidently seen good society. We propounded the usual conundrum about something to eat, and exhibited money to show that we intended to pay.

The young woman, when speaking of the Confederates, spoke of them as "our army," and it leaked out that they had one brother therein, and another in the paymaster's department at Washington. After supper, we were invited into the reception-room, where there was a piano, and I asked for a song.

One of the young women sat down at the piano and played "My Maryland" and "Dixie," and then wheeled as if to say, "How do you like that?" My chum hoarsely whispered a request for the "Star-Spangled Banner," and she obligingly complied, and then said, in a half-saucy manner, "Is there anything else?"

My friend mentioned a piece from Beethoven. "I never heard of it," said she; "perhaps if you should whistle it I should recognize it." But my friend's whistle was in as bad tune as his voice.

"Perhaps you will play it yourself?" said the black-eyed miss, for an extinguisher.

To my astonishment, and theirs also, the rusty-looking artilleryman seated himself at the piano, and under his hands the instrument was transformed. He played piece after piece, and finally improvised a midnight march, in which a band of music was heard receding farther and farther, till the whole died away in the distance. Our parting was more cordial than our reception.

WHAT MAY BE PATENTED.

It may be of interest to the readers of *The Companion* to know what may be patented. A United States patent will be granted to any person who has invented or discovered any new and useful art, machine, manufacture, or improvement thereof, not known or used by others in this country, and not patented or described in any printed publication in this nor any other country, before his discovery or invention thereof, and not in public use nor on sale for more than two years prior to his application, unless the same is proved to have been abandoned.

In this connection the word "art" means the process or method of producing an old or new result. If a method of doing anything contains one or more new steps, the process is new and patentable.

The word "machine" means any device or thing by means of which a mechanical result may be produced, such as a pin, a churn, or a locomotive.

The word "manufacture" means a made-up article, such as furniture, clothing, harness, and the thousands of things which are offered for sale. "Composition of matter" means a chemical compound of ingredients, such as hard rubber, liquid glue, medicine, etc.

Patents may also be obtained for designs for manufactures and works of art, for three, seven and ten years.

Trade-marks may be registered for any arbitrary sign or symbol which is not descriptive; the government fee is twenty-five dollars. Such marks are the exclusive property of the registrar for thirty years, and the time may be extended.

A "label" is any descriptive tag, print or impression to be placed upon any article or its case, and it may be registered for twenty-eight years. The government fee for a "label" is six dollars; but if it contains any special mark or symbol, the office decides it to be a "Trade-mark" instead of a label.

WORTH IT.

Some picture-dealers, as well as certain art critics, have a scent for merit which may be compared to a dog's "nose" in hunting. T. Sidney Cooper, the English artist, gives such an instance of a dealer who could trust his own intuition without seeing the picture.

On the varnishing day I was busy in touching up one of my pictures, when Turner passed me, palette in hand. He stopped to look at the canvas, and then, saying, "Put it out! It destroys the breadth!" he laid a dab of color over the part on which I had been working, and walked away again. Another artist saw him do it, and immediately said:

"Don't touch it again. He has done in one moment all that is wanted."

So I left it, and when Turner passed again, I went up to him and thanked him, whereupon he nodded, and gave a sort of grunt, but vouchsafed never a word.

That afternoon I met Gillott, among other dealers, who at once began asking me about my pictures. I told him that they were well hung, and then mentioned the fact that Turner had put a touch on my Welsh scene.

"What is the size and price of the picture?" asked Mr. Gillott. I told him.

"And did the great Turner really touch upon it, as you say?"

"Yes, he did."

"Then the picture is mine."

"But you have not seen it!" I remarked.

"No matter. Turner would never have touched it if it had not been worth it. The picture is mine at three hundred pounds, so cross it 'sold.'"

TART.

The Oriental notion that no one can insult so violently as a woman, because no one has such a tart tongue, is illustrated by an anecdote translated from an Arabic author:

"I stood on a road, conversing with a friend," said a learned man, "when a woman, halting, gazed at me steadfastly. When her staring had passed all bounds, I told my slave to ask the woman what she was listening to. He came back, and reported that the woman had said:

"'My eyes had committed a great sin. I intended to inflict a punishment upon them, and I could devise none worse than looking at that hideous face.'"

Children are often irritated and made sick by worms. A simple and effective remedy is found in "*Brown's Vermifuge Comfits.*" They contain nothing injurious. [*Adv.*

Teething Made Easy.

A pamphlet of value to every family in which there is a child under five years of age, will be sent free to any address on receipt of two-cent stamp for postage.

SUGGESTIONS

LAMP CHIMNEYS.

You have noticed that some lamps have chimneys, while others have none.

Consider the use of the chimney.

The reason why one lamp needs it more than another.

How does the chimney effect its purpose?

Why does moisture gather inside a chimney when the lamp is first lighted?

For the Companion.

THE KING'S COMMAND.

A royal feast lay spread before the king.
"Good cheer," he quoth, "to ye, my courtiers all.
Health, wealth and happiness may Fortune bring,
And to the lot of all of ye let fall."
And then, 'mid clink of glass, the wine was quaffed;
The toast was drunk, the merry round was laughed.

The wit ran high. Staid Wisdom stood unbid
To join the board, and starved and thirsted sore.
When one—a brat-o-brains; a younker-kid,
Unused to royal feasting—gently bore
The grave-eyed maiden in, and then, hey-day!
The tide of talk was turned from mirth away.

"What was man's destiny?" and "How should states
Add power to power?" "What made a nation's strength?"
"The price of labor; and taxation rates."
And so from this to that until, at length,
The universal tongue which one day should
Be proved by all the world to be most good.

One held 'twas A, one B; while no one came
To think his neighbor reasoned past all doubt.
And time sped on with still the tongue of fame
Unproved. Then spoke the king: "A pleasant lout,
Who knows no language save his own and that
But most indifferent well, we fain were gat,

"And brought into our presence. Haste! away!"
Then to his courtiers: "Faith, methinks 'twere well
To prove the question now; sans more delay.
We'll send this bumpkin forth, and let him tell
On his return what language most is spoke.
Beshrew me well, but 'tis a pretty joke."

And so, when 'fore the king the peasant stood,
—An awkward lad, unschooled, untaught in art:
His only knowledge that of doing good;
His one endowment bravery of heart,—
To him was issued forth the stern command
To find the world-tongue over sea and land.

He went. Years passed. Down-pressing cares of state
Weighed on the monarch's mind till he forgot
His pilgrim-peasant. Then, as once he sate
At board, his courtiers with him, thinking not
Of aught to hap wherefore their wits might yearn,
Word came of this: the traveller's return.

"So? Bring him forth," the king said. "Let us hear
How speaks the world—or will speak at the last.
Come forward, peasant. Think thou not of fear.
And hast thou kept our charge both fair and fast?
What foundest thou to be the only tongue
That in all ears the same, familiar, rung?"

The peasant bowed him low. "My lord," he said,
"In every land there found I different speech.
Mayhap that less, this more, its accent spread,
But none was known to every man and each.
And I despaired, at last, of finding one
That all the world might own beneath the sun.

"Until methought how, when I issued hence,
No language knowing but mine own poor tongue,
With naught of rank or power and little pence,
And how, spite all, my hand was friendly wrung—
Methought there was indeed one speech did prove
The language of the world. Its name is—Love."

JULIE M. LIPPMANN.

WORK.

Jane Dewey, said the old village pastor, came home from boarding-school when she was nineteen years old. She had been absent several years, for her father was in quite ordinary circumstances, and not able to bring her home in vacations. She was a pale, worn-looking girl, cold and reserved in manner, and evidently carried some burden of grief or anxiety. After a few weeks she brought it to me, asking my counsel.

"I became a member of the church this spring," she said. "How can I be cheerful or laugh like the rest? I must save my soul. I am full of faults. When I count them, and pray over them, I am miserable."

It was her habit, she told me, to keep a record of all her sins. A certain hour each day was given to this work.

"But have you nothing to do for others?" I asked.

"Others! Is not my first duty to endeavor to overcome my own faults?" she retorted, irritably.

After this she visited me frequently, and wrote me interminable letters, all in the same unhealthy tone. One day she was sure she had committed the unpardonable sin. The next she had doubts concerning some theological doctrine. The third her "heart was cold." So she grew all the time more morbid, and gloomy, and selfish.

I said to her, "You say you have given yourself to Christ? By this you mean, or ought to mean, that you have given yourself to His service. Instead of this perpetual misery, you should be glad and thankful that He has accepted your service. But what service do you render Him? None. The work which He means you to do for others would strengthen and uplift your own soul more than all this morbid introspection."

But she was deaf to all suggestion or argument.

During that summer her mother died, and afterward her father was thrown from his horse, and confined to his bed for many weeks. The charge of the house and five children was thrown upon her.

As the busy, anxious weeks passed, she grew, strangely enough, plump and ruddy and cheerful. She came to me for advice, sometimes; but it was to know how to enliven her father, who was sinking into dull despair, or how to keep David and John away from bad company. The little children, too, required constant attention.

"If mother were but here!" she said. "I am so ignorant! I do all I can, and in my prayers look above for Divine guidance."

"And about yourself, Jane?" I asked.

She blushed. "I have no time now to think of myself," she said. "I must trust Christ for His promised acceptance notwithstanding my errors, while I do this work which He has given me."

Many well-meaning Christians actually nourish faults in themselves by unhealthy broodings over their own condition. The best remedy is active work for others.

THE BOSTON TIME BALL.

The time ball, which is dropped every day at noon, on the Signal Service tower of the Boston Post-office building, is controlled by telegraph from the standard mean time clock at the Cambridge Observatory. The action is entirely automatic, there being no human intervention between the ball and the clock. The ball is three feet in diameter, and is visible to the naked eye at a distance of two or three miles. It is arranged to slide freely up and down on a hollow iron staff, which passes through its centre.

Around the base of the staff is an iron cylinder, about three feet high and three feet in diameter, open at the upper end. The ball in falling drops into the open end of the cylinder, fitting it so closely that very little air can escape. The air thus confined in the cylinder makes an elastic cushion, which breaks the fall of the ball and prevents damage to the building or apparatus.

A stout rope leads from the interior of the tower below, up through the hollow staff, and, passing over a pulley at the top, reaches down on the outside and is attached to the ball. This rope serves to hoist the ball, and hold it in place till the proper time arrives for it to fall.

The dropping apparatus is located in the tower below. It is very compact, and is contained in a little closet about one foot square. It consists of a drum or cylinder, on which is wound the rope leading to the ball.

At five minutes before noon the ball is hoisted by means of a crank, which fits on the spindle of the drum like a clock key. It is then held in place by a catch or pawl, which engages a notched wheel attached to the end of the drum, and prevents it from turning. The catch is operated by a lever, on which a powerful spring is constantly pulling, tending to throw it over and release the drum. The lever is held in place until the proper time by the armature lever of an electro magnet, which is delicately caught on its end like the hair-trigger of a rifle.

When the signal current is sent through the magnet, it draws the armature lever away, and the lever operating the catch is promptly thrown over by the spring, thus freeing the drum. The ball instantly shoots downward by its own weight, unwinding the rope from the drum as it falls.

As the current from the observatory is too weak to operate the dropping mechanism, a powerful "local" battery is placed in the tower to do this work, and is controlled by a delicate repeating instrument, or "relay," as it is called, which is connected with the main observatory circuit. In this way the faintest signal from the observatory throws the full power of the local battery upon the dropping magnet.

As a precaution against the premature dropping of the ball, the local battery is disconnected by means of a switch, in reach of the operator, and is connected about ten seconds before the final signal from the observatory. W. P. G.

BOY AND PRESIDENT.

There are great men who never forget that they were helped on their way, and who express their gratitude by lending a hand to all who need a lift. Doctor Peabody mentions, in his "Harvard Graduates Whom I Have Known," one of the last times he saw Jared Sparks, the historian and former president of the university.

Mr. Sparks was carrying a large bundle of clothes from the washing, and a shabbily dressed little girl was chatting merrily at his side. He had come up with the child, tottering under a burden too heavy for her, and instinctively, for he never missed an opportunity for a kind word or deed, had taken the bundle from her.

He began life as a poor country boy, determined to get an education, but compelled to labor for his daily bread. Until his twentieth year his schooling had amounted in all to forty months. He had, however, done a great deal for his own education, and had learned the trade of a carpenter.

The scholarly clergyman of his native town, the Rev. Hubbell Loomis, owned a barn which needed shingling. Jared offered to shingle it if the clergyman would teach him Latin and mathematics. The offer was accepted, and young Sparks went to work.

One day a brother-clergyman, named Abbot, called on Mr. Loomis, and was told of the remarkable young carpenter then shingling the barn. Mr. Abbot asked that Sparks might be summoned to the study to construe a passage in Virgil. The carpenter's translation was such as prompted Mr. Abbot to bespeak for him a place on the beneficiary list of Phillips Academy at Exeter. The application was successful, and Sparks walked to Exeter, one hundred and twenty miles, in four days, that he might begin at the autumn term.

Two years after he entered Harvard College, where his robust strength of body and strenuousness of purpose enabled him to support himself by teaching, to hold a high rank in his class, and to graduate the first scholar in mathematics. Friends gave him aid, sympathy, and, what he valued most, opportunities to help himself.

When he became a great man, and the president of the university, he loved to recall the trials of his early days, not in self-congratulation, but that the remembrance might keep him up to his rule of life—never to miss an opportunity for a kind word or deed.

CHIVALROUS MINERS.

Chivalry is the same in the nineteenth century, on the plains, as it was when Sir Launcelot rode to tournament, though it may not take precisely the same form. The following true story adds one more to the list of incidents proving the fact. An engineer writes:

A few months after my marriage, I was sent to New Mexico to survey some land for a railroad company. My wife went with me, although we depended upon camping out in the most primitive way. We went across the plains into the very heart of the wilderness.

One day a dreadful rain-storm set in, and continued all night. I lost my bearings, and wandered about until eight o'clock in the evening, when I came upon a miner's cabin, where there was a light. I knocked at the door, and asked shelter.

"Come right in, stranger, and welcome!" was the answer.

Four roughly dressed miners were in the room, which had no floor, and only an open fireplace, over which their frugal meals were cooked.

"My wife is with me," I said. "She is sitting in the wagon."

"Here, boys," cried the spokesman, pulling off his hat and bustling about, "bundle out of this, and help the stranger with his things! Be lively now!"

They brought in our goods, made a roaring fire, and then formed in line, headed by the leader, who said:

"Yer kindly welcome, mum. We aint got much to offer, but yer can take the ranch. Me an' my mates'll roost outside. Jes' make yerselves to home, an' don't mind us."

At the end of this speech they filed out of the cabin, and spent the night in the rain, heedless of our remonstrances.

For the Companion.

ON THE BEACH.

[*The Children's Race.*]

Fleet Atalanta, skimming the gray sands
As runs the hurrying beach-bird, airy-light,
With radiant eyes and floating locks, and hands
Outstretched, and fluttering garments snowy white!
May never golden apple roll between
Thee and thy victory! Keep steadfast on,
Reach thy far goal, and so be crowned a queen,
Thy race accomplished and thy triumph won.
Before thy feet the world is sure to cast
Its gilded fruit: Be faithful to the last;

And run thy race with Time, outstrip thy friends
Not for ambition, empty, feverish, vain,
But shape thou thy life's course to labor ends;
Strive to be foremost a pure heart to gain;
To win forbearance and sweet charity,
Truth, patience, faith, a conscience crystal clear—
For these press on, nor pause, and thou shalt be
Lifted into a peace that knows no fear,
And thy sweet childhood's bliss be thine alway,
As on the breezy sands this summer day.

CELIA THAXTER.

WHAT TO DO.

Unconcern in times of excitement or danger may be a very good thing, but it sometimes results less from real presence of mind than from natural sluggishness of temperament. A case of this sort was that of Jerry Bay, who owned a great three-year-old colt, that had never yet been hitched to a carriage, though it had several times worn a harness. One fine winter's day Jerry decided to give the colt an advance lesson. So he harnessed it to an old sleigh, invited his neighbor, Abner Tilly, to ride with him, and started out on a trial trip.

At first they went along beautifully: the colt behaved like a well-trained horse.

"He's a good one, aint he, Abner?" said the delighted Jerry; "goes as stiddy 'z 'n old hoss, don't he?"

"Yes, he's doing well now," admitted Abner, "but don't you crow too soon. Colts are freaky critters."

As if to prove the truth of this statement, the colt, that very instant, came to a standstill.

"Come, g' long," cried Jerry, coaxingly. But the colt did not budge, and so Jerry touched him gently with the whip.

The effect was magical. Within ten seconds the colt had kicked both his hind feet through the fender of the sleigh no less than three times. Then came a very short pause, followed by an earnest attempt to sit down, which succeeded only so far as to break one of the shafts.

The colt next stood erect on his hind legs for a moment, and then tried bravely to stand on his head. When tired of this performance, he made a most resolute struggle to turn entirely round in the shafts, so as to face his driver. Failing in this, he again began to kick with all his might, and was fast reducing the front part of the sleigh to kindling wood.

Abner had long since jumped out of the sleigh, and was now at the head of the struggling brute, using every effort to soothe and quiet him. Jerry sat calmly in what was left of the sleigh, apparently amused, but not at all alarmed, as the splinters whizzed past his head.

At last it evidently occurred to him that he might take some part in the contest, and he inquired, in a drawling tone, "D'ye think I'd better git out?"

"No, don't!" thundered the indignant Abner; "stay right there, and let the colt kick ye out."

AT THE EAGLE'S NEST.

Folklore, however fanciful and improbable, has always a charm. "The Boy Travellers" found in Ireland a guide who, in expatiating on the echo at a bluff called the "Eagle's Nest," recalled the following explanation of the name. He said:

There was an aigle had a nist there for years and years, and that's why the place got its name. The ould bird was a sly one, and she'd put her nist where it wasn't aisy to get at it. The only way was for a fellow to lower hisself down along the face of the big rock you see over beyant there.

Well, one day, whin the ould bird was away, a sodger said he'd have the young uns out of the nist, onyhow, and so he goes and gits a long rope, and lowers hisself down.

Just as he got in front of the nist, the ould bird come a-flyin' out of a cloud.

"Mornin'!" says she to him, and he says "Mornin'!" to her, jist as perlite as ye plaze.

"Wot ye want here?" says she.

"Nothin'," says he. "I jist dropped down to ask arter the hilth uv yer nice little birdies."

"That's a lie!" says she.

"It's the truth," says he.

"No, 'tisn't," says she.

And thin she hollered out so's yer cud hear her a mile, ez ef she was a-talkin' to the mountain:

"Didn't he come to rob the aigle's nist?"

Av coorse the echo said, "Rob the aigle's nist!" and wid that she hit him atween the eyes wid her ould hooked nose, and away he tumbled into the lake, and he's been there iver sence.

NEAR ENOUGH.

Two English war correspondents—one of them being Mr. Irving Montagu, who tells the story—had planned to drive out of Giurgevo in disguise on their way to Plevna, during the Russo-Turkish War. Their portmanteaus were packed under the seat of the three-horse drosky, and the two adventurous passengers jumped in, lighted their morning cigars, and with a jingle of bells the horses started.

We had not long cleared the town when it became manifest that we had attracted more attention from the gunners at the Turkish outworks at Rustchuk than we either desired or deserved. All at once there was an ominous roar from across the water, immediately followed by the bursting of a shell in some underwood a little to our rear.

Evidently we had been spotted, and should be likely to suffer as soon as the sighting of the gunners became more accurate. Another shell followed, wider of the mark than the first, and we felt renewed confidence. Not so the horses, however, and their plunging and rearing gave the Turks the opportunity they wanted, for in less time than it takes to describe it, the uncanny screech of another shell terminated in a third crash, so close that even now I shudder when I think of it. Our horses were unmanageable, and some moments elapsed before we were again on the way. Our stoppage had given those gunners a steadier aim. Another all-too-familiar boom, a prolonged screech, and then the crash of a shell, which seemed to lift us from our seats.

This last shot so startled the horses that they dashed off in headlong flight, taking us providentially round a corner, and so out of sight of the enemy; but the most curious part of the story is to come.

Arrived at Zimnitza, we decided to remain there for the night. I went therefore in quest of some necessaries from my portmanteau, which had served as a back to my seat in the drosky.

Imagine my astonishment when I found it torn from end to end, and its contents twisted into a conglomerate mass within. No wonder I sank back at the moment of that terrific shock, the cause of which was now apparent. The shell had struck home rather closer than I had any notion of, and my life had been saved by that well-packed valise.

One side of it was in ribbons—leather, straps and buckles being mixed in picturesque confusion with broken brushes, flannel shirts, smashed pots of Liebig's essence of meat, and broken bottles of chlorodyne. Indeed, that smashed portmanteau is still in evidence, a household god, enshrined as a memento of yet another providential escape.

UNDRESS PARADE.

Bravery and good tactics may be displayed in a retreat quite as well as in an advance. Indeed, a true soldier never shows to so good advantage as when he suddenly finds himself taken at a disadvantage. An anecdote which illustrates this point is taken from Mr. Warren Lee Goss's "Recollections of a Private."

Just before the battle of Chantilly, I, with Wad Rider and "Joe," the recruit, had retired to the seclusion of a neighboring wood to engage in a war of extermination against a certain too close an invader of the Union blue.

I had partly resumed my clothing, but not my shoes. Joe had entirely re-dressed, but Wad Rider was still in undress parade.

Suddenly Joe, whose quickness of sight and hearing were remarkable, shouted, "Rebs! rebs!" Down a cross-road on our left came a squad of the enemy's cavalry. I ran barefoot, with my cartridge-box and belt over one shoulder, my musket in one hand, and my other hand holding my garments together.

As I ran I heard a musket-shot, and turned to view the situation. Wad Rider, dressed in nothing but his cuticle and equipments, had shot the leading cavalryman in the pursuit, and shouting like mad for reinforcements, was retreating in light marching order upon the camp.

I dashed through a stump lot, with Joe on my flank and Wad in the rear, still pursued by the enemy, who were calling upon us to surrender. The uproar brought the boys swarming from the camp, and when I regained my feet, after a collision with the root of a stump, the Confederates were making for the woods.

Under a strong escort of comrades we returned to reclaim Wad's uniform and my shoes, but the enemy had gobbled them. Wad concluded he must use the clothing of the unfortunate cavalryman he had shot, and looked grotesque enough in his gray suit.

"First thing you'll hear of," said he, "some fool will be shooting me for a reb!"

INQUISITIVE.

A Western gentleman recently gave a house-warming party, having just moved into a new dwelling. A large company was invited, and the entire mansion was thrown open to the guests. The house was modern in its appointments to the last degree, even to being lighted with electricity instead of gas.

One young man among the guests saw much to arouse his curiosity, and was on the alert for new discoveries.

A celebrated singer had just taken her place at the piano when this young man, who was standing in the lower hall near the parlor door, caught sight of something that looked like a black rubber button in the centre of a small marble disk. What could that be for?

He was so anxious to know, that he could not listen to the singer. The crowd was great, and he felt sure he could examine the curiosity without being noticed. He passed his hands over it slyly, touched the rubber or metal button with his finger, pressed it softly, and on the instant the parlors and hall were in total darkness!

The song of the soprano ended in a little shriek, and the air was full of exclamations.

"Pray keep perfectly quiet," the voice of the host was heard saying. "We will have lights in a moment."

Groping his way through the crowd, stepping on their toes, striking against them, and putting his outstretched hands into shrinking faces, the chagrined host finally made his way into the hall, felt along the wall until he touched the electric button, pressed it, and the rooms were again flooded with light.

The inquisitive young man hadn't presence of mind enough to hold his tongue.

"Oh, is that what that thing is for?" he said. "I didn't know, or I—I—I wouldn't have touched it."

RUSTIC PARISHIONERS.

The Rev. Augustus Jessop, in his "Trials of a Country Parson," tells some amusing stories concerning his rustic English parishioners. The mistakes which hearers make in interpreting sermons, he says, are simply endless and sometimes almost incredible. No invention of the most inveterate story-teller could equal the facts which are matters of weekly experience.

"As you was a-saying in your sarmon, 'tarnal mowing won't du without 'tarnal making—you mind that! yer ses, an' I did mind it tu, an' we've got up that hay surprising!"

Mr. Perry had just a little misconceived my words. I had quoted from Philip Van Artevelde, "He that lacks time to mourn, lacks time to mend. Eternity mourns that."

Not many months ago I was visiting a good, simple old man who was death-stricken, and had been long lingering on the verge of the dark river. "I've been thinking, sir, of that little hymn as you said about the old devil when he was took bad. I should like to hear that again."

I was equal to the occasion.

"The devil was sick—the devil a saint would be;
The devil got well—not a bit of a saint was he."

It seemed necessary to soften the language of the original.

"Is that what you mean?"

Yes! it was that. "Well, I've been a-thinking, if the old devil had laid a bit longer and been afflicted same as some on 'em, as he'd 'a' been the better for it. Aint there no more of that there little hymn, sir?"

For the Companion.

HE COULDN'T.

Our Ted is full of merry fun
As any boy can be;
Yet, for an errand to be run
Stands always ready, he;
And when he hears his mother's call,
He does not wait to doubt,
But drops his bat, or book, or ball,
With ne'er a frown or pout.

He really is a model boy
We think, as wouldn't you?
His father's pride, his mother's joy—
So manly, brave and true;
For just one little failing, though,
He's chided o'er and o'er:
Come heat or cold, come rain or snow,
He never shuts the door!

On New Year's Day his mother said,
—A twinkle in her eye:
"Suppose you turn a new leaf, Ted,
This morning; won't you try?"
Then Teddy laughed a laugh of glee,
And gave his cap a fling:
"I can't, mamma; for there will be
No new leaves until spring!"

For the Companion.

WINFRED'S MARKETMAN.

"If I only could have a sled, mamma! Don't you s'pose papa will buy me one?" asked Winfred, looking wistfully from the window as the boys on their gaily painted sleds dashed by.

"No, indeed! Your papa has doctor's bills and other expenses since we were all sick so long. We must do without a sled this year," was mamma's answer.

Winfred was quiet for a few minutes.

"There goes Thad Stevens and his papa, with their new horse and sleigh!" he cried, excitedly. "Can't *we* have a sleigh-ride this year—just one?"

"No, dear," said mamma, "I think not. We must take our pleasure in watching other people ride and slide. Then we shall not freeze our fingers or noses, or have our bones broken by a smash-up. Don't you see how much better off we are not to run such risks?"

Winfred did not feel sure of that, but he did enjoy the fun, and laughed merrily when there was a turn-over, and the boys rolled off in the snow.

"Put on your coat and cap, Winfred," his mother said, presently, "and run down to Kellogg's, and get me a spool of white thread. The doctor said you must wrap up warmly, and exercise in the out-door air so as to get strong again."

"If I only had a sled!" said Winfred to himself, as he started down the long hill to the store. "But I'll try not to worry papa about it, for I s'pose he can't afford it." Then Winfred began to whistle, trying to keep time to the merry sleigh-bells behind him.

"Hallo, my lad!" cried a cheery voice. "Would you like to have a ride?"

Winfred looked around, and saw the jolly, red-faced marketman who came around every week in the summer with fresh vegetables and fruit.

"Oh, yes!" said Winfred, with sparkling eyes. "I should like it splendid, but I'm only going to the store."

"All right!" said the man. "I'm going there, too. Jump in!"

The boy was only too glad to obey.

The man tucked the robes around Winfred, and the horses rushed on as if they enjoyed it.

"I believe your name is Winfred—isn't it?" asked Mr. Tinker. "And if I remember, you are the boy who helped me pick up my vegetables last summer when the milkman ran into my team and upset it. Do you remember that?"

"Oh yes," said Winfred, "it was jolly fun; and you gave me some apples and onions. Mamma made us a stew for dinner. It was good."

"Then when some youngsters started my horse once, you ran after them and stopped them—forgot that?"

"Oh no!" said the boy, "and you were *so* kind and gave me a ride, and let me drive. I never shall forget it."

"Maybe you remember running after me, for half a mile, when I dropped my whip," said the man again. "You don't look as if you could run much now—been sick?"

"Yes," said Winfred, "but I'm all right now. Oh, it's such fun riding with you! I'm sorry we've got to the store."

"Well," said Mr. Tinker, "I'm going back as soon as I do my trading, and you can ride home. Now, my boy, look around and tell me what you would like best to have."

"I've had one of the things," said Winfred; "'twas the sleigh-ride. The other was a sled, but papa can't get it this year, so I'm trying to forget it."

"How would this one do?" asked the man, holding up a handsome red sled.

"That's the very one I wanted!" said the boy. "Isn't it a beauty?"

"Guess I'll buy it so you'll forget it easier," said the man, laughing.

So when they drove homeward the gay sled went too. "I s'pose it's for his little boy," thought Winfred, looking at it wistfully.

When they reached his door Winfred jumped out.

"I've had two sleigh-rides now," said he, "and I thought I wouldn't have any. Thank you, sir."

"Hold on!" said the man. "I haven't any boys, and what on earth I'm going to do with this sled is more than I know. If you only would be kind enough to take it off my hands I'd never forget it."

Then before Winfred could speak the sled lay at his feet, and the man and horses were far up the road.

Do you wonder that the boy laughed and shouted, and hugged the handsome sled?

JULIA DARLING PECK.

Two of Katie's uncles were married lately. One of them married a very dark young lady, and the other a red-haired one. They live in the same house, and Katie went visiting them one day. When she came home she rushed to grandma's room. "O gran'ma, I've got a red aunt and a black one," she said. Then, seeing the queer little smile on grandma's face, she added, quickly, "I don't mean the bug kind, gran'ma!"

Her first muff.

For the Companion.

DREADFUL!

"Where's mamma?"

Dotty stole down from the nursery to see mamma for a little while; but mamma had gone out.

It was twilight, and the sitting-room was nearly dark, except for the glow which came from the fire in the grate.

"Who's zis?" said Dotty, going toward the lounge.

There was quite a heap of things on it. Edith, her big sister, often threw her hat and cloak there when she came in from school; and now they were mixed up with the slumber-robe, and some body must be sleeping under them, for a bit of black hair peeped out from one end.

"Poor papa!" said Dotty, going up and stroking the hair with her soft little hand. "He's tum home wiv a headache again. I'm sorry. I'll tomb his head, and I won't 'sturb him one bit."

She brought a comb, and carefully worked away at the black locks, whispering to herself:

"Papa always likes his head tombed when he's dot a headache.

"He's fast as'eep, I dess," she went on, finding that he did not move. She put her little face close down to the hair, and half-whispered:

"Papa, does I 'sturb 'ou?"

But papa did not answer, so she kept on combing, saying to herself:

"How g'ad he'll be when he wates up and finds his headache all don!"

But just then the comb caught in a tangle.

"O papa, did that pull?"

No answer, and the combing went on. Another pull, and the head moved a little.

"O papa! I'll be more tareful; 'ou see if I don't!"

But a harder tangle came. The head moved toward her and—fell upon the floor at her feet.

"O-o-o-o-o!" What a scream went before Dotty as she rushed into the hall!

"What's the matter?" cried Edith, who was just coming down stairs.

"What's the matter?" asked mamma, who was just coming in the street-door.

"O-o-o-o-o!" Dotty was too much terrified to answer, but Edith caught her in her arms as she tried to run up stairs.

"What is it, dear?" she asked.

"O-o-o-o-o!" cried Dotty, sobbing as if her heart would break. "Papa! Papa!"

"What about papa? He's down town."

"No—I've—pulled his head off."

"Nonsense, Dotty. What do you mean?"

"Oh, I have—I did. In there—" she pointed to the sitting-room, but kicked and screamed when Edith carried her toward the door.

"Papa isn't here," said mamma.

Dotty hid her head on Edith's shoulder as mamma lit the gas, but took a little peep out as Edith said: "See. Papa isn't here."

"O-o-o-o-o! Yes he is—he's on the lounge."

Mamma tossed over the things on the lounge. No papa was there.

"But—look on the floor," sobbed Dotty.

Mamma picked up the thing of long, straight black hair which lay there.

"It's my new monkey-skin muff," said Edith.

SYDNEY DAYRE.

Enigmas, Charades, Puzzles, etc.

1.

A NEW YEAR EPISODE.

"I have *first!* I'm ahead!"
At the table cried Ned,
"For I *second* five pieces of pie as I said!"
Then Fritz, who is studying German, cried
"*Third!*"
And mamma said, "Absurd!
If you've *fourth*, on my word,
You will want no more pie
Till *the whole* has gone by." E. S. B.

2.

ANAGRAMMATICAL CRYPTOGRAM.

In *sheet* days of *riteclec* cars, when rapid transit has become the *throwcawd* of the multitude, when *vocotennins* both grave and *risetef* are the order of the day, and *shote* who follow them up are hurried hither and thither like *clocktushets*, how often we hear the complaint from young and old alike: "*Heter* isn't time *hugone*." The following quotation from a well-known *hoatru* would make an *eclentlex* New Year's motto for all such: "One always has time *guneho* if he will apply it well."

The name of the writer of the last quotation, containing six letters, is buried in the twelve anagrams. The 1st, 6th, 7th, 8th, 9th and 12th anagrams each contain four letters, but not the same four. The remaining anagrams contain three of its letters each.

LILIAN PAYSON.

```

1. A letter from Lexington.
2 to 11. In composition, usually signifies *on*.
3 to 12. Hostility.
4 to 13. A Scripture proper name.
5 to 14. A kind of rampart.
6 to 15. Pertaining to milk.
7 to 16. To dislocate.
8 to 17. To draw from.
9 to 18. A town in the Russian Empire.
10 to 19. An undermining.

Primal row of letters, 1 to 10—The name of a battle fought on Jan. 8, 1815.

Diagonal row of letters, 11 to 19—The name of a battle fought on Jan. 3, 1777.

CYRIL DEANE.

4.

DOUBLE ACROSTIC.

1. A thing that sticks where'er it can.
2. The first name of a "funny man."
3. A vehicle quite small and light.
4. The conduct of a naughty sprite.
5. The time for sleep or candle-light.

From these you'll gather in a trice
A bit of holiday advice. E. S. B.

5.

COMBINATIONS.

Change the first and last letters of the words whose definitions are given in the first column to make those given in the second.

1. To satisfy.	1. A road.
2. The harvest.	2. Part of a vessel.
3. A supplication.	3. A carriage on runners.
4. The first garden.	4. The first day of March, May, July and October.
5. Short poems.	5. The first garden.
6. To lay hold of.	6. A knot.
7. A haven.	7. An advocate for royal power.

Now commence at the first letter at the left hand of the second column, and read down in a zigzag manner, and you will have what, I hope, you will receive on New Year's Day; then commence with the last letter at the right hand and at the top of the second column, read down in a zigzag manner,*and you will perceive what New Year's Day has now become.

6.

CHARADE.

My *first* belonged to a Dutch navigator, surnamed Mayen, who discovered a volcanic island in the Arctic Ocean in the year 1611.

My *second* belongs to you, and it comes in autumn.

My *third* belonged to a Dutch painter, surnamed Scheffer, who was born in Dort, Holland, in 1795, and who died in Argenteuil, near Paris, in 1858.

My *whole* brings the first festival of the year.

7.

QUERY.

Out of what two words, containing seven letters, can you get two pronouns, six adjectives, eleven nouns, nine verbs, two prepositions and one adverb?

Conundrums.

Why is a prince like an eaglet? He is high-born.

Why is a man of variable disposition like a hilly road? He has his ups and downs.

What article of parlor drapery might be tempting to a hungry man? A table spread.

Answers to Puzzles in Last Number.

1. New Year's Day.

2. 1st Couplet, Teddy, steady. 2d Couplet, steed. 3d Couplet, hotel. 4th Couplet, hay. 5th Couplet, shod. 6th Couplet, say, day. 7th Couplet, list, hist. 8th Couplet, tiles. 9th Couplet, toys. 10th Couplet, late, date. 11th Couplet, toes, hose. 12th Couplet, ties, hies. 13th Couplet, lad. 14th Couplet, says, the holidays.

3. Maria EDgeworth, HatCh, County, Eng-Land, EXtensive, NoVels, GIfted, UnIversally—MDCCLXVII., 1767.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year.

Payment for The Companion, when sent by mail, should be made in a Post-office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

AIR AND BREATHING.

Of the many sources of atmospheric impurity, we mention four.

1. Normal breathing. The air which we inhale to oxygenate the blood, is exhaled loaded with carbonic oxide. No harm results from this where there is a free circulation of air. But it is far otherwise in closed rooms and ill-ventilated places of public gathering. In such places the oxygen is rapidly exhausted, and its place filled with noxious carbonic oxide.

2. Exhalations from the surface of the body. It is this that makes the air of unventilated sleeping-rooms so disagreeable, and that rendered the Black Hole of Calcutta so fatal.

3. Dusty occupations, such as those of coal-heavers, black-lead grinders, copper and iron fillers, cotton spinners, etc.

4. Noxious microbes. Though these are microscopic plants, they are so small that they float in the air like the finest dust. They are now believed to be the cause of most epidemic diseases. They flourish in filth. They may enter the system through the lungs, or through the stomach.

But we are asked to say something upon the question, "How to Breathe?"

1. Avoid breathing impure air, as far as possible.

2. Keep high health back of the breathing. Vigorous health enables the stomach to kill microbes by digesting them, and opposes a strong resistance against all disease-producing causes.

3. In all dusty occupations, as far as practicable, keep the mouth shut and wear nose-protectors.

4. Form the habit of breathing through the nose, instead of through the mouth.

5. Let workers in white lead, besides wearing nose-protectors, make large use of a milk diet, which aids in the elimination of the lead.

6. Avoid tight-fitting clothes. They doom to an early death persons of weak lungs or consumptive tendencies.

7. Form the habit of deep breathing. This promotes a more complete oxygenation of the blood, enlarges the chest, strengthens the intercostal muscles, expands the air-cells in the lower part of the lungs, and helps the health of the entire body. As an aid to full inspiration, walk up hill, and breathe, a few minutes at a time daily, through one nostril, closing the other with the hand.

CATS IN ANTIQUITY.

Several questions have been raised as to the history of our domestic cat. The leading question is, whether the cat was known to the ancients. Supposing this to have been the case, then follows the question as to whether the cat of antiquity was a domestic animal or only a tamed one—like the monkey or the gazelle, for example.

There are thousands of mummies of cats in Egypt. A comparison of these with the cats of the present time is said to prove that they are of a different variety, if not of different species. The cat of antiquity, according to some authorities, was slimmer, and resembled the weasel more than it did any other animal.

Apart from the mummies of Egyptian cats, we have paintings of the animal on tombs in Italy. In these paintings cats are represented in the interior of dwellings. In one of them, especially, a kitten is seen playing with other animals under the couches upon which the guests are reclining at a banquet.

Upon two pitchers in the British Museum are to be seen domestic cats in the interior of a school of music. One is tied by a string, and the other stands upright on a stool, and a young man is offering a cake to it. All these pictures, which are authentic, and which date back more than two thousand years, reproduce the image of a cat, perhaps a little slimmer than ours, but like the animal as we know it.

There is pretty good evidence that the cat belonged to prehistoric times. An eminent English naturalist, Mr. Mivart, has enumerated fifty distinct species of living cats, and he adds, "A much larger number of species have probably existed in the past."

It is commonly supposed that the wild-cat is the ancestor of our domestic cats. This is declared by Professor Owen to be a mistake. There are said to be differences in the anatomy of these animals that make any near relationship improbable. Again, the wild-cat is not easily tamed, and is never domesticated. Its progeny revert to the original type.

There are circumstances that make it seem likely that the cat in England is a foreign importation. The king's cat was called "the keeper of the royal granary."

The old Welsh laws provided a curious penalty to be paid by the one who should kill this cat of the king. The offender was to pay as much corn as would cover the cat's body when held up by the tail. This goes to show that cats were rare, and had a market value.

A "PAN HANDLE" SCHOOL-GIRL.

Going to school in the "Pan Handle" of Texas—that little known but fruitful region, almost as large as Maine, to the west of the Indian Territory—is not so simple a matter as it is in the older parts of the Union, if we are to accept an account, which seems to be given in good faith by a Texas journal, of a school-girl's recent adventure near the new town of Childress.

About ten miles from Childress, it is stated, there lives a settler named Collier, who has a daughter sixteen years old named Pauline. The daughter wished to go to school, and as there is no school nearer than Childress, she was allowed to journey between her home and her school on horseback.

Not long ago, as she was galloping easily along over the plain on her pony, she suddenly saw, crouching on the ground before her, ready for a spring, a panther, or "American lion," an animal which is not uncommon in that region.

No doubt a good many sixteen-year-old girls, confronted by such an animal under such circumstances, would have turned their horse's head and taken to flight. Pauline was wiser than this. She knew that an attempt at escape meant death.

She had no firearms, but she had, hanging upon the pommel of her saddle, an instrument which is very commonly used thereabouts—a lariat or lasso. Pauline coolly took up the lariat, and, with a quick and skilful hand, threw it over the neck of the now advancing wild animal.

Then, with a wrap of the coil about the pommel of her saddle, she started swiftly along the trail, dragging the resisting panther behind her.

Before she reached Childress, Pauline encountered a group of cowboys, who were naturally greatly astonished to see the game she had in tow. The animal, between his choking and his dragging, was quite dead.

The cowboys removed the panther's skin, and had it made into a sacque, which they presented to the young girl. The animal, however, was first weighed, and was found to weigh two hundred and ten pounds.

DODGING HIS FARE.

It is unquestionably true that multitudes of people especially in our larger cities, spend an unnecessary amount of money for car fares. With a measure of shrewdness, such as was displayed by the Englishman concerning whom the following anecdote is related, they might put many a nickel and dime into their purses.

Some time ago a passenger on the North London railway remarked in the hearing of one of the company's officials, how easy it was to "do" the company.

"I often travel," he said, "from Broad street to Dalston Junction without a ticket. Any one can do it. I did it yesterday."

When he alighted he was followed by the official, who asked him in a pleasant, off-hand way how the thing was done. But the wily traveller was not to be cajoled out of his secret by a few soft words.

At last he laughingly agreed to tell for a substantial consideration.

"Now," said the eager official, "how did you go from Broad street to Dalston Junction yesterday without a ticket?"

"Well," was the reply, "I walked."

A GENTLE BLOW.

People often push others in a crowd in the street, in a manner much ruder than they would ever employ, were not those jostled into their way entire strangers.

A Boston gentleman was crossing a crowded street one day, when a well-dressed, ladylike-looking woman gave him a real blow on the shoulder while attempting to push her eager way past him. He lifted his hat.

"Madam!" he said, courteously, "next time you assault me in public, would you mind striking a little higher up on my shoulder, as that place is lame!"

The lady rushed by him, her face flaming with mortification.

BAD FORM.

An exchange reports a pleasing instance of mutual kindness between a little girl and a little boy. He was thoughtful of her comfort, while she was concerned for his reputation.

The little girl was pretty and the street-car was crowded.

"I'll give you my seat if you'll take it," said the boy.

The little girl put up her hand to check his movements. "I'm ever so much obliged to you," she whispered, "but you shouldn't offer your seat till you are ready to get off, 'cause people might think you're from the country."

AFTER AN OFFICE.

Some features of office-seeking are objectionable, but the Atlanta *Constitution* prints a letter from an applicant, and suggests at the same time that he seems to be really in need of an office, and it is equally evident that he is not a man whom office is likely to seek. The following is his modest avowal:

"To the edITyr I am a candydait to the Offise of skule KommiSioncer an Ask My Frens to Cast a Vost in My Beehaive. I am a 1 Arm Man, Beein cut oph in A. saw Mill, and Knead the Offise."

Ladies' Underwear should be made from KING PHILIP CAMBRIC, LAWNS and NAINSOOKS. Send stamp for samples. King Philip Mills, Worth St., N. Y. [*Adv.*

If you want to KNOW ALL ABOUT the Commercial and Manufacturing Centre of the **State of Washington;** **TACOMA** the western terminus of the Northern Pacific Railroad; the head of navigation of Puget Sound; the centre of the Mining and Timber Regions on the Pacific Coast, send for full information to the [Mention COMPANION.]
TACOMA LAND CO., Tacoma, W. T.

PLUSHES
Direct from the Mills. Every Lady uses Plushes. Before buying elsewhere, send for our prices and samples. Enclose 10 cents towards paying for the samples and postage, and we will send you 30 good-size samples, no two colors same shade.
CONTREXEVILLE MFG. CO., Manville, R. I.

POLUBOSKOS
FOR WEAK STOMACHS
CRYSTAL SPRINGS PURE GLUTEN FOOD.
We have perfected a Gluten Food, POLUBOSKOS, universally recommended by physicians who have tested it. The Food is agreeable to, and easily retained by, the most delicate stomachs. A healthful food for Invalids and those who are troubled with Dyspepsia, Sleeplessness, and Diabetes. Unequalled as a food for infants.
Quarter-Pound Package Free
Sent to any one who sends us name and address.
Half-Pound Package, post-paid, 50 cts.
CRYSTAL SPRINGS MAN'F'G CO., Boston, Mass.
Manuf. of Celebrated Crystal Springs Wheat Starches.

NIGHT-GOWNS.
Ladies' Gowns, as shown in cut, with Double Yoke, Front and Back, Collar and Cuffs, Heavy Cotton.
As an advertisement for our Cotton Underwear Department, at
59 cts.
Postage Free.

SHEPARD, NORWELL & CO., Boston, Mass.

AGENTS AMAZED
At the quick sales and large profits. Write at once and take an agency and get exclusive control of your town or county for the sale of the BEST HOUSE UTENSIL IN THE UNIVERSE.

HILL'S CHAMPION STEAM COOKER
is BETTER and CHEAPER than TIN COOKERS. **INDESTRUCTIBLE IRON BASE.** Steamless and Odorless. WONDERFUL and PLEASING to all HOUSEKEEPERS. Warranted to give satisfaction. Address for terms, **Hill, Whitney & Co.,** 151 Pearl Street, Boston, Mass.

Blanket Wraps
FOR LOUNGING, FOR THE SICK-ROOM,
FOR THE NURSERY, FOR THE BATH,
FOR STEAMER-TRAVELLING,
FOR THE RAILWAY CARRIAGE, FOR YACHTING.
For Men, Women, Children and the Baby, $2.75 to $35, with Hood and Girdle complete.
Samples of Goods and full information sent on application.
NOYES BROS., Boston, Mass., U. S. A.

W. L. DOUGLAS $3.00 SHOE
And other Specialties.

For GENTLEMEN.
$5.00 Genuine Hand-Sewed.
$4.00 Hand-Sewed Welt Shoe.
$3.50 Goodyear Welt.
$3.50 Police and Farmer's Shoe.
$2.50 Extra Value Calf Shoe.
$2.25 Workingman's Shoe.
$2.00 Goodwear Shoe.

For LADIES.
$3.00 Genuine Hand-Sewed.
$2.50 Best Dongola.
$2.00 Extra Value for the price.
$1.75 For MISSES.

For BOYS and YOUTHS.
$2 and $1.75
SCHOOL SHOES.

W. L. DOUGLAS $3.00 SHOE for Gentlemen is the best in the world, having stood the test for years.

$3.00 is made in fine calf, seamless, and laced waterproof grain, and its excellence and wearing qualities cannot be better shown than by the recommendation of wearers of **250,077** pairs in 1890.

$5.00 Genuine hand-sewed. An elegant and stylish dress or street shoe which commends itself. This shoe will give equal satisfaction to those costing much more, as one trial will convince you.

$4.00 Hand-sewed welt. This shoe can not be duplicated in style and durability for this price. Satisfy yourself on this point by comparison with other makes of shoes.

$3.50 Goodyear welt. You can scarcely distinguish this shoe from the best hand-sewed goods. Easy, stylish, and durable, it has become the standard dress shoe at a popular price.

$3.50 Police and Farmer's Shoe is especially adapted for outdoor work. For policemen, farmers, letter-carriers, railroad men, etc., it cannot fail to please and give the best satisfaction.

$2.50 $2.25 and $2.00 for workingmen are all well worth more than the price asked. They are specially prepared to meet the purses of all desiring a first-class shoe. Warranted not to rip.

BOYS' $2.00 and $1.75 School Shoes are made of the best material, no shoddy, but leather through out. They will not rip, and will stand more hard usage than any other shoe sold at this price **74,282** pairs sold in 1890.

All made in Congress, Button and Lace. Men, sized from 5 to 11, including half sizes. Widths 3, 4, 5, 6. **Boys,** 1 to 5½, including half sizes. **Youths,** 11 to 13½.

W. L. DOUGLAS $3.00 SHOE FOR LADIES is a **hand-sewed shoe** and the only hand-sewed shoe sold and warranted at this price. The accompanying cut shows its general style as nearly as can be illustrated. It is made of the best Dongola, will wear well and keep its shape; no shoddy or paper used in any part of it, and is of solid leather throughout.
W. L. DOUGLAS $3.00 SHOE is made in the following styles: No. 427, "Opera;" No. 428, "Common Sense;" Sizes 2 to 7 including half sizes. C, D, E, EE widths.
W. L. DOUGLAS $2.50 SHOE FOR LADIES is a new departure, and promises to become a very popular-priced shoe. It is made of the best bright Dongola on stylish lasts, and finished in the best possible manner. It cannot be duplicated at the price asked; is warranted and so stamped on bottom. Made in the following styles: **No. 350, "Common Sense;" No. 370, "Philadelphia Toe" (new); No. 360, "Opera."** Sizes, 2½ to 7, including half sizes. D, E, EE widths.
W. L. DOUGLAS $2.00 SHOE FOR LADIES is made in both bright Dongola and Pebble Goat, in a most finished manner, thus giving a fashionable and durable shoe at a moderate price. A great many of these shoes are worn throughout the country, and always have proven satisfactory. They are warranted similar to the other lines. Made in the following styles: **No. 227, "Common Sense;" No. 226, "Opera."** Sizes, 1 to 7, including half sizes. C, D, E, EE widths.
W. L. DOUGLAS $1.75 SHOE FOR MISSES, made expressly to meet a long-felt want for a shoe combining style with the hygienic principles so necessary in the footwear of misses and young ladies. Styles **No. 150, "Spring Heel;" No. 16, "Regular Heel."** Sizes, 11 to 2, including half sizes. D width.

The only $3.00 Hand-sewed Shoe for Ladies in the world.

CAUTION The stamping of name and the price and guarantee on bottom of **W. L. Douglas' Shoes** is the value fixed by the Manufacturer for the benefit of consumers, and gives them price-worthy goods and the dealer fair profits. Do not buy unstamped shoes, although claimed to be just as good, as you have no knowledge or guarantee of their value. Insist upon having **W. L. Douglas Shoes** with name, price and guarantee stamped on bottom. **If our advertised local agent** cannot supply you, send direct to factory, enclosing advertised price. **To order by mail,** Gentlemen and Boys will state size usually worn, style and width desired. Ladies will please give the **number** of style desired, size and width usually worn, and if a snug or loose fit is preferred. For Misses state size and kind of heel. Address,
W. L. DOUGLAS, Brockton, Mass

LATEST DISCOVERIES IN SCIENCE.

THE STARS.

By J. Norman Lockyer, F. R. S.

Every well-brought-up English child is supposed to lisp, before he or she is six or seven years old:

"Twinkle, twinkle, little star,
How I wonder what you are."

I have little doubt that young people in America have the same peculiarity, since I have been asked to tell in *The Youth's Companion* how astronomers are endeavoring to replace the wonder, and I may add, the mystery concerning star structure, by certain knowledge. It may also be said that, although astronomy is not being studied by so large a relative proportion of the population as formerly, still the means of finding out things about the stars recently have been so greatly increased, chiefly by the aid of the prism and the photographic plate, that very much of the certain knowledge to which I have referred is of quite recent date.

The Chief Constellations.

It is not generally known how easy it is to get a sufficient knowledge of the chief constellations to enjoy to the full the magnificent picture presented to us:

"When in heaven the stars about the moon
Look beautiful, when all the winds are laid,
* * * and the unmeasurable heavens
Break open to their highest, and all the stars
Shine."

The best way is to begin with the pole-star, and then, by using the simplest star-map procurable, gradually to work further and further away from it, until at length the constellations which lie along both the equator and the ecliptic become quite familiar. When this knowledge has been even approximately obtained, the movements, both of the moon and the planets, among the stars from night to night, will afford a perpetual source of purest enjoyment.

Stars Seen by the Naked Eye.

One is afraid to say how many thousands of years ago were made the first observations of stars of which we have any certain knowledge; but in all probability they were made not less than seven thousand years ago, by priests in Egypt, who required to know when certain stars rose above the eastern horizon, in order that their morning sacrifice might be offered at the proper time, that is, exactly at sunrise.

Nowadays, such eye observations have given place to others made by elaborate instruments, which enable us to observe stars, not only on the horizon, but in any part of the blue expanse of heaven; while by the increased power of telescopes the number of stars within our ken has been increased from six thousand, the number which may be seen in both hemispheres by the naked eye, to probably about eighty million.

Our Sun a Star.

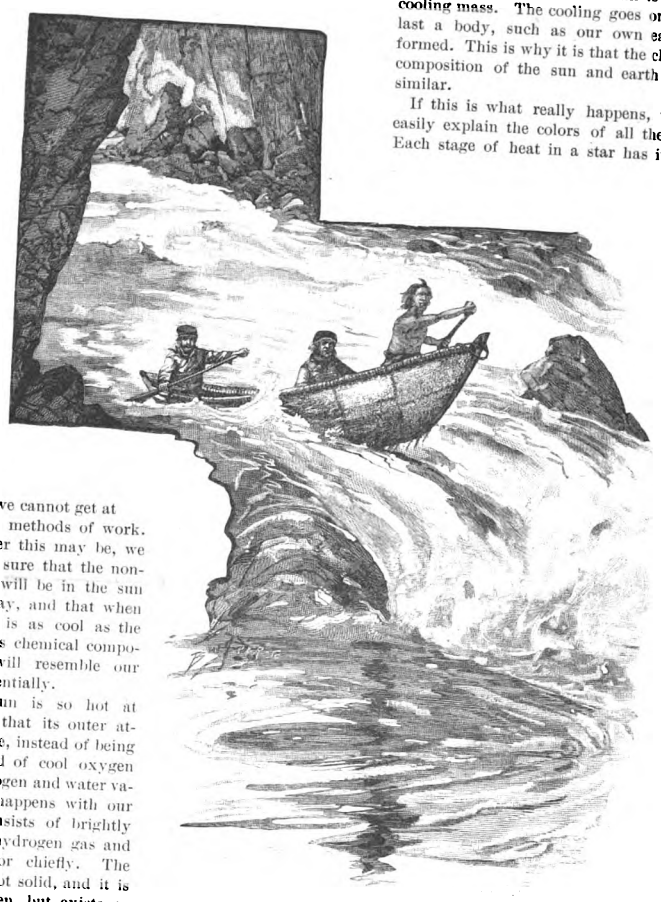
Most young folks now know that the difference between night and day on this planet of ours arises simply from the fact, that among the innumerable multitude of stars, there is one infinitely nearer to us than all the rest. Being so much nearer to us, when we see it we have day. When by the earth's movement on its axis the sun has set in the west, we have night; at which time we depend for light upon the more distant stars—unless, indeed, the moon is shining.

In the main, it is true that the enormous difference in the intensity of the light that we receive from the sun in the one case, and from all the stars seen at night in the other, depends upon the fact that the sun is the star nearest to us, and the other stars are suns infinitely removed.

The amount of light we receive from any star depends upon its distance, its size, and the brilliancy of its surface. A faint star far away may, therefore, be much larger than one which appears brighter to us because it is nearer, and as a matter of fact it is known that some faint stars have a much larger mass, that is weigh more, than Sirius, the brightest star in the heavens, although this latter star is three times heavier than our sun.

The star nearest to the earth, *a* Centauri, is about two hundred and seventy-five thousand times as far from us as the sun is, and Sirius is about twice as far away as that; if, however, we could view these bodies at an equal distance, *a* Centauri would appear nearly twice as bright as our sun, and Sirius forty times as bright.

Further, we know that all these bodies, although they are called fixed stars in astronomy books, so far from being fixed are all in rapid movement, and the rate in some cases fills us with astonishment. Thus, one star (1830 Groombridge) has a velocity of not less than two hundred miles a second. This would carry it from New York to Constantinople in about a minute, and from the earth to the sun in five days. Another star (61 Cygni) has a velocity of not less than thirty miles a second, or three million miles a day.



So far, then, we find that the stars are at different distances, that they are of different sizes, and that instead of being fixed, they are all in movement.

The Light of the Stars.

We now come to another question. Why do these bodies, whether near or distant, give out light? They give out light because they are hot, and some of them are hotter than almost anything we can imagine. But we are not left to our imagination. By the use of the prism, the child's wonder as to what the stars may be has been changed into a certain knowledge of what stars like the sun really are. Such bodies are masses of glowing gas, the materials of which are for the most part precisely the same as those of which our earth is built up; the great difference between such stars and the earth, at the present time, being that they are hot while the earth is cold.

All the metals, or nearly all of them, which we read of in books of chemistry, have been found in the sun; and it is quite possible that some of the non-metals may exist in a part of the sun which we cannot get at by our methods of work. However this may be, we may be sure that the non-metals will be in the sun some day, and that when the sun is as cool as the earth, its chemical composition will resemble our own essentially.

The sun is so hot at present, that its outer atmosphere, instead of being composed of cool oxygen and nitrogen and water vapor, as happens with our own, consists of brightly shining hydrogen gas and iron vapor chiefly. The iron is not solid, and it is not molten, but exists as iron steam, at perhaps a distance of two hundred thousand miles above the shining orb that we see and call the sun. This, I think, may be taken as a fair indication that the sun is, indeed, a very hot body, especially when we remember that as its centre is approached, the temperature must always increase.

Shooting a Fall.

Are all Stars Like our Sun?

I have said this much about the sun, because it is very natural to ask whether all stars are like the sun? It used to be thought that they were, but I, for one, do not think this is so. When we come to examine the bodies which shine in the sky, those dim patches of gray light called nebulæ as well as many of the stars themselves, the prism tells us that the light which they send to us is very different from the light sent to us by the sun, and by other stars the light of which is exactly like sunlight.

It is fair to suppose that if the light sent out is different, the body which sends it out must also be different in some way or another. A great deal of work recently done shows that probably many stars, instead of being like the sun, are built up as the comets are, of enormous clouds or swarms of little bodies, some of them, perhaps, no bigger than grains of dust, the different quantities and qualities of the light given out depending upon the motions of these little particles, and the average distance between them. So when we have a great many of these little masses closely packed together and moving rapidly, they will have an opportunity to strike one another, and thus produce light and heat in a greater degree than can happen in those other so-called "stars" where the dust is sparser, and the motion less rapid.

How Stars are Formed.

This is an idea which has lately been suggested, and I refer to it here, because it appears to make clear a great many points on which children even of a larger growth have been long puzzled.

The idea, in its most general form, is that the bodies which shine in space, whether nebulæ, comets, stars, planets or moons, all start in the same way. For the starting point, it is imagined that they all consist of the little particles to which I have referred, far apart, and not in very rapid movement. Collisions take place between these particles, and give rise to light as the striking of a flint against a steel gives rise to light. The light at first is dim, because the collisions are not numerous, but in time the little particles condense toward a centre which, therefore, becomes brighter because the particles are then nearer together, clashing together oftener, and, therefore, developing a larger amount of heat and light.

In this way we pass from what we see in the heavens as patches of milk-white light called nebulæ, to other bodies even hotter than our sun; and when the stage is reached in which we see specks of light merely, and deal with "stars" properly so-called, we get a hot body which increases in temperature as all the little particles arrive at the centre, until the motion of all of them has been changed into heat, and a ball of vapor results, very, very hot.

As soon as the supply of heat ceases, the mass begins to cool. Our sun is such a cooling mass. The cooling goes on till at last a body, such as our own earth, is formed. This is why it is that the chemical composition of the sun and earth are so similar.

If this is what really happens, we can easily explain the colors of all the stars. Each stage of heat in a star has its own special color. It is true that sometimes very nearly the same color is produced at two different stages of heat, but apart from this, we know that very white stars are at the condition of their greatest heat, and that yellow stars are cooler, though some are old, some young; and that very red, but especially blood-red, stars are tottering on the verge of invisibility, having run through all their changes.

Variable Stars.

So far we have considered that the quantity of light given out by a star depends upon its age, so to speak. But this is not all. In some cases stars, although we do not see them as double stars, are really double, and this causes them to vary their light. We may imagine one swarm of colliding and light-giving bodies going round another; and if the swarms are not always the same distance apart, and there is good reason why they should not be, they will at times, so to speak, intermingle, and then there will be more opportunity for clashings, and, therefore, more light will be given out. The star will be what is called a "variable star," and the waxing and waning of the light will be regular, if we are dealing with two swarms only, or irregular, if we are dealing with more.

Not only so; the two swarms which consisted of separate particles in the first instance will eventually become bodies like the sun, and go on until both have become cooling bodies, one of them, perhaps, cooler than the other. Then it may so happen that the cooler body will come between our earth and the brighter one, and stop some of its light in the same way that our moon stops the light of the sun from reaching the earth in a solar eclipse.

These, then, are some of the points about stars on which facts are being accumulated, so that it is certain that the more our knowledge increases, the more the majesty of the universe of which each of us forms a part will be revealed.

It should please the youth of America to know that a noble American lady is at the present time doing more than all the rest of the world put together, to bring the facts of star-life before us; and there is little doubt that when the "Henry Draper Memorial" is completed, what the stars really are will be far better known. At present we are looking through many glasses darkly. We shall then be face to face with records which cannot err, for tens of thousands of stars will have told their own story in the language of light.

For the Companion.

FORTY MILES OF MAELSTROM.

The Canadian Pacific train, speeding swiftly on toward Winnipeg, had just dashed over an iron bridge which threw its audacious spider-web across a foaming torrent. Pointing down at the tumbled water beneath, one of the men in the smoking compartment of a palace car exclaimed:

"I'd like to try that rapid in my Rice Lake."

"Are you so fond of a wetting as all that?" asked Charlie Hall, with a smile.

"Oh, I'd risk the wetting. I've been through worse rapids than that without so much as being sprinkled." He proceeded to support his assertion by relating some of his adventures.

When Jack Fleming came to the end of his tether, the others had their say, for they had not been without experiences of a similar nature. Meanwhile, the fourth member of the group had been listening with interested attention, as if their stories were so novel that he did not wish to lose a word of them. He was merely a chance acquaintance, who had fallen into conversation with his fellow-travellers through the free-masonry of the pipe. They knew his name, Ronald Cameron, but they knew nothing more about him.

It was more for the sake of saying something courteous than with any idea of drawing the stranger out, that Fleming turned to him and said, "Perhaps you know something about running rapids, too?"

The stranger's bronzed face broke out into a smile, which meant unmistakably, "As well ask Grant if he knew something about fighting battles," but there was not the faintest trace of boastfulness in his tone as he replied, "I have run a few rapids in my time."

"Well, it's your turn now; tell us your experience," said Fleming, and without much urging Cameron began.

"I must explain that I am in the employ of the Hudson's Bay Company, and have spent many years in the Northwest districts. My duties have required frequent long trips by York boat and bark canoe, in the course of which I have had my full share of tussles with rapids of all kinds. I could tell you half-a-dozen rather exciting little episodes, but I'll give you only one just now, namely, my passage of the Long Cañon of the Liard in a canvas boat."

"In a canvas boat?" broke out Fleming, half-incredulously.

"Yes, in a canvas boat," repeated Cameron. "Not a particularly seaworthy craft, I must confess. But it was a notion of my own in order to get around the difficulty in which I was placed. I had been over in British Columbia, and was on my way back to Athabasca. The season was growing late, and I had only two men with me, an Indian and a half-breed. The Indian was a splendid canoe-man, but the half-breed was not of much account. The first part of the journey could be made by boat easily enough, but for us three men to drag a heavy boat over Grizzly Portage, which is about six miles long, and has a portage-path that climbs a thousand feet up the mountain side, was quite out of the question.

"So before I started I had a boat made out of tent canvas, which would be no trouble to carry. The wooden boat was to be left at the head of Grizzly Portage to take care of itself.

"Well, we got on smoothly until we passed the Portage, and the Long Cañon opened out before us. As I looked at its wild rush of water, and realized that this was only the beginning, and far from the worst of it, I confess I felt tempted to turn back. But my pride soon banished that thought, and I set about getting my frail craft ready for the trip. Dennazee, the Indian, did not show the slightest concern; but Machard, the half-breed, was evidently much frightened.

"Assuming a cheery indifference I by no means felt, I went about the work in the most matter-of-fact way, and, with Dennazee helping heartily, the canvas boat was put together and set afloat.

"But it became evident immediately that she was not minded to stay afloat long. Although I had taken the precaution to give the canvas a good coat of oil, no sooner were we on board than the treacherous stuff leaked through every pore. Clearly this must be remedied before we could attempt the passage.

"Bidding the men gather all the gum and balsam they could find, I put the whole of our bacon, some ten pounds at least, half-a-dozen candles, and the gum and balsam into our pot, set it over a brisk fire, and produced the most extraordinary compound you can imagine.

"With this we thickly daubed the outside of the boat from stem to stern, and then left her for the night. The next morning she was as tight as a drum, and we started off, the poor half-breed muttering prayers in full expectation of a watery grave, the Indian as stolid as a statue, and myself

Digitized by Google

much more anxious at heart than I cared to have either man know.

"The cañon is about forty miles long, and in that distance the river falls quite five hundred feet. Old Lepine, who has piloted boats up and down the Liard for thirty years or more, asserts that once, when the water was unusually high, he went through the whole length of the cañon in a York boat in two hours. The old man may be a few minutes short of the record, but there is no doubt that in the spring, when the snow is melting on the mountain slopes, the river runs at a fearful rate. I had hoped for low water, but, as luck would have it, a sudden spell of intensely hot weather had set the snow going, and the Liard was just high enough to be a very ugly customer.

"Well, we paddled out into the current, and then there was nothing to do but steer. I had the stern, and Dennazee the bow, while Machard clung tightly to the centre thwart, and was useful only as ballast. Like an arrow our little boat sped down stream, darting this way and that, dipping and dancing about like a cork, doing exactly what the water willed.

"At the very first swirl I found out something that gave me an additional shiver. This was that the boat could bear very little pressure from the paddle. If the water pulled one way and the paddle the other, the frail thing squirmed and twisted like a snake instead of obeying the steersman, so that it was quite impossible to make her respond readily or to effect a sharp turn. No doubt Dennazee discovered this as soon as I did, but he gave no hint of it, as with intent face and skilful arm he did his part of the work to perfection.

A Succession of Whirlpools.

"The first few miles were not very bad, but we soon came to a place where whirlpool followed whirlpool in fearfully quick succession, and I no sooner caught my breath after escaping one than we were struggling with another. Our canvas cockle-shell appeared to undulate over the frothing waves rather than cut through them. I seemed to feel every motion of the water through her thin skin. In the very thick of it I could not help admiring the wonderful skill of the Indian in the bow. Again and again he saved us from dashing against a rock, or whirling around broadside to the current.

"For mile after mile we were tumbled about, and tossed from wave to wave like a chip of bark. My heart was in my mouth. I could scarcely breathe. My knees quaked, though my hand was firm, as, with eyes fixed upon Dennazee, I instantly obeyed every motion of his paddle.

"In this fashion, one hairbreadth escape succeeding another, we did half the distance unscathed, and made the shore by the aid of an eddy at the head of the Rapids of the Drowned. These rapids got their forbidding name from the fate of eight voyagers, who lost their lives while attempting to run them in a large canoe. Being studded with rocks, these rapids are extremely dangerous. As the cañon widens out sufficiently to leave a narrow beach at this point, we preferred portaging our canvas boat to impaling her on one of the rocks.

"It was a strange thing that our sudden appearance should have so startled two moose who were standing on the shore that, instead of retreating up the hill, they plunged boldly into the river, of whose pitiless power they evidently knew nothing, and were borne helplessly away to destruction. A little later we saw their bodies stranded on a shoal, and the sight gave me a chill as I thought that that, perhaps, would be our fate, too, before we escaped from the long cañon.

"We had hard work getting the boat and ourselves over the broken, bowlder-strewn beach beside the Rapids of the Drowned, and the boat had more than one 'close call' as we slipped and stumbled about. I've no doubt Machard would have been glad to see it perforated with a hole beyond repair. But by dint of great care and hard work we did manage to bring it through uninjured, and then we halted for a rest, and a bit of dinner.

An Unwilling Passenger.

"When it came to starting again, Machard vowed he would not get aboard. He pleaded to be allowed to follow us on foot; but I would not listen to him. I needed him for ballast in the first place, and moreover, if we did get through alive, I could not afford to waste half-a-day waiting for him to overtake us. Drawing my revolver, I ordered him to get on board. He obeyed, trembling, and we started again, Dennazee as imperturbable as ever.

"We had the worst part of the passage still before us. The sides of the cañon drew close together until they became lofty walls, between which the river shot downward like a mill-race. The great black cliffs to right and left frowned upon us as if indignantly, and at every turn in the cañon a whirlpool yawned, ready to engulf us. Again and again I thought we were caught in a whirl, but in some marvellous manner Dennazee extricated us, and we darted on to try our fate with another.

"Extreme as our peril was, it had a wonderful thrill and excitement about it, and in the midst of it I found myself thinking that were I only in a big York boat I would be shouting for joy instead of filled with apprehension.

"The great difficulty was to keep our boat straight with the stream, for, as I have already told you, she was so pliant that she bent and twisted instead of keeping stiff, and more than once I felt sure she would cave in under the tremendous pressure upon her thin sides. To make matters worse she began to leak again, and although I commanded Machard to bail her out with a pannikin, he did it so clumsily in his terror that I was afraid he would upset us, and had to order him to stop.

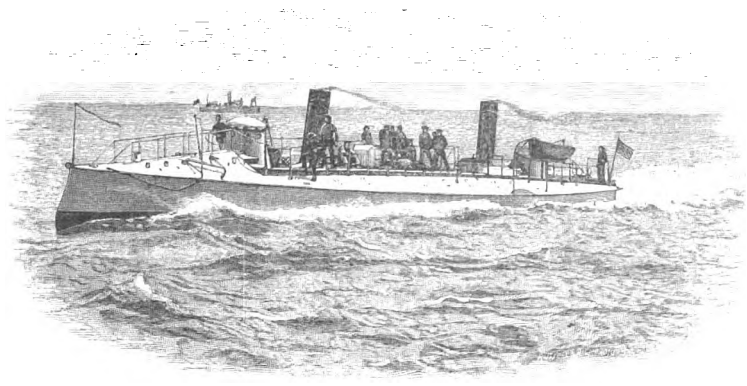
"We must have had an hour or more of this, when for the first time Dennazee spoke. Turning round just for a moment he pointed ahead, and exclaimed, 'Hell Gate!'

"I knew at once what he meant. We had almost reached the end of the cañon. There remained only Hell Gate, and our perils would be over. *Only Hell Gate!* I've not been much of a hand at praying, but I'm not ashamed to confess that I imitated poor Machard's example then. As for him, the moment he heard what Dennazee said he fell on his knees in the bottom, and, clinging to the thwart, set to praying with all his might and main.

Last and Worst.

"With a thrilling rush we swept around the curve and plunged into Hell Gate. It is an awful place. The walls of the cañon are two hundred feet high, and not more than a hundred feet apart. The deep water spins along at the rate of twenty miles an hour, while at the end is a sort of drop into a black, dreadful pool where the whirls are the worst of all.

"We got through the narrow passage all right, and then, with a dive that made my heart stand still, entered the whirlpools. There were three of them, and we struck the centre one. In spite of our desperate efforts, it got its grip full upon us, and round and round we went like a teetotum.



"It is not at all likely that I shall ever forget that experience. Our flimsy craft seemed to be trying to collapse every moment. It writhed and squirmed like a living thing, and at every turn of the awful circle we drew nearer to its centre, which yawned to engulf us.

"I had given up all hope, and was about to throw away my paddle, and prepare for the last struggle, when suddenly there came a great rush of water down the cañon. The whirlpools all filled up and levelled over; for one brief minute the river was on our side.

"With a whoop of delight Dennazee dug his paddle deep into the water, and put all his strength upon it. I seconded his efforts as well as I could. The boat hesitated, then obeyed, and moved slowly but surely forward; and after some moments of harrowing suspense we found ourselves floating swiftly but safely onward, with no more dangers ahead."

Cameron ceased speaking, and picked up his pipe. There was a moment of silence, and then Fleming, drawing a deep breath, said with a quizzical smile, "Perhaps you *do* know something about running rapids."

J. MACDONALD OXLEY.

The Cushing.

For the Companion.

THE TORPEDO BOAT.

There is no part of the naval equipment of nations that is more interesting to the people than the torpedo boat, and its peculiar duty. Yet, with the exception of some slight use on the Danube, thirteen years ago, the torpedo in its present form has never been in action. On that one occasion, moreover, the effect was chiefly upon the *minds* of the combatants. Each was in such terror of the torpedo boats of its adversary, that the result was achieved through fear rather than fighting. Yet we may safely assume that the torpedo boat may be relied upon as a practicable weapon of war.

The boat at present in use, whose main duty is coast and harbor defence, requires an auto-mobile or self-propelling torpedo, which shall run for half a mile under water, and be exploded by contact with the enemy's ship.

Several Kinds of Torpedoes.

Torpedoes themselves may be divided into three classes. In the first are the fixed torpedoes, which are planted at the bottom of the water near harbor entrances, and exploded by electricity. The second includes movable torpedoes, which are dependent upon connection with a fixed base. A coil of fine wire concealed upon the torpedo unwinds as it advances, and by means of electric influence the operator can make it stop, start, turn to right or left, and finally explode at will. The third class embraces the strictly auto-mobile torpedoes, of which there are two kinds, the Whitehead and the Howell.

The Whitehead torpedo has been adopted by all the naval powers of Europe. Its body, which is cigar-shaped, is of polished steel plate, about eighteen feet long and fifteen inches in diameter midway. Near the stern is a diaphragm and a small screw propeller.

The body of the Whitehead torpedo is divided into three sections. The front portion is devoted to the storage of fifty pounds or more of dynamite, which is discharged by contact with the hull of the vessel destined for destruction. In the central section is a very compact engine, which has nearly one hundred horse-power, and is usually made of phosphor bronze. In the last section lies the stored power, which is air compressed to a pressure of fifteen hundred pounds to the square inch.

Experiments made in Portsmouth, England, have established for the Whitehead torpedo a speed of about thirty-five miles an hour when it is set for a five-hundred-yard flight. The torpedoes used by the English Government are made at the Arsenal at Woolwich on the Thames, and cost about five hundred pounds each.

The Howell torpedo is an American machine. It resembles the Whitehead, but differs from it in its means of propulsion. Its motive power is furnished by a fly-wheel, to which rapid motion is given just before it is to be used. The amount of power stored in the wheel is astonishing, and, by its force, the torpedo can be made to perform a flight of nearly two miles. Great nicety of finish is necessary in order perfectly to balance the machine, which would otherwise be torn to pieces by the vibration of the wheel, enclosed as it is in the torpedo, and running at the rate of twelve hundred turns a minute.

Advantages of the Howell.

The Howell torpedo leaves no visible trace of its flight through the water, and is, in this respect, superior to the Whitehead, whose course is plainly discernible by the bubbles of exhaust air which rise to the surface. But, on the other hand, the spinning of the fly-wheel in the Howell torpedo is accompanied by a tremendous noise, caused by the exhaust steam which is used to give it the requisite speed.

The mode of using the two machines is the same. In the side or bow of the vessel is fixed a tube containing the torpedo, which, when it is on a line with the object to be destroyed, is projected by a charge of slowly burning powder, or the release of a quantity of compressed air.

The boats used for carrying torpedoes are more complex in construction than the instruments themselves, and have received much attention from naval designers. They are divided into two classes. A boat which can be carried by a ship belongs to the smaller class, and is limited in length and displacement by the capability of the ship which is to launch it.

Such torpedo boats are from seventy feet to fifty-five feet in length, from seven to eight feet wide, and displace ten to fourteen tons. They are expected to work only a few hours, and carry a crew of not more than six men.

The engines and other equipments of the second-class boat are more simple than those of the larger, and up to the present time they have always been furnished with single screws which give a speed of seventeen or eighteen knots an hour. They are used as adjuncts to larger ships, and in an engagement are expected to harass the enemy by attacking from several points at once. The battleships *Maine* and *Texas* are to be furnished with two of these second-class torpedo boats.

The New Torpedo Boats.

Soon after the second-class boat came into use, about twenty-five years ago, it was seen that a larger boat for harbor defence was desirable, and to meet the demand the British Admiralty built the *Lightning*, the first of her class. She was eighty-five feet long. Since then these sea-going torpedo boats, as they are often called, have been increased in length to one hundred and fifty-five feet, and in displacement to one hundred and sixty tons, while their range has been increased from harbor to coast defence. They are also fitted with twin screws.

Since the success of the torpedo service depends on "dash," it is clear that the highest possible speed is desirable. This has been developed with such success that, in a recent trial of first-class torpedo boats built upon the Baltic for the Italian Government, a speed of nearly twenty-seven knots an hour was obtained.

The secret of such tremendous speed lies in two characteristics—power and lightness. The designers must study every item of construction, and endeavor to eliminate every ounce of weight not requisite to strength. It is plain to be seen that all materials for hull and machinery must be of the best. It is only since the introduction of high speed torpedo boats that steel manufacture has been improved to meet the demands of marine architecture.

Wood for the construction of hulls was displaced thirty-five years ago by iron, and iron in its turn was five years ago displaced by steel. The limit has not yet been reached, for already alloys of steel and aluminium, and steel and nickel, have appeared, which may in time supersede the use of pure steel.

The "Cushing."

The sea-going torpedo boat No. 1, named the *Cushing*, recently built in Bristol, R. I., for the United States Government, affords the best example of vessels of her class. Although she is the first ever built in America, all the experience of foreign builders has been utilized; and it is thought that some improvements over all others have been introduced.

The *Cushing* is one hundred and thirty-eight feet long, and fifteen feet wide, is furnished with twin screws driven by quadruple expansion engines of eighteen hundred horse-power combined, and shows a speed of twenty-three and a half knots light, and twenty-two and a half knots loaded. The hull is of the best quality of plate steel, and it is all galvanized to prevent damage by sea water. The *Cushing* is heavier by several tons than her foreign predecessors, and does not for that reason show such high speed. It was thought best to sacrifice something of speed to durability and strength. She is about one knot less fast than the best record of foreign boats of her class, while her accommodations for officers and crew and her manœuvreing powers are far superior to theirs.

When one considers the size of a torpedo boat in proportion to the amount of paraphernalia which it is required to carry, one must wonder that it is able to float at all. The *Cushing* is required to carry four Howell torpedoes, to have space for two tubes used in discharging them, and for a crane of a capacity of fifteen hundred pounds' lift used in hoisting them out of the water after experiments. She must carry three machine guns on deck, and a magazine in which ammunition for the torpedoes and the guns may be safely stored. An engine for hauling up the anchor must be properly placed, and she must carry a full electric plant, that is, a dynamo with its engine and connections, with which to light the vessel, and for use in two electric search-lights.

The propelling power must develop force enough to drive the boat twenty-two knots an hour, and maintain a reasonable rate of speed for a distance of three thousand miles, which means room for a large stock of coal, and all other engine-room equipments. Beside all this, she must have quarters for four officers and a crew of sixteen men, who must be properly fed and supplied with water, which is distilled on board the vessel at the rate of ten gallons an hour. Space there must be, too, for clothing, provisions and medicines, in fact, everything that is found on a ship of five thousand tons, though in reduced form.

Untrustworthy Compasses.

One of the greatest difficulties in torpedo boats is found in adjusting the compass to the powerful and varying currents of electricity from the electric plant which surrounds it. Regardless of what the vessel is doing, the needle must point to the pole with unerring constancy; and it was a work of great difficulty to cancel this local attraction.

Another requirement in the case of the *Cushing* is that she shall be able to free herself from water in case of accident, or in case she is riddled with shot in action; and to this end each of the ten compartments is fitted with separate means of discharging water. By their combined power, the pumps and injectors will discharge fifteen tons, or about four thousand gallons a minute, so that the *Cushing* could free herself of an amount of water equal to her own displacement in about seven minutes.

Some idea of the amount of machinery in the *Cushing* may be gained from the fact that fifty-eight feet of the body of the boat are taken up by the boilers, engines and coal bunkers, and that twenty-nine steam cylinders are required. Her boilers are constructed under the patent of Thornicroft of London, and are the largest of the type ever made, and the first that were ever built outside the shops of the inventor.

The officers and crew have, on the whole, very comfortable quarters. Each man is allowed to carry twenty-five pounds of clothing and each officer fifty, and both officers and men are provided with lockers, as there is no room for the ordinary seaman's chest.

A Picked Crew.

The officers and crew of torpedo boats are selected with reference to the special duty performed, and must be men of nerve, great physical endurance and technical skill. The crew are preferably small men, wiry and active, and accustomed to positions of danger, which they are expected to fill unflinchingly.

The stokers or firemen must be especially experienced. Two are required for each boiler, and in a protracted run at high speed the assistance of another man would be necessary to trim the coal. When running under ordinary draught the duty is comparatively easy, as the consumption of coal is light; but when high duty is required the situation wholly changes. The hatchway of the fire-room is closed, and light is supplied by lanterns; for when the boat is in action, the small round windows are closed with iron shutters, close-fitted, so that no ray of light shall disclose her position to the enemy.

As soon as the stoke holes are closed, the blowing engines, which are controlled by the men in the engine-room, are set at a speed of about eight hundred turns a minute, producing a humming or roaring which is frightful to one unused to the situation. Each boiler-room is furnished with a blower, delivering ten thousand cubic feet a minute, which causes a severe pressure in the rooms. It is easily seen that the duty in the fire-rooms is very exhausting, and in action or a prolonged run the men are given stimulants to sustain them. The stokers are further goaded on by the increased action of the heart, due to the compression of the air which surrounds them.

The scene in the engine-room is not less animated

Digitized by Google

than that in the boiler-rooms, and the noise caused by the rattle of the engines, added to that caused by the passage of steam from one cylinder to another, makes conversation impossible. In fact, the vibration of a signal bell placed near the head of the engineer can be heard only as a short, quick blow, all its ring being drowned in the general whirr and hubbub.

When running at high speed six men are required in the engine-room, and they must be drilled in keeping their allotted positions, as there is very little space. The chief engineer and his first assistant never stir more than two feet from the throttles of their engines; and as the chief stands at the forward engine, the reversing lever is directly under his hand. Each engineer has also under his charge two of the engines of the propelling machines.

Uncomfortable Positions.

Next come two oilers, who lie on their sides close to the whirling cranks, so situated that each can examine the condition of the three engines which are nearest the after end of the main machines. Their duty is to carefully watch the automatic oiling process, and, if the flow of oil thus distributed is not sufficient, to supplement it by means of oil droppers.

In an engine where all the bearings are accessible, their condition is determined by touch. This is neither safe nor easy, for the space seems full of whirling cranks and flying connecting rods which, with the heat and deafening noise, make one wonder at the calmness with which the men maintain their positions.

The amount of oil used upon machinery during the performance of high duty is astonishing. Of course most of it is wasted, being thrown off by the rapid motion before it has reached the rubbing surfaces; and when applied by a syringe with as much care as possible, not more than five or ten per cent does actual work. During the contract trials of the *Cushing*, which lasted about four hours, and the preliminary runs, one hundred and sixty gallons of the purest sperm oil were used. Not one bearing became heated.

The duty of the officers and crew on the second-class torpedo boats is not so severe, and less is expected of them in length of service. Six men to perform all the duties—two in the fire and engine-room, two for the torpedo service and two officers. The engines and boilers are in a very confined space, but a high crown in the middle of the deck allows the men to stand nearly upright, and there is a bench at the side of the engine on which the engineer may lie in such a position that he can reach nearly all parts of his engine without moving. The maximum speed of this class of boats is from seventeen to eighteen knots.

A Remarkable Accident.

A curious accident happened, in the autumn of 1889, during a trial of a second-class torpedo boat belonging to the Danish Government. The boat was running at full speed in a moderate sea, with the usual number of men on board, when, without warning, she rolled over and sank. Both engineer and fireman were closed in their compartment. The engineer, Angelo Benson, was standing just forward of his engine, and, as he felt the listing of the boat, he grasped the handle of the hatch, meaning to open it; but the boat went over, and, just as he was about to escape, the oil tank was emptied on his head, nearly suffocating him.

Upon recovering, Benson found that the rush of water was too great to allow his escape. So he coolly waited until the interior of the boat was filled, and then pulled himself through the hatchway and struck out for the surface, where he found several of the crew swimming about and waiting to be relieved. The accident was due to some error in the distribution of weights. The boat was raised, rearranged, and is now doing good service.

Under continual steam the duty on a torpedo boat is very wearing. It is found that a few days' continuous steaming makes a change of crews necessary.

Last year four large torpedo boats started from England for the Bermudas. They were to make the run by steam-power alone, and, as the men could not endure so long a trip, a vessel with relays of men convoyed them, the crews being changed four times during the run, which was successfully made in eleven or twelve days.

The electric search-light is the bane of the torpedo boat, since, however dark the night might be, it is questionable if a boat could elude its rays, and approach a watchful enemy without running the gauntlet of its machine guns. The only hope of success for torpedo boats is to attack in numbers, as many as six approaching the enemy from different directions. One stroke of the Whitehead torpedo is enough to destroy an enemy's ship, but the chances are that the majority of the boats would be disabled by the rain of steel shot before that stroke could be given.

The machine guns discharge from three hundred to six hundred steel shots a minute, each of which weighs from one to three pounds. These are made sharp and pointed, and, if well directed, would soon disable a torpedo boat. The boats themselves are provided with these weapons, but they would be effective only against a vessel of their own class, and would be wholly useless when directed against a fully armored ship.

The best appointed European navies are now furnished with a class of vessels called torpedo-boat destroyers. They are from two hundred and twenty-five to two hundred and fifty feet long, and carry very powerful machine guns, varying in size from the largest to those one inch in diameter. They are also furnished with powerful engines, and show a speed equal to that of the torpedo boats which they are expected to drive off or destroy.

If it be true, as wise men tell us, that as the horrors of warfare increase, the nations will be proportionately averse to going to war, then the torpedo boat will surely do much to ensure peace. No instrument of destruction is more terrible.

JED'S HALIBUT.

The following story was related to a correspondent of *The Companion* by an eye-witness. The crew of a large schooner engaged in halibut-fishing was composed mostly of genuine Yankees, full of fun and somewhat given to practical joking. A standing offer from the captain to give a prize of a dollar to the man who caught the biggest fish each day, and a prize of two dollars to the man who caught the greatest weight of fish, made every one anxious to do his best.

One day the general catch had been uncommonly good, and several men were already claiming the two-dollar prize, but no one had yet caught a really big fish. When the cook called to supper, the men of our watch continued to fish, while those of the other watch went below.

Before leaving the deck, some of them made their lines fast and left them hanging in the water, hoping that a fish would be hooked while they were away. When supper was finished, the men came straggling on deck to resume their fishing, the other watch now going below in their turn.

Those who had left their lines baited pulled them up, some to find a fish attached, others to find nothing except the bare hook. With the rest, Jed Keene tried his line. It started very hard. There must be an unusually large halibut at the other end. Jed was delighted; he had caught so many fish that day that he felt sure of the two-dollar prize, and now he was going to get the other one as well.

How that fish did struggle! What if he should escape before he could be pulled aboard! Jed hauled vigorously, and coiled fathom after fathom of his line on the deck. But the water was deep, the fish seemed constantly to grow heavier, and Jed made slower and slower progress. Tough as were his hands, he found that the line was cutting into them so that the pain was severe.

Then he simply could not pull any longer, but was obliged to fasten his line and rest. He might have called some of his mates to help him, but in that case he would have been obliged to divide the prize of which he felt so sure. Meanwhile the other fishermen had seen by Jed's actions that he had hooked an unusual prize, and were giving him all sorts of hints and advice. But sarcasm didn't disturb Jed, and when he had rested a bit, he began again to draw up his line, hand over hand.

That halibut couldn't possibly weigh less than two hundred pounds! How he did wriggle and thrash about! Jed feared he would break loose and escape, after all. At last he landed on deck his hook, to which was securely tied an enormous skate, tail first, and also—the grindstone usually kept on deck for sharpening the fish-knives.

Jed never again was known to leave his line to fish for him while he was below.

AN IMPORTANT OMISSION.

Mrs. Williams had never been satisfied with the arrangement of her old house, and so, when her husband proposed to build a new one, she said *she* would like to draw the plans; then she should be sure that she would have enough closets, and other conveniences.

Mr. Williams said, "Certainly, my dear, you draw the plans, and then you can have Jones look them over, and see that they are practicable."

"Of course they'll be practicable, and it will be only a matter of form for Mr. Jones to pass approval on them," said his wife, confidently.

The plans were made and remade, altered and realtered, until at last they gave Mrs. Williams perfect satisfaction. There were enormous closets at every turn, and open fireplaces wherever there was a chance for one, and with a sigh of relief she started for Mr. Jones's office.

When she displayed the plan of the first floor she was much gratified at the architect's evident approval, and although he seemed on the point of asking some question once or twice, he did not do so, and in triumph she spread out the plan of the second floor.

"What do you think of that?" she asked, in the tone of one assured of a pleasant answer.

"Charming, my dear madam, charming!" said the suave Mr. Jones; "but—ah—how do you propose to *reach* the second floor, may I ask?"

"Oh!" said Mrs. Williams, with a horrified gasp, "I forgot all about that; there's no *place* for any stairs!"

EFFECTIVE.

An old woman in Dr. Todd's famous New England church kept a small grocery store, and it was currently reported she was dishonest in her dealings with the few townspeople who bought of her. One Sunday Dr. Todd preached a powerful sermon from the text, "False weights are an abomination unto the Lord."

The old woman was much roused by this sermon. She was trying to tell an old acquaintance about it.

"A very powerful discourse, Maggie. Ah, but he came down upon the sinners! It would ha' done your heart good to hear him."

"What was the sermon about? What was the text?"

"Ah, I cannot remember the text. But it was about weights and measures and groceries and balances."

"But what was the subject? What was the theme of the discourse?"

"Oh, the theme. I do not know. But this I know, Maggie. I went right home and burned my half-bushel!"

CAUTIOUS.

There is such a thing as being too cautious about taking cold.

Mr. Simmikins was in the room lately when Mr. Longbow, a gentleman from the Black Hills, began an account of an encounter which he once had with an unfriendly Indian.

Mr. Simmikins rose and prepared to go.

"Why do you go?" he was asked.

"I never read or listen to stories of adventure," said Mr. Simmikins.

"Why not?"

"Because they might make the cold chills run down my back, and in that case I should be likely to take cold, you know."

"LATE," said an Irishman to a departing guest. "It isn't late till midnight, and that's early!"

KENT HAMPDEN.

IN SEVEN CHAPTERS.—CHAPTER III.

Dark Days.

"I have lost the money," repeated Mr. Hampden. "Ten thousand dollars!"

"If you lost it, father, it wasn't your fault, I'm certain," said Kent, stoutly.

Mrs. Hampden threw her arms about her husband's neck. "So I tell him, Kent!" she exclaimed. "Don't worry, Ralph, it will all come right! I should like to know who would dare suspect you!" Mrs. Hampden was accustomed sometimes to reproach her careless husband when he erred in trifles, but in this crisis she and Kent stood by him shoulder to shoulder.

"Come, now!" she said, cheerfully, "you must have your supper. You are worn out. Carey, bring your father's slippers."

She herself ran to bring water, to bathe his face, Kent took the tray with his supper from old Aunt Elsy at the door, and placed it before him, Carey knelt at his knees, caressing him. Hampden was fond of affectionate attentions from those he loved. The color began to come back to his face, and his eyes filled with tears.

"One would think I had come home after winning a victory, instead of having ruined you all!" he said, with a nervous laugh.

Aunt Elsy thereupon spread the news that some terrible misfortune had befallen her master, and every negro in the kitchen came to the rescue to console him. Sukey brought in a basket of paw-paws; old Sentry piled up the grate with huge lumps of coal, and little Pot brought in half a dozen yelping puppies.

Mr. Hampden ate a hearty supper, and was warmed and comforted more than other men would have been by these homely things. They did not warm or comfort Mr. Jarret, however, when that gentleman arrived, and entering the open hall, stood looking into the parlor, his eyes twinkling and his jaws moving nervously.

"Sorry to disturb this happy home circle!" he said, at last. The paw-paws, the puppies, the supper and negroes all disappeared in a scurry. Carey followed them, but Kent sat resolutely down by his father. A new life stirred at the boy's heart.

"I heard that you had returned, Mr. Hampden," said the cashier. "I also heard some ill news that I am loath to credit. The package —"

"I have lost it. Or, rather, I have lost the money. There is the package." He drew out of his breast and threw on the table what was to all appearance the package as he had received it.

Jarret eagerly seized it, and drew out of the black oil-skin case a bundle of brown paper in which were folded sheets of blank foolscap.

"A strange parcel!" he said. "I gave you, wrapped in this very sheet of brown paper, ten thousand dollars. You do not deny it? I have your receipt for the money."

"Oh yes, I had the money with me when I started," said Mr. Hampden, coolly. "How it was conjured out of that case I do not know. I have felt sometimes as if I were going mad, in my efforts to understand it. I did not open the case from the time I left home until I reached Philadelphia. I had been three weeks on the way, having been delayed in Cumberland. I had the case constantly with me; went directly to the bank in Philadelphia, glad enough to be rid of the thing; opened it, and found—blank paper within it."

Mr. Jarret fingered the foolscap thoughtfully, without looking up.

"You did not part with the package at all, then?" he asked.

Mr. Hampden flushed, and hesitated before replying. "Yes I did—twice. Once I followed a rattlesnake into the woods, and another time, near night, we saw a bear—as pretty a shot as you would wish to see! Each time I gave the package to a passenger in whom I had perfect confidence; once to a lady, the other time to a clergyman. You do not suppose that *they* took the notes?"

"Who did take them?" said the cashier, quietly.

Mr. Hampden started to his feet. "How can I tell? That package has been a curse to me!" His face grew paler every moment.

"It is a most unfortunate affair," said Jarret, deliberately, still without looking at him. "Of course, my dear sir, none of the officers of the bank suspect you. But the thing looks bad—it does indeed! There was the case of Vanuxem, who lost the jewels confided to him;—you know the black cloud of suspicion that hung about him all of his life. People knew Vanuxem, too, from his cradle, while in your case there is, unfortunately, an obscurity—"

"Kent laid his hand on the package."

Mr. Hampden stared at him, bewildered. "What do you mean?" he began.

"He means," said Mrs. Hampden, in an unusually quiet voice, "something which he will not say in this house or in my presence. Kent, Mr. Jarret's visit is over. Will you open the door for him?" Her cheeks were pink, her eyes burned with a soft fire. Kent smiled; he had never thought his little mother a beautiful woman before.

"Stop, Jarret!" said Mr. Hampden, sternly. "I understand you now. I will see the directors of the bank to-morrow. I will repay that money, if it leaves me a beggar."

"My dear man, all this agitation is totally uncalled for," said Jarret, his jaws working convulsively. "You will think better of it to-morrow—and so will your wife."

He was gathering up the paper of the package as he spoke. Kent laid his hand on it. "I beg your pardon, Mr. Jarret; my father may find a clue to the thief in that. You have no use for it?"

"I? Oh, certainly not." With an elaborate bow he left the room.

"There is not another man in Wheeling who would harbor such base suspicions of me," Mr. Hampden burst forth. "You gave him a quietus, Sarah!" He laughed delightedly.

"But, father," said Kent, after an anxious pause, "must you pay this money back?"

"Can you ask me, my son? In law, I am not bound to pay it, because I acted as an unpaid agent; but I shall pay it, nevertheless, if I starve! I cannot have any stain resting upon my honor."

"Ten thousand dollars!" said his wife. "This house must go."

"Yes, this house must go, and the warehouse. All we have shall go!"

"That may not be enough, father."

"No, it will not be enough. But I'm a young man; I can work. I began here without a dollar, and I can push my way up again."

Mrs. Hampden was standing in the doorway. Kent saw her slow look pass over the belongings which had been earned so slowly, and which were so dear to her. There was the rag-carpet, every inch of which she had made; the few books, read in winter evenings; the silver forks, Ralph's last Christmas gift, her pride and glory. Fifteen years had been spent in gathering these household treasures, and now—Kent saw her shut her mouth closely, but not a sigh escaped. Presently she said:

"Must everything go?"

Kent went to her and put his arm about her.

"Everything!" Mr. Hampden was pacing up and down in a fever of excitement. "I shall begin life again, bare of all but honor!"

The little woman who had often scolded him sharply when he spilled ink on his cuffs, said not a word. When he sat down, she stroked his forehead to quiet him.

There was much excitement in the town when the story of the loss of the money was known. The tide of sympathy at first set in favor of Hampden.

"A man could not take a journey but he must be hampered with these commissions by the bank, which made his life a burden!" people said. "The accident might happen to any one; and as to Ralph Hampden's proposal to pay back the money, when he was not bound to, it was very honorable in him, and he deserves great credit for it."

But in a few days there was a change, like the sudden chill of a summer day before a storm. Mr. Hampden's friends saluted him pleasantly, but they avoided the subject of the lost package. If he approached a group of his friends on the street, they were suddenly silent, and soon scattered.

He went to Judge Morris. "You are my friend," he said. "Tell me what is wrong! I have done all that an honorable man can do. I have offered both warehouse and house for sale. Can you ask me, my son? In law, I am not bound to pay it, because I acted as an unpaid agent; but I shall pay it, nevertheless, if I starve! I cannot have any stain resting upon my honor."

"Ten thousand dollars!" said his wife. "This house must go."

"Yes, this house must go, and the warehouse. All we have shall go!"

"That may not be enough, father."

"No, it will not be enough. But I'm a young man; I can work. I began here without a dollar, and I can push my way up again."

"Everything!" Mr. Hampden was pacing up and down in a fever of excitement. "I shall begin life again, bare of all but honor!"

The little woman who had often scolded him sharply when he spilled ink on his cuffs, said not a word. When he sat down, she stroked his forehead to quiet him.

There was much excitement in the town when the story of the loss of the money was known. The tide of sympathy at first set in favor of Hampden.

"A man could not take a journey but he must be hampered with these commissions by the bank, which made his life a burden!" people said. "The accident might happen to any one; and as to Ralph Hampden's proposal to pay back the money, when he was not bound to, it was very honorable in him, and he deserves great credit for it."

But in a few days there was a change, like the sudden chill of a summer day before a storm. Mr. Hampden's friends saluted him pleasantly, but they avoided the subject of the lost package. If he approached a group of his friends on the street, they were suddenly silent, and soon scattered.

He went to Judge Morris. "You are my friend," he said. "Tell me what is wrong! I have done all that an honorable man can do. I have offered both warehouse and house for sale. Jarret proposes to take the house, furniture and all."

"That is hard for your wife, Ralph."

"She does not complain. I intend to pay this money, though it keep me slaving for many a year. What more can I do? I see the suspicion in the faces of my friends. Do they dare suspect me of being a thief?"

"Calm yourself, Hampden. I will be candid about it. No one really believes you took the money, but there is an unfortunate mystery. You have kept your early life a secret. Jarret attaches a good deal of importance to that."

"My early life concerns no one but myself," said Mr. Hampden, haughtily.

"Oh? Well—then Jarret thinks there was something kept back about that advertisement, eh? Then there was another odd thing—"

"Go on."

"You spent ten days in Cumberland. What were you doing there? Of course, Hampden, nobody has a right to ask; nobody does ask. But as it was about that time the money was lost, the best course for you would be to state frankly where you were, and make no mystery about it."

Mr. Hampden stood silent and thoughtful. "You are right; but I cannot tell you anything about those ten days. I simply cannot, if it ruins me."

The Judge wrung both his hands. "Well, my dear fellow, it will all come right. I will try to silence this buzz of talk."

That night Colonel Congdon called on Mr. Hampden to talk the matter over.

"Your course in giving up your property is very honorable," he said. "But you have some enemies busily at work. They whisper, 'He can afford to give up the house if he has the ten thousand dollars safely hidden away somewhere.' Keep cool, Hampden; you are partly to blame. You make mysteries where none are needed. Judge Morris has spoken to you of this?"

"Yes. It is impossible to speak, Congdon. I can explain nothing."

"You are aware, I suppose, that your name has been withdrawn as candidate for mayor?"

"Yes. They will not give it to me, because they think I am unworthy? Let it be so."

"More than that," said the Colonel. "Until you declined to explain these matters, I was resolved to give the West Point cadetship to Kent. But I dare not outrage public sentiment. I am warned that the government should have no favors for the sons of men of doubtful antecedents. I am warned by the fathers of the boys who were out on the hills with me that day, that some suspicion attaches to Kent. My boy Tom tells me there is no truth in these scandalous whispers. I don't understand them; but the whole thing is annoying."

"I do not know what you are talking about," said Mr. Hampden. "But I do know that my boy is as worthy of trust and confidence as I am!"

Mrs. Hampden saw nothing but ruin before them. They could leave their comfortable home, and seek shelter in some little cottage. But after that? Her husband's business, that of a forwarding merchant, required an unblemished reputation. As soon as the story of the lost package reached his consignors in the East and South, his credit was gone. What would be Kent's fate, or Carey's—the children of a man suspected of theft?

For Mrs. Hampden the pain of giving up her home was lost in the greater misery. But to Kent and Carey the daily visits of Mr Jarret to inspect "the house we are going to buy" were a burden hard to bear. Sly soon began, too, to assume airs of ownership.

"You've got to send off these rabbits," he drawled one day to Kent. "I don't want them burrowing under our garden."

Digitized by Google

Then he turned to Carey, who was perched up in her favorite crotch of the cherry-tree.

"You'd best keep off there!" he said. "We'll get no fruit off that branch next year, I expect!"

Carey came down from the tree, inwardly angry, but showing no sign of her feeling.

"If I were a boy," she said, reflectively.

"What would you do, baby?" Kent pulled her down upon his knee. "Would you shoot St Jarlet?"

"No, I can't shoot. I'd go and find that package."

The blood rushed to Kent's head. The garden, the trees, wavered dizzily before him. He sat motionless for a long time, holding Carey close in his arms. At last he put her down, kissed her, and went into the house. Mrs. Hampden was sewing at the window by the fast fading light. His father sat before the fire, cowed and helpless.

"Father," said Kent, "did you make any search for that money?"

"How could I search for it?" he answered, irritably. "It was not lost—to be found under my pillow at an inn or in the straw at the bottom of the coach. It was stolen, and the paper put in place of the notes."

After a few minutes' pause, Kent ventured another question. "Did those passengers who left Wheeling with you go all the way?"

"No. Armitage, the blind man, stopped at Hardscrabble. He was a bright, intelligent fellow."

"You gave the package to him to hold while you went to kill the rattlesnake?"

"Yes; that was when we had driven about twelve miles from Wheeling. Then there was a Mrs. Digby, a very well-bred lady indeed. She left us at Washington, in Pennsylvania."

"Wasn't there another passenger—a minister?"

"The Rev. Jabez Elkhart. He lives in Cumberland, Maryland. I gave the package to him to hold while we went after the bear. There were other passengers after I left Cumberland; but I told none of them about the package."

"No," said Kent, thoughtfully. "If any clue is to be found, one of the first three must have it."

"What are you thinking of, Kent?" said his father, sharply. "You do not suspect the lady or Mr. Elkhart of stealing the money?"

"I was thinking, sir, that if the money could be found, all of our troubles would be at an end."

Mr. Hampden groaned. "It will never be found," he said.

Kent came closer. The muscles in his face were firm. It was a man's spirit, not a lad's, that looked through his eyes.

"You have always told us, father, that God is just. He will help us to find the money!"

His father stood up, pale, unsteady. "And who will undertake the search?" he said.

"I will, sir," said Kent, in a low voice.

REBECCA HARDING DAVIS.

(To be continued.)

THE STARS.

What are their years? The night's unfathomed deep
Rings back no answer, gives no glimmering key;
And still unknown, and beautiful, they keep
The silent courses of Eternity.

For the Companion.

BONNIE'S HOROSCOPE.

In a quaint, little old house in a pretty suburban village lived two quaint, little old ladies, Aunt Priscilla and Aunt Mary Robbins, as they were called, and with them lived their orphan niece, Bonnie. Bonnie's real name was Laura Ann, but some young relatives, who loved her very much, had first called her "Bonnie Annie Laurie," and afterward that had been shortened into Bonnie.

The name suited her well; she was bonnie. Her face was fresh and rosy, her teeth white, her blue eyes bright and sparkling, and she was frank and open as the day.

Her two aunts loved her to the point of weakness. All their affection was concentrated on Bonnie, and if she had not been a very sensible girl, and naturally well disposed, she must have been sadly spoiled.

Bonnie's father and mother had died young, and this fact made her aunts fearful that she would not be long-lived, notwithstanding her appearance of perfect health. The fear of losing Bonnie was the bugbear of their lives, and of Bonnie's, too, for a healthy, active child does not like to be unnecessarily restrained, nor to be constantly dosed with herb tea, pills and powders. One thing was certain: Bonnie had really a very good constitution, or she would have died from coddling and from taking so much medicine.

Her little moods of listlessness or of high spirits, common to most young people, were often taken by her over-careful guardians as symptoms of approaching disease, and she was "doctored" accordingly. If she was perfectly well, they gave her medicine to keep her so.

One evening in early autumn the two old ladies sat together in their little parlor before a cheerful open fire. Aunt Priscilla was sewing, while Aunt Mary read the paper aloud. Bonnie had gone to bed. There had been company the evening before, and she had been allowed to sit up later than usual. So it happened that on this particular night, and in accordance with the invariable rule of the house, she was sent off to bed at seven o'clock, in order to make up her sleep.

The aunts themselves were accustomed to early hours, and when the little clock on the mantel struck ten, Aunt Priscilla folded up her work and began to yawn, and Aunt Mary, having pretty much finished the news, began to yawn also. She was just giving the paper a last cursory glance when her eye caught the following advertisement, which she read aloud:

MADAME KOREB,
THE RENOWNED ASTROLOGIST,
367 ELM STREET.
Sittings, $2.00. *Hours, 9 A. M. to 4 P. M.*

She laid down the paper, and looked furtively at her sister over her gold-bowed spectacles. Aunt Priscilla was gazing thoughtfully into the fire, but presently she spoke: "I shouldn't think of such a thing for ourselves, at our time of life —"

"Of course not; no, indeed!" supplemented Aunt Mary, eagerly, "but for —"

"But for Bonnie," continued Aunt Priscilla, "I *should* like to have her horoscope told, and kind of feel as if I knew whether she's going to die young, as her parents did before her."

"Yes," sighed Aunt Mary, "what a relief it would be to know that she would grow up and live to a good old age, oh, what a blessed relief! But," she added, reflectively, "what if the astrologist should tell us that she will die, say, in five years, in one year—this very month! O sister, I couldn't bear that, could you?"

"Yes, I could!" answered Aunt Priscilla, bitterly. "Anything would be better than this constant worry and fear. If we knew the worst, we should be prepared for it, and in time grow reconciled."

"There is something in that," agreed Aunt Mary, "but do you believe she can tell, this astrologist?"

"I don't know what this particular woman can do, but I believe in astrology," said Aunt Priscilla. "Why, don't you remember how Napoleon—was it Napoleon?—and Lincoln and Garfield, I think they were the men, it was somebody, anyway, had their horoscopes told, and everything happened exactly as it was predicted—everything!"

"Oh yes! I've read the very same in regard to—somebody; I don't recollect the names. Well," after a pause, "what do you say to our going in town to see her, Priscilla?"

"I say we'll go to-morrow morning," answered Aunt Priscilla.

They took off their slippers, and toasted their feet before the fire for a few minutes, and then went to bed.

They found number 367 Elm Street and Madame Koreb without any difficulty. The "madame," notwithstanding her foreign-sounding name, had every appearance of being a keen, shrewd Yankee woman, as undoubtedly she was; and when the two little old ladies, looking pale and nervous, were ushered into her presence, it is not unreasonable to suppose that she guessed their character fairly well at the first swift glance. Such people often become wonderfully expert in judging of people's character.

The "madame," in a brisk, business-like way, took a pencil from over her ear, and inquired if they had come for "a sitting." Aunt Priscilla answered, with some composure, that they had.

"Both of you, or only one?"

"Oh, neither of us!" they answered together in a breath, blushing at the very idea of it.

"We shouldn't think of such a thing for ourselves!" said Aunt Priscilla, with dignity. "We have come to get the horoscope of our niece, who lives with us."

"And who is all we have, and very dear to us," interpolated Aunt Mary.

"Our niece," continued Aunt Priscilla, "is not strong, and we are very anxious about her; we always have been —"

"And if we *could* be sure that she will live to grow up, that we are not going to lose her," faltered Aunt Mary.

"If we could know the worst, whatever it is, and be prepared for it," said Aunt Priscilla, firmly.

The astrologist waved her hand. "I understand," she said. "Well, we shall see. Please give me the year, month, day of the month, day of the week and the hour on which the young lady was born."

"Oh dear!" cried Aunt Priscilla, much disturbed. "I'm afraid we can't give you the day of the week nor the hour, can we, sister? Will that make any difference in the horoscope?"

"We may do without it," said the "madame." "You can give me the year and day of the month, I dare say?"

"She was born on the first of November, 1876, and that makes her just twelve years and ten months old," answered Aunt Priscilla, concisely.

Both aunts leaned back in their chairs, with eyes fastened intently on the astrologist's face, and waited with beating hearts.

The astrologist consulted an almanac, a sort of chart, made a great many rows of figures on a sheet of paper, laid down her pencil and looked up at them in impressive silence.

"Will she live to grow up?" gasped Aunt Mary, breathlessly.

"Why don't you tell us? What are you waiting for?" said Aunt Priscilla, impatiently.

"Do not spare our feelings; we will try to bear it!" said Aunt Mary, tearfully.

"She will live to grow up—to be old—very old —"

"Oh, how glad we are!" the old ladies exclaimed together.

"*But* —" said the astrologist.

"But!" cried Aunt Priscilla, sharply. "But what? Didn't we tell you we wanted to know the worst?"

"She will have a severe illness—a fever. She will be sick nigh unto death —"

"When? Soon?" gasped the two aunts.

"She will be taken down this very month," returned the sceress.

"There!" exclaimed Aunt Priscilla, solemnly. "I knew, I felt that she was going to be sick. I have had warnings! Well, we can be prepared for it now. But you are sure she will recover?" She fixed her sharp eyes upon the astrologist.

"Quite sure. Have I not said she would live to be very old?"

The aunts rose. Heroic resolve had taken the place of the old feeling of anxiety and uncertainty. Visions of doctors, of sweats, of mustard plasters, and of remedies without number began to flit through their minds. They must hasten home, and commence at once active preparations for the terrible visitation.

Bonnie came flying down the walk at home to meet them. What a picture of health she made! Her cheeks glowed, her eyes sparkled, and her pretty face had as many smiles and dimples as it could contain. She danced up to them, and, clinging to a hand of each, skipped on between them up the walk, chatting and laughing as she went; but the two aunts scrutinized her face with a thrill of horrible expectancy.

The dinner that day was the regular Saturday dinner of roast beef and vegetables, which also made a nice cold dinner for Sunday, and for dessert there was a delicious steamed pudding.

Bonnie, with her usual appetite, began the meal by enjoying it very much; but when she asked for a second slice of beef, Aunt Mary, who was carving, hesitated, and turned questioningly to Aunt Priscilla.

"Perhaps she ought not to overload her stomach. What do you think?"

"I don't know, really. In case of fever —" returned Aunt Priscilla.

"Yes; a low diet, I suppose, would be safer," murmured Aunt Mary.

"Please! please!" said Bonnie, impatiently, moving her plate a little nearer. "Do give me my meat, auntie! I'm almost starved, and it's ever so good to-day! But what are you talking about? Is anybody sick?"

Aunt Mary's kind eyes filled with tears.

"Bonnie, dear," she said, coaxingly, "we want you to be a little careful about eating for a few days; so much depends. Not to overload your stomach, you know."

"Oh yes, I will be careful, but I haven't had half enough yet. Another slice, please!" said Bonnie, her eyes still fixed on the platter.

Aunt Mary thrust the fork into the roast, and proceeded to cut another slice, very thin and small, to be sure; but her sister interfered.

"Bonnie," she said, firmly, "we have made up our minds that it is best for you to eat sparingly for a few days, and you know we must be obeyed. Now be a good girl, and do not tease."

Bonnie looked aghast. "Oh dear!" she cried. "I don't see what you should starve me to-day for. I'm sure I haven't got any symptoms, not a single one!"

"We are not going to starve you, child, but to save you unnecessary suffering," answered Aunt Priscilla, solemnly.

Bonnie said no more. The indications were a little unusual; she saw that there were tears in both pairs of eyes, but this fact gave her no encouragement. Her experience told her that from Aunt Priscilla's decision there was no appeal. Why waste her breath in teasing or in asking questions? She put down her plate with a sigh of forced resignation.

"Well," she said, "if I must, I must, I suppose. Am I to have any pudding?"

The pudding was denied her, but she was allowed an orange instead, with which she tried to be satisfied, though she did not find it so "filling" as could be desired.

At supper that night Bonnie was so happy and bright, so gay and funny, that the two old ladies laughed heartily in spite of themselves, and forgot for the time all their terrible forebodings. They forgot, also, to count the slices of bread and butter that Bonnie ate, so that, for once, her appetite was fairly appeased before she herself realized how it had come about.

But this is what Bonnie heard Aunt Mary say to Aunt Priscilla a little while afterward: "How full of life and spirits she seems!"

Aunt Priscilla responded, "Yes, it is hard to see her so, and believe that she is standing on the threshold of the great crisis of her life." Then they both sighed deeply.

As the last days of October slipped swiftly by, the aunts grew more and more anxiously expectant. The suspense became almost unendurable, and at last both ladies grew so strained and nervous as to be hardly sane and accountable. They examined Bonnie's tongue and pulse almost incessantly, watching her every movement with such extraordinary care that Bonnie became more cross and irritable than she had ever been in all her life before.

"Auntics," she protested, at last, "my tongue is tired, and my wrist is tired, and I am tired all over! I do wish you would please, please let me alone! Why can't you look after each other some? Don't you ever have any symptoms of your own?"

"Bonnie, dear," said Aunt Mary, "if you are so tired, how would you like to go to bed and rest awhile—be all nice and quiet in your own room, you know?"

"Oh, I don't care!" answered Bonnie, wearily. "I don't know that it makes much difference, as long as I can't play nor have any fun, nor anything good to eat, nor—nor anything! I might as well be in bed. I don't care."

So she went to bed. The next day she slept a good part of the time. She was so tired, and there was nothing else to do. On the thirtieth she felt so much better,—so much rested and refreshed,—that she proposed to get up and dress; but this, of course, her aunts would not permit, and consequently Bonnie became more dejected and fretful than ever. They would not let her play with dolls nor read, so she begged Aunt Mary to tell her a story.

"Tell me a sad story," she said, "about a poor little girl that was very, very unhappy. Make it awfully sad, please, so I can cry, for I think it would do me good to cry."

But Aunt Mary thought it better to tell her a story of a happy, obedient little girl, who always did right and never had any trouble. Bonnie found it very dull, and when her aunt had finished, she turned over wearily and closed her eyes.

"Thank you, auntie," she said. "I guess it is a nice story, but it is not very interesting." Then she thought she would go to sleep.

The next morning,—the morning of the thirty-first,—when she awoke, she found that the shades were all down and the curtains drawn close. It was so dark that she could not see distinctly the pictures and familiar ornaments about the room.

She knew it was a pleasant morning, for she heard the milkman saying cheerily to somebody, "Good-morning! Fine day!"

Oh yes; without the sun was shining, and the trees were looking gay in their October finery. If the shade were only lifted, she could see her own particular maple, that had turned so beautifully spotted this year, all red and yellow and green. How pleasant it would be to lie and look at it!

A sudden impulse seized her. She sat up in bed and listened for a moment intently. Then she stepped softly out upon the floor to the window, and threw up the shade.

The gorgeous maple, her maple, flamed in upon her! She gave one long glance around, which took in everything; the deep blue sky, the beautiful lawns, still green as in June, and the dear little bird perched silently on the gate-post, and apparently looking at her.

A marketman was driving slowly along the road with his load of vegetables, and a young girl, about her own age, sat on the seat beside him.

Bonnie followed them wistfully with her eyes. "Oh," she thought, "I only wish I was that little girl! How happy she must be!"

She crept back into bed, and lay feasting her eyes on her maple, until by and by Aunt Priscilla came softly in, bringing a thin slice of toast and a cup of weak tea on a tray.

When she saw the shade was up, she started back in dismay.

"Why," she exclaimed, "how could sister be so careless!" She put it down at once.

"Auntie," expostulated Bonnie, "why don't you let the shade be up? How can you see anything in such a dark room? I'm sure you must have cat's eyes."

But Aunt Priscilla did not reply. She came to the bedside, and taking Bonnie's wrist between her fingers, began counting her pulse.

"Quicker," she muttered, "much quicker! And this is the last day! It must be time to send for the doctor. Yes, I think it is high time to send for the doctor."

When good old Doctor Mack, who had attended the family ever since Bonnie could remember, came into the room, and she heard his kind, cheery voice, somehow she felt encouraged.

The first thing the doctor did was to send the shades spinning up and throw back the curtains, grumbling something about "shutting out God's light and sunshine." Then he came over and stood by Bonnie's bed, and looked down at her very kindly indeed. He was very fond of her. The aunts were close at his elbow, watching his face anxiously.

He looked at Bonnie's tongue, laughing to see her put it out without being asked, and was just beginning to count her pulse by his big gold watch, when, greatly to his surprise, Bonnie threw an arm around his neck, and drew his head down to her lips.

"Dear, dear doctor," she whispered, hurriedly, "can't you please send my aunties away a minute? I want to tell you something."

"Now, Bonnie!" remonstrated Aunt Priscilla, supposing that she was coaxing the doctor to allow her something to eat.

"One, two, three—um—um—um!" counted the doctor. "I guess you had both better go and prepare a hot bath, while I am looking her over a bit."

When they had gone he questioned Bonnie.

"O doctor, dear," she explained, "you know how they are always giving me lots of medicine and—and coddling me when I'm not sick at all? Well, along back they've been worse—much worse! Last week they went into the city together, and when they came home they began to be awfully solemn and—and mysterious, and to starve me,—I mean to keep me on a low diet. Oh, it was very low, doctor dear! You haven't any idea how low! And they said it was to save me from suffering so much in the fever that I was going to have, for they think I am to have a fever and be 'nigh unto death.'"

The doctor gave a low whistle.

"Yes," Bonnie went on, "I heard them say those very words: 'Nigh unto death!' Isn't it terrible, doctor? But I'm not really sick one bit; oh, you can see that I'm not, can't you? Only hungry and cross and tired. Why, you haven't any idea how many times I have had to let them feel my pulse and see my tongue—more than a million, I guess!"

"Your tongue seems to be in good running order yet," remarked the doctor, dryly, when she finally paused, out of breath.

He asked a few questions; then he looked down at his big gold watch, which he still held in his hand. Bonnie thrust out her wrist mechanically; she thought he was going to count her pulse again, after all.

The doctor laughed. "Bonnie," said he, "I give you just five minutes to dress yourself. I will go out in the hall and stay till you have finished. Brush your hair, put on the blue ribbon and the—the bangs—all the gimcracks, you know, and fix yourself up pretty. Then I'll come in and show you something I've got in my pocket." And he went out and left her.

When the two aunts, having prepared the bath, came tiptoeing softly back, and opened the door of Bonnie's room, they experienced the most decided sensation of their lives. There, beside the doctor, sat Bonnie, dressed, and looking bright and fresh as a rose, and they were both laughing heartily at some object in her lap.

"Oh! oh! Doctor Mack, how could you!" gasped Aunt Mary.

"Bonnie, go back to bed this instant!" commanded Aunt Priscilla, in a terrible voice.

"Now she will die! She will surely die!" wailed Aunt Mary.

"Nonsense!" said the doctor. "She's no more sick than I am!"

"But her symptoms —" began Aunt Priscilla.

"She has none, except symptoms of perfect health. And yet, perhaps I ought to say she has decided symptoms—of hunger, an unappeased appetite, you know."

"But the—*the horoscope*, sister!" ejaculated Aunt Mary, in great bewilderment.

"Ah-h-h! The—the horoscope!" repeated the doctor.

He studied their faces a moment in silence. He asked no questions, but recalling what Bonnie had told him, he had no difficulty in guessing the truth.

When he spoke at last, it was very gravely. "My dear friends," he said, "our 'horoscopes' are with God. Let us thank Him for present good, and trust Him for the future. The child is well; do not treat her as if she were sick until you are quite sure she is so."

Just as he was about to take his leave, Bonnie, who had only forgotten her hunger in the excitement of the moment, sprang forward and seized

his hand, and clung to it. Looking up into his face, and then back at her aunts, she said, half-laughing, half-crying: "And no more low diet, doctor dear? Plenty to eat, aunties?"

"Yes, yes, certainly!" said the doctor. "Give the child a good hearty breakfast at once," and he went out laughing.

BELLE C. GREENE.

THE SOUTHERN PINE.

The Southern pine has a minstrel's voice
And a proud, commanding mien—
And he sings the songs of the winds that smite
His musical boughs of green!

—*Selected.*

For the Companion.

AT LOS VALLES GRANDES.

IN SIX CHAPTERS.—CHAP. III.

Warlike Pueblos.

The party of Indians remained halted for nearly ten minutes, apparently in dispute, and accompanying their talk with much gesticulation. I had time to notice that the details of dress were not like those of the three hundred Navajos who had recently attacked us; but as the old hunter Cordova had pronounced them Navajos, I gave the matter little thought. They did not seem to be aware of the existence of an encampment of soldiers in the Valleys, and after a brief delay went on toward La Puerta.

Returning to the parade, I ordered the six mules brought to my door and the pack-saddles got ready. The saddles were adjusted for two men to ride in each. Sergeant Cunningham was mounted on my horse and placed in command of this hybrid cavalry. Fortunately the mail riders had arrived from Santa Fé the evening before, and I ordered them also to accompany the party.

The sergeant was directed to take the "reserved trail" through the hills into the valley of San Antonio, and bring his party into the western end of La Puerta before the Indians could pass through it. I impressed it upon him on no account to fire unless the Indians showed fight; to leave his mules and horses concealed in the timber at the entrance of the cañon, and so dispose his men as to convey the impression that fifteen were but a part of his force.

My Plan of Battle.

For myself, I proposed to follow up the Navajos with the rest of the company as soon as they were fairly within the cañon, and I expected to capture them without bloodshed.

Meantime I kept my men out of sight. When the Indians disappeared in a depression, I started with all the remaining men except the guard, at a double-time step in the direction of La Puerta. When the Indians were fairly in the cañon we deployed right and left, and closed up rapidly.

The redmen showed much astonishment when they perceived this unexpected and warlike demonstration, but soon recovered, and then, feeling the superiority of the mounted man over the footman, they broke into derisive shouts and made gestures conveying their contempt for us. This went on for a time, when the Indians suddenly showed confusion. They dashed at a gallop to the north side of the passage and skirted it for a considerable distance, as if looking for a place of escape. Failing to find one, they next rode wildly to the other side, where they met with no better success; and then they halted and consulted.

Presently one of their number rode out and waved a white cloth. Upon this I approached alone, and made signs for them to dismount and lay down their weapons. They did so, and at another sign withdrew in a body, when my men picked up everything and collected the ponies.

I was certainly somewhat surprised at such a bloodless result of my strategy. The Navajos are a brave people, and do not often surrender without some show of fighting, unless the odds against them are greater than they were in this case. I could but congratulate myself upon the success of my manœuvre, and after shaking hands with the chief, began my return march to camp.

Why the Victory was Bloodless.

We had gone but a short distance when I overheard the veteran Irish soldier, Clary, say to Hoey, his mate: "D'ye moind the cut o' thim chaps' hair, Jarge?"

"Indade I do, Tom," replied George.

"Thim's no Navijos!"

"Not a bit of it! I'd as soon expict to see one in curris!"

I had a wholesome respect for the opinion of these old soldiers, for they had campaigned against Indians in Texas, Utah, Colorado and New Mexico long before I had seen a more savage redman than the indolent, basket-making descendants of the Passamaquoddies and Penobscots. Accordingly, without appearing to notice their remarks, I approached the chief and said, interrogatively, "Apache?"

A shake of the head.

"Ute?"

Another shake.

"Navajo?"

"*Si, señor!*" he said, with a bow of the head. I was satisfied that my fifty-three prisoners were Navajos, and marched triumphantly on.

But presently I heard Clary ask, "Jarge, did ye iver see Navijos with blankets like thim?"

"Niver!" said Hoey, emphatically.

These comments disturbed my confidence in the belief that I had made a capture of Navajos. But if not Navajos, Apaches or Utes, who were these warlike men? There were no other hostiles in the Territory. These men were painted in war tints and characters, and were armed for fighting. They were Indians, and they were on the war-path.

When we had approached within a mile of camp we were met by Cordova, who had remained behind, during the strategical capture, to recover from the fatigue of his four miles' run. As soon as he came up to the Indians there seemed to be an immediate recognition. He and the chief met and embraced, and conversed for a few moments in a language that was neither English nor Spanish. Then the hunter approached me, looking shame-faced, and said, in Spanish, "Lieutenant, these Indians are Pueblos."

Pueblos on the War-path.

Whoever knows the character of the Pueblos will appreciate the joke. Many of the towns of New Mexico are inhabited by Indians, a relic of the civilization which Cortez found when he entered Mexico. The towns stood then where they stand now. These Indians, who are called Pueblos, are an excellent part of the population, being temperate, frugal and industrious. In their towns they dress in Indian style, generally, and when at war, paint and disfigure themselves like any other Indians, so that a green soldier would see no difference between them and the wilder tribes.

The Pueblos explained that they were in pursuit of a band of Navajos who had stolen fourteen of their cows the night before. When they first saw Cordova they attempted to approach him to inquire if he had seen any Navajo "signs." Seeing that he appeared to be frightened and ran away, they gave up the pursuit and resumed their march.

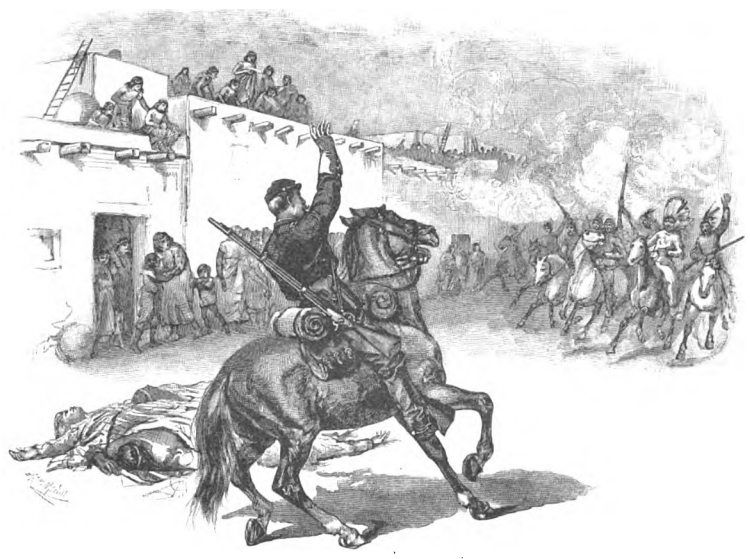
My appearance and warlike demonstration had greatly astonished them. When I put the questions, Apache? Ute? Navajo? the chief thought I was asking him if he was in pursuit of a party of one of those tribes, and accordingly he had answered *no* to the first two and *yes* to the last.

The Santo Dominicans had told the people of Jemez that if they interfered to prevent the slaughter of the Navajos they would be considered by the military authorities as allies of that tribe, and treated accordingly.

Unnecessary Delay.

Inasmuch as mounting two men on each saddle would make progress slow, I tried to persuade the agent that much the best course would be to start at once, so that there could by no accident be a massacre of the women and children; but evidently the man had determined to pass the night in sleep, and not on a night march of twenty miles or more.

As my orders from the General were to conform my movements to the wishes of Mr. Wetherell, I could do nothing but wait. He strongly insisted that there was no special reason for us to start before morning, as the Dominicans were not to leave their pueblo before noon.



We set out before four o'clock the next morning, leaving the camp in charge of Second Sergeant Mulligan. First Sergeant Cunningham accompanied us. We were twelve in all.

We passed some very interesting hot springs, where the road from the mountains descended into the valley of the Jemez. We also passed Cañoncito, where José Cordova lived.

As we came within sight of the tinned spires of the church at Jemez, we heard a distinct murmur upon the air. We halted and listened.

In a moment what had before seemed but a murmur swelled upon the quivering air an unmistakable Indian war-whoop.

It was very evident that the Dominicans had arrived before us. We ought to have started the night before, come as far as the hot springs, and encamped there until morning. The road was so rough in many places, with so many steep descents and ascents, that for a great part of the way we had gone no faster than if we had been on foot.

'Stop where you are!"

Of course the two mail riders who had taken part in this exploit carried an amusing account of it to Santa Fé, which, coming to the General's ear, caused him to send for and examine the cavalrymen thoroughly as to the nature of my attempt and its result. The next mail brought a kindly letter from him approving of the construction of the "reserved trail," and assuring me that he had no doubt that I would have succeeded as well had the Pueblos been actual hostiles.

A Call for Help.

A week after my captives had returned to their homes in Santo Domingo, at the close of a fruitless hunt for the cattle-thieves, a gentleman, mounted on a bronco and accompanied by a Mexican similarly mounted, rode up to my cabin late in the afternoon. He introduced himself as Mr. Wetherell, United States Agent for the Navajos, and handed me a letter from the department commander, which stated that the bearer was on his way to the Indian Pueblo of Jemez to prevent the massacre of a number of Navajo women, children and old men who had sought asylum there, and authorized me to furnish him all the aid in my power.

After dismounting and entering my quarters, Mr. Wetherell stated that the Navajo country being overrun by the national forces, many of the principal men had sent their women and children with a few old men to Jemez for safety; that the party of Dominicans which had been recently captured by us had returned home very much vexed at their want of success in retaking their lost stock and inflicting punishment upon their enemies; that a Jemez Indian had told them of the presence of the Navajo women and children in the town, and that they had determined to wreak vengeance upon the cattle-thieves by killing these defenceless creatures.

Upon my expressing some surprise that the Pueblos of Jemez should permit such a grave outrage of the laws of hospitality when they outnumbered the Dominicans by several hundreds, Mr. Wetherell further explained that the Jemez Indians were in no sense to be considered friends of the Navajos, but that their advanced position toward the country of those predatory nomads made it necessary for them to be on good terms with them, so that they had not dared to refuse asylum to the women and children.

As soon as I heard the war-whoop, I told Sergeant Cunningham to bring up the men as rapidly as possible, sticking to the travelled road, which here made a long curve around the corn-fields, and accompanied by Mr. Wetherell, I put spurs to my horse and dashed toward the town.

Our route was through the cultivated land, while that of the soldiers was on the hard ground along the foot-hills. Ours was in a direct line, over deep, soft earth, frequently crossed by water ditches, while theirs, although nearly double the distance, was over firm soil without break. We struck directly for the church spires, which I knew stood upon the plaza.

Often we plunged down the banks of *acequias*, carrying avalanches of soil with us into two or three feet of water, to make a hard scramble up the crumbling wall of the opposite sides; and as we neared the pueblo, the louder grew the discordant war-whoops. Being better mounted than Mr. Wetherell, I took the lead by a few rods.

As I reached the border of the plantation I found, between me and the street, a cactus hedge about four feet high, with no passage through it except at a considerable distance to the right. Distrusting his bronco's ability to leap it, Mr. Wetherell veered away toward the opening, while I gave my good cavalry horse his head and rode sharply at the hedge, clearing it at a bound and receiving but a few scratches from the spines as we went through the branching top.

The Victims.

Clear of the hedge, I found myself at the foot of a narrow lane which passed between two tall buildings and entered the plaza near the centre of its western side. I took it at a run, and when half-way through saw directly before its inner entrance, facing to the north, a group of old, gray-haired Navajos standing alone, with their arms folded, and holding their blankets firmly about their shoulders and breasts, while in their immediate front were some one hundred mounted Indians, painted and ornamented in true aboriginal style.

On the terraced fronts of the houses and the flat roofs, and along three sides of the square, seemed to be gathered the entire population of the town, looking passively on.

Before I had more than taken in the situation, a rattling discharge of rifles came from the direction of the Dominicans, and the twelve old men fell in a heap to the ground. Covered with dust and mud, my horse reeking with foam, I burst through the crowd of spectators on the west side of the plaza and gained the open space just as the firing party was advancing with wild yells to complete the tragedy by scalping the slain.

Raising my right hand, I shouted in Spanish: "Stop where you are!"

The Pueblos halted, and at the same moment a group of eighteen women and nearly three times as many children, who had been reserved—as I afterward learned—for later shooting, ran into the space and clung to my feet, stirrups, and the mane and tail of my horse, entreating with eyes and tongues for protection. What their eyes said needed no interpreter, although I did not know the meaning of a single spoken word.

The war-cries had ceased, and the Dominicans had gathered in an angry and gesticulating group, when Sergeant Cunningham and the rest of the men appeared on foot, running into the plaza from a side street, and formed in line before me.

CAPT. C. A. CURTIS, U. S. A.

(To be continued.)

SIN FOUND OUT.

It is the law of life that retribution
Shall follow wrong;
It never fails, although the execution
May tarry long.

For the Companion.

A PRINCE AT COLLEGE.

Crown-Prince Constantine of Greece, heir to the throne of the King of the Hellenes, whose marriage to the Princess Sophia of Prussia was celebrated with such pomp at Athens not long ago, was a student at the University of Heidelberg, during the summer semester of 1888. He had been graduated a year before from the gymnasium or college at Athens, and had spent his first semester in Leipzig. Following the custom of the wealthier Germans, he had decided to pass the warm season, which was to end his collegiate career, in the ancient University of Heidelberg, hallowed by the traditions and history of five hundred years.

It was a beautiful morning in April when the Prince arrived. The sky was Italian in its clearness; the hills about the town were clad in their full foliage; the vines on the old castle were already in leaf, and the whole valley was in that incomparable state of beauty which has so often inspired the poets.

The city was in a mild state of excitement and expectancy. It was the first coming to the old university of an heir to an independent throne. He was received at the station by the heads of the municipal government, clad in knee-breeches and velvet coats, ornamented with gold lace and weighty chains, and escorted, after appropriate addresses, to his residence on the tree-lined Anlage.

The Duke of Sparta—to give him his more popular title—was then twenty-one years of age, and a fine specimen of physical manhood. He followed the characteristics of the Danish royal family—his father's—in point of height, as he stood six feet one inch tall, with breadth proportionate to his height and years. His face was beardless save for a light pair of whiskers on his cheeks. His hair was blond, and his eyes were as blue as a Hellenic sky.

His apartments on the Anlage, opposite the Wrede-Platz, were not extravagantly furnished. He had a suite of six or seven rooms in the third story of a house whose apartments were let, regularly, to the students of the University. The two front rooms were occupied by the Duke, while the others were used by his tutor, Baron Von Lüders, his marshal and the several servants of his retinue.

On the morning following his matriculation, the Duke attended the lectures for the first time. The students always greet the entrance of a popular professor into the auditorium with stamping of feet or clapping of hands, but they are rather indifferent to one another. They were so toward the Greek Prince. There was no curiosity manifested to see him.

The professor proceeded with his remarks upon extradition, and the pencils of the students worked busily on while the Prince, accompanied by his tutor, found a place on one of the benches. After the lecture was ended, they hurried from the room, jostling one another as usual, totally unmindful of the presence of royalty.

I chanced to sit near the Duke in the class on International Law, and had excellent opportunity to observe his industry, attention and assiduity. Although the lecture was at eight o'clock in the morning, the early hour did not deter the Prince from regular attendance. On the contrary, he rarely missed a day, and was seldom late. He paid the very closest attention to the words of the learned professor.

The lectures in Political Economy and Civil Government were delivered privately to the Prince by Professor Karl Knies, one of the sages of the University, who has sent many men into the world of science and politics. This privacy was due not so much to the wishes of the Crown-Prince, as to the desires of the professor himself, who was somewhat liberal in his views, and in his lectures upon Civil Government was wont to attack monarchical institutions, and fearlessly express reformatory principles. It was deemed unpleasant for a future occupant of a throne to hear these criticisms in the presence of other men.

With these exceptions, the Duke of Sparta was merely one of the mass of students, and was subjected to the same discipline, obliged to conform to the same laws, and taught the same principles as the others. It was my fortune to make the

Prince's personal acquaintance some time later at the house of Privy Councillor Von Bulmerincq. In company with several other students and a number of professors, I was invited to meet him at dinner. He seemed to be not only a thorough "good fellow," but a capable man in every way.

His knowledge of English was surprising. He

A Prince in Heidelberg.

spoke our language with almost the fluency of a native, and showed but little of the accent of a foreigner.

The Prince was not a master of English alone, but was a linguist of no mean pretensions. His German was as good as his English, enabling him to converse with students and professors with perfect ease.

He is a master, also, of Danish, and the kindred tongues of Norway and Sweden, in addition to French, and, of course, modern Greek. All who were present at the dinner were impressed with his intelligence; he appeared to good advantage in discussing abstruse subjects with the old professors of Heidelberg.

His position was a trying one. Royalty, even among the aristocracy of the intellect, is half-deified in Germany, and age is not taken into consideration. But the Prince acquitted himself modestly; his deference to the professors, his complete suppression of his own rank, his perfect tact, proved him the well-bred son of one of the best rulers in Europe.

The Prince's remarks throughout the dinner, at which he had as a neighbor the celebrated philosopher, Kuno Fischer, and over the cigars and coffee in the smoking-room, were not brilliant, but they were sensible, and worthy an older head than his.

The Crown-Prince remained in Heidelberg until the beginning of August. He joined the "White Caps," or Saxo-Borussian corps,—a society of the students,—soon after his arrival. He was, of course, exempted from fighting duels, as the members of the blood royal are beyond the scope of challenges.

He attended their "Kneipes" or feasts, and joined with zest in their songs and pranks. Although he was always addressed as "Royal Highness," he was on terms of intimacy with some of the leaders as complete as though he had been called by the commonest of names.

One evening he was denominated a "bier Junge" or "beer booby" because he failed to empty a glass as rapidly as the adversary who had challenged him. He accepted the unmanly title in the spirit in which it was given, and laughed over his defeat, which was rather a credit than a discredit.

The Prince's betrothal to the Princess Sophia was announced while he was at Heidelberg. In fact, the greater part of the royal courtship took place during his residence at the University. He had met the Princess during a former visit to the court of Berlin, and decided at once to win her as his bride.

But the old saying that the "course of true love never did run smooth" was exemplified in his case, too, for the summer was filled with doubt. Political reasons, State complications, and diplomatic entanglements played their part in obstructing one of the purest of royal love-matches.

The young man's devotion was romantic and touching. His room held many mementos of the Princess—little trinkets which she had made, and photographs taken every year of her life. They were on the mirror above his bureau, on the tables and writing-desks, and on the wall above his bed. The whole University was interested in the romance, and wished that nothing might prevent it. When at last word came that Emperor Frederic had decided that the young people should be married, all the students very heartily welcomed the happy look which appeared in the Prince's eyes.

The people, too, were sorry when the day came for his departure. He had become, during his short residence, a part of them; one whom every school-boy, maid and coachman knew by sight and respectfully saluted. They had learned to appreciate the feeling of deference held by the people in Athens for this native Greek, and they wished, with them, that he might realize their dreams by restoring Christianity to Constantinople and to make the mosque of St. Sophia once more a Christian temple.

HUMILITY.

'Tis always nearest to the ground
The honey of the cane is found!
They taste life's sweetness full and free
Who bow in true humility.

GEO. B. GRIFFITH.

SENATOR CONTESTS.

The terms of one-third of the members of the Senate of the United States expire every two years. Inasmuch as most of the State Legislatures, which make the choice of Senators, begin their session about the first of January, this issue of *The Companion* will reach its readers about the time when many of the elections will be taking place.

The rules governing such elections are established by a national law, and are quite simple. The election is made by the Legislature which is chosen next before a vacancy is to occur. The time for beginning the election is the second Tuesday after the meeting and organization of the Legislature.

On that day the voting is in each House of the Legislature separately. One or more votes may be taken, until some person has a full majority of all the votes given. On the next day, at noon, the members of the two Houses meet in joint convention, and the journal of each House is read. If the same person has received a majority of the votes given in each House, he is declared elected.

In case the same person has not been elected by both Houses, the members in joint convention proceed to elect. At least one vote must be taken on each day of the session until an election has been made, and a clear majority is required to make a choice. All the voting is open, or *viva voce*. As ballots are not used, it is not correct to say that a Senator was elected "on the first ballot."

The situation in several of the States where elections are to take place this month is extremely interesting. The elections in November were disastrous to the Republican party. In certain States, which have not for a generation been represented in the Senate by a Democrat, the opposition to the Republican party will be able, if it can unite upon candidates, to choose Democratic Senators for a full term of six years.

A senatorship, however, is a great prize, and is contended for most keenly. It is easy to foresee possibilities of long contests in States where all the members of two parties in temporary alliance cannot be induced to support one man. In such cases it frequently happens at last that a comparatively obscure man, who has not been regarded as a candidate, is taken up as a "compromise" candidate.

There have been some protracted contests over the election of Senators. They have not been so frequent since 1866, when the present law regulating elections was passed, as they used to be before that time; for then there was no law governing the matter, and the Legislature of each State chose Senators when and how it would.

The most notable contest in recent years was that in New York, in 1881, when the two Republican Senators, Mr. Conkling and Mr. Platt, resigned their seats in consequence of a difference with President Garfield. The election devolved upon a Republican Legislature, and each of the Senators who resigned desired a re-election. The contest was very bitter between the two Republican factions, and lasted many weeks. In the end neither of the old Senators was chosen.

Again, in 1885, Senator John A. Logan was a candidate before the Illinois Legislature for a re-election. He had, in the autumn previous, been the Republican candidate for Vice-President, and was unanimously nominated, by the Republican legislative caucus, for election as Senator.

But the Legislature was exactly divided between the two parties, there was a long delay in organizing it, and the voting did not begin until the tenth day of February. The election dragged on until the nineteenth of May, when, at the one hundred and eighteenth vote, General Logan obtained a bare majority and was chosen.

It is somewhat remarkable that at the end of six years the successor of General Logan, who died in 1886, confronts a situation in the Illinois Legislature not unlike that of 1885.

The only long contest two years ago was that in West Virginia. Mr. Kenna was re-elected after a struggle that lasted a whole month, on the forty-fifth vote, and by a majority of one.

WORTH LIVING FOR.

If I might do one deed of good,
One little deed before I die,
Or think one noble thought, that should
Hereafter not forgotten lie,
I would not murmur, though I must
Be lost in death's unnumbered dust.

—*F. W. Bourdillon.*

DISCOURAGED PATRIOTS.

Our younger readers may be puzzled to account for the doleful manner in which some conspicuous men speak of their country, its institutions and prospects.

We have among us a society called the Sons of the American Revolution, which has recently proposed the holding of a Pan-Republican Convention at Washington, April 30, 1892, composed of delegates from all the republics now existing in the world. The object of this convention is to celebrate at once the one hundred and third anniversary of President Washington's inauguration, and the four hundredth anniversary of the discovery of America by Columbus.

The Sons of the Revolution hope in this way to exhibit the success of republican institutions, and to recommend them to mankind.

But *are* republican institutions successful? To this question some of the gentlemen consulted have given very positive answers in the negative. One of them, a descendant of George Washington's family, avows his belief that every experiment of self-government that has ever been made upon our planet has resulted in disaster, and that this nation is now "whirling down the descending grade to destruction."

Another gentleman, an admiral in the navy, is of opinion that although we are a much larger nation, we are neither as great, nor as virtuous, nor as valiant as the three millions of people who achieved our independence.

Another discouraged patriot, recently the president of a famous college, expresses the opinion that our system is correct, but "we are not good enough for our institutions."

A fourth, the scion of an historic family, remarks that he has such a sense of the failure of democracy that he has no heart even to talk about it.

Finally, a veteran sea-captain comes forward to say that, until recently, there was one good government on the Continent of America, the late Empire of Brazil, but now there is not one.

This language is very different from that usually employed at our school-house flag-raisings, with which our readers, young and old, are familiar. Which expresses the truth?

There is truth in both. On the one hand, compared with other countries, the United States is the truly fortunate and happy land. On the other, there are defects and faults in the conduct of public affairs which are grievous, and to persons of melancholy temperament discouraging. We advise our readers not to overlook either the glory or the shame of their country, and to spend their lives in enhancing the one and redeeming the other.

Let us remember that during the Presidency of George Washington there were more men who despaired of the Republic than there are now, and that Washington himself, even to the end of his life, regarded the government over which he presided as an experiment, which he *hoped* would be successful.

The number of educated men who fully believed in government by the people was not large, and few of them were free from occasional apprehension concerning it. After the lapse of a century, it is much stronger in the confidence of thoughtful men than it was during the administration of President Washington.

A more important fact to remember is that government by the whole people is an experiment that has been tried but twenty-seven years, reckoning from the abolition of slavery.

Now, the institution of monarchy had endured for unknown thousands of years, and was always bad. Certainly, it had had abundant time to perfect itself, but it never became anything better than a choice of evils. Under it, the mass of the people remained ignorant, oppressed, degraded and miserably poor, while the ruling class was often dissolute, extravagant and unfeeling. Nor had monarchy in itself any means of self-rectification. It could only be reformed by revolution and massacre.

It is the special happiness of the American system of government that it does actually possess within itself the means of self-improvement, and now the great majority of the people are deeply interested in applying remedies for existing evils, some of the worst of which are in course of removal.

An American citizen whose memory goes back fifty years, and who judges his country from the facts, and not from distorted reports of the facts, can adopt as his own the well-known statement of the late Lord Macaulay, when he said that all his life he had been hearing of decline and deterioration, while he had seen nothing but improvement.

IS SHE CHARMING?

Katy Darcy is the daughter of a good-natured, well-meaning man and a gentle, modest woman; but Katy has suffered from the disadvantage of hearing from friends and companions that she is a charming girl, and that a charming girl is born to rule.

When she starts out in the morning, therefore, she arrays herself in brighter colors and more gaudy ornaments than are suitable to the street. She casts furtive glances at young men whom she meets, but with whom she has no acquaintance, or tries with her eyes to express her admiration of the taste of well-dressed ladies who pass by. The girl is innocent of wilful wrong-doing. She is not even flirting, intentionally; but she is trying her power. If she is charming, must she not charm?

But if you will watch her through the day you will discover that she "draws the line." There are people, evidently, whom she makes no effort to charm. Perhaps she thinks they should be grateful to her for accepting their favors.

She enters a street-car with one or two companions. They hold by the straps, swinging to and fro, giggling, and obtrusive in manner and conversation. An old man rises with a bow to Katy, and offers her his seat. She flumps down into his place without a word of thanks.

Or, she is going on the railway to a suburban town. She arrives late at the station, crowds through the line of quiet, waiting passengers, marching straight on, her head erect, casting supercilious glances at the "common people" around her. All plain-dressed men and women whom she does not know are pariahs to this young American aristocrat.

Once through the gate, she hurries into a car, fills one seat before her with her bag and shawl and dog, while she reads a novel or nibbles candy in the seat that is opposite. If any other passenger attempts to take one of the seats for which she has not paid, she glares at him as if he were doing an impertinent act.

She speaks to tradespeople, servants or officials, imperatively and with rudeness, to show what she thinks is her superiority to all working people. She is happy in the belief that she bears herself like a charming young woman, while in fact she has only been noticed as an extremely vulgar, underbred girl.

Such girls may be seen in the city shops, or in the street or steam-cars. Foreigners sometimes call her the typical American girl.

Can nothing be done to reform her? There is good material in her. As Matthew Arnold said of American buckwheat cakes, "They are really not half so unpleasant as they look."

FIGHT IT.

A member of an Arctic exploring expedition said, lately, Whenever I see a man making a brave fight against despair, I am reminded of the Moravian missionary at the most remote station in Greenland.

He was a middle-aged man, and had left family and friends behind when he went to this lonely hamlet within the Arctic circle to preach to the Eskimos. He had not a single companion in the frozen North.

For one or two years his eager zeal sustained him, then he was suddenly overcome by a terrible homesickness. He would look out upon the vast and awful icy solitudes until he felt that he should go mad unless he could hear the voice of one of his own people, or see a familiar face.

He struggled against this depression, but in vain. Then his common-sense came to his rescue. He went to work vigorously to convert a chamber in his cabin into a likeness of the living-room in his old home.

The plain wooden chairs and the desk were easily copied. Pictures from Danish papers covered the walls. He had with him the cup and saucer which he had used at home. He brought them out. He taught his native servant to prepare Danish dishes.

Once a year a ship from home came to the station bringing supplies; among them back numbers of a daily paper for a year. Instead of reading them all with greedy haste he stored them away, and every morning the paper of that date for the year before lay on his breakfast-table.

These little homely means slowly effected a cure and restored him to cheerfulness.

Not many of us have the courage or intelligence to fight sorrow with the shrewd rational remedies with which we would meet other ills. Submission

Digitized by Google

and prayer are the only cure for the soul; but the shattered nerves need more commonplace, practical treatment.

"Gin ye canna kill your trouble, gang aboot it," is a wise Scotch prescription which we would do well to heed.

SELLING THEIR GODS.

The Shan States, as the country lying between Burmah and China is called, have been explored by Europeans lately for the first time. In "A Thousand Miles on an Elephant in the Shan States," an English traveller, Mr. H. Hallett, gives an account of the places where the Shan boys, or such of them as are fortunate enough to receive any instruction at all, go to school.

They are taught by the monks and abbots of the Buddhist monasteries, and sleep, with the acolytes and some of the priests, in the rooms where they are taught. The monasteries consist of a hall divided into two portions; one part level with the veranda, where the scholars are taught, and the other part, where the monks receive their visitors, two feet above the rest of the building.

In the larger buildings the monks sleep in the cloisters; in the smaller ones, their beds may be seen rolled up, with those of the acolytes and school-boys, round their pillows against the walls.

A conspicuous object in these halls is the row of images of Buddha on a raised stand against the wall in the background. Before them are offerings of taper candles, flowers and prayer-flags. Perhaps the largest image is made of alabaster, in which case it has been carried a great distance, from the quarries of Burmah.

Standing about this image, or on a lower shelf, will be other images, some of wood or clay covered with gold leaf, some of silver having a core of hard resin, others of soapstone, and some of terra cotta, the last greatly resembling the images of saints in their niches sold in Italy.

One who has an eye for curiosities is naturally attracted by these images, and seeks an interview with the abbot, who is teaching a class of boys. After he is asked many questions, he will very likely say that his eyesight is much impaired, and will more than hint that a present of a pair of spectacles would be acceptable.

When the visitor hints that he would like one or more of the images of Buddha, the abbot is very greatly shocked, and declares that he cannot think of parting with one, because they have been offered by the people.

But if the bargainer pulls out a handful of silver, the abbot will probably give the boys a recess, and with much haggling about the price and a show of reluctance, will sell some of the gods.

He is sure, however, in order to salve his conscience, to exact a promise to treat the image with respect, declaring that if you do not, evil things will happen to you, as well as to himself.

QUEEN AND PRINCE.

"Silence is a test of friendship," said some one, meaning that two persons, who are friends, can enjoy each other's company for hours without conversing. Mr. Cooper, an English artist, tells an anecdote of Queen Victoria and Prince Albert, which suggests that a test of matrimonial happiness may be the ability of one to be amused by a joke at the other's hobbies.

The artist, who excelled in painting domestic animals, was invited by the Queen to the Isle of Wight to paint the portrait of a fine Guernsey cow, which had been presented to her by the Corporation of the Island. The artist went down to Osborne and began painting the animal and her calves, a yearling and a three-months-old. While the picture was unfinished, the Queen expressed a desire to see it, and Mr. Cooper carried it to Osborne House.

As soon as the Queen saw it, she exclaimed, "Oh yes, that is my Buffie!"

"But, Mr. Cooper," said Prince Albert, "how about those dock-leaves that you have put into the foreground?"

"Your Royal Highness," answered Mr. Cooper, "still-life helps the pictorial combination, and the dock-leaves enable me to avoid the monotony of grass and earth."

"Well," said Prince Albert, jocosely, and with a look at the Queen, who was fond of farming, "they are beautifully painted and assist the composition, but they don't give evidence of good farming."

The Queen, shaking her finger at the Prince, said: "How about that pool of water in which the heifer's hind-legs are standing?"

The Prince saw the point, for his specialty in farm-work was good drainage, and said, laughingly, "I think it is a beautiful artistic idea, and gives a stamp of nature to the scene."

"Yes, Albert," replied the Queen, "and I like its introduction; but that pool is not evidence of good draining."

Upon this Queen, Prince and artist laughed heartily.

INTERFERENCE.

Abraham Hayward, an English wit and author of the present century, had a genius for society. He knew everybody considered worth knowing, and cultivated conversation as a fine art. As age crept upon him, his appetite for admiration increased with a dislike of being interrupted by other ambitious talkers.

One day, he was dining at a house where an eminent Frenchman, who was among the guests, talked much and well. He cut into Hayward's best stories, and with the skill of a practised *raconteur*, talked the Englishman down.

After dinner, Hayward approached his hostess, and said to her with that familiarity which was his privilege:

"Lady Waldegrave, you really must not have Count X—— here to dine again."

"But why, Mr. Hayward?"

"Because he spoils conversation."

This reminds us of an old lady who protested against selling the discarded church carpets by auction, on the ground that such an act would be irreverent.

"Put up at auction them carpets we've kneeled on so many years!" cried she.

"But, Sister Gifford," remonstrated an acquaintance, "they must be sold."

"So they must," replied she, impulsively, "and I'm ready to buy 'em. But if they're put up at auction, Sister Pinkham will run 'em way up to spite me!"

COINCIDENCES.

Many a person has been surprised by events occurring, as it seems, at the immediate suggestion of the victim. The excitement of the moment claims fate, Divine Providence, an unknown law of association or power of mind over matter as suitable explanations; but calm reason classifies such phenomena under the vagarious realm of pure coincidence.

A well-known insurance magnate, who was in the habit of taking almost daily trips between Albany and New York on the train, had the uncomfortable experience of having a wheel break right under his seat while the train was going at full speed. By a fortunate jump he narrowly escaped with his life. This experience made a deep impression upon him.

Some weeks afterward he took the same train, and as it happened was in almost the same seat. As he was chatting with a friend, he happened to look out of the window, and recognized the landscape and the spot of his narrow escape. Naturally he told his friend the story of the broken wheel.

"It was exactly in this spot it happened. The train was making the same speed. It was the most awful grinding noise I ever heard. It makes me tremble to think of it. Great heavens! There it is again!"

The identical accident had actually happened on the same train, almost between the same two fields adjoining the track, and the victim of this strange coincidence barely escaped the same way as before.

Such coincidences happen frequently, but are always difficult of credence. Darwin, in his "Voyage of a Naturalist," mentions one of the same kind, though different in degree. One of the party was speaking of the earthquake of Talcahuano, in Northern Chili, where his father lost all his property, and he himself had barely escaped with his life in the earthquake at Valparaiso.

He mentioned a curious coincidence which then happened. A German, one of the party, got up, and said he would never sit in a room in these countries with the door shut, as, owing to his having done so, he had nearly lost his life at Copiapo. Accordingly he opened the door, and no sooner had he done this, than he cried out, "Here it comes again!" and the famous shock commenced. The whole party escaped.

MAKING RICE-PAPER.

The so-called rice-paper is not made from rice, as its name implies, but from the snow-white pith of a small tree belonging to the genus Aralia, a genus represented in the United States by the common sarsaparilla and the spikenard. The tree grows in Formosa, and, so far as is known, nowhere else. The stems are transported to China, and there the rice-paper is made, which is used by native artists for water-color drawings, or dyed of various colors and made into artificial flowers. Mr. Hosie, in his "Three Years in Western China," describes the process of making the paper.

I was invited to visit a worker in pith after nightfall. Although somewhat surprised at the hour named, I accepted the invitation.

On arriving at the house, I was ushered into a badly lighted room, where a man was sitting at a table with his tools in front of him. These consisted of a smooth stone, about a foot square, and a large knife or hatchet with a short wooden handle. The blade was about a foot long, two inches broad, and nearly half an inch thick at the back. It was sharp as a razor.

Placing a piece of cylindrical pith on the stone, and his left hand on the top, he rolled the pith backward and forward for a moment until he got it into the required position. Then, seizing the knife with his right hand, he held the edge of the blade, after a feint or two, close to the pith, which he kept rolling to the left with his left hand until nothing remained to unroll; for the pith had, by the application of the knife, been pared into a square white sheet of uniform thickness. All that remained to be done was to square the edges.

If the reader will roll up a sheet of paper, lay it on a table, place the left hand on top, and gently unroll it to the left, he will have a good idea of how the feat was accomplished.

It seemed so easy that I determined to have a trial. Posing as a professional worker, I succeeded in hacking the pith, and in nearly maiming myself.

A steady hand and a keen eye are required for the work, and hence it is that the so-called rice-paper is manufactured only at night, when the city is asleep and the makers are not liable to be disturbed.

CHRONIC RAIN.

Young men who ape English manners and customs are reviled daily by newspaper wits. One of them is even represented as carrying an umbrella on a fair day, "because it's raining in London, doncher know!" An equally logical reason is ascribed to the artist, Fuseli.

One of his peculiarities was that of carrying a large gingham umbrella of a conspicuous color, generally red, whether the weather were fine or not. One day, a friend met him bearing his usual burden, and called to him:

"Halloa, Fuseli! What do you want that old umbrella for, this fine day?"

"What do I want it for?" answered he. "Oh, I'm going to see Constable."

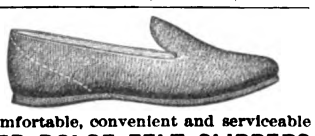
"What has that got to do with it?"

"Why, whenever I go to see him, he's always painting rain!"

HE WAS SELFISH.

An Arabic anecdote, illustrative of the subtleness of selfishness, which enables it to glide into the heart of a saint, is told of the holy Mohammedan, Sakati.

He said that for twenty years he had never ceased imploring Divine pardon for having once exclaimed, "Praise be to God!" On being asked the reason for such persistent praying, he answered:



"A fire broke out in Baghdad, and a person came to me and told me that my shop had escaped, on which I uttered those words; and even to this moment I repent of having said so, because it showed that I wished better to myself than to others."

For the teeth use "Brown's Camphorated Saponaceous Dentifrice." This preparation gives the best results obtainable. Soap destroys the animal and vegetable parasites on the teeth, and camphor hardens the gums. Price, 25 cents a bottle. Sold by druggists. [*Adv.*

PLUSHES

Direct from the Mills. Every Lady uses Plushes. Before buying elsewhere, send for our prices and samples. Enclose 10 cents towards paying for the samples and postage, and we will send you 30 good-size samples, no two colors same shade.

122 East 13th Street, New York.

A Birthday Gift.

Nothing is more pleasing for a little girl than a beautiful dressed doll — latest style.

The publishers of THE YOUTH'S COMPANION have had these dolls made in Europe after the celebrated Jumeau model, having the ball and socket joints at the elbows, shoulders, knees and hips, also joint at the neck. It has a beautiful Bisque head, with "natural" eyes and flowing hair.

Price, $1.00. Postage 40 cts.

THE YOUTH'S COMPANION, Boston, Mass.

HEYWOOD TRADE MARK SHOE

For Boys

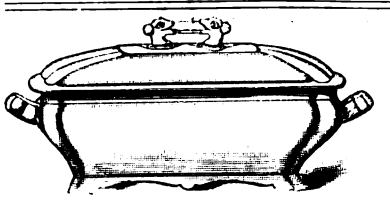
This shoe was first made by us for use in families of a few of our personal friends who failed to find in the stores neat and stylish shoes for the boys, which would stand hard wear.

A boy's shoe should be made to stand rough usage; this can be done, and at the same time its style may be preserved, but it costs a little extra.

Isn't it worth something?

Ask your retailer for a pair of the Heywood Shoes for Boys—if he doesn't keep them, we will send them to you—Button or Lace—Sizes 13 to 1¾, $2.75; 2 to 5½, $3. Three widths.

Send a 2-cent stamp for our circular, telling you how to secure a pair for yourself **FREE.**



HEYWOOD BOOT & SHOE CO.,
WORCESTER, MASS.
REFERENCE—Any National Bank. [133]

GOLD MEDAL, PARIS, 1878.

W. BAKER & CO.'S
Breakfast Cocoa
Is absolutely pure and it is soluble.
No Chemicals
are used in its preparation. It has *more than three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, EASILY DIGESTED, and admirably adapted for invalids as well as persons in health.
Sold by Grocers everywhere.

DR. TAFT BROS., ROCHESTER, New York.

Dinner Set, No. 131, 118 Pieces.
ENGLISH PORCELAIN STONE CHINA.
Packed and delivered at depot for $8 cash.

OR we give this Set as a **Premium** to those who get up a **Club** of **$20.00** for our **Teas, Spices** and **Extracts.** We are **Importers** of **Tea, Coffee** and **Crockery,** and sell direct to **Consumers.** We want **YOU** to send for our 120-page **Price** and **Premium List.** It tells the whole story. Costs you nothing. Will interest and pay you.

THE LONDON TEA COMPANY,
793 Washington Street, Boston.

WINTER HUMORS

Cold, raw winds of winter fan to fury itching, burning, and scaly humors and diseases of the skin, scalp, and blood. No pen can describe their severity, no language can exaggerate the suffering of those afflicted, especially of little babies, whose tender skins are literally on fire. *Winter is the best time to effect a permanent cure.* **Cuticura Remedies** are the greatest skin cures, blood purifiers, and humor remedies of modern times, are absolutely pure, and

agreeable to the most sensitive, and may be used on the youngest infant and most delicate invalid with gratifying and unfailing success. CUTICURA, the great skin cure, instantly allays the most intense itching, burning, and inflammation, permits rest and sleep, heals raw and irritated surfaces, cleanses the scalp of crusts and scales, and restores the hair. CUTICURA SOAP, the only medicated toilet soap, is indispensable in cleansing diseased surfaces. CUTICURA RESOLVENT, the new blood and skin purifier and greatest of humor remedies, cleanses the blood of all impurities, and thus removes the cause. Hence, the **Cuticura Remedies** cure every humor of the skin, scalp, and blood, with loss of hair, from pimples to scrofula, from infancy to age, when the best physicians and all other remedies fail.

☞ "HOW TO CURE DISEASES OF THE SKIN AND BLOOD" mailed free to any address, 64 pages, 300 Diseases, 50 Illustrations, 100 Testimonials. A book of priceless value to every sufferer.

CUTICURA REMEDIES are sold everywhere. Price, CUTICURA, 50c.; CUTICURA SOAP, 25c.; CUTICURA RESOLVENT, $1. Prepared by POTTER DRUG AND CHEMICAL CORPORATION, Boston.

Pimply Skin, red, rough hands, painful finger-ends and shapeless nails are prevented and cured by **Cuticura Soap,** incomparably the greatest of skin purifiers and beautifiers, while rivalling in delicacy and surpassing in purity the most expensive of toilet and nursery soaps. *The only medicated toilet soap* and *the only preventive and cure* of inflammation and clogging of the pores, the cause of pimples, blackheads, rough, red, and oily skin, and simple humors of infants and children. Sale greater than the combined sale of all other skin soaps. Sold everywhere. Price, 25 cts.

SUGGESTIONS

ABOUT THE MOON.

Watch the new moon several successive nights, through an opera-glass, if possible.

Is the concave or the convex side turned toward the sun? Why?

Why does one edge always look notched?

Do the dark spots on the moon ever change in size, shape or position?

Read what you can about the moon.

For the Companion.

THE BRISTOL BELL.

When George the Second in Albion's Isle
Defended the Faith, 'twas a weary while
Ere a ship that sailed from Rhode Island's shore
Could return to the colonist port once more.

And the Churchmen of Bristol, who'd hoarded well
And sent across seas for an English bell,
Had waited full many a month and long
For the cheer of their new-built steeple's song.

But at last the good vessel at Newport lay,
And a brave little sloop sailed down the Bay
To carry the bell to Bristol town,
That should bless St. Michael's with wide renown.

Though the brave sloop's men numbered only two,
Their pride was enough for a galleon's crew,
And their bosoms swelled as they fondly thought
Of the fame for themselves in the bell they brought.

The sky never looked so blue to them,
And even "Despair" seemed an island gem
In the beautiful spread of the sun-lit Bay—
For when pride is at work, it works that way.

"The deck is too lowly a place," they said,
"For our glorious cargo; high overhead
Let's hoist it, that there its far-heard peal
May speak for the righteous joy we feel."

So up to the cross-trees the bell they swung,
Forgetting by mere mischance its tongue;
"What matter!" cried brawny Waldron, "I
Will smite it myself 'neath the arching sky!"

Then aloft he sped with a mighty sledge
To waken the sounds from the slumbering edge
Of the Church's treasure: no greater bliss
Had fallen to Waldron's lot than this.

"Give ear, good helmsman!" he cried aloud,
As he reached the top of the slender shroud,
And praise to himself for his prowess spoke,
And curved his arm for the wondrous stroke.

D-o-n-g! Glorious tone! How its echoes ran
Around and across the horizon's span!
Did ever a sound so full and clear
Enrapture a listening mortal's ear!

"Again!" cried the steersman in mad delight;
"Still a lustier note from the metal smite!"
And exultant his comrade called back, "Be it so!
And Bristol shall hear it this time, I trow!"

Oh, the ponderous blow that descended then—
'Twas beyond all telling of song or pen;
For, alack and alas, by ill-fortune's whim
It cracked the church-bell from top to rim!

Then woe for the pitiful homeward sail,
And the crestfallen heroes glum and pale,
With an eager crowd on the wharf, to be met
With naught but a prayer to forgive and forget!

How sing of a welcome turned to tears,
A payment in worthless weight for years
Of the parish thrift? What words for the shame
That asbore with the crew and their cargo came?

In briefest measure their tale they told,
But they'd learned a lesson that's never grown old:
When pride, on land, sea, river or bay,
Is at work, it can work in a wretched way.

M. A. DE WOLFE HOWE, JR.

For the Companion.

THE OTHER SIDE.

Jared Lincoln, an uneducated man, who had made within a few years a large fortune by speculation, while driving out to Central Park passed Mr. Crounse, a plainly dressed, middle-aged gentleman who was on foot.

"That man," he said to his wife, "belongs to one of the oldest families in New York. His grandfather was one of the signers of the Declaration. He has been brought up in the midst of refined and scholarly people. He belongs to a set into which I cannot enter. I would give half that I am worth for his start in life."

In the meantime Mr. Crounse looked at the carriage and its sumptuous equipments, and thought, "If I had some of that man's money, how many comforts I could bring into our bare lives!"

Down one of the leafy avenues a man sauntered thoughtfully, whose name is known throughout the country as a brilliant magazinist.

One of the foremost men in Wall Street rode past him. The men, having met at the club, bowed to each other. "Ah," thought the novelist, "if *I* could live without writing anything but checks!"

"That fellow is famous!" thought Dives on horseback, with an envious sigh. He had in his pocket-book a yellow newspaper clipping in which his name occurred as having made a few remarks at a dinner. Dives thought of this clipping and said to himself, "What happiness it must be to see one's name in print every day! How much finer a gift than money is fame."

The minister's wife, whom somebody had taken out to drive, saw one of the parishioners pass, a woman who ruled in an exclusive fashionable clique. A thrill, almost of envy, disturbed her calm breast. How pleasant it must be to live in a social atmosphere pure and refined, to escape all that is vulgar and painful in life!

The other woman's eyes grew troubled as she looked wistfully into the serene face of the clergyman's wife.

"Oh, to have her faith!" she thought. "When sickness and death come, to know where to turn as she does! To live always apart from the worry and pain of the world, close to God!"

So each man and woman went on a separate way, envying the other. For the great mistake in life is, that each of us overrates the peculiar blessing which God has bestowed upon our brother, and is blind to the good which He has given to us.

FRANKLIN'S BIRTHDAY.

The birthday of Benjamin Franklin, January seventeenth, is celebrated every year by the printers of the United States with a ball or a banquet. To the last years of his long life, when he was President of Pennsylvania, after having been American Minister at the Court of France, he styled himself "Benjamin Franklin, Printer," as indeed he was, for he always had a printing-press in his house, and used it, much as we now use the type-writer. Besides thus claiming fellowship with the honorable guild of printers, he rendered it some solid services.

He did not invent the art of advertising, but he originated the American way of advertising. He was the first to use pictures in advertisements, some of which he engraved with his own hand and penknife. His cut of the runaway apprentice might be termed an "unkind cut," for he had been himself a runaway apprentice.

Having a newspaper of his own, he advertised everything that he bought or sold with the greatest amplitude and profusion—books, pamphlets, paper, rags, lampblack, ink, wine. He was the man who discovered the mighty power of advertising, and the first who perceived what an important thing it is that an advertisement should be written and printed in just the right way.

He rendered printers another service in showing them the effectiveness of humor in enhancing the value of newspapers, and in promoting good causes. In those times there were no journalists except printers, and commonly the same hand wrote and set in type the paragraphs of news. From first to last, he knew the value of a little fun in the newspaper, and how helpful it may be made in exposing false pretensions and in recommending virtuous habits. His first boyish essays, timidly thrust under the door of the printing-office, and the last piece he ever wrote, done a few days before his death, were humorous.

At the same time, he never abused the power of the press by harsh criticism or insinuations of bad motives. It would be difficult, if not impossible, to find in the thirty years' file of his Pennsylvania *Gazette* an article intended to wound the feelings of an individual.

The printers do well, then, to celebrate the day on which the great printer of America first saw the light, one hundred and eighty-five years ago; but we are all equally indebted to him. It was he who first set the brain of America at the work of inventing and improving, in which it has continued ever since, to the great benefit of the whole world; and he it was whose electrical discoveries gave the irresistible impulse to the development of electrical science which to-day is flooding our cities with light, and supplying our engines with power.

But the best of him was his goodness, his charity, his tolerance, his admirable temper, his patriotism, his humanity. So far from being penurious or penny-wise, he was the very soul of generosity, the man to share his last shilling with a friend, and to risk joyfully his whole estate for his country, both of which he did more than once.

He was one of the men who value money without overvaluing it, and he knew precisely when he had enough of it. At the age of forty-two, when he had been in business twenty years, and had created the most prosperous establishment of the kind in the colonies, he retired, in order to devote his whole time and strength to the pursuit of science. He had acquired an estate of seven hundred pounds a year, and he considered it enough.

At the call of his country, he gave up all his chosen pursuits. He laid aside his electrical apparatus, his musical glasses, his books and his collections to spend laborious and troublesome years in the strife of politics and the devices of diplomacy, from which his country issued victorious and free, himself ranking, in the importance of the services he had rendered and in the esteem of his fellow-citizens, next to Washington.

CAST-IRON "BRICKS."

Most of the building materials now in use have been employed with greater or less skill for thousands of years. Since primitive man discovered the adaptability of stone, wood and burned bricks composed of clay and sand for house-building, no equally useful building material has been added to the list. According to the *American Furniture Gazette*, a German mechanic has recently patented an invention which has certainly many advantages over the old-fashioned brick of clay, though use may not prove it to be in all respects superior.

Its practical design and ingenuity are characteristic of the modern tendency of inventions. It is in the form and of about the size of an ordinary brick, but is composed of cast iron and is hollow.

The shell is so thin that the brick weighs less than one made of clay. A wall is built of such bricks without the use of mortar, and no skilled labor is required in laying them. The upper and lower sides of the bricks are provided with grooves and projecting ribs, which fit into each other easily and perfectly and form a wall of great strength.

There are also two large circular openings in the upper side of each brick, arranged so as to receive projections on the lower side of the brick that is to be placed above it. One of these projections is hook-shaped, which insures a solid hold. A wall of the bricks is very quickly put together.

After the wall is built it is covered with paint. This closes all the cracks, renders the wall air-tight, and prevents the bricks from rusting. By the use of good paint the wall can be made highly ornamental. The bricks are very durable, and a building made of them is perhaps as nearly fire-proof as possible.

A wall thus constructed can be taken down or rebuilt as readily as it can be put up. There is no mortar to be removed, as there is when clay bricks are used. A house with such walls is cool in summer and warm in winter, for the large air spaces prevent the passage of heat.

With a supply of such bricks a man can put up his own house, and be entirely independent of bricklayers, mortar-mixers and hod-carriers. If he does not like his house, he can take it down and build another with the same material, which is always as good as new.

A TOUCH OF NATURE.

A writer in the Boston *Democrat* relates an incident which proves that genuine humanity is not confined to those who are sufficiently well-to-do to contribute liberally to the funds of humane societies. The writer was passing along one of the business streets of Boston early on a summer morning, at an hour when few people had risen. The streets, lined only with stores and warehouses, were almost deserted.

Presently he saw a workingman, carrying a dinner-pail in his hand, come around a corner. The man wore soiled and tattered clothes, and looked as if he might be making his way to the docks or coal-yards for a long day's work.

Just at this moment a thin and forlorn cat came out of an alley and walked toward the passing workingman, mewing piteously. The man stopped, bent down and stroked the cat, which responded by arching its back, rubbing against the man's legs and hand, and mewing louder and louder.

"Hungry, I'll be bound," said the workingman. "Some one's gone and left ye."

He opened his dinner-pail, took out one of two sandwiches which were there, opened it and removed the piece of corned beef that was between the slices of bread, and gave the meat to the cat, breaking the beef up and feeding it to the animal bit by bit.

Just as the cat was greedily eating the last of the meat, a small and very lean and dirty dog came running up, looking wistfully at the proceeding. The cat made no movement toward flight. The dog was evidently an acquaintance.

"Companions in distress!" said the workingman. He said nothing more, but, taking the other of the two sandwiches out of his pail, opened that, removed the meat, and fed it to the dog. Then he went on to his day's work, without any meat for his own dinner, but leaving the cat purring contentedly and the dog lying in a sunny doorway with the air of one who says:

"Fate cannot harm me—I have dined to-day."

THE GOLDEN HOUSE OF NERO.

In earth's dark bosom Nero's palace lies;
Huge vaults and arches crumble in decay,
Like skeletons which pass in dust away.
Along the corridors the sad wind cries
And mourns the past, and light of sunny skies.
Weird reptiles creep amid the twilight grey,
And waters drip like one who weeps for aye
The fame which passes and the love which dies.
But far above us, where the daisies stare,
The wild bird pours into the list'ning blue
Its song of hope and pleasure ever new;
And seems to say, "Tho' ruin scatter low
Brave hall and palace, still the world is fair,
And where a stone decays, a flow'r may grow."

MARGARET THOMAS.

MARCHED TO DEATH.

Mr. Goss, in his "Recollections of a Private," says that few Generals seemed to understand how to march troops to good advantage—so as to cover long distances without needless fatigue. "Officers, unencumbered with baggage, with good horses and well-filled flasks, thoughtlessly marched men to death." A wise General, he says, halted his troops often, and in that way made long distances, and yet brought his men in comparatively fresh.

Little Day was not a handsome boy, but as brave a patriot as ever fired a gun. His face was bronzed by long campaigning, but he was hollow-cheeked, and his eyes, dark and expressive, seemed the largest part of his face. Joe said there didn't seem to be much to him but his pluck, yet he never reported sick, and was in every fight with his regiment.

He had been slightly wounded twice in battle, but had told me that he was hoping to come out of the service rugged and strong, and afterward to complete his education. "Then," said he, "I shall be proud of having fought through the war."

The marching, since we left camp, had been very hard, and our brigade had been marched in such a way as needlessly to exhaust the men. One night, after one of our long marches, Joe came to me, and said, "Little Day is kind of petered out. I guess you'd better come and see him."

I roused myself from a sleep, and went. Little Day clasped my hand, and said, "I knew you would come!"

"What's the matter?" I inquired.

"I'm all marched out," was the reply.

"Don't lose your courage," said I, "and you'll come out all right."

"I never have lost my courage, but there's no more march in me."

There is little you can do for a sick man on the march, except to give him sympathy, so I stayed by him during the night. When I awoke it was broad daylight. Little Day lay with his eyes wide open, looking wistfully, as if he would make a request.

"What is it? Is there anything I can do for you?" I inquired.

"Yes, turn me over so I can see the sun rise," he faintly whispered.

When I returned from roll-call, rough, stalwart Joe, with tears on his cheek, touched my arm, and said, softly, "Little Day is dead!"

He had fallen asleep to wake, I trust, in a more glorious sunrise. The verdict of the boys, as they crossed his thin hands over his breast, and closed his mournful eyes in their last sleep, was, "Marched to death!"

ON A GLACIER.

Tobogganning on a glacier is a sport which might daunt any but an adventurous soul. Evidently it is an experience never to be matched or forgotten. A descent over a part of the Silvretta Glacier, which lies nearly ten thousand feet above the level of the sea, and is for the most part smooth and free from the dangers common to glaciers, is described by Miss Margaret Symonds in the *Pall Mall Budget*:

Herr Guler had for a long time entertained the plan of tobogganning over a large portion of the glacier. As the autumn advanced, and the surface of the glacier grew smooth, he urged me to join the expedition, and I consented willingly, tobogganning being my favorite sport. Four toboggans had to be carried up the four thousand feet, and the march was, of course, slow and laborious.

At half-past four we reached the club hut, a tiny stone edifice with two rooms, a table, an iron stove, and hay to sleep on. Soon afterward the glacier was in shadow. Darkness fell suddenly. It was a wonderful world of snow and stars upon which we gazed before we went to sleep.

At three o'clock in the morning we were aroused, and continued our march for fully an hour and a half up over the snowfields, stopping about every forty yards to place a stick in the snow, which should guide us on our downward course. Finally we reached the top of the glacier, and after some delay, Christian and I took our seats, and started slowly forward over the first gentle incline. Guler followed with my friend.

Smooth and very slow at first; then, on a sudden, my toboggan glided more easily, then bounded forward. I realized that I was on the verge of the great rounded summit of the Silvretta Pass. Below me lay the billowy sea of unending white; beyond that again broken bits of moraine; then glimpses of the verdurous Prättigäu, surmounted by innumerable ranges ending in Tödi and the whole Bernese Oberland. Then followed the most breathless flight I have ever flown.

Up dashed the fresh snow into my face, filling my eyes, my eyelids, my mouth and nostrils, and plastering itself in upon my chest. All power of controlling my headlong course had vanished. For a second all consciousness of danger forsook me. I was seized with the intoxication of movement, and hurled forward with closed eyes and lungs choked by the driving snow, which rose in a cloud before me.

When I recovered my senses it was to find myself launched forth upon a gentler slope, and many metres to the left of the assigned course. A few feet in front of me I became aware of an old scar of a crevasse. It was neck or nothing, and I had no energy to stop. I shot across it, and steered out upon an even plain of ice. I had descended through the sunlight, in the space of five minutes, a tract of snowfield which it had taken us more than an hour to climb at dawn.

IN MORTAL PERIL.

Dr. C. C. Abbott, in "Outings at Odd Times," tells a tragic tale of an adventure which once befell an old lady, "long, long ago." The spot where she lived was almost a wilderness, and was beset with the perils of a new and scantily settled land.

The now almost forgotten Camden and Amboy Railroad was in operation, but though scarcely a mile distant, it was as nothing to her. She knew neither what nor where it was. But where the best whortleberries grew, in the back swamp, that was knowledge worth her possessing.

Although her cousin Abijah had killed a bear there, during the winter, she did not stop to think of that, but one day started for berries where few men would care to follow. With a light heart she gathered and gathered, until at length an ominous shrieking fell upon her ears.

"Could it be another bear?" thought she, and turned her face homeward. Her big basket was not quite full, and there were such loads of fruit within easy reach! This was tantalizing, but all her doubt vanished with the second shriller, more unearthly scream.

The path was no longer plain, nor was she sure-footed. As she pitched recklessly forward, the berries were bounced by handfuls from her basket, and finally, in despair, she threw aside the basket itself.

And still sounded through the swamp the terrible screeching of that angry bear. At last, she could see her cottage through the thickly set trees, but not so plainly the tortuous path. One misstep, and she sank, waist-deep, in the yielding mud of an old well, and there she stood screaming, until her husband came to the rescue.

"Do be still, Hannah," was his first remark, after she had chokingly called his attention to the still audible cries of the bear, "that's only the new-fangled steam-ingine whistlin'!"

"And to think," the old lady was wont to remark, on concluding this story, "to think I lost all them beautiful berries!"

SETTLING A DISPUTE.

It is not often that a criminal testifies against himself, but a correspondent mentions a case in which the temptation proved too strong. A man had been shot, under very peculiar circumstances, and the conviction or acquittal of the prisoner turned upon the evidence concerning his exact use of the weapon.

It was argued by the prosecution that, from the nature of the wound, the accused must have been in the street at the time of the shooting, and fired the pistol while on horseback. Furthermore, it was asserted by the lawyer that the pistol must have been held by both hands at the time of its discharge, and certain ingenious theories were advanced to support the statement.

On the other hand, it was alleged by the counsel for the defence, that the shot must have been fired from within the house.

The accused had shuffled very uneasily in his seat during the discussion of this point, and finally he broke in with the remark:

"You're both on you wrong about this shootin'. An' I'm blessed if I don't tell you how it was, seein' as I did it an' ought er know. 'Twa'n't done with any pistol, an' 'twa'n't done on horseback nor in no room. I was in the corn-field acrost the road, an' I sighted the old double-barrel gun on a stump an' blazed away. An' now that p'int's settled, I hope the court will give me credit for tellin' the truth."

The court did give him credit for telling the truth, and also gave him ten years for an attempt at manslaughter. But it was a satisfaction to have that "p'int" settled.

HONEST.

A gentleman who passed the autumn some fifty miles from Philadelphia pays a tribute to the honesty of the Quaker lady with whom he boarded. He passed several weeks at her house, and when the time came for him to leave, he packed up his belongings, paid his bill, and said good-by, leaving the house by the stage-coach, which, in primitive fashion, was to take him to the nearest railway station.

The stage stopped for a few moments at the village post-office, while the mail was made up, and the gentleman, sitting on the box, saw his landlady coming down the street. The driver came out and mounted to his place, but the Quakeress made signs to him to wait, and in a moment she was at the side of the coach.

"I found this in thy dressing-table," she said, extending something wrapped in a wisp of paper.

"What is it?" the gentleman asked, it being rather difficult to reach down to where she stood.

She unrolled the wisp of paper with the greatest gravity, and showed—a discarded quill toothpick.

"Oh, thank you!" the gentleman said, endeavoring not to smile. "It is of no value. You may keep it."

"It is of no value to me," she responded, with unmoved seriousness, and standing upon the step she reached to him the wisp of paper.

There was manifestly nothing to do but to take it, and so the ridiculous scene was ended by the gentleman's pocketing the quill, and thanking the bringer as gravely as if it had been a gold watch.

SURE OF HIS WIFE.

"Pooh!" said one man in the horse-car, as a group of business men were on their way down town, "my wife is the most methodical, careful, neat woman you ever saw. It is all nonsense for a woman to let a house run into disorderly ways. You ought to see how my wife does things."

"Well, of course that is all very well in theory," responded another; "but the best housekeeper gets behind, or something, sometimes."

"My wife *never* does. She is always the same. She keeps everything in first-class shape."

"She must be a remarkable person," said another man. "How long have you been married?"

"Ten years. And she never disappointed me. Why, gentlemen, she always puts everything in the same place, and you know just where to find what you are after. For instance, I went to my handkerchief drawer this morning before daylight, and took out a handkerchief and put it in my pocket before starting out, and I know just as well as I know my own name that that handkerchief is just such a size, and has my initials worked in silk in one corner."

And the boastful man put his hand in his pocket and pulled out—and unfolded—a white night-cap, with long strings dangling from it.

DAISY'S CALENDAR.—I.

Now here's a Calendar bright and new;
Come, Daisy, this one is just for you.
We'll learn the letters crooked and queer,
And what they stand for, Daisy, my dear.
Here's J A N at the top,
you know,
Which stands for plenty
of ice and snow,
And skates and sleds, and
snug little beds
That are cozy and warm
when the north winds
blow.
It stands for the good re-
solves we make,
That we'll haste to mend
if ever they break;
For cakes and calls and
Happy New Year;
For sleigh-rides merry,—
for January—
That's what it stands for,
Daisy, my dear.

For the Companion.

ONE DAY AT GRANDPA'S.

"I wonder if I can borrow two or three children for a day or two?" called a familiar voice at the door.

"Oh! oh! it's Uncle Gerald!" cried three eager voices, and three pairs of feet hurried into the hall.

Then Uncle Gerald was hugged and kissed, until he cried for mercy.

"Do somebody help, or I shall be strangled! Call the police!"

Mrs. Bastow looked on, laughing, but did not offer to help him. She knew very well that her brother enjoyed it fully as well as the children.

"If you only will come in and stay a long time," said Phil, trying to pull him into the sitting-room.

"You are always in such a hurry," said Clare. "Please do sit in the arm-chair, till we look at you."

Uncle Gerald seated himself, and took Dolly on his knee.

"Ask your mamma if you may go home with me, and stay till to-morrow afternoon," he said. "Pine Hill is smooth and hard. It's fine coasting, and the 'double ripper' hasn't had a slide this year."

"I am almost afraid to have them go," said the mother, doubtfully, in answer to the children's eager entreaties. "They might get hurt coasting, or take cold."

"Bless your heart!" cried this funny uncle. "There isn't the slightest danger. The hill, you know, is half a mile long, and from the top you can see half-way across the continent—or less. Besides, there isn't a team a month which thinks of going to Europe that road, and as for their taking cold—haven't they a grandmother and two or three aunts, ready to rub them in sweet oil, roll them in cotton batting, and bake them in the oven, if they even dare to sneeze?"

"Well, then, if you'll promise to bring them home 'safe and sound,' early to-morrow afternoon," said Mrs. Bastow, "they may go, but —"

The excited children did not wait to hear the last of the sentence, but hurried away to find clean aprons, coat, cloaks, and hats, and very soon after, they were seated beside their uncle in the sleigh, behind the big gray horses.

The snow was smooth, and there was enough crispness in the air to make their cheeks rosy; but the sun shone bright and warm, and Uncle Gerald told funny stories, and it seemed but a very short time before the city was left in the distance, and they drove up to the farmhouse door; and there was Grandpa and Grandma Avery, and Aunt Grace, and Aunt Jessie, and their four little cousins from across the way, to welcome them.

"We're going to have such fun to-morrow," cried Leon and Roy. "Mamma says we must all go to bed early, so we must go home just as soon as we've played a little while."

"We will," said Phil. "Dolly always gets sleepy by seven, and we had all better go then, so we shall have all the more time in the morning. O grandma, how good your muffins do smell!"

After this hint grandma asked them all to taste her muffins, and after supper the children played a few games, and then went to bed, to rise with the sun. Well muffled in warm clothing, the seven merry cousins started, with the long sled, for "Pine Hill." But grandpa came out from the stable with "Old Dan" harnessed.

"See here, children," said he. "You'll get pretty tired walking up that long hill, and if you'll be very careful, and let him take his own time, you may hitch on 'Old Dan' to draw you up."

Was there ever such fun before? The gentle old horse easily drew them to the top of the hill; then he was unhitched, and trotted down again, while the children went swiftly down on the "double ripper," for almost half a mile.

How they laughed and sang and shouted! They never thought of being cold; and the morning was so short! But they were quite ready for grandma's delicious dinner.

They had such appetites that Uncle Gerald declared "that they should all have to go to the Poor House if Phil and Leon and Roy stayed another day."

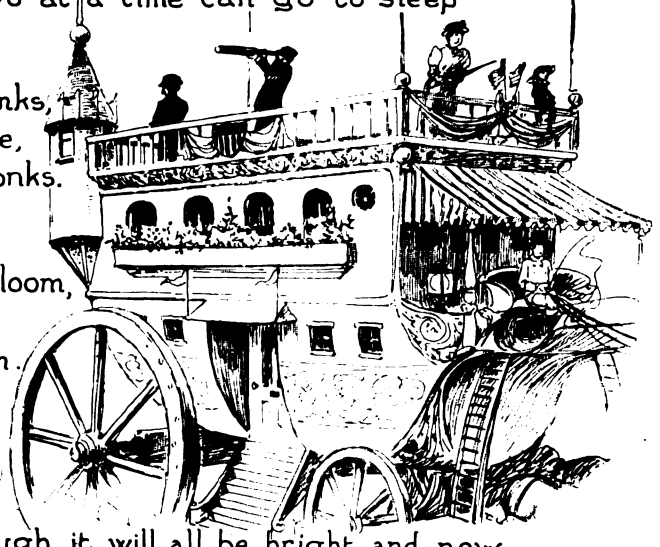
After dinner Uncle Gerald brought the sleigh and horses again to the door, and Phil and Clare and little Dolly were wrapped up warmly, and kissed and tucked in.

"We thank you all ever and ever so much for the good times we've had," said Phil, who was the oldest and most thoughtful of the children. "I never had so good a time in all my life, but we always *do* have nice times when we come here—the very nicest times."

"We ought to thank 'Old Dan' too," said Clare. "Oh! wasn't it such fun?"

"You must come and see us just as often as you can," said grandma, tucking a bag of walnuts under the sleigh seat.

Grandpa brought out a basket of red apples, and Aunt Grace a bag of pop-corn, and then Uncle Gerald whipped the horses with the reins or "there wouldn't be a thing left in the house," he said, laughing.



Then they all said "good-by" for the third time, the bells jingled, and the happy children were driven, merrily, to their city home.

THE LITTLE BOY PLANS.

I'll tell you what—when I'm a man
I mean to own a splendid Van,
And travel all the wide world over,
India, China and Japan.

Six horses I shall always keep—
Some of the places will be steep
And when they're not, and it's easy pulling,
Two at a time can go to sleep

The lower part shall be for trunks
And for nice little rooms with bunks,
With only room for a chair and table,
Just like the cells of good old monks.

Above shall be the drawing-room
With window-plants that always bloom,
And a little closet in the corner
To hold the dustpan and the broom.

We'll have to do our eating there
And I shall like it, I declare!
There will not be a thing about it
We mustn't rub, or muddy, or tear

Though it will all be bright and new,
A flag in every corner, too,
And the mantelpiece and all the windows
With hangings of red, white and blue!

I'll have a railing round the top,
And then, wherever I choose to stop.
I can go up there and look about me,
And the railing will not let me drop.

And all the wide world over there's not
A single country, cold or hot,
Where I will not go—but about the ocean?
Oh well! I shall have to keep a yacht!

Margaret Vandegrift

For the Companion.

CHILDREN'S SAYINGS.

One day Owen was riding with his papa and mamma in the country, when he saw a cow in a field with a calf by her side and a bell on her neck. "Mamma," said he, "why does that cow wear a bell?" Mamma did not answer, her attention being otherwise employed. Owen waited a little, and then said, "Is it to call the calf to dinner?"

—

Little Harry came rushing into the house one day, saying, "Mamma, Mr. Clark is sick." "Is he?" said his mother. "What's the matter with him?" "The doctor says it's a theoretic throat," he answered.

—

"Mamma, what made the preacher keep saying something about his ears?" asked Georgie. "I didn't hear him say anything about them," said mamma. "Well, he said, 'Oh, my hearers,' and I thought that meant his ears."

Enigmas, Charades, Puzzles, etc.

1.

CHARADE.

You may find in my *first* if the princess
Were lost or won;
My *second* is spurned by thousands,
And loved by none;
My *whole* is a singular person
The frivolous shun,
For he deems my *first* the best thing
Under the sun.

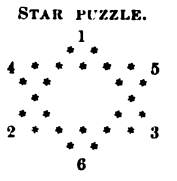
2.

COMBINATION PUZZLE.

Numerical Enigma.

The whole, composed of 58 letters, is a quotation from a celebrated novelist, quite appropriate in expressing the character of a well-known inventor, who was born on Jan. 17, 1706.

The 1, 29, 49, 36, 18, 6, 55, 16, 2 is illustrious.
The 3, 4, 32, 22, 5, 42, 8, 10 is to line with boards.
The 7, 19, 9, 34, 11, 28, 54 is an enigma.
The 31, 52, 33, 46, 13, 12 is a whirlpool.
The 15, 21, 25, 14, 17, 45, 27 is web-footed.
The 20, 24, 23, 30, 26, 41 is to cover close.
The 40, 35, 43 is to regret.
The 38, 57, 37, 39 is a decoction of flesh for food.
The 47, 56, 51, 58 is a kind of wine.
The 44, 48, 53, 50 is a child's title for a father.
The name of the author of this quotation and the one to whom it refers will be found in the following.



Double Cross-Word Enigma.

In caitiff, not in slave;
In dastard, not in knave;
In villa, not in house;
In coney, not in mouse;
In kicking, not in fight;
In fellow, not in wight;
In running, not in walk;
In singing, not in talk.

CYRIL DEANE.

3.

STAR PUZZLE.

1 to 2. A grand or lofty style.
1 to 3. A thin satin.
2 to 3. The name of an American statesman, who died on Jan. 15, 1865.
4 to 5. The name of an American statesman, who was born on Jan. 18, 1782.
4 to 6. Makes pure.
5 to 6. Wanderers.

GILBERT FORREST.

4.

ANAGRAM.

Uo ff fe em.

These mystic words with meaning fraught
A horror hold beyond your thought,
And yet with smiles full many a time
You've traced through them historic crime.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

HOUSEHOLD CHEER.

All readers know that dark, lowering days tend to depress the spirits. The effect is partly physical, partly mental. Invalids feel the depressing influence seriously, and even those in vigorous health are sensible of it to a greater or less degree.

Analogous to this effect of dull weather is the effect of gloom in the household. Indeed, the influence is even more marked in this case than in the other. Cloudy days are the exception in the outside world, and are soon succeeded by sunshine; but in gloomy homes there are few rifts in the all-encompassing cloud.

The hygienic influence of such a state of things is very bad, to say nothing of its moral and social effects. It is like the atmosphere of a malarial region, which one cannot help inhaling.

It is thoroughly depressing, and this means that every inherited morbid tendency in the members of such a family is strengthened; that every incipient disease is helped toward development; that where disease is in progress, the power of resistance and recuperation is weakened; that where epidemics are prevailing, the danger of exposure is greatly increased; that the brain itself, the great centre of all vital forces, works with impeded action.

Is it surprising that in gloomy homes there is a lack of spirit, hope and energy? That dark thoughts, impatient acts and unkind words prevail? That little things annoy? That husbands are unreasonable, mothers irritable, and children cross?

We need not spend words in attempting to describe the effect of a cheery home, where love and kindness reign, and husband and wife and children daily bask in a sunshine nearly allied to the glory of heaven, and in turn radiate it into the world around.

But what shall be done to change the gloom to cheer? In some cases, where ill health is the cause of the difficulty, the doctor's advice should be sought. In other cases, a habit of petty fault-finding is the source of the trouble, and must be corrected. Sometimes there is a natural physical tendency to fretfulness, and the will must be aroused to counteract it.

A gentleman who found a habit of gloom steadily growing on him, at length one morning delared, "By the help of God, I will not yield to it any longer!" He set a watch upon himself, and gradually overcame the evil tendency.

In many cases gloomy and irritable moods are due to overwork, want of sleep, improper food, foul air in dwellings, deficiency of exercise in the open air and sunshine, or to lack of change of scene. In such cases, the prime thing is to remove the cause of the evil.

WALKING FISHES.

It may seem absurd to speak of fishes as walking. The flying-fish is well known, but its flight looks much like swimming in the air. We naturally think of fishes as living all the time in water, as being incapable, in fact, of living anywhere else. But nature maintains no hard and fast lines of distinction between animal life which belongs on the land and that which belongs to the water. If we can believe the accounts of naturalists,—and there are no grounds for doubting them,—there are fishes that traverse dry land and others that walk on the bottom of the sea.

It is reported that Dr. Francis Day, of India, has collected several instances of the migration of fishes by land from one piece of water to another. Layard once met some perch-like fishes travelling along a hot and dusty gravel road at midday. Humboldt saw a species of *dorus* leaping over the dry ground, supported by its pectoral fins; and he was told of another specimen that had climbed a hillock twenty feet in height.

A French naturalist published in the "Transactions of the Linnæan Society of Normandy," 1842, an account of his observations on the ambulatory movements of the gurnard at the bottom of the sea. He observed these movements in one of the artificial sea-ponds or fishing-traps, surrounded by nets, on the shore of Normandy.

He saw a score of gurnards close their fins against their sides like the wings of a fly in repose, and, without any movement of their tails, walk along the bottom by means of six free rays, three on each pectoral fin, which they placed successively on the ground.

They moved rapidly forward and backward, to the right and left, groping in all directions with these rays, as if in search of small crabs. Their great heads and bodies seemed to throw hardly any weight on the slender rays, or feet, being suspended in water, and having their weight further diminished by their swimming bladders.

When the naturalist moved in the water the fish swam away rapidly to the extremity of the pond; when he stood still they resumed their walking and came between his legs.

On dissection the three anterior rays on each pectoral fin are found to be supported each with a strong muscular apparatus to direct its movements, apart from the muscles that are connected with the smaller rays of the pectoral fin.

TRADE.

The spirit of barter is one which very early animates certain American children. As soon as they have possessions enough to "swap" for others more desirable, they are happy indeed. The St. Paul *Press* gives a recent instance of such devotion to trade.

"Please, sir," said a boy to the foreman of a paving gang, "will you give me one of those round cedar blocks?"

"Yes, I'll give you one if you will tell me what you want it for."

"To cover it with carpet, and make a hassock."

"What do you want with a hassock?"

"Oh, I can trade the hassock to Mrs. Brown for a bird-cage. Her bird is dead."

"But what can you do with a bird-cage without a bird?"

"Oh, I don't want the cage, but I can trade the cage for an oxidized picture-frame."

"Well, of what use is a picture-frame without any picture?"

"But Mr. Oliver has a picture of General Sheridan, and he said he would trade me a hanging-lamp for a good oxidized frame."

"So it's the lamp you want!"

"No, I've no particular use for a lamp, but I can trade a good hanging-lamp for a Persian rug, and the rug for a Mexican parrot, and Tom Higbie will give me his banjo for the parrot. It's the banjo I want."

MUST YOU GO?

Mr. Hammond was a man of violent temper, which he tried to restrain, but which sometimes got the better of him, in spite of all his efforts. This happened one day when a neighbor who owed him money on a note had, for the twentieth time, asked for further extension of time.

Hot words were passing between the two men, when Mr. Hammond's young grandson, Georgie, who was playing about the room unnoticed, came to the visitor, and spoke to him as he had heard his mother speak to departing guests:

"*Must* you go?"

He was such a little fellow, and the hint for going was so plain, that the angry neighbor almost smiled.

"Must you go now?" said Georgie.

"Well, yes, I think I must," he said; but the absurdity of his dismissal so much mollified Georgie's grandfather that he afterward consented to the extension of the note.

The phrase became almost a watchword for peace in the two families, so that when quarrels were imminent, if some one said, "Must you go? Must you go now?" tranquillity was easily restored. Try it.

WHAT SHE MEANT.

The language of the Irish "servant-girl" sometimes requires interpretation before it becomes intelligible to the average listener. Old words in new senses have something of the difficulty of a dead language.

"What are me duties, if ye plaze, ma'am?" asked Bridget of her new mistress.

"You'll be expected to do all the cooking, the washing, some of the sweeping, and other things which I will tell you as they come up," said the mistress. "And Thursday afternoons, when Mary is out, you will have to answer the bell, and wait upon the table at dinner."

"An' will yez stretch for yerselves, or will I stretch for yer?" asked Bridget, doubtfully.

"What do you mean?" asked her mistress, who, after an explanation which took some moments, discovered that her new cook meant to ask whether she would be required to pass the various dishes at dinner, or whether the family would serve themselves.

ECONOMICAL TRANSLATION.

A young man called upon a retired school-teacher not long ago, to consult him about studying French. He wished to learn the language, but could not afford to take lessons of a regular teacher, and asked what books would be suitable to enable him to acquire a reading knowledge of French.

The old pedagogue fitted him out with a simple book for translation, a vocabulary and a grammar, and left him to work out the problem for himself. A few weeks later they met again.

"How are you getting on with your French?" asked the teacher.

"Oh, first-rate! first-rate! Why, yesterday I translated two whole pages of that book you told me to buy. I got out the meaning perfectly, and had a lot of French words left over!"

VALUABLE CARP.

The Census Bureau, with all the rest of its work, has been attempting to ascertain the value of the carp which have been introduced into American waters. A writer in the Boston *Transcript* says:

One man, to whom a schedule was submitted, replied that the carp in his pond had been worth a thousand dollars to him in the past six months. His wife had been sick, and he had fed her exclusively upon carp, to which diet he attributed her recovery.

She was worth a thousand dollars, at least, and therefore he estimated his gain on his investment at that sum.

LATEST DISCOVERIES IN SCIENCE.

THE GULF STREAM.

By J. E. Pillsbury, Lieutenant U. S. Navy.

What is the Gulf Stream? Whence does it come? Where does it cease to flow? To what cause is it due? These questions have been asked from the time when Columbus made his great voyage of discovery, four hundred years ago, down to the present day, and even now some of them have not been satisfactorily answered.

Lieutenant Maury began his description of this wonderful phenomenon with the expression, "There is a river in the ocean." The phrase explains in few words exactly what the Gulf Stream is. It flows along the coast of North America from the lower extremity of Florida to Cape Hatteras, and thence crosses the Atlantic toward the shores of Europe. Like land rivers, it has its source, the Gulf of Mexico, which is fed from the Caribbean Sea. This in turn receives its water from the eastern Atlantic Ocean, into which the Gulf Stream itself pours its own supply, so that there is, in reality, a grand circular movement of the whole ocean, of which the Gulf Stream is a portion.

Our ocean river does not run dry, like those on land, nor does it do much harm when, like the Mississippi, it overflows its banks, because its banks are water, and can easily be pressed aside. It always flows in about the same place over the bottom, too, and when it does change its position it is only in accordance with a law, which makes it return to its original position after a regular time as certain as that spring follows winter. It does not always flow on the surface of the sea, for occasionally it dashes along below the waves; but the same law guides it, and after a while it is sure to rise again to the light of day.

Peculiarities of the Gulf Stream.

This river is very warm, because it comes from the Gulf of Mexico and the Caribbean Sea, where the sun has been heating it for a long time. Of course, after it has left its southern home, and is making its journey across the Atlantic, it is gradually becoming cooler; but, nevertheless, it maintains to the shores of Europe, even well up toward the Arctic regions, a much higher temperature than that of the surrounding air or water.

It has its own finny inhabitants and other animal life: curious little fish and crabs that make nests in the floating sea-weed; beautiful little jelly-fish called thimble-fish, floating or swimming near its surface in such countless numbers that at times the waters are brown with them; and the graceful flying-fish, which dart out of the water in schools; and countless myriads of minute animal life floating about, so that, when the sun is shining high in the heavens, the water seems to be filled with motes. These little things, dying, sink to the bottom, and their diminutive skeletons or shells go to form an ooze, which, if exposed to the air and to pressure, resembles chalk.

This ocean river is quite unlike the rivers of the land in point of size. The Mississippi, at a point below its lowest tributary, is about two thousand feet wide and one hundred feet deep. At places it is wider than this, but there it is shallower. The Gulf Stream, at its narrowest point in the Strait of Florida, is more than two thousand feet deep, and over forty miles wide.

A Rapid Stream.

In point of speed, but few navigable rivers in the world equal the Gulf Stream. It hurries along three, four, five, and sometimes over six miles an hour. Even three miles is fast enough to delay or assist in a great degree, in the course of twenty-four hours, any vessel which happens to be in its influence.

The water is a beautiful deep blue, and so clear that one may look far into its depths. On the edge nearest the coast, where it presses against the colder shore water, its line of meeting with the shore water is frequently so sharply defined that at one end of the vessel you may have the clear warm water from the south, while at the other end is the cold murky water from the north.

Nature is always wonderful, and one can hardly fail to be impressed by the grandeur of high mountains, lofty precipices, immense forests, glaciers and waterfalls, but the Gulf Stream is the greatest of all of nature's wonders on this earth. It is impossible to realize the immensity of it, because it does not appeal to the eye, and the mind can hardly grasp its magnitude by the aid of an array of figures.

We all know that the sea water is salt. Contained in every thousand pounds of water there are thirty-five pounds of saline matter. Now if you could stand on the shore of Florida, and could take all of this saline matter out of the water of the Gulf Stream as it flowed past, during only one minute of time, all the vessels in the world at the present time would not be enough to carry the load.

When Columbus crossed the ocean to America for the first time in 1492, he discovered the existence of the current which enters the Caribbean Sea, and helps to form our Gulf Stream. All the old Spanish navigators noticed this current, and wondered what could be its cause.

Grotesque Theories.

Columbus gave a reason which was generally accepted as correct for many years. He saw that the heavenly bodies appeared to rise in the east, and go down in the west; that the winds in the tropics always blow from the east, and the currents of the ocean move in the same direction. So he concluded that the fluid and gaseous elements on the earth's surface, the air and the water, simply partook of the motion of the sky, and all went around the earth together.

The Gulf Stream itself was not discovered until the famous Ponce de Leon went to search for the Fountain of Youth. The natives told of a wonderful well or spring on the Island of Bimini, and the Spaniards, who were always on the lookout for remarkable or valuable objects, fitted out this expedition of discovery.

They did not know where Bimini was, except that it was somewhere northwest of Porto Rico; but they set out, hoping to find the means of cheating time, and making the old young again. They sailed along the eastern side of the Bahama Islands, and finally reached the coast of Florida. Then they turned south, and sailed against the current for several hundred miles, all the time wondering where the water came from without exhausting the supply, and where it went to without filling up some other place.

After several years it was concluded by many persons that all the water of the sea was moving; that it reached a hole in the earth and went down, and at some other point, a great distance away, returned again to the surface at the starting-point of that or some other current.

Its Effect on Navigation.

For a long time after the settlement of the country which is now the United States, vessels coming from Europe made a very long detour toward the south to avoid the Gulf Stream. Instead of sailing from England to Virginia in the most direct line, they went to the West Indies, and sometimes even around the Island of Cuba, in order to have a favoring current all the way. They did not know that they might avoid the Gulf Stream by sailing north of it.

By and by it was noticed that this great river was always found to be flowing at nearly the same place along our coast, and that the edge was marked by a great change in temperature. The captains of the whaling vessels and Atlantic packets avoided the current by testing the temperature with a thermometer, keeping in the cold water when sailing west, and in the warm water if going east.

A knowledge of this fact led Benjamin Franklin to investigate the subject, and finally to publish a chart defining the limits of the Stream. This happened to be just at the time when the American Revolution was breaking out, and as the information would help the English vessels engaged in the war, Doctor Franklin suppressed its publication, so far as he could, until the contest was over.

After that time, the importance of the study of the Gulf Stream was everywhere admitted. The advantage of a knowledge of it to captains of vessels, who might gain its assistance in their voyages, was evident.

It was also proposed, since it had so great an effect on the climate of Great Britain, to keep swift sailing-vessels in the Gulf of Mexico and the Strait of Florida to carry reports to England whenever its temperature or volume changed materially. This was before the days of fast steamers or the electric telegraph.

Ship captains were requested, and naval officers of most countries were required, to make all the observations possible of the temperature and other features of the Gulf Stream, and regular expeditions were fitted out solely for this purpose by the United States. They devoted a great deal of time in finding the temperature, but there was, at that time, no accurate method of determining the velocity of the water.

The usual way employed to ascertain this velocity was this: A vessel at sea is moved by its own power, or by the wind, on a certain compass course; but at the same time, a current is impelling it in some unknown direction.

Laws Which Govern the Stream.

After a while the captain takes an observation of the sun, or some other heavenly body, by which he is able to calculate almost exactly where the vessel actually is; and the difference between this position and the one where he supposed himself to be he attributes to currents. By collecting many thousands of these results, a fair idea of the general direction and velocity of the currents has been reached.

This method could only tell the general average, and could not enable any one to predict a change in the position of the current, or any variation in strength or direction.

It is also delusive to depend upon the test of the temperature of the water to show the direction of the flow, because the wind and waves, crossing a current of warm water, always carry it, on the surface, beyond the limit of the current.

People who bathe on a sea beach notice that when the wind is blowing toward the shore the water is warmer than when it is blowing in the other direction.

This is simply because the wind slides or pushes the surface water, warmed by the sun, and every wave, large or small, also carries some of the heated water toward the beach. When the wind is blowing from the land the warmest water is carried away, leaving the colder water from below to take its place.

This is also the case in the ocean, with the Gulf Stream.

In quite recent years the government has started out in a more certain way to ascertain the laws of this river. A steamer is anchored in the ocean, and from it the speed and direction of the water, as it flows past, is measured directly, not only on the surface, but hundreds of feet below. Steamers have already anchored in water nearly two miles and a half deep, and probably there is no spot in the ocean at which we shall not be able, before long, to observe the currents.

Instead of employing a chain, as vessels ordinarily do when anchoring in harbors, these steamers use a long, steel wire rope, which is lowered, pulled in, and wound up on a large iron spool, by steam-engines.

In this way we have learned that this great river is governed by laws such as those which govern the tides. You will remember that the tides rise and fall generally twice each day, the greatest rise and fall during the month coming about the time of the new and full moon.

Changes in the Gulf Stream.

In the same way the Gulf Stream's current varies in strength every day, and at different times in the month, depending upon the position of the moon in the heavens. It varies in temperature according to the season, and in position, too, a little; but the grand stream is not erratic. All its movements are fixed by laws that do not change.

It is maintained by some, that the current moved so far to the northward a year ago that it bathed the shores of Nantucket and Long Island, causing the weather in New England to be warmer than usual.

This conclusion was based upon the fact that sea captains found the warm water farther north than usual, and on the finding of a floating sea-weed, peculiar to warm waters, much nearer the shore than customary. But as we have seen, the temperature is a poor guide as to the limits of the current; and the same wind and waves that can carry the water can also carry the small fragments of floating weed.

A Popular Delusion.

Then, too, if the current did reach the shores, it could hardly temper the climate far inland unless the wind carried the heated air; and this the wind can do about as well from the regular position of the current as from any position to which it may have moved.

The month of December, 1889, was very warm for the season of the year, and the cause was assigned by many to the erratic movement of the Gulf Stream. East of the Rocky Mountains the United States Signal Service has eighty-six signal stations, and at sixty-five of these stations, many of them over a thousand miles from the sea, the temperature for the month was many degrees above normal.

At Cape Hatteras the stream is always, winter and summer, very near—indeed, it is just outside the shoals—and yet here the temperature was more than six degrees warmer than the normal.

For the cause of this we must look to the air, and not the water. As it happened during December, the air pressure as shown by the barometer was higher than usual in the vicinity of the Gulf of Mexico and the Southern States, and much lower toward Canada, so that the general movement of air was from the warmer toward the colder parts of the continent. The Gulf of Mexico and the Gulf Stream are warm, and the heated air, rising from them, was carried north, and so tempered the weather for the month.

Now what is the cause of the Gulf Stream? Some say that the water in the tropics, being heated, and consequently lighter than the cold, heavy polar water, flows northward on the surface, and the other water southward, underneath. Others say that the trade-winds, always blowing in one direction toward the west, blow the water along, too, and so begin and afterward keep up the movement.

Both are, perhaps, right to a certain extent, as to currents in general, but the Gulf Stream is probably almost wholly due to the wind and the waves alone. The water is pushed by the wind, and thrown by the waves into the Caribbean Sea, from the western end of which the accumulation of water runs into the Gulf of Mexico, and from there it escapes through the Strait of Florida into the Atlantic Ocean.

A Toy St Sebastian

For the Companion.

MY ADVENTURE IN TOYLAND.

I was bound for St. Ulrich, a village in the Tyrol, where Donald, my chum and fellow-countryman, had gone sketching. I was sure of a welcome, for I carried with me Donald's summer allowance, a stout little bag of twenty-mark pieces, which his people at home had been slow in sending.

To protect this treasure, and my own precious person, I tucked a pistol into my flannel blouse, saying to myself as I hid it guiltily away, "Tom Thorne, you are a silly fellow, arming yourself against those peaceful, honest, sleepy Tyrolese peasants; not one of them would hurt a kitten, and you know it."

Leaving the last railway station on my route, I climbed to the top of a crazy old yellow diligence, in which we swayed and rattled about for hours through the Grödnerthal. The shining white peaks of the Marmolata and Seisser Alp seemed to swing from side to side of the valley, as we wound up the long zigzags of the road. Occasionally the horses, and one, at least, of our passengers started at the creaking, heavy roar of an avalanche up among the solitary crags.

The last three hours of the journey I made alone, on foot. It was a lonesome way, still as an empty church. At intervals a tall, wide-armed crucifix lifted itself from the thicket, the life-sized wooden figure nailed upon it terribly real in appearance, in the deepening twilight. Madonnas in gay silk dresses and chains of pink paper roses smiled at me from wayside shrines, and, coming suddenly upon a gaunt, black-robed St. John of Nepomuk, standing beside a foot-bridge, I jumped like a timid maiden at the sight of a mouse.

The rumbling of wheels was a welcome sound, and presently an open cart, filled to overflowing with nothing more nor less than wooden legs and arms for dolls, creaked slowly by—plump pink arms and sturdy legs painted with white stockings and red, yellow and green boots, thousands of them, and of all sizes.

Then I began dimly to recollect that St. Ulrich, besides being famous for its wooden statues for churches, convents and wayside worship, specimens of which had given me the shivers along the road, was also one of the most thriving capitals of Toyland. I was nearing the place which sent out into the world countless cargoes of wooden toys—the Noah's Arks with their spotted animals, the unsteady villages with frizzly, tipsy green cones of trees, all sticky and strong-smelling of their gaudy paint, which had so delighted my childhood.

Entering the village, I saw abundant signs of the chief industry of the place. A girl sat at a window, painting, with a hand swift and sure as a

Digitized by Google

machine, round red spots on white hobby-horses. Her neighbor, across the way, was doing exactly the same thing, only the spots were black, on gray horses.

Piles of dolls' heads reached to the ceiling in some rooms, all to supply one German firm which buys thirty thousand dolls a week. One family of six persons carves nothing but skulls and cross-bones for the bases of crucifixes. I saw crowns of thorns by the binful, and here and there a stark, stiff figure lying under the workman's chisel or paint-brush. This disjointed, distorted wooden company visited me freely in my dreams that night.

Donald had gone on a sketching cruise up the Tschlippitbach, and was not expected back at the Elster Inn till the second day after my arrival.

The first day, I had to amuse myself as best I might, and I found the time heavy on my hands. Over the cold stone floor of the dining-room cats, chickens, a goat, and two young chamois ran about fearlessly. Some rough fellows, with bare knees and short stockings covered with green embroidery, sat in the garden with their noses buried in tall stone pots of beer, served by an apple-cheeked girl with tow-colored plaits of hair.

Down by a dark, sedgy pond stood the remains of a summer pagoda—a round roof supported by many shaky props, heavily moss-grown, looking surprisingly like a giant hairy-legged spider sprawling down to the water. A stupid-looking young man with bare feet, and ragged trousers rolled up above his knees, came plunging through the mud to ask if I did not wish to go fishing, with him as assistant. Not liking his looks, I declined his offer, and directed my steps elsewhere.

I was melancholy and lonesome, and heartily wished for Donald's return, so that we might set out upon a long planned walking-tour through this part of the Tyrol.

I went to my room, and, for pastime, opened Donald's little bag of money to make sure the sum was quite right. While I was counting the bright new goldpieces, I saw, in a plum-tree a few feet from my window and on the same level, a pair of muddy bare feet and legs fringed with ragged trousers. Half hidden among the branches of the tree was the remainder of the evil-looking fellow who had asked me to go fishing.

I had foolishly spread out Donald's money without drawing my curtain; and this fellow had, of course, seen me counting it, like a miser. In my melancholy condition, I assured myself that to be robbed and murdered in my bed would be really no greater punishment than I deserved for such stupidity.

I thrust the money back into my breast, and set out for a long tramp over the hills. I did not return till long after dark, and was so tired and hungry that my recent folly was forgotten. After supper my only desire was to tumble into bed as speedily as possible.

While undressing, I dropped a cuff-button on the floor. Sleepily fumbling about for it in the dim light of one tallow dip, my eyes fell upon something which opened them round as cart-wheels in an instant. In the deep shadow under the bed I saw what seemed to haunt me everywhere in this dismal place—a man's bare feet and legs! He lay perfectly still, trusting to the darkness to conceal him; which it would have done if I had not dropped my button.

"So, my ragged friend of the fish-pond and plum-tree, you liked the looks of Donald's money, and are here to make off with it to-night? Well, my hearty, we shall see who comes off best in the tussle. You are a blundering rascal, or you would, at least, have put on your stockings to hide those feet, which I have had the pleasure of seeing once too often."

These thoughts and many more flashed through my brain, but I was quiet as a mouse, and gave no sign that I knew the man was there till I had my pistol in my hand. How lucky, after all, that I had had the forethought to bring it!

With my thumb on the trigger I exclaimed, boldly, in my best German, "Come out from under my bed, you thievish vagabond!"

This invitation produced no effect.

"Crawl out at once," I repeated, "or I'll shoot you at once!"

Again no response. What an abject coward he was! My blood was up, and after one more loudly uttered warning, I fired—low, so as not to inflict a mortal wound. The dead silence that followed even these violent measures chilled me to the bone, and I repented bitterly of my hot haste. I had doubtless killed the poor half-witted creature, who was not responsible for his actions.

My pistol-shot made a sensation elsewhere in the Elster. Presently the landlady, wild-eyed and trembling, burst into my room, followed by a lank, black cat, and a crowd of retainers.

"*Donnerwetter noch e' mal!* What has happened? Is the gracious young gentleman murdered in his bed? Help! fire! Ach! send for the Herr Pastor and a mustard-plaster!"

I explained, with dignity, that I was unhurt, but that my property, and probably my life, had been in great danger at the hands of the ruffian concealed under my bed; and I pointed with tragic gesture to the ten dimly visible toes.

The landlady bent her portly person with some difficulty, and peered beneath the valance of cotton crochet round the bed, my tallow candle affording the necessary illumination.

Frau Wobber of the Elster did not display the emotions I was prepared for. On the contrary, she exclaimed with a scornful grunt, "*Ach donner!* all this fuss about Benny's St. Sebastian!"

She seized one of the feet with scanty ceremony, and dragged forth—a carved wooden figure of the luckless martyr Sebastian, stuck over with more than his usual allowance of arrows.

"My son Benny carved it for the convent at Hirsch Insel, but the sisters thought it too dear. Such nonsense! Look at the work on him! How beautiful he is—and how bloody! Benny was always a generous hand with the red paint, and it costs a pretty penny. Na', Benny would not take the stingy little price the sisters offered, so we stowed away Sebastian here under the bed, to wait till the church at Erlenfeld is finished.

"I ought to have told you, sir, to save you a fright, but what with pig-killing last week, and my Clärchen going to be married next Sunday, my poor head is all in a flurry. Your bullet has gone clear through his leg, but Benny can stick in another arrow in the hole, and it will do all the better for Erlenfeld."

If Donald had been there with his brush, he might have made a telling picture of the group in the dingy little bedroom of the Elster; the gory, rigid statue on the floor; the old hostess in her mob-cap and short red petticoat, beneath which the witch-like cat cowered, glaring at the company with its big yellow eyes; I with my pistol in my hand, and in the background, a crowd of open-mouthed bumpkins from the kitchen, stables and lodging-rooms.

If they had all stayed in the background! But alas! somebody advanced, stealthily and unnoticed, farther into the room, to his or her profit and my considerable loss. I discovered, all too late, that while I was congratulating myself upon not being a murderer, some of the rabble who had trooped to my room had really made off with Donald's money—a fact which prevented me from appreciating the full absurdity of my adventure till long afterward.

I made every effort to recover the money which my stupid blunder threw in the thief's way, but it was a total loss.

All this painful part of the affair I kept a profound secret from Donald, replacing his money with my own, and living on what old Moses Schneider in Munich allowed me for my watch and best sleeve-buttons. Donald's jokes about St. Sebastian were hard to bear, for they carried a deeper sting than he realized.

RACHEL CAREW.

For the Companion.

A PANTHER IN THE HAYSTACK.

The valley of the Clark Fork, in Montana, is undoubtedly one of the most picturesque regions in America. Owing to the fact that winters here are not quite so severe as in the adjoining mountain

valleys of the same latitude, the Flathead Indians had, for many years before the railway was built and white settlers came, been accustomed to drive hither their herds of ponies or cayuses to pass the snowy season in the sheltered, grassy vale of this beautiful, clear-tinted mountain river. One of the railroad stations perpetuates the name of Horse Plains, while another bears the yet more alluring appellation of Paradise Valley.

In a pleasant nook of the river and the crags, a Scotchman, McClerg by name, built a log-cabin about twenty years ago, and beginning with a single ewe, soon possessed a flock of sheep. He fenced with logs, and cultivated a small vegetable garden, had a shed for his sheep and cow, and was accustomed to cut and stack hay for the winter season near his little homestead.

McClerg brought from Scotland a wife, a little girl, and a boy about thirteen years old. The boy, who was a chubby, resolute fellow, was named Duncan, or, as they pronounced it, Dooncan, although he was more commonly called "Doonkie."

The first winter which the family spent in Paradise Valley brought them many surprises. They marvelled at the extraordinary severity of the cold, the "snapping" of the trees from the frost, and the great snow-falls.

McClerg himself, who suffered from rheumatism, would scarcely stir forth from the cabin when the great snow-drifts piled up about them, but Doonkie was more plucky. He shovelled paths through the snow-banks to the shed where the cow and the three sheep were sheltered, and attended to their food and water, which was no light task, for the water had to be brought for them in a bucket, from a hole in the ice, down the Fork, or else the creatures had to be driven there once a day to drink.

It was with difficulty that the "drink-hole" was kept open in the severest weather. Ice formed fully three feet in thickness, and during one week the snow-banks quite overtopped the cabin and the shed.

In addition to these cares, the lad was obliged to cut and draw in firewood on his hand-sled from pine-trees, which grew at a little distance. Later in the season, he had to draw hay to the sheds from the stacks which his father had made in August. But in this labor he had the cow's help.

He made a "crooked yoke," and led the cow attached to the hand-sled along the path which he opened to the stacks. Although he was kept so busy, the boy enjoyed his responsibilities. He liked to be stirring and bustling about.

He drew in the hay only as fast as necessity for fodder arose, and used the supply in the nearest stacks first. So as the winter advanced and the snow deepened, he had farther and farther to go. It was not very good management, but was pardonable in emigrants who were new to the country.

The farthest and largest stack stood nearly a hundred rods from the cabin, near a tall, blasted pine-tree, and near also the rocky bank of the Fork. On the other side, distant fifty or sixty yards, rose a crag of jagged, wild aspect, crowned by pines.

A great deal of interest attached to this stack in the lad's mind, for during the winter he had frequently seen large black animals about it. Sometimes there were two, sometimes three or four, and once five had been seen pulling out mouthfuls of hay.

Doonkie perceived from the cabin that they had made sad inroads upon the stack. Neither he nor his father knew that they were elk, but the fondness of the animals for fodder suggested that they were some kind of deer.

For a fortnight or more Doonkie noticed the black animals at the stack every day. Then nothing more was seen of them for three or four days. About this time it became necessary for Doonkie to make a trip there for hay. He yoked the cow one morning, and having hitched her to the sled, led her along by a rope attached to her horns, while he walked ahead with hay-fork and shovel to open the path to the stack.

Approaching it, he perceived that the snow had been trampled, and that a good deal of hay had been scattered about. There was a path which led from the stack up the valley, and a little way along this trail he could see where the elk had wallowed through a snow-bank, eight or ten feet in depth.

All these signs the lad's eyes noted with great curiosity, but going around to the other side of the stack, he saw something which at once thrilled him with alarm. There lay gnawed bones, bits of black hide, and the head and antlers of a large elk. The snow was discolored with blood-stains, and there were other indications that a great struggle had taken place here.

With wonder and growing fear the boy peered about, stepping very cautiously now. Beneath the stack, close down to the trodden snow, there was a sort of hole or opening, under the hay. With heart thumping audibly, he stooped to look into it, when his eyes encountered those of some savage animal which was apparently in the act of creeping out!

Terrified now in good earnest, Doonkie darted around the stack to where the cow stood, harnessed to the sled. Then he turned to see if the beast had come out. There it stood, crouching on the snow, not twenty feet away, switching its long tail to and fro.

There is no doubt that the animal was a panther, but Doonkie McClerg knew only that it was a fierce and terrible creature of a species utterly unknown to him. With a howl of affright which his mother heard at the cabin, he dashed past the cow and started to run home.

The cow, frightened at the sight or smell of the panther, turned to run almost at the same instant; and with good cause, for the ferocious brute sprang upon her back as she turned to bolt, and fastened its claws into her shoulders.

The cow, a sturdy creature, galloped along the path, bellowing, bearing the panther and jerking the sled behind her, helter-skelter. She went at such a pace that the lad was overtaken after a few rods, and knocked aside into the snow, where he fell, rolled over and lay nearly buried. The sled had barely missed him, and as he raised his head and scrambled up a little, he saw it as the cow galloped, bounding alternately high in the air, then plowing into the snow.

Once or twice the sled seemed to fall upon the panther, and this circumstance discomfited the beast, or, perhaps, actually knocked it off the cow's back. It lost its grip before the cow gained her shed, and then stood in the path a hundred yards or more from the cabin, looking wistfully after its intended prey.

It was at this juncture that Mrs. McClerg came out to ascertain what had caused Duncan to cry out in so strange a manner. Seeing the cow dash past, and then perceiving the panther standing in the path, the poor Scotch woman was horror-stricken, and stood for a moment as if petrified. Then she cried out:

"Me bairn, oh, me puir bairn! That fearsome beastie has eaten him up!"

The lad, meantime, lay as low as he could in the snow, in mortal fear lest the panther should turn about and find him. He heard his mother's lamentations, but probably felt that it was better for her to be mistaken and grief-stricken for a time, than to have her guess made right by his calling out.

Next the boy's father came hobbling forth. Strange to say, although this settler had wandered so far into the great West he did not possess a gun. He laid hold of his axe, and advanced past his wife, but awed by the savage aspect of the panther, took second thought and stopped short.

Mrs. McClerg, whose motherly anxiety had now risen to the pitch of frenzy, ran back into the cabin, and, seizing with each hand a smoking brand from the fireplace, ran straight along the path toward the beast, brandishing the sticks and uttering shriek on shriek.

She presented such a singular and formidable appearance to the panther, that its switching tail dropped, and, suddenly turning, it trotted back along the path. As it came past where the boy lay in the snow, its flashing, yellow eyes fell upon him. It paused, and for one terrible moment, he thought that the beast would surely pounce upon him. But with a backward glance it ran on again, passed the haystack, and was lost from view along the elk path.

Duncan McClerg, now grown to be a man, tells the story in a very graphic manner. The sudden appearance of the panther from under the haystack plainly made a very vivid and indelible impression upon his boyish mind.

For the Companion.

INDIAN MEDICINE AND MEDICINE MEN.

Probably there is no greater impostor than the so-called Indian doctor, who pretends to have derived from the Indians his herbs and his knowledge of their use in the cure of disease. Such impostors abound in all our larger cities, and though some of them have a smattering of medical lore, and know, at least, the names of the diseases they profess to cure, it is certain that, be their knowledge of diseases and simples much or little, it is not obtained from the Indians.

It is true that a few of the Indians now have a slight knowledge of diseases, and resort to herbs in their cure, but this knowledge is not their own; it is obtained at second-hand from the whites. The old-time Indian theory of disease, that which the Europeans found in possession of the Indians when they came to America, is possibly the most curious of their many strange ideas; and if their theory of the nature and origin of sickness is curious, the methods they employ to restore the sick to health are not less so.

The Indian is intensely superstitious; and although superstition is common enough now among us, who think we are civilized, it is difficult to understand the extent to which superstitious fancies govern every act of the Indian. The free savage exists only in the mind of the poet. The savage is, in fact, a slave, a slave to his own fancies, which never for a moment leave him free.

Does he intend to go hunting? He must first fast, and invoke the aid of his fetich. Is he bent on the more important and hazardous business of horse-stealing or the war-path? His abstinence from forbidden things must be longer, his fasting more rigid, his religious dances and ceremonies more devoutly performed, his prayers to his fetich more earnest.

The fetich is of a variety of shapes. Now it is a weasel's skin, or a stone curiously colored or curiously shaped by nature; now it is a bit of stone or wood rudely carved to represent some animal god. These fetiches, or guardian spirits, are revealed to the Indian in a dream after a prolonged fast, and they must never be shown or their nature revealed, else their protecting power is withdrawn. Bad luck causes the Indian to change his fetich; for of what use, argues the savage, is a god unless he is able and willing to look after the interests of his worshipper?

When he is taken sick, there is no doubt in the Indian's mind as to the cause of the trouble. He has neglected some duty, has transgressed some obligation to his deity, or, more likely still, is bewitched.

Witchcraft is of all things most dreaded by the savage, and as belief in witchcraft is universal among all primitive tribes, it is small wonder that civilized folk, who after all are removed but a few thousand years or less from the savage, should retain many survivals of this belief. It is not so strange, after all, that the good Puritans of New England hanged people as witches. They merely retained a little longer than some others an extreme form of a well-nigh universal belief.

When sick, then, the Indian believes that his body is possessed by spirits which assume various shapes, according to the part of the body affected, or the tribe entertaining the belief. Thus a toothache is supposed to be caused by a small worm which is busy gnawing at the root of the tooth; and the shaman or medicine man, when called upon to assist the sufferer, prays to a bird or squirrel to take away the worm, and put it into the hollow or forks of a tree.

Rheumatism is caused by the deer or by the measuring-worm, the idea being suggested in the latter case by the manner in which the measuring-worm arches his body in walking, which is supposed to be like the contortions of a rheumatic patient. On no account must the patient eat a squirrel or touch a cat, since the manner in which these creatures arch the back indicates an affinity with the disease. Nor must he eat the legs of any animal, since, as every one knows, the limbs are most frequently affected with rheumatism, and by eating the legs of an animal the "disease spirit" residing there might be taken in.

The above are certainly curious beliefs, but the cure resorted to is even more curious. Every one has noticed ferns as they spring up from the ground in spring. The stalk and leaves are curled into a ball, which slowly uncoils under the influence of the sun and warm rains. The patient is given an infusion of the roots of ferns, and is supposed to receive power from the friendly plant to straighten the members which are curled and crooked by the spirit of rheumatism, just as the fern straightens its own stalk.

The terrapin is thought to have much influence

Digitized by Google

in causing sickness, and the terrapin disease is either a rheumatic affliction about the chest and ribs, or possibly some pulmonary trouble. The association of the terrapin with diseases in this portion of the body, doubtless, originates from the fact that the ribs of the terrapin are not free, as in the case of most of the higher animals, but are united into one piece.

An Indian who was ill applied for relief to a shaman, and was asked, "Did you not, when a boy, tie strings to the terrapin's tail and worry the creature?"

The patient admitted that he did.

"Well," said the medicine man, "that is what is the matter. It is the terrapin's turn now, and the terrapin is paying off old scores. You have the terrapin sickness, and all your ribs have grown together, and to your breastbone."

The shaman administered the proper remedy prescribed in such cases, I forget what it was, and the man thought he was cured.

"Beggars' lice" or "ticks," as they are called, which stick to the clothes of every one who saunters in the woods, are thought to be a sure cure for a short memory. A tea made of the ticks will make facts stick to the mind; and what is more, if administered to your sweetheart it will fix her affections upon you. If one would be a good singer, let him drink a tea made of crickets; for has not the cricket a pleasant voice, and does he not sing merrily all day long?

So on through the whole list. Childish enough such fancies may seem to us, but they are real to the Indian. Moreover, such notions constitute the first crude conceptions which ultimately ripen into the more scientific medicine of to-day.

The Indian theories of disease originated chiefly among the shamans, and they claimed to be able not only to cure the disease, to drive away or coax out the afflicting spirit, but also to send "disease spirits" to whomsoever they chose. It was this supposed power which made them so greatly dreaded, and conferred so much influence upon them.

The implicit reliance placed upon the word of a shaman, and his influence over a fellow-tribesman, may be illustrated with this anecdote. A Sioux Indian, who had lost a relative by death, vowed to kill the first living thing he met. This was once not an uncommon practice among our Indians.

Issuing from his lodge, he chanced to meet a missionary—a man much beloved by all, from whom this Indian had received many favors. Unwilling, but bound by his vow, he shot his benefactor as he passed. Indian usage did not sanction a bloody retribution on the murderer, since the obligation of his vow was recognized by all.

The shaman, however, upbraided him for his act, and pronounced his doom, saying, "You will die within the year."

The Indian, though apparently a well man at the time, was seized by a wasting disease, and actually did die within the specified time, a victim to his own superstitious imagination.

Usually, in bewitching a person, it was thought necessary to possess something closely connected with the victim, as a lock of his hair, a nail-paring, or even a small quantity of his saliva.

The belief engendered by the shamans often had very serious consequences to innocent persons. If a shaman told a patient that he was afflicted by a disease which a certain man or woman had charmed into him, the consequences to the supposed offender were often serious enough, and such beliefs led to many deaths.

This is particularly the case in Africa, where the same belief occurs, and thousands are yearly sacrificed, because they are supposed to have afflicted others with disease spirits or to be the authors of misfortunes of one sort or another.

The power to "hoodoo," that is, bewitch, is believed in by a very large number of the negroes of this country. In fact, such beliefs are common to the ignorant everywhere, be they red, white or black.

We should not be too ready to despise the Indian who holds them, since faith in charms, fortune-telling and similar nonsense survives to-day among civilized people who ought to know better, and many are they who thrive by the practice of such arts. Credulity does not die with sorcery and barbarism, but lives on, and will continue to live until men grow much wiser than they have yet grown.

H. W. HENSHAW.

WHO ARE THE HAPPIEST PEOPLE?

The Earl of Derby answered this question recently in an address to the Scientific and Technological School of Liverpool, an institution of which he was one of the founders. He said:

"Having known men of many professions, I should say that the happiest lives are those which have been devoted to science. Every step is interesting, and the success of those who do succeed is lasting.

"What general, what orator, what statesman, what man of letters can hope to leave a memory like that of Darwin? An invalid in health, a man who seldom stirred from home; a man until his later years very little known to the outer world, but who from his quiet study revolutionized the thought of Europe, and will be remembered as long as Newton and Bacon.

"If fame be ever worth working for (I do not say it is) that kind of fame is surely the most durable, and the most desirable of all."

These words are true of the disinterested men of science. We have never had in this country men more uniformly cheerful and good-tempered than Franklin, Rittenhouse and Jefferson, who spent most of the leisure of their lives in the pursuit of knowledge; and Professor Agassiz was noted for the buoyancy of his spirits in every company where he felt at home. But we can say something similar of every person who has a pursuit suited to his talents and circumstances.

The happy people are they who have an occupation which they love, apart from any advantage it may bring them, one that they pursue with generous ardor. It is the element of disinterestedness that cheers their lives, whether they are engaged in ordinary or extraordinary avocations; and this is the reason why earnest students have such a keen enjoyment of existence.

For an ache, pain or cramp, internal or external, use *"Brown's Household Panacea."* A superior remedy. [*Adv.*

Yes, Vanilla is expensive, and when one buys an Extract at a low price, do not be disappointed if it is poor or disagreeable in flavor. For absolute purity, we recommend Burnett's Extract of Vanilla. [*Adv.*

DONALD KENNEDY
Of Roxbury, Mass., says:

I have kept a Scrap Book for a good many years of letters received from patients; some are long, too long to publish; some are short, short and good. Rainy days I sit down and read them, and have learned a good deal about the human body from some poor, sickly woman or overstrained man. Here is one of them. I call it a good letter:

TRENTON, TEXAS, Sept. 28, 1886.

"To Kennedy of the Medical Discovery, Roxbury, Mass. I am so proud of my recovery as to express my feelings in thanks to you. The RHEUMATISM has made me four-legged for six years. At last I have traded off two of them to Bell—Druggist—for four bottles Kennedy's Discovery. I am yours, gratefully and unsolicited, J. B. IVY."

CONSUMPTION
in its early stages can be cured by the prompt use of
Ayer's Cherry Pectoral
It soothes the inflamed tissues, aids expectoration, and hastens recovery.
Dr. J. C. Ayer & Co.
Lowell, Mass.

EDWARDS' ORANGE SPOONS.
Patented Apr. 22, 1890.

Sterling Silver Inlaid at points most exposed to wear, then plated entire. More durable than light Sterling Silver, and not half the cost.
A set of six, any pattern, $3.50. Hand-engraved, $4.00; with Gold Bowl, $1.00 extra.
If you cannot obtain them of your jeweller send to us for catalogue. Accept no substitute.
The Holmes & Edwards Silver Co., Bridgeport, Conn.

EVERY OWNER OF HARNESS SHOULD USE
FRANK MILLER'S

HARNESS DRESSING
FOR HARNESS, BUGGY TOPS, SADDLES, FLY NETS, TRAVELLING BAGS, MILITARY EQUIPMENTS, ETC.
Gives a beautiful finish, which will not peel or crack off, smut or crock by handling, does not lose its lustre by age; dust will not stick to work finished with it. Is NOT A VARNISH. Contains no Turpentine, Benzine, Naphtha, Alcohol or other injurious articles.
SOLD BY ALL HARNESS-MAKERS.

SYRUP OF FIGS
ONE ENJOYS both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers, and cures habitual constipation. Syrup of Figs is the only remedy of its kind ever produced, pleasing to the taste and acceptable to the stomach, prompt in its action and truly beneficial in its effects. Prepared only from the most healthy and agreeable substances, its many excellent qualities commend it to all, and have made it the most popular remedy known. Syrup of Figs is for sale in 50c. and $1 bottles by all leading druggists. Any reliable druggist who may not have it on hand will procure it promptly for any one who wishes to try it. Do not accept any substitute.

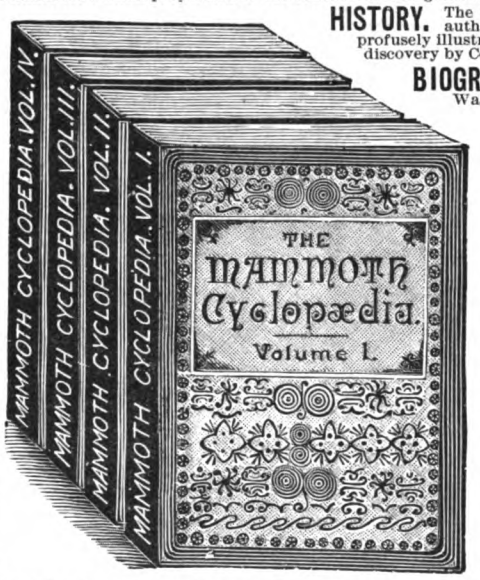
SCOTT'S EMULSION
Of Pure Cod Liver Oil and
HYPOPHOSPHITES
Of Lime and Soda.
It is almost as palatable as milk. Far better than other so-called Emulsions. A wonderful flesh producer.
Scott's Emulsion
There are poor imitations. *Get the genuine.*



A SPECIAL OFFER.
The Mammoth Cyclopedia
PUBLISHED COMPLETE IN
4 VOLUMES, containing 2176 PAGES, 620 ENGRAVINGS.
BOUND IN NEAT PAPER COVERS.
PRESENTED TO READERS OF THIS PAPER WHO SUBSCRIBE TO
THE AMERICAN AGRICULTURIST.

Recognized throughout the world as the **STANDARD RURAL MAGAZINE,** and the authority on all matters pertaining to Rural Life. It is published monthly, each number consisting of not less than 48 pages, with colored cover, and a year's numbers make a large volume of **576 pages, and over 1,000 original illustrations. It is a complete compendium of Rural and Household Affairs, and the only Illustrated Rural Magazine in the World.**

As an inducement for you to give this magazine a trial, we make the following special offer: The subscription price of the *American Agriculturist* is $1.50 per annum, but on receipt of this amount, mentioning that you saw this offer in *The Youth's Companion*, we will send the *American Agriculturist* for one year, and in addition will **present to every subscriber** (providing 15 cents additional is sent for postage) a copy of

THE MAMMOTH CYCLOPEDIA.

Thousands of dollars have been expended to make this the **most complete, valuable,** and **useful work** for the masses **ever published.** It is a **work** for **everybody**—man, woman and child, in every occupation or walk in life. **The substance** and practical **utility** of **20 ordinary volumes** are **comprised** in **these four,** and so **replete** is the work with **knowledge** of every kind, so **filled** is it with **useful hints** and **helpful suggestions,** that we fully believe that in **every home** to which it will find its way it will soon come to be regarded as worth **its weight in gold.** For want of space we can only briefly summarize a small proportion of the contents of this great work as follows:—

HISTORY. The Mammoth Cyclopedia contains a **complete** and authentic **history** of the great American **Civil War,** profusely illustrated, a **complete history** of **America,** from its discovery by Columbus to the present. Chronological history, etc.

BIOGRAPHY. Comprising the **Lives** of all the **Presidents** of the **United States** from Washington to Harrison, with portraits and other illustrations; also lives and portraits of Napoleon Bonaparte, Shakespeare, Byron, William Penn, Benjamin Franklin, Henry Clay, Daniel Webster, and famous statesmen, authors, poets, generals, clergymen, etc., down to the present day.

AGRICULTURE. **Valuable hints** and **useful suggestions** to **farmers,** treating of **field crops, gates, fences, fertilizers, farm implements, live stock raising,** including the treatment of **diseases** in **domestic animals;** poultry-keeping and how made successful and profitable; bee-keeping, dairy farming, etc. The treatment of these subjects is complete and exhaustive, and renders the work of great practical use to farmers and stockmen.

HORTICULTURE. **Useful hints** to **growers** of all kinds of **vegetables** and **fruits,** as gathered from the **experience** of the most successful **horticulturists.**

ARCHITECTURE. **Designs** and **plans** for **houses, cottages, barns** and other **outbuildings,** with valuable suggestions to those intending to build.

HOUSEHOLD. **Tried and tested receipts** for almost every imaginable dish for breakfast, dinner and tea; almost innumerable hints, helps, and suggestions to housekeepers; designs and suggestions for making many beautiful things for the adornment of home, in needlework, embroidery, etc.

LAW. The **Mammoth Cyclopedia** is also a **complete law book,** telling every man how he may be his **own lawyer.**

MEDICAL. **Many dollars in doctors' bills** and patent medicines will be saved annually to every possessor of this book through the **valuable information** herein contained. It tells how to cure diseases by simple yet reliable home remedies, available in every household.

THE WORLD'S WONDERS. **Graphic descriptions beautifully illustrated** of the **Yellowstone Park, Yosemite Valley, Niagara Falls,** and other famous places.

TRAVELS. **Descriptions, profusely illustrated,** of the **life, manners, customs,** peculiar forms, rites and ceremonies, of the Chinese, Japanese, the people of India, and other countries throughout the world.

MANUFACTURES. In this work is also described and illustrated the **arts** and **processes** of **printing, stereotyping, wood engraving,** lithography, photography, and other trades and manufactures in which everybody is interested, all of which will be found peculiarly interesting and instructive.

INVENTION AND DISCOVERY. Remarkably **interesting descriptions** of **great inventions,** including the Steam Engine, the Telegraph, the Printing Press, the Electric Light, the Sewing-Machine, the Telephone, the Type-Writer, the Type-Setting Machine, etc.

MINING. Descriptions and illustrations of mining of gold, silver, diamonds, coal, salt, copper, lead, zinc, tin, quicksilver, etc.

WONDERS OF THE SEA. Herein are described and illustrated the many wonderful and beautiful things found at the bottom of the ocean, the plants, flowers, shells, fishes, etc., likewise pearl-diving, coral-fishing, etc.

FOREIGN PRODUCTS. Interesting descriptions, illustrated, of the **culture** and **preparation** for market of **tea, coffee, chocolate,** cotton, flax, hemp, sugar, rice.

NATURAL HISTORY. Interesting and instructive descriptions, accompanied by illustrations, of numerous beasts, birds, fishes, and insects, with much curious information regarding their life and habits.

But a fractional part of the topics treated in this great work have been named. It is a **vast storehouse** of **useful** and **entertaining knowledge**—unquestionably **one** of the **best** and **most valuable works ever published** in any land or language. No home should be without it.

The *American Agriculturist* alone is fully worth the subscription price asked for it, **$1.50 per year,** a year's volume being nearly equal to that of the $4.00 magazines, but we want to introduce it into **50,000 new homes,** and adopt this method, being confident that after a year's perusal the new readers we secure in this way will become permanent subscribers.

Money refunded in every case if you are not fully satisfied. Remit by postal note, post-office money or express order or by registered letter. Postage stamps accepted for fractional amounts of a dollar. Address, mentioning *The Youth's Companion,*

THE AMERICAN AGRICULTURIST, 52 LAFAYETTE PLACE, N. Y. CITY.

MAGIC LANTERNS
And STEREOPTICONS, all prices. Views illustrating every subject for PUBLIC EXHIBITIONS, etc. *A profitable business for a man with small capital.* Also Lanterns for Home Amusement. 208 p. Cata. *free.* McALLISTER, Optician, 49 Nassau St., N. Y.

THE NOSE OF BRASS.

One of the most famous of the colleges which, taken together, form the great English University of Oxford is named Brasenose. It is officially known as the King's Hall and College of Brasenose, and was founded in the year 1509. The origin of this singular name, which plainly seems to have some sort of reference to a *brazen nose*, has been a matter of controversy. Many scholars maintained that it had nothing to do with a nose, but was derived from the Latin *bracinum*, malt, and the English *house*, and testified to the fact that one of the old halls at Brasenose, since absorbed into the new foundation, had been used for brewing purposes. This explanation seemed rather forced, and a recent event has put the authorities of the college on record as accepting the opposite theory.

In fact, the true "brass nose" of Brasenose has been found, brought back from another English town to Oxford, after an exile of five hundred and sixty-six years, and set up in a place of honor in the college.

The recovered nose, carried upon a velvet cushion, and followed by the principal, vice-principal and other authorities of the college, has been received in state, and its restoration commemorated by addresses by those functionaries, by the Bishop of Salisbury, and by several eminent professors.

It is known that, in the year 1334, Oxford University was temporarily removed to the ancient town of Stamford, in Lincolnshire. There is no record that the university possessed a brass nose among its symbols at the time of the removal; but Anthony à Wood, an antiquarian who wrote in the seventeenth century, tells of a certain building in Stamford "near to one of the Tower gates, which to this day is called Brazen Nose, and hath a great gate and a wicket, upon which wicket is a face or head of old cast brass, with a ring through the nose thereof."

He adds that the name of the building was written in leases and deeds "Brazen Nose." This is held by authorities to have been a part of the belongings of the university.

BY TELEPHONE.

The telephone accomplishes many useful and wonderful things nowadays. One of its most important functions is the enabling of patients to communicate promptly with their physicians. Sometimes the instrument may be of doubtful service to the doctor.

One afternoon a city doctor was called from the dinner-table, just as he had finished his carving for the family and begun to eat on his own account, to answer the telephone.

"Hello! Hello!" came a sharp, eager call over the instrument.

The doctor recognized the voice of a very nervous man of his acquaintance.

"Well, what is it?" he asked.

"Oh, I'm not well at all, doctor, but I haven't got time to come and see you, and I want you to cure me by telephone, you know."

"Well —"

"Well, just hear this cough: ahum! ahum! ahum! Isn't that pretty bad?"

"But," the doctor began, "I can't —"

"And what do you think of my breath? Now, I'll breathe into the telephone. Fhwee! Do you get that?"

"But I can't judge of your breath through the telephone!"

"You can't, eh? So you can't—that's a fact! Well, I haven't any time to come and see you, nor to wait here until you come down, so I guess I'll call in at Doctor Handy's on my way down town, and get him to prescribe for me. Oh, I say! Don't put this in your bill, now!"

As the doctor goes back to his cold roast he speculates as to whether the absurdly thoughtless and nervous man or the telephone is the greater annoyance.

AS FREIGHT.

Those were bustling days on the Western rivers, fifty years ago, when emigrants from the East flocked to the prairies of the West. Some of the emigrants, being poor, paid in part for their passage by helping to "wood the boat," that is, by carrying wood down the bank, at the wood landings, and throwing it on the boat. A writer in the *Century* tells of an impecunious Irishman, who did not wish to pay full fare nor to carry wood.

He boarded a Western steamer, at a landing, and asked the fare to St. Louis. Being told, he then asked:

"What do you charge for one hundred and fifty pounds of freight?"

Upon learning the price, a small amount, he said, "I'll go as freight."

"All right," replied the captain; "put him down in the hold, and lay some flour barrels on him so that he won't roll about if we have heavy weather."

KNOWLEDGE AND INSTINCT.

James Hogg, a Scotch poet known as the Ettrick Shepherd, was a close observer of life under many different forms and conditions. A conversation with a fellow shepherd upon the habits of the salmon is reported, in which shrewd native reasoning is shown. It brings out the Scotch love of metaphysics.

Shepherd—I maintain that ilka saumon comes aye back again frae the sea till spawn in its ain water.

Friend—Toots, toots, Jamie! Hoo can it manage till do that; hoo, in the name o' wonder, can a fish, travelling up a turbid water frae the sea, know when it reaches the entrance to its birthplace, or that it has arrived at the tributary that was its cradle?

Shepherd—Man, the great wonder to me is no hoo the fish get back, but hoo they find their way till the sea first ava, seein' that they've never been there afore!

THE New York *Tribune* reports that a woman of that city is disturbed by the irreverence with which the newspapers speak of public men. "Take the case of Major William McKinley," she says. "It would be bad enough to call him Bill McKinley, but here are all the papers calling him McKinley Bill." She thinks it must be an imitation of the cowboy style.

KENT HAMPDEN.

IN SEVEN CHAPTERS.—CHAPTER IV.

The Dwarf.

A month earlier, Kent's mother would have regarded his proposition to set out on a long and perilous journey as sheer madness; but now she welcomed it, and began the next day to pack his knapsack, praying and praying silently as she did it. She was stunned by the hopelessness of the whole calamity.

When Kent told her his plan, she said that God had put it into his heart. She would send the boy out in faith that God would help him to prove his father's innocence.

In order to travel independently, Kent must go on horseback.

"What is your plan?" his father asked.

"I suppose, sir, the money must have been stolen between here and Cumberland. You say you have confidence in the three passengers?"

"Perfect confidence, my boy."

"Then the money must have been taken by the coachman or by some way-passenger. I shall go to those who were with you all the way, and tell them the story. Perhaps they may have observed something which will be a clue."

"Very good! very good!" Mr. Hampden's spirits rose with this gleam of hope.

"You will not tell any one that I have gone, father?"

"Not a soul! I did mention it to Congdon, but I charged him to keep it secret. By the way, Tom Congdon wants to go with you."

"Tom Congdon!" exclaimed Kent, dismayed.

"Yes. His father thinks the adventure will make a man of the boy. Do you object?"

"N-no," said Kent, who on second thought found the idea of a companion not unpleasant. "If Tom knows about it, it will be much better to have him go."

Tom was delighted with the prospect of adventure. Besides, his going as Kent's comrade and friend would, he knew, prove to the boys his contempt for the scandal about Wetzel's cave. He still kept the note-book, but he would not add to Kent's trouble by telling him of the suspicion resting on him.

Colonel Congdon consented to Tom's going, "because," he said, "if Kent should find the money alone, the town would say his father told him where to look for it. They would quote the old saw, 'Hiders are good finders.' But no one will dare hint that Tom is an accomplice."

It was a cool October morning when the two boys started, Tom riding his frisky mare Bess, and Kent his father's black horse, Conky. Each boy carried a rifle, a change of clothes in a knapsack, and saddle-bags stored with provisions, and sufficient money to pay the expenses incurred on the way.

His father held Kent's hand, his mother prayed that God might be with him. Carey laughed, and threw an old shoe after him.

He looked back at the corner of the street, and saw Carey perched on the cherry-tree, watching them.

"How she does want to come!" said Kent. "That baby has a heart as big as Jack the Giant-Killer's."

"What a chance she's a girl!" said Tom.

The fields were covered with white frost, which disappeared as the sun came up. The road climbed up the sides of the hills, which now wore their royal autumn robes, gold and scarlet and crimson.

There was a measureless splendor and silence in the forest that would have awed any one but a boy with a gun. The only interest Tom and Kent had in the woods was the hope of seeing wild game. If they could bring home a bearskin with the money, their glory would be almost too great to support.

The road was not a very lonely one. Sometimes they met a traveller on horseback, with pack and gun like themselves; sometimes there were great freight wagons from Philadelphia going West and South. Twice they passed huge emigrant wagons, with high canvas tops, and drawn by eight horses, each carrying his arch of chiming bells.

One of these was filled with emigrants going to "the Ohio," which was then the West. They were from the Austrian Tyrol, and wore their picturesque costume; the women with their white sleeves and high red velvet caps peeping out of the huge wagon, and the men marching outside, each shouldering his gun.

Kent drew a long breath. "It is a fine thing to get out and see the world," he said. The trouble at home dwindled and shrank on the open road. He became absolutely certain of success in his task of clearing his father's reputation.

"I have no doubt the driver robbed father while he was napping. It will be easy to find him by inquiring in Hardscrabble."

"As easy as treeing a coon!" shouted Tom. "Then seize the money, hand the thief over to the sheriff, and march home. That will be a great day! The whole town will turn out to meet us!"

He whipped up Bess in his excitement, and just at that moment one of the men with the retreating wagon uttered a shrill Tyrolese *jodel*. Bess cocked her ears, danced wildly down the hill, and then changing her tactics, stopped and threw Tom clear over her head.

"Oh, she's done it before!" he sputtered, as Kent pulled him out of the mud. "But I—I don't want to keep you back; I'll mount."

With the word, he reeled and fell senseless. The blood was oozing from a deep cut in the head. Kent brought water from a neighboring spring, sprinkled his face, tied up the wound with his handkerchief, rubbed his hands, and shouted in his ear.

But Tom, for almost the first time in his life, had nothing to say. He lay still and white, the blood soaking through the handkerchief.

There was a rattle of wheels behind them. "What's the matter?" said a squeaky voice. "Don't yell that way in the boy's ears!"

"He's dead!" said Kent, looking up, the tears rolling down his cheeks.

The man gave a perplexed whistle. "I reckon not, sonny," he said. "Hold on a minute."

He hurried off to his wagon—a queer structure, built like a little canvas house in front, with a square box behind. The canvas was painted red, and the box striped brown and yellow, like a tiger's back.

The man was as extraordinary in appearance as his wagon. He was a dwarf, not more than four feet high, with a heavy chest, thin legs and a round, babyish face.

He climbed like a cat to the box, opened it, and in a minute was back with a sponge, plaster, scissors, and a bottle.

"Wet the sponge, my boy," he said, taking Tom's head in his lap, and expertly clipping the hair about the wound. "It won't need a stitch."

Kent watched while the dwarf, with the skill of a surgeon, dressed the cut and bandaged it.

"I have not introduced myself."

Tom opened his eyes. "Take this," said the queer little man, pouring a few drops of the medicine into a cup. "Aha! That brings the color! Take his legs, and we'll carry him back into the shade."

"I must push on—push on!" muttered Tom. "I am keeping Kent back."

"You mustn't push on for an hour or two. Give your blood time to cool. It's dinner-time, anyhow. I was just going to have my cold repast. Will you take a bite with me, gentlemen?"

"Thank you, sir. You've been very good indeed to us!" exclaimed Kent, wringing the hand which his new friend held out. "I'll bring our saddle-bags."

Tom regained his senses rapidly as the cold tongue, buttered biscuit and chicken were spread on the grass. The dwarf whistled and sang as he hopped about, tetigging at last from the wagon a tiny stove, in which he set some chips burning.

"Coffee!" he said. "And sausages!" He produced a miniature pot and pan. The savory steam soon rose through the trees.

"I'm sound as a trivet!" said Tom. "I never was so hungry in my life!"

"Set to, then, gentlemen!"

The dwarf himself ate little, but beamed down on his companions thoughtfully, running to the wagon to bring knives, salt, mustard, and whatever he fancied they might want. Suddenly he stopped, drawing himself to his full height.

"I have not introduced myself," he said. "I am Nero Fife, at your service; peddler, travelling dentist, and mediciner. I can furnish you with stuffs, hats, pins, tapes and jewelry; can apply dry cups and leeches, cure cancers and corns, pull teeth, and play the fiddle for the dances of the *long tang*."

Tom laughed aloud, but Kent rose and shook hands with him gravely. "This is Tom Congdon, Mr. Fife. My name is Kent Hampden," he said.

"Hampden of Wheeling?" said the dwarf, with a keen glance at Kent's face.

"He has heard that my father stole the package!" thought the boy, his blood hot in his veins. The dwarf was silent for a minute; then he began to chatter with fresh energy.

"Yes, sir! This is the famous Nero Fife," he said, clapping his hands on his breast. "Known throughout the Alleghany Mountains! My mother was the beautiful Miss McJilton, celebrated for having been stolen by the Indians when an infant. Not rescued until she was sixteen! She taught me the great secrets of the red man in the healing art—cancers, corns, —"

"Well, you worked a wonderful cure on me, Mr. Fife," said Tom, pulling out his purse.

"Mr. Fife to the world," said the peddler, loftily. "Doctor Nero to my friends. Put up your purse, sir. Foes from indoor patients; but here in the woods we are all jolly good fellows."

Doctor Nero would not allow Tom to mount until the heat of the day was over. Seeing their impatience to be off, the little man sought to beguile the time by playing on the fiddle and singing, in a high, cracked voice, the ballads of "Lord Lovel," "Barbara Allen," and others, and telling stories, to which the boys listened with great interest.

"The salt in my stories is that they're true," he said. "I've been twenty-five years a-travelling these mountains in Pennsylvania, Maryland and Virginia, visiting the same house twice a year. Nothing goes on in these houses—marriages, murders or ghosts—but Nero Fife keeps the run of it.

"I know some secrets. There are tales I could tell of men now living that would make your blood freeze at your heart! But Nero Fife knows how to hold his tongue! I carry news from house to house the year round; but no man can say that Nero Fife ever made mischief."

About three o'clock he permitted the boys to go on, forcing a bottle of medicine on Tom. With all his chatter, he had not questioned the boys as to their destination or errand. When they were ready to mount, Kent said, "We are going to Cumberland. Shall we meet you again?"

"It's likely. I keep the road pretty close, this trip. I'm sold out, and am going to Philadelphia to lay in stock. I made some heavy sales in Wheeling 'tother day. So you're Colonel Congdon's son?" he said, turning abruptly to Tom.

"Do you know him?"

"Know him? I knew your grandfather and —why, I could tell you a story of your grandfather's uncle that—but no matter! Who is there that I don't know?"

The dwarf's face, when he laughed, broke up into the countless wrinkles of old age; the next minute he had the vacant, smooth face of a baby. He came to Kent when he had mounted.

"And you're Ralph Hampden's boy?" he said, peering shrewdly up at him.

A sudden wild fancy rushed into Kent's brain. Could this strange creature, who had been going up and down the hills so many years, know anything of his father's early life? He shut his teeth to keep the question back. It was not for him to pry out his father's secrets from strangers.

The dwarf's blue eyes were on him. "You don't ask me if I have any stories about your grandfather? No? Well, good-by, and good luck to you, Ralph Hampden's son!"

He reached up and patted Kent's knee, and then turned and trotted off to his wagon.

"There's something almost scary about that man," said Tom. "Sometimes he looks old enough to be the Wandering Jew."

Digitized by Google

About sunset they reached Hardscrabble. Kent's pulses quickened. Here he would find the first clue! He rode up to the inn-door.

"Can you tell me where I shall find Mr. Armitage?" he asked of the hostler, who sat lazily on the end of a mossy trough by the pump.

"Blind Peter Armitage?"

"Yes."

"Went to Pittsburg last week. Comin' home Thursday. Light, boys?"

Kent and Tom looked at each other in dismay. They consulted in whispers.

"We can't follow him to Pittsburg; we've no time," Tom counselled.

"A blind man, anyhow, would have been the least likely to see what was going on," said Kent. "Let us push on to find Mrs. Digby in Washington, and if she can give us no clue we'll go to Cumberland to the clergyman."

"Take yer hosses?" drawled the leisurely hostler. "Supper? Bed?"

"What do you say, Kent?"

"I say, let us cover more ground before night. We've lost too much time already!"

Tom trotted off, and Kent followed. The wind was chilly and damp. The boys were disheartened by their disappointment.

A couple of miles farther on the stage-coach dashed past them, full of drowsy passengers. The driver lifted his whip by way of salute, and the guard blew a single note on his bugle.

"Those fellows will sleep in Wheeling to-night," said Tom, dolefully.

Kent said nothing, but he felt suddenly that his back was turned toward home, and that the world into which he was going was big and cold and unknown.

"I wish," said Tom, "we had kept with Nero Fife. He was a good fellow!"

"You called him the Wandering Jew just now!" said Kent, crossly.

Tom laughed, but prudently made no answer.

The road now wound through thick forests. It dipped between two little hills into a gorge. At the side of the road in this gorge or hollow was the bed of a dried stream, thickly overgrown with briers and high grass. As the boys passed this point the briers moved.

"Sh!" whispered Tom. "Did you see that? A bear!"

"It can't be! It's too near the farms. A wild-cat, probably."

They unslung their rifles in desperate haste, looked to the priming, and cocked them. All the chill and ill-humor were gone. Each whispered "Sh!" and "Keep back!" and pushed his horse closer.

"It stirs again! Fire!" cried Tom.

"Foh heben's sake, massa, doan shoot pore nigga!" a man cried, scrambling out of the undergrowth up to the road. He, too, carried a gun, and his hat was slouched over his eyes.

"What are you hiding there for, then, like a wild beast?" said Tom, angrily, letting down the hammer of his rifle. "I had almost put a bullet through your head!"

The man eyed them sullenly but said nothing, and the boys rode on. When they were out of hearing, Kent said, "Tom, there was something queer about that fellow. He did not talk like a real negro, and while his face was jet black, his hands were white."

Both boys turned and looked back.

"Kent, there are two of them!" said Tom, shading his eyes. "Don't you see? One man is sitting on the road and the other is creeping up out of the briers. What rascality can those fellows be up to?"

"I'd think they were runaway slaves, but I tell you that man's hands were white," said Kent.

"They've broken jail, more likely. Look there! Come back in the shade, or they'll see us and send a bullet after us. There they go, creeping down into the thicket again! What shall we do?"

"Nothing; what can we do? They are in hiding for some reason, but they've done us no harm, and we have no cause to meddle with them. Besides, we've lost so much time already. Come, let's ride on."

"Just a minute!" pleaded Tom, trembling with excitement. "I want to know what they're up to. They're back among the brambles as still as death!"

The boys waited in silence. There was not a sound to break the stillness except the drowsy lapping of a stream in the woods. The sun had sunk out of sight, but the red shafts of light still struck up from behind the hills, while the hollow lay in twilight.

"Well, we may as well go on," said Tom, reluctantly. "They seem to have settled themselves with the snakes and frogs for the night."

They had hardly ridden twenty paces when the rattle of wheels behind them broke the silence, and a shrill voice piped out:

"And out of her grave there grew a red rose,
And out of his a brier,
And they grew and grew to the church steeple top
Until they could grow no higher,
And twined at the top a true lover's knot,
For all true lovers to admire—mire,
For all true lovers to admire!"

"It's Nero!" the boys exclaimed in a breath.

"He is behind us. Let us wait for him to come up. He must be in the hollow now," said Tom.

They drew rein and waited. The sharp lilt rang out nearer, as the peddler's wagon began to descend into the gully.

"Tom!" exclaimed Kent, "Nero said he had made heavy sales. He must have his money with him. Those fellows in the swamp!"

Tom gave a smothered cry. Both lashed their horses into a gallop, unslung their rifles and loosened the pistols in their holsters. As they reached the top of the hill, the dwarf's song stopped. A wild shriek rent the air. Below, in the hollow, was the peddler's wagon, and a confusion of black figures.

"They're on him!" muttered Tom.

"We're coming, Nero!" shouted Kent, as they went thundering down the hill.

(To be continued.)

FOR HONOR'S SAKE.

The day will come when men have grace
To know themselves, and sometimes take
A humble task, a lowly place,
And use it well for honor's sake.
—*Marianne Farningham.*

For the Companion.

MISS COX.

"Take off your things and rest a spell, do! You look real tired, Miss Cox."

"Well, I don't know. It *is* dreadful hot," answered Miss Cox, irresolutely.

She took off her black "mitts," rolled them carefully together, and tucked them into the lining of her hat, which she gave to Mrs. Bowen. Then she leaned back in the big rocker with a sigh of comfort.

She was small and faded; she might once have been pretty, but now her blue eyes were pale and sad, and the once golden hair was a dull drab.

Mrs. Bowen came hurrying back, with some soft white ruffles in her hands. "Rosie finishes at the 'Cademy next week," she said, with her mouth full of pins, "and I'm making her dress. She looks like a picture in it."

The front gate opened, and Rosie herself came down the path. She was a very pretty girl of sixteen. The walk had given her a bright color, and made her eyes sparkle like jewels under her fluffy golden bang. Miss Cox leaned forward with an eager look on her thin face.

"Good-afternoon, Rosie!"

"Why, how do you do, Miss Cox?" Rosie answered, carelessly.

"Your ma says you finish at the 'Cademy next week. I should like to see you."

Something in the pathetic voice touched Rosie, and she answered with pretty graciousness, "Nothing is easier, Miss Cox. You only need to be invited, and I invite you. Won't you come?"

A faint flush of pleasure came into the thin cheeks, but it quickly passed away.

"I wasn't begging an invitation, Rosie; I didn't mean it," she said, humbly.

"Of course you didn't, Miss Cox, but I mean it," Rosie persisted.

Miss Cox looked up wistfully. She loved this pretty, spoiled girl deeply, for in her fresh beauty she saw reflected her own girlhood, and that of the sister who had been dearer to her than life; but she only said, in her prim little way, "Thank you kindly, Rosie; I'll be pleased to come."

Rosie chattered gaily. Miss Cox drew a thimble from her pocket, and began hemming one of the ruffles. The shadows of the elms stretched farther across the road, and the clock pointed to half-past four. Miss Cox put back her thimble, shook her narrow skirts, and rose. "I must be going now," she said.

"What's your hurry?" said Mrs. Bowen. "I calculated to have you stay to supper. Do sit a while longer."

"No, thank you, Mis' Bowen. I always give Foxy his supper at five, you know, and it's quite a ways home."

Mrs. Bowen brought her hat from the front room. Miss Cox pinned it on, and then drew on her mitts with great care. She seemed nervous, and unlike herself.

"I remember when Elviry finished," she said, hesitatingly, "she looked reel pretty, Elviry did. 'Twas before pa died, you know. He was set on having her educated, she was so smart. Elviry had flowers. Will you have flowers, too?"

"Oh yes, indeed!" laughed Rosie. "Lots of them! The hall will be all trimmed, and then the girls have them sent by friends sometimes, too."

Miss Cox's eyes brightened. "I'd like to send you something to wear then, Rosie. Would you wear it? 'Twas Elviry's, and it's real. I wouldn't ask you if it wasn't nice." She looked up eagerly at Rosie.

"Of course I'll wear it," answered Rosie, sweetly. "It is lovely of you to think of me, Miss Cox."

"You look so much like Elviry!" said Miss Cox, softly, and then added, hurriedly, "Well, good day! *Good* day, Mis' Bowen!"

All the way home Miss Cox was in a state of excitement. Her little straight figure, in its scanty dress, looked as prim as usual, but old Mrs. Gowan, seeing her pass, peered through her spectacles, muttering:

"For the land sakes! If there aint Marthy Cox, trailing her black alpaca through the dust just as if 'twas common! And she hasn't had it more'n seven years. The Coxes always *did* lose their faculties early!"

Miss Cox opened a gate at the right side of the road, and walked down the narrow path. The black alpaca brushed against the low hedge of box that bordered the flower-beds on either side. A big gray cat that had been sitting on the door-step came slowly toward her with his tail erect. Miss Martha gave a little start.

"I do believe I'm late!" she said, feeling under the door-mat for the key. There was no reason why Miss Martha should leave her key there, since she lived alone, but everybody in Greenfield did it, and she had lived in Greenfield all her life.

The door opened into a narrow hall, carpeted with oil-cloth. Foxy followed Miss Cox gravely as she went upstairs to change her dress, and then back again as she came down and prepared his supper. Miss Cox prepared her own supper as well, but ate very little herself. She washed the few dishes, and went upstairs again.

Her excitement had given place to a troubled look, and she sat down by an open window, with her hands lying idly folded in her lap, and thought.

"Elviry, you *wouldn't* care, would you?" she whispered. "It's because I love you so, and she looks like you, and—and—I'm so lonely!"

There was no sound but the swish of a long elm branch against the roof, and a single sleepy note from a bird in the big lilac bush beneath the window. Foxy rubbed against her skirts, but she did not notice him. She still looked toward the graveyard.

Suddenly she rose. "Anyway, I promised Rosie," she said, decisively. She lighted a small hand-lamp, went to a bureau in the corner of the room, unlocked the upper drawer and took out a wooden box, and from that a small pasteboard one, which she opened. It contained a large brooch of thin, pale gold, filled with a lock of light hair. Miss Cox lifted it reverently to the light, and brushed off a speck of dust; then she wrapped it in a little piece of paper, and tied it with a pink string.

"I'll carry it over to-morrow," she said. Foxy jumped up in her lap, and she stroked him absently. "I mistrust it isn't too rich for a young girl to wear," she said, anxiously. "It's real gold; you don't see gold like that nowadays. And then it's for Rosie, and she reminds me so of Elviry. Maybe she'll come and stay with me sometimes. It's dreadfully lonely here!"

She ceased to stroke the cat, and he rubbed his head protestingly against her hand. She did not feel it; she was thinking of Rosie.

The June days came and went, until the one arrived which was to end Rosie's school-life. Miss Cox was up very early. She put the house in order, brushed her best dress and bonnet, and then went out into the little garden, and made a very large bouquet, with a big rose in the middle, then a circle of phlox and mignonette, then more roses, and last an edge of box. Miss Cox looked at her work with pride.

"It makes a proper nice bunch," she said. "I guess she won't have any nicer one."

Half an hour later old Mrs. Gowan was astounded to see Miss Cox ride past in the stage-coach, holding an immense bouquet of flowers, whose stems were wrapped in paper, and then in an old handkerchief, to keep them from soiling her gloves.

The Academy was five miles from her house, and Miss Cox, slightly tired by this unusual journey, walked up the steps, and then stopped at the door. A pretty girl in white came toward her.

"I—I came to see Rosie," began Miss Cox, hesitatingly. "I aint too late, am I?" The shifting crowd bewildered her.

"Oh no," answered the girl, pleasantly, "the exercises don't begin for half an hour. Come this way, and I will give you a seat."

There were many curious glances at the queer, little, old-fashioned figure, but Miss Cox supposed they were all for her pretty companion, and trotted quietly down the broad hall to a seat near the front.

"There!" said the girl, stopping. "I am sure you can see Rosie from here."

"Thank you kindly," answered Miss Cox.

The hall was filling rapidly. Miss Cox began to feel a touch of the excitement around her. A soft color came into her cheeks, and she looked eagerly at the groups of white-robed girls. They were so different, with their dainty dresses, and rapid school-girl chatter, from any girls she had ever known. Ah, this would be a day to remember all her life!

More girls came in behind her. "There's Rose Bowen!" said one, "doesn't she look pretty!"

Miss Cox looked eagerly. Rosie, dressed in white, with pink ribbons, stood among a group of girls. Miss Cox could not see the brooch.

"My eyes aint what they were once," she thought, with a sigh.

The girls behind her were laughing. "Rosie's a cute one!" said one.

"Why, what now?"

"Oh, the most comical thing! I can't begin to tell it as she did. I wish you could have heard her! You know, down in Greenfield, where she lives, there are a lot of queer people. One of these is an old maid. She was engaged thirty years ago, but her lover went West and never came back, and Rosie—she's so funny, you know—says she never could get married because she's matched already."

"How do you mean?"

"Why, she has rhymed herself all up! Her name is Miss Cox, and she lives in a little house whose yard is bordered with box, and her garden has phlox and stocks, and her very cat is named Foxy. Isn't it comical? Well, it seems she thinks that Rosie looks like a sister of hers who died ever so long ago, and so she's taken a fancy to her; and when she heard that Rosie was going to graduate, she sent her an old brooch to wear that used to be her sister's."

"The idea!"

"You ought to see that brooch! It's as big as a silver dollar, and full of hair. Rosie showed it to us. Of course she couldn't think of wearing it; 'twould spoil her dress, so she managed it so nicely. You know no one could see, on the platform, whether she wears it or not, but she has it in her pocket, and when she sees Miss Cox, after the exercises, she will put it on, and then take it off again. She says —"

But Miss Cox heard no more. She was not conscious that she had been listening. She thought only that these girls and Rosie—Rosie, whom she had so loved and trusted—were making fun of what had been Elviry's.

She trembled violently, and the color rushed to her face. She could not at first collect her thoughts, but gradually one thing became clear to her. Rosie was seeking to deceive her.

She was pale and faint now. "If she'd only told me 'twas old-fashioned!" she thought. "I might have known, I suppose, but 'twas pretty, and I didn't think. And she's going to pretend she wore it all the time! 'Twas Elviry's, too, and Elviry was *so* honest! Oh, what can I do?"

A thought came to her. If she did not stay, she would not see Rosie, and then Rosie would not have to wear the pin.

She rose in trembling haste; something dropped at her feet. It was the bouquet of phlox and box. Mechanically she stooped and picked it up, and then hurried down the hall. Many turned to look after her, but she went straight on. At the door the pretty girl stopped her.

"Are you going?" she said, "and before the exercises?" Then, catching a glimpse of her face, "I'm afraid you are ill. Let me get you a glass of water."

Miss Cox sat down, faint and trembling. The girl soon came back with the water.

"Now let me get you an easy-chair, and you can rest here," she said.

Miss Cox shook her head and rose. "No; I must be going."

The girl's sympathetic face looked down at her. Miss Cox glanced at her big bouquet, now partly crushed, and then up at the girl. Would she be like Rosie—pretty, faithless Rosie? Something in the clear eyes encouraged her, and she put the flowers in the girl's hand.

"Will you take these, with an old woman's thanks?" she said.

She had never thought of herself as an old woman before that talk.

It was eleven o'clock, and the sun shone hot and bright on the dusty roads. The coach did not return to Greenfield until three o'clock, and then Rosie and her mother would be in it. She must walk back. She lifted her dress carefully and started down the street. It grew hotter and the trees gave less breeze, but she did not falter. She became faint, for she had eaten nothing since early in the morning. The dust settled in all the folds of her dress. She walked wearily on.

About four o'clock Mrs. Gowan saw a pale, dust-covered little figure enter Miss Cox's gate.

"Wal, I *never!*" she exclaimed; "Marthy Cox, with her best dress, in *that* state!"

Miss Cox shut the front door, and then dropped upon the stairs. She did not move until, an hour later, she heard Foxy crying for his supper. Then she opened the door.

"Come in, Foxy," she said; "you're all I've got now."

The cat rubbed against her dress, and she stooped to stroke him, her pale eyes full of tears. The coach came down the road, leaving a cloud of dust behind it, but she did not look up. It stopped before her gate, and a girl got out and hurried down the path.

It was Rosie. She had her arms full of pale pink rosebuds, and she wore Elviry's brooch. Miss Cox turned very white. She felt weak and dizzy, and sank down on the doorstep. Rosie knelt beside her with a little cry.

"Miss Cox, *please* don't look so! Oh, what have I done? Dear Miss Cox, what can I say to you? I know it all, and I am so sorry—so sorry!"

Her blue eyes filled with tears and her voice trembled, but she went on bravely:

"You heard what the girls said! Oh, Miss Cox, if you knew how sorry I felt the moment I had said that! I don't ask you to forgive me—I don't see how you can, I only wanted you to know. Miss Cox, I wore the brooch all the time—I did indeed! I put it on after I said that, and I never took it off; but oh, I felt so wretched and mean, and when I found you had gone, it was all spoiled for me. I deserved to have it so, I know!"

Miss Cox looked up. "You wore it all the time, even if 'twas 'old-fashioned?'" she said, with a strange eagerness.

"Every minute," answered Rosie, earnestly.

Miss Cox smiled faintly up into the pretty, humble face. "Thank you, dear," she said, simply.

"Do you mean you are not angry with me,

Digitized by Google

that you can ever forgive me?" cried Rosie, eagerly.

A look of surprise came over the little pinched face. "Me?" she said, wonderingly, "I had nothing to forgive. I always loved you, Rosie. 'Twas only for *her*." Her eyes wandered to the little church-yard.

Rosie understood, then. She lifted her rosebuds from the doorstep.

"Miss Cox," she said, hesitatingly, "would she care—do you think—we might take her these?"

Miss Cox looked incredulous. "But they're yours, Rosie. They were given to you!"

For answer Rosie laid the flowers in Miss Cox's arms. The fragrant rose-petals rested against the black dress. As Miss Cox moved, their sweetness was shaken out into the warm summer air, but more of it was breathed into her lonely, colorless life.

The sun was shining low behind the trees, and two swallows were dipping their wings in the golden air. The purple blooms of the long grass made a soft, violet haze across the meadow, and beyond that lay the quiet churchyard.

"Come," said Rosie.

DOROTHY E. NELSON.

For the Companion.

AT LOS VALLES GRANDES.

IN SIX CHAPTERS.—CHAP. IV.

In a Navajo Trap.

The massacre had ended with the death of the old men. I sent the Pueblos, who turned out to be the same party that I had arrested at Los Valles, back to their own reservation, and spent the night at the house of Padre Gutierrez, the hospitable priest of the village.

Early next morning I had the mules examined, and found that most of them needed a day's rest before starting on the return march. Finding one of the leaders tolerably fresh, I told Sergeant Cunningham to take it and get ready to accompany me to Los Valles Grandes. I gave orders to the rest of the party to remain in town until next morning, and then make a leisurely march to camp by way of the hot springs.

Instead of ourselves returning by this route, we took a shorter and rougher one pointed out to us by Padre Gutierrez. It was almost as straight as an arrow, but led through a country which we had not scouted. The Sergeant and I rode away at half-past nine o'clock, Vic bounding and barking at my horse's head.

Six miles up the valley our road, which had now narrowed to a path, entered the forest, and ran along the side of a small brook, which it followed several miles, and then rose gradually to the side of a range of hills. We were walking our animals along the side of this acclivity, at a considerable distance above the brook on our left, their hoofs making no noise in the soft, black earth, when I was startled by the braying of an ass somewhere in the valley.

Sergeant Cunningham threw himself quickly out of the saddle, and held his mule closely by the curb-bit beneath the jaw, to prevent its responding to the call. I also dismounted.

Sighting the Enemy.

We were in a clump of trees which commanded a view of the valley, and covered us from sight in all directions. Looking across the valley, I caught a glimpse of a party of Indians a little beyond the brook. Using my field-glass, I saw clearly twenty-one Navajos sitting about a camp-fire, eating their dinner.

As many ponies were grazing near, and a mule and a burro. From some peculiar marks, I had no difficulty in recognizing the donkeys as the property of Cordova, lost at the time of the Navajo raid into our valley, and I had no doubt the mule also was his. Packs were lying near the fire, showing that the captured animals were being used as beasts of burden.

All this time I had entirely forgotten my dog Vic. If I had thought of her in season, it would have been easy to keep her close at my heels; but I had left her free to wander.

Suddenly I heard a chorus of grunts from the Indians, and looking in their direction, I saw Vic stand for an instant with her forefeet on a prostrate log, look questioningly at the savages, and then drop down in the furze and disappear.

The effect of this sight of a white man's dog, wearing a brilliant metallic collar, was electrical upon the red men. They sprang to their feet at once, seized their arms, and began saddling and bridling their ponies.

"Vic has betrayed us, Sergeant," I said. "There is nothing for it but to get out of here as fast as possible!"

As we sprang into our saddles and regained the trail, Vic came with a bound before us, and I immediately gave her positive orders to keep close at our heels. We rode as fast as it was possible to do without making a noise, hoping that we might get a considerable distance away before we were discovered; but we had not gone far when a yell from the direction of the Navajo dinner-party announced that we were seen.

A Place of Refuge.

As we galloped on I noticed, quite a distance in advance, an eminence or butte, which lifted its summit nearly three hundred feet skyward, and which presented on the side toward us an almost perpendicular wall. When we approached it, we saw a neat log-cabin close at its foot, nestling under its over-arching brow. We dismounted, led our panting and utterly exhausted animals into the cabin, closed the doors, and went to the windows with our rifles.

I afterward learned that during the Confederate invasion of New Mexico from Texas, two years before, this cabin had been a station for pickets, to prevent an approach by way of The Great Valleys. It was about thirty by twenty feet, and stood with one end close against the perpendicular wall of the butte, with an overhanging cliff a hundred feet above it.

At the end of the cabin farthest from the wall the ground broke off perpendicularly twenty feet downward to the spring, the source of the brook. The only way to cross from one trail to the other, except by going a mile down the brook or to the north end of the butte, was therefore through the cabin, and for this purpose the soldiers had left a door on each side. The cabin could be approached or attacked only on the east and west sides. It could not be reached from above, for the cliff jutted out over it at least thirty-five feet, so that a stone dropped from overhead would fall five feet outside the south wall of the cabin.

There was a small window in each of the walls, except the one that rested against the precipice, and here was a wide stone fireplace. Two men, if provided with plenty of rations and ammunition, could make a good defence. Water could be had by lowering a bucket or canteen from the window in the southern end to the spring, twenty-four feet below the window-sill.

Indians Reconnoitring.

The Indians had discovered our escape, and joined by all but five, who were in the woods at the east, had returned to the west of us. They showed great respect for our place of refuge and our rifles, for they kept well out of range. Our Springfields could throw a ball farther and could be loaded more rapidly than any guns in their possession, for this was before the Indian trader had sold the tribes the modern improved firearms.

We removed the saddles and bridles from our animals, and hitching one on each side of the fireplace, began to discuss our prospects.

"If we could keep a couple of fires going before the doors during the night, sir," said the Sergeant, "we might keep them away."

Vic takes a Message.

"I am afraid a fire would be a greater advantage to them than to us. I wonder if the roof is covered with earth? It is flat."

The Sergeant easily ascended the wide-mouthed chimney by stepping on the projecting ends of the rough stones of which it was built, and after looking out of its top a moment called down to me:

"Yes, sir, it is covered with two or three feet of earth."

"All right then. If we can get pine enough to keep a blaze going we will have one. A fire on the roof will not confuse our vision, but will that of the Indians. It will throw them in the light, and us in the shade."

Preparations for Defence.

We set at work at once and pulled down all the bunks, breaking the pine puncheons and posts of which they were made into fragments with large stones taken from the fireplace. Then Cunningham once more ascended the chimney and tore away one side of the part which projected above the roof—the side looking in the direction opposite the precipice. This would enable us to replenish the fire, and at the same time remain concealed from the enemy on our flanks. As we could be fired at in two directions only, a man standing in the top of the chimney was safe.

Fortunately, Padre Gutierrez's housekeeper had put up for us a lunch sufficient to subsist us, including Vic, for a couple of days, and water could be drawn easily through the southern window with a canteen and lariat.

"Now, Sergeant, I am going to put Vic's education to a practical test," said I, taking my note-book from my pocket. "Keep a sharp lookout as I write."

"What! Going to send her to Jemez for the men?"

"No: I could hardly make her understand my wishes in that direction. But there is no doubt she can be sent to camp."

"Yes, sir; I think she will go to the Valleys. She has several times taken messages nearly as far. Look at her!"

Vic had come forward and sat looking intelligently from one to the other as we talked.

"All right, little girl," I said, patting her, "you shall have a chance to help us after dark. Go and lie down now." The dog went to a corner, and lying down, appeared to sleep.

I wrote a letter to Sergeant Mulligan at the camp, telling the story of our situation, the Sergeant keeping watch at the windows. I also took a flat pine stick, smoothed it with my pocket-knife, and wrote upon it in large letters, "Examine her collar." I intended she should carry the stick in her mouth, as she had hitherto carried articles and messages, fearing she would not understand she was to go on an errand unless all the conditions of her education were observed.

During that day the Navajos simply showed their presence occasionally among the trees, far away on either flank. We once heard the rapid strokes of an axe, as of chopping, and wondered what it could mean. It was by no means unusual for these Indians to fell trees. They had white men's axes, and were fairly well skilled as workers in iron.

Our foes seemed disposed to wait for night before beginning operations, whatever might be their intentions. As dusk began to settle among the trees, I called Vic and attached the note to her collar, wrapped in a piece of the lining of my blouse.

Sending a Message for Help.

"I think, Sergeant," I said, "we had better send our message before it gets darker and the Navajos close up nearer, or we light our fire."

"Yes, she can't leave any too soon, sir, I think. It is going to be pokerish work for us before morning, and I shall be mighty glad to see a few of old F Company appear round that rock."

After fastening the note securely in the dog's collar, I placed the stick in her mouth, and opening the eastern door, said, "Now, little Vic, take that stick to the Sergeant,—go!"

She walked across the room and dropped the stick at Sergeant Cunningham's feet. The Sergeant stooped, and placing his hand under her chin, raised her face upward. "Well, Vicky," he said, "there is but one Sergeant in the world to you, and he is here, isn't he?"

"That is true. I never sent her to any Sergeant but the First Sergeant. I'll have to send her to another of her warm friends—perhaps, in her estimation, her best—the cook. Here, Vic,"—placing the chip once more in her mouth,—"take this stick to the cook—go!"

The setter looked at me an instant and then at the Sergeant, walked to the door, looked out, and then glanced questioningly to me.

"Yes, little one—the cook—go!" I repeated.

She bounded through the doorway, and turned the corner of the butte at a run, bearing our message to our comrades at Los Valles Grandes.

For a while after the departure of Vic, the Sergeant and I stood at opposite windows and gloomily watched the darkness deepen in the woods. In order to husband our fuel I was disposed to put off the lighting of our bonfire as long as it appeared safe to do so. As the evening advanced into night we heard a crushing sound as of a heavy wheel rolling over twigs and gravel, but were unable to guess its meaning.

Fearing that any further delay to light our fire might bring disaster upon us, I told Sergeant Cunningham to kindle it. He ascended the chimney, lighted a few splinters of pitch pine and placed them upon the roof, and as soon as they were well lighted added to them half a dozen billets of wood which I passed up to him. Soon a blaze was leaping upward, and, being reflected strongly by the white sandstone of the overhanging cliff, lighted the whole space about the cabin.

What Did It Mean?

As soon as the Sergeant descended to the floor we looked out of the windows. Everything about us was plainly visible to our eyes, and we were certain that our movements could not be seen by the Navajos. To the east all was silent, and for a long time we had noticed nothing in that direction to suggest a lurking foe. To the west we could see no enemy, but the same puzzling sound of crushing and grinding came to our ears. What could it be, and what did it threaten? Adjusting my field-glass I looked out of the window in the direction of the mysterious sound, and on the edge of the wood, saw a log about three feet in diameter and twenty-five feet long rolling slowly toward us propelled by some unseen power.

Passing the glass to the Sergeant, I said: "The Indians seem to be rolling a log in our direction. See if you can make out their purpose."

"I think it is quite plain, sir," replied the Sergeant, after a long look. "When we came in here our range from the windows was clear for over two hundred yards, and the Indians had no chance to harm us, for they couldn't approach without being exposed to our fire for a long space. That log seems to me to be a movable breastwork, which can be rolled up to our very door."

"That's so, Sergeant. Probably they are lying low behind it and rolling it forward. Rather a black prospect for us if we cannot stop it."

We stood silently, watching the slow approach of the moving breastwork.

CAPT. C. A. CURTIS, U. S. A.

(To be continued.)

DIVINELY APPOINTED.

Doors are opened, ways are made,
Burdens are lifted or are laid
By some great law unseen, and still
Unfathomed purpose to fulfil,
Not as I will.

PRAIRIE SIGNS.

The Dakota prairies are not uninteresting, as many travellers would have their readers believe. Their monotony is only apparent. A close study of even the most level and apparently characterless stretch of sod will yield the most surprising and interesting results. It is like the ocean in its immense sweep and in the changelessness of its lines, and the great variety of its shades of color and its light-effects.

But it is unlike the ocean in retaining traces of change upon its surface—mysterious marks of storm and fire. Looked at closely, the turf is a page closely written with strange and often pathetic lines—whole histories of storm and stress of war.

One of the signs first to strike the eyes is the sight of the buffaloes' bones scattered thickly over the plain. The living buffalo has long ago disappeared, even from these prairies, and the freshest "crib" of bones dates back ten years.

Many of these, I suppose, may be twenty-five or even fifty years old. Of these last nothing remains save the hardest part of the skull and the teeth. The burial-places of others, still older, are indicated by the more luxuriant growth of grass.

Dakota boys soon found that the buffalo carcasses on the upland were good places to look for arrow-heads, for the Indians sought the young and strong animals, and generally killed them on the open plain. I have seen arrow-heads and spears driven quite through the shoulder-blade, showing with what great force they were sent.

Next to the bones in interest come the buffalo trails, seen everywhere as deep, crooked furrows. At the place in Dakota which I have in mind, they ran from the southeast to the northwest. These undoubtedly show the course of the buffalo, as they came and went from the feeding grounds to the watering-places.

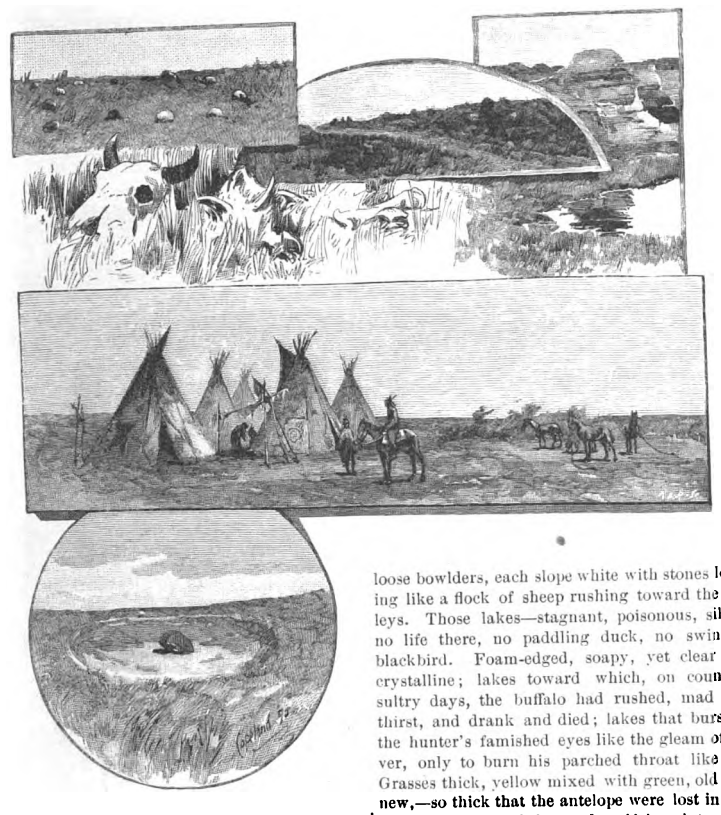
Occasionally, on the prairies, one comes upon an Indian trail, shown by two parallel furrows more direct and purposeful than the buffalo trails; and still more interesting are the circles of stones found very plentifully in this part of Dakota,—McPherson County,—indicating where the *tepees* were pitched. The stones, I suppose, served the purposes of pegs, being laid on the edges of the tents. As they were simply rolled off when the tent was folded, they served in turn for others.

I well remember what a stir it gave my imagination, one beautiful May morning in 1863, as I stood in the midst of the level sward in McPherson County. On the west was the low, irregular line of treeless hills, and on the east the fresh, green, level plain, stretching into the misty distance like the Atlantic Ocean—the far-away, advancing line of shanties, like a fleet of little boats, keeping up the illusion of a sea.

I was in advance of civilization. There was no sound save the trill of the lark, the cry of the plover or the short, shrill shriek of the hawks. It was a weird scene. I stood in the centre of one of these rings of stone, and in imagination I recalled what must have been a characteristic scene—as characteristic of the land and people as the tourney of feudal England.

I saw the group of tents, surrounding the large one of the chief; the horses picketed, waiting the morning mount; on the far-away hills dark masses of buffalo and swifter masses of antelope.

On a distant mound, like a figure of bronze, the wolf stood, with long body alert, and head thrown sidewise. Men were swarming about the tents; some mounted, with arrows slung at the back and spear in hand, impatient to be off, while the rest consulted and motioned toward the distant herds.



I imagined with what joy the young men vaulted upon their horses, and how impatient they were to start. The sunlight fell upon the plain, and the springing grass was as sweet to the eye as the word to the lip. The white man's world was still far away—almost unknown.

It is probable that the Indians' real life and emotions will never be written; but it seemed to me that morning that I got nearer to the feeling of the wild huntsmen of the buffalo than ever before or since. These Indians were not beasts nor demons, but men living under conditions which required and produced savagery in some things.

One "sign" which I have never seen written of at any length, nor satisfactorily explained, is the "fairy circle." These marks on the sod are figures wrought in grass of a darker green than the rest, usually found in places where the ground is perfectly smooth. They can only be seen at

Digitized by Google

favorable seasons of the year—say the first of June. On this morning of which I write they were very plain, and excited the greatest wonder in our minds. The circle is of even breadth, and looks like Fig. 1. It is thirty or forty feet in diameter, and has an appearance as if dark-green grass had been planted by a gardener in the midst of a yellow-green sward.

Sometimes the "rings" are mere crescents, (Fig. 2), or crescents with a supplementary line (Fig. 3). Sometimes the supplementary line is

Fig. 1. Fig. 2. Fig. 3. Fig. 4. Fig. 5.

complete (Fig. 4)—a circle, in other words, having one side much broader than the other. Sometimes it seems to be an attempt at representing a bow (Fig. 5). This last form is very rare; I have seen but few like it.

What these are I certainly do not know. They are too large to be the result of tent-setting and, besides, they would not be found in low ground in such case. It has been supposed that they are the marks left by electrical vortices during storms, but they are as yet unread signs. I think they are the result of intelligent force; but I have no theory.

I am no more sure of their cause than I am of that of another phenomenon to which my attention was called. There are many instances where, in the exact centre of a shallow basin in the sod,—a "dip" thirty or forty feet across,—there rests a huge bowlder. The whole effect is that of a "circus ring," and the children call these depressions by this name. The depression is so round and the stone so exactly in the centre that one cannot rid himself of the impression that the spot was a threshing-floor or a circus ring. If the ground beneath were of limestone formation I think I could explain it; but as it is clay for thirty feet, and an impervious layer of slate at last, I simply retire from the field of discussion.

Another mark almost equally baffling is the shallow pit, or "wallow," which is not unfrequently found in Dakota. These pits are quite unlike the "hog-wallows" or "buffalo-wallows" of Iowa and Minnesota. They are on the upland, have abrupt perpendicular sides, and look precisely as if the soil had been lifted out bodily a foot or two deep, leaving the clay subsoil exposed. The bottom is generally covered with gravel.

There are many theories as to the cause of these. It has been claimed that the cavities were burned out during great drought, and also that they were worked out by the buffaloes pawing the dust. Others see in them the work of the wind as well. My opinion is that the buffalo and the wind together did the work.

These are a few of the signs which the observant eye of the traveller will see as he rides or walks across these strange stretches of short, crisp grass. As I rode, on the morning of which I have spoken, toward the hills, entering through narrow defiles into valleys holding alkaline lakes surrounded by deep grasses, it required little effort to imagine savage men signalling from peak to peak of those bare and stony hills.

I could imagine a gigantic sentinel buffalo standing like a figure of granite outlined against the sky, watching the surrounding valleys for his foes, the red men, and roaring a sudden warning upon his herds as he thundered down among them. It was so silent and so lone, and the landscape was so peculiar, that I had gone beyond the reach of anything I had ever known or loved. I shall never be able to forget that scene, as we lay in the shade of our wagon and looked at the hills, the faint, delusive gleam of the distant lakes, and saw the cranes rise out of the grasses.

Those hills! Prodigious mounds of clay and loose bowlders, each slope white with stones looking like a flock of sheep rushing toward the valleys. Those lakes—stagnant, poisonous, silent; no life there, no paddling duck, no swinging blackbird. Foam-edged, soapy, yet clear and crystalline; lakes toward which, on countless sultry days, the buffalo had rushed, mad with thirst, and drank and died; lakes that burst on the hunter's famished eyes like the gleam of silver, only to burn his parched throat like lye. Grasses thick, yellow mixed with green, old with new,—so thick that the antelope were lost in it,—shelter for the cold fox and wolf in winter, into which the antelope cowered when the north wind swept over the hills.

Once again, as I write, the wild-geese pass by overhead, the shadows of clouds slide down the hills, the hawks scream in their sport, the wolf looks down at me from a distant swell, and out of the unknown west the wind drives the white puffs of cloud.

THE WASHINGTON MONUMENT.

He towered among mankind as I do here;
Like me, his genius, shining far and clear:
And mine it is to stand and honor him
In whose bright glory I myself were dim!

FRANK DEMPSTER SHERMAN.

THE CANADIAN PREMIER.

It is rarely that a statesman in a colony—even if it is a large colony like Canada or Australia—achieves a reputation that is world-wide. One reason of this is that the political affairs of colonies are, to a large degree, local in their scope. Colonies do not usually have diplomatic relations with other countries; they do not make treaties with them, or declare war and conclude peace.

But one colonial statesman, by reason of his abilities, his political power and success, and his long occupancy of office, and by reason of the extent and importance of the country which he leads, has attained to an eminence similar to that occupied by statesmen of high rank in larger States.

This is Sir John Alexander Macdonald, the present Prime Minister of Canada, who is always familiarly spoken of in his own country as "Sir John."

Sir John's political career in Canada has covered a period of forty-six years. He was born in Glasgow, Scotland, in January, 1815, but when he was five years old his father emigrated to Canada. He was admitted to the bar at the age of twenty, and at twenty-nine years of age was elected a member of the Parliament of Upper Canada.

Ever since that time he has been constantly engaged in public life, and a greater part of the time he has held high office in the colonial government. He first took office in 1847, when he had only been three years in Parliament.

Since that period he has been Attorney-General, Minister of Militia, of Justice, of the Interior, and of Railroads, and has several times been at the head of the Cabinet as Prime Minister. He had the distinction of being the first Prime Minister of the Dominion of Canada, after its formation in 1867, and continued to hold the post till 1873; and again from 1878 to the present time.

But the record of Sir John's political achievements is not expressed by the mere statement of the many offices he has held. He has done more than any one else to build up and strengthen the Canadian Dominion, to foster its commerce, and to develop its industries and business.

To him mainly Canada owes it that, instead of comprising a number of small, separate colonies, it was transformed into a united federal State, with a central government and Parliament; a State very similar in its construction to that of the mother country, Great Britain.

Sir John's services to Canada include the adoption of a large number of important measures. It was he who established the Canadian civil service on the permanent basis it now occupies; whose energy aided in the successful establishment of the great railway line which connects Canada with the Pacific coast; and who introduced the policy by which manufacturing on a large scale was introduced in the Dominion.

To him Canada owes it that it has direct steam mail communication with Europe; that its system of public education has been extended, and that a well-devised election law has come into force.

He was selected and served as one of the Joint High Commissioners by whom the Treaty of Washington, that settled the famous Alabama Claims, was framed, and received the high honor of being created a member of the Imperial Privy Council for his services.

Throughout his political career, Sir John has been the leader of the Canadian "Conservative" party, and it is owing, no doubt, to his great ability and popularity to a large degree, that that party has so long remained in control of office and power. As a party leader he has great tact; he is somewhat mysterious and silent, and he has the art of conciliating men, and attracting them to his leadership.

The value of his services induced the Queen to confer on him the rank of knighthood in 1867, and in 1872 he received a similar honor from Spain. His scholarship was recognized by the University of Oxford, which conferred on him the degree of D. C. L. in 1865.

At seventy-six, Sir John's activity and ambition seem as vigorous as ever, and he is not unlikely to be for some time to come the chief figure in Canadian politics.

JANUARY IN VIRGINIA.

Tall rose-trees bend, with swelling buds agleam,
The quaint red quince flowers flaunt their bits of flame,
Some strange white petals breathe a fragrance rare
Across the languor of the Southern air,
And graceful golden sprays of Jasmine fall
In witching sunshine on the hidden wall.

The May-sprites must be dancing in the breeze;
The Jasmine holds the magic of the Spring,
And sends me memories, longings, smiles and tears,
Which only Northern violets used to bring.

LILIAN B. MINER.

THE WORLD'S FAIR.

The President has lately issued a proclamation which gives the final sanction of the government to the World's Columbian Exposition, the international exhibition to be held at Chicago in 1893, and invites foreign nations to take part in it and appoint to it representatives.

The issue of this proclamation means that the President has been satisfied that the necessary sum for the prosecution of the work of the World's Fair—not less than ten million dollars—has been duly raised, and that suitable grounds for the buildings of the exhibition have been provided.

The law which authorized the exhibition provides "for celebrating the four hundredth anniversary of the discovery of America by Columbus, by holding an international exhibition of arts, industries, manufactures and the product of the soil, mine and sea."

Columbus landed on the island of San Salvador in 1492, and the exhibition is not to be held until 1893. In order to bring the celebration within the fourth centenary of the discovery, a double character has been given to it. It is provided by the law that the buildings shall be dedicated, with appropriate ceremonies, on the twelfth day of October, 1892. This dedication will serve as the inauguration of the celebration.

The exhibition itself will be open to visitors not later than the first day of May, 1893, and may continue open until the last day of October of the same year.

The active work of preparing for and managing the business of the exhibition is done by a Board of Directors of forty-five members, representing a corporation chartered by the State of Illinois; but the most important acts of this board, affecting the general public, are under the supervision of, and may be vetoed by, a national commission representing all the States and Territories of the Union.

The national commission has exclusive control of certain matters, such as the allotment of space for exhibitors, and all dealings with foreign participants.

The World's Fair of 1893 differs from the international exhibitions of a similar character given in the Old World in the fact that it is paid for out of private contributions instead of national revenues, and is managed directly by a private corporation instead of by government functionaries.

However, the supervision of it which has been assumed by Congress through a national commission, and the invitation to foreign nations to take part in it, put the seal of government authority and responsibility upon it.

The site of the exhibition was fixed at Chicago by act of Congress. The exact location of the buildings has been determined since by the Board of Directors and the national commission. The site is a double one; certain buildings are to be erected on the shore of Lake Michigan, very near the centre of the city, and the others in a great park on its southern outskirts.

One of the most interesting features of the great fair will be the exhibit of the United States Government itself, for which Congress appropriates a million and a half dollars. All the government departments, and all the enterprises which it maintains, such as the Smithsonian Institution and the Fish Commission, will be illustrated in a large building erected for the purpose.

Provision is made for separate displays by the States and Territories of the Republic, and a new feature among world's fairs is a board of "lady managers" required by the law, and to be appointed by the national commission to look out in a special way for the representation of women's part in the arts and industries of the nation.

NOT DRIVEN TO IT.

The following pitiful story is from the columns of the daily newspapers, and is given with very little alteration except in the names. It carries an especial significance to every young girl who is forced to earn her own living.

A young woman of nineteen, whom we shall call Jenny Darr, the educated daughter of a mechanic, supported herself as a book-keeper in a large store until last winter, when she was attacked by rheumatism, and forced to go into a hospital. When discharged, she again found work, but in a week or two again became ill, and returned to the hospital. She was released in September, but now found it impossible to secure a place as either book-keeper or saleswoman.

She was fully competent to do the work which she sought, but every place was full. She went from shop to shop in search of employment, meanwhile selling or pawning all that she had to keep herself alive.

"At last," we are told, "finding that her choice must lie between death and dishonor, she wrote a word of farewell to her friends, and swallowed a sleeping-draught which put an end to her sorrows."

She was found dead in her bed in the morning, and her pathetic story was told in all the newspapers, with comments upon the "cruelty of a social condition which drove a young girl to suicide."

The story is pathetic; but the false sentiment with which it is clothed is calculated to do great harm to young girls who read it; for it is not true that the social condition of any American city drives a young girl to commit suicide to avoid a dishonorable life.

On the day on which this girl ended her life because she could not find work as a clerk or saleswoman, hundreds of housekeepers in the city where she died were offering a home and high wages for competent help in their households. She chose, not between death and crime, but between death and work of a lower grade than that to which she was accustomed. She was a victim not to cruel fate, but to the unreasonable dread of losing caste by her work.

Any girl-reader is liable to be placed some time in the strait of this poor girl. If she is ever so unfortunate, let her remember that any innocent occupation is honorable.

It is not the work we do which degrades or ennobles us; it is the mind which we bring to the work.

IN HIS FATHER'S FOOTSTEPS.

No one can say truly that the United States has not a hereditary nobility. An announcement was made at the last anniversary of the Children's Aid Society of New York showing that we have at least one noble line.

For thirty-six years the secretary and manager of that organization was the late Charles L. Brace, to whose fidelity and skill its long-continued prosperity is chiefly due. At the last anniversary, quietly held in a bank parlor, Mr. George S. Coe, the Treasurer, used the following language:

"While sincerely lamenting the death of Mr. Brace, it is at the same time my grateful duty to introduce to the patrons of the society Mr. Charles Loring Brace, son of our departed friend, whose honorable name he bears and whose benevolent spirit and charitable devotion he earnestly desires to perpetuate.

"The trustees are not only unanimous in their choice of him as a successor in this important trust, but they cordially congratulate the public that the gentleman now elected willingly leaves an honorable business career, at no small financial sacrifice to himself, to enter upon this good service."

The appointment has given great pleasure to the people of New York, where the Children's Aid Society is one of the most favorite and popular charities. Mr. Coe might have added that the new Secretary is the third of his name to acquire note as a philanthropist. The father of the late Secretary was John P. Brace of Litchfield, Conn., where for fifty years he was esteemed as an educator, author, editor, and public-spirited citizen.

There were two William Pitts in England, and here in America there is a somewhat numerous natural nobility, which for several successive generations has given true noblemen to the public service. In philanthropy, which sometimes involves much painful and even loathsome toil, the hereditary line has often been abruptly broken, the son recoiling from the father's career of self-sacrifice. John Howard's son, for example, was a melancholy failure in every respect.

During the thirty-seven years which have elapsed since the late Mr. Brace founded the Children's Aid Society, more than a hundred thousand newsboys have been inmates of the Newsboys' Lodging Houses under its charge.

Similar societies now flourish in all our large

Digitized by Google

cities, the good effect of which in improving the character of newsboys and many other boys who earn their living in the streets, is plainly to be seen. Fewer boys find their way to the House of Refuge and Blackwell's Island, and fewer girls go astray.

HOW IT WAS WRITTEN.

When Mr. Stanley invited his publisher to travel from London to Cairo, in order to assist in the preparation of his manuscript, "In Darkest Africa," he may be said to have done an almost unique thing, even in these days of fast travelling over long distances. Mr. Marston, the publisher, on arriving, found the great explorer absorbed in his work. He had taken a room removed from the bustle and noise outside the hotel, and rarely left it, even for a stroll about the garden.

"I have so many pages to write," he said. "I know that if I do not complete this work by a certain time, when other and imperative duties are imposed upon me I shall never complete it at all. When my work is accomplished, then I will talk with you, laugh with you, play with you, and ride with you; but let me alone now."

Nothing worried him more than a tap at the door while he was writing; he sometimes even glared upon his guest like a tiger ready to spring, although the intruder was of course privileged, and came always with the purpose of forwarding the work. When the courier knocked, trembling, at the door, Mr. Stanley would cry:

"Am I a prisoner in my own house?"

"I've brought you this telegram, sir."

"Well, I detest telegrams! Why do you persist in bringing them?"

Sali, the black boy who travelled with him on his expedition, is a youth of sufficient resource to escape the penalties of such intrusion. Until his master engaged on this terrible book, he had free access to him at all hours; now he never approached the den without expecting the inkstand to be hurled at his head.

At length he hit upon a device for saving his threatened skull. Having a telegram to deliver one day, he fixed it on the end of a long bamboo, poked it into the room through a crack of the door, and bolted.

One day Mr. Marston succeeded in drawing him out for an hour, to get a glimpse of the Nile and enjoy the cooling air. After looking at the river a few seconds, Stanley remarked:

"Six months ago I drank its waters at the eastern source, which I discovered years ago. On my recent expedition, I discovered its western source. Now that you have discovered its mouth, let us go back to work."

SAINT HUBERT.

On the third of November, in the churches of France, it was once permitted to the people, and even in certain places expected that they should bring their dogs to church with them.

Even now, on that day, though the people do not go to church accompanied by their Newfoundlands, their pugs or their bull-terriers, they talk as if they were going to do so, and pleasantly ask one another, in the afternoon, "Did you take your dog to mass this morning?"

The third of November is St. Hubert's Day, and Hubert is, in a measure, the patron saint of dogs. He is, first of all, the patron saint of hunters; but he is held to have special authority over dogs, and to him are addressed prayers for cure or protection from hydrophobia.

Hubert was, away back in the early days of Christianity, a prince at Liége, now a town of Belgium. He was so passionately fond of hunting that he neglected his duties as a chieftain and as a man, and, accompanied by his beloved dogs, continually engaged in the chase. Even on holy days the sound of his horns and of the baying of his pack clashed discordantly with the ringing of the church bells and the chanting of the choirs.

But on one of these holy days—it was Good Friday—Hubert, while hunting, was confronted, it is said, with a vision of a stag bearing a bright cross between its antlers.

By this the knight was so deeply impressed that he gave up his boisterous life, undertook a pilgrimage, and became a bishop, of holy life and beneficent influence.

But even in his sainthood, which was afterward decreed, it was said that he never lost his wonderful influence over dogs and other animals.

The custom of taking the dogs to church on St. Hubert's Day, as if to share in the beneficent influence of the life of a holy man who loved them, was not without its beauty. The animals certainly should have kept very quiet on such an occasion, though it is to be feared that they did not understand the significance of the ceremony in which they were participating.

NOBLE.

Our War of Independence was no exception to the tendency of a revolution to raise a neighbor's hand against a neighbor. The patriots of those days hated the Tories more intensely than they did George III. and Lord North. The fact that a patriot and a Tory lived in adjoining houses intensified their political animosity, and not unfrequently caused them to exchange epithets and blows.

When the Revolution began, the high sheriff at Portland, Maine, was William Tyng, whose father commanded the provincial fleet sent against Louisburg in 1745. One day Tyng, an irascible man and a rank Tory, met General Preble, an ardent Whig, on the street. Hot words passed between them, and Tyng called the General an old fool.

"Repeat those words, and I'll knock you down!" shouted the angry General. The excited sheriff answered the threat by whipping out his rapier; but before he could make a pass, the General, an old man, seized Tyng by the collar, and shook him until the bystanders parted them. The sheriff was a gentleman, even if quick-tempered, and he asked the old General's pardon.

Tyng was kind-hearted if hot-tempered, and his willingness to serve even an enemy is illustrated by an anecdote which Mr. Drake tells in "The Pine-Tree Coast."

When the British troops entered New York, Tyng went there. Hearing that a son of his late antagonist was a prisoner on board the Jersey Prison Ship, he sought him out. The young man was found suffering from an illness, which in that floating charnel-house meant speedy death.

The refugee Royalist secured the prisoner's release, took him to his own house, nursed him through his sickness, and restored him to his family, who had mourned him as dead. The young man became Commodore Preble of Tripoli fame.

PIGEON MESSENGERS.

The employment of carrier pigeons to aid operations in Wall Street is a novel idea, which has proved a decidedly happy one for a stock-broker who has a farm in Somerset County, New Jersey. The broker did not find the telegraph service satisfactory, especially when an excited stock-market necessitated quick communication with New York, and he decided to establish a messenger pigeon service of his own.

A hamper containing several birds is kept in his office, and when he is passing a day or two at his farm, forty-three miles from the city, and his manager wishes to communicate the condition of the market, it is quickly done by means of one of the birds.

This gentleman went to an isolated point in Buzzard's Bay, Massachusetts, on a fishing excursion, the only communication with the mainland being by a small steamer, which arrived about twelve, noon, and departed at one o'clock.

One day, after the steamer had departed, the broker opened his mail, and found that the stock-market had taken an unexpected turn, which necessitated immediate communication with his office.

A message was quickly written and attached to a tail-feather of one of the birds, while to insure absolute safety, a duplicate was attached to another bird. They were released at three o'clock in the afternoon, and arrived at the broker's farm early the next morning, so that the order which they transmitted was acted upon at the opening of the Stock Exchange, and resulted in saving a considerable sum of money for the owner of the pigeons.

OUACHITA.

Perhaps we are all familiar with the man "who knows more than the captain," as the saying goes. We meet him on the railway and hear him tell the conductor that the train is behind time. He finds fault with workmen who are doing a street job, and in a general way he informs the world that he can do anything better and knows more than any one else.

One of these conceited fellows was exhibiting his superior knowledge in a Cincinnati cotton warehouse recently. He was a nephew of the junior partner of the firm.

A consignment of cotton had arrived that morning, each bale marked, "From Jerome Lavalle, Ouachita, La." It happened that Mr. Lavalle arrived with the cotton and was close at hand, but the young man did not know that.

"Ah," he said, airily, to a clerk who was weighing the bales, "Here's some cotton from *Jeremy* Lavalle of *Oochita*."

"Ouachita, young man," said Mr. Lavalle, with a smile, giving the word its proper pronunciation of *Washitaw*.

"You're mistaken," returned the youth, coolly. "I think not," said Mr. Lavalle. "I was born and raised there."

"Well," retorted the other, stubbornly, "Jeremy Lavalle doesn't call it that."

"Maybe not, but *Jerome* Lavalle does. *I* am Jerome Lavalle."

At this point the youth should have sunk through the floor in confusion, but he didn't. "Are you?" he said, lightly. "I guess it's been a long time since you went to school and studied geography."

JOLLY.

There are many people, old and young,—as many who are old, perhaps, as young,—who never stop to think of the words they are using; who, for instance, never examine their speech, to see whether they are not employing one word over and over again in such a way as to make their friends weary of it, even if the word itself has no sense of being overworked.

The other day an actual conversation which was much like the following was heard on the street near a public school-house:

"Say, Edith, my father gave me the jolliest sled you ever saw for Christmas."

"Oh, so did my uncle give me one! Mine's awfully jolly, I tell you! Been coasting on it?"

"Not yet, but they say there's jolly coasting down by the Falls."

"Oh yes. Marian and Henry and the Williamses and all of us went down yesterday afternoon, and it's just the jolliest place, and here come Eleanor and Dick, and let's all go now! We'll have just the jolliest —"

"Oh, well, but if my mother don't know I'm going, she'll be jolly angry about it."

"Well, I guess we'll go, but if you'd come too it would be lots jollier."

The young people disappeared, still talking, and how many times they used the word "jolly" before they separated it would be useless to try to conjecture.

EDISON'S ADVICE.

It is the little things that give the best insight into a man's character, things which he does involuntarily, and when he is off guard. Any man may learn much about himself by taking notice how he is accustomed to spend his odd minutes and his loose change.

For the same reason there is no little shrewdness in a saying which is attributed to Edison. According to the story, a gentleman introduced his son to the famous electrician, and in the course of the conversation suggested that he should give the young fellow a motto for his business career, upon which he was about entering.

Edison was silent for a moment, and then said, "Never look at the clock!"

Probably the boy was more or less mystified by this laconic utterance, but he will not be long in the company of clerks or day-laborers without discovering that those who take so little interest in their work as to be continually asking what time it is, are not the ones who get on in the world.

Success is not for the lazy or the indifferent. As some one has said, "The carpenter who stays fifteen minutes after hours to finish a job is working towards a shop of his own."

Ladies' Underwear should be made from KING PHILIP CAMBRIC, LAWNS and NAINSOOKS. Send stamp for samples. King Philip Mills, Worth St., N. Y. [Adv.

Adjustable brass screens, fitting any cage, prevent dropping seed or dirt on floor. A special feature of the Hendryx. Buy it of any dealer. [Adv.

DIXON'S AMERICAN GRAPHITE PENCILS
Are unequaled for smooth, tough leads.
If your stationer does not keep them, mention *Companion* and send 16c. in stamps to Joseph Dixon Crucible Co., Jersey City, N. J., for samples worth double the money.

P. E. Arline
At Home
January 1st to December 31st

Makes home cleaner, brighter and better. Cleaner—because it takes away what soap and other things leave. Brighter—because it does away with labor and hard work. Better—because it saves wear and tear on everything it touches, and nothing can be hurt by it.

Pearline "receives" every day. It gets blessing from millions of old friends—pleasant calls from a host of new ones. The best families welcome it. It goes everywhere. But it's "a stayer." When it once makes a call upon you, it stays forever—and you're glad to have it.

Beware Peddlers and some unscrupulous grocers will tell you "this is as good as" or "the same as Pearline." IT'S FALSE—Pearline is never peddled, and if your grocer sends you something in place of Pearline, do the honest thing—*send it back*. 245 JAMES PYLE, N.Y.

REVOLUTION
In Children's Wear.

THE SIGSBEE UNDERWAIST.

Just the waist for boys, because **they cannot tear off the buttons, nor tear out the buttonholes.** The simple and novel device for attaching the elastics is the best for the purpose ever invented. Being supported from the shoulders, the weight is divided equally. Box plaits over the hips allow ample fullness to insure a perfect fit, preventing all pressure, and allowing the vital organs to develop naturally. Easily laundered. Wears longer. Sold by Dry Goods Dealers everywhere.

Sizes 20 to 24 in., 35 cts. Ages 1 to 8 years.
" 25 " 30 " 60 cts. " 12 years.

Mailed to any part of the United States on receipt of 5c. additional for postage.

Pat. Sept. 23, 1890. SIGSBEE MANUFACTURING CO., Ayer, Mass.

"It surpasses my expectation in beauty of finish, accuracy of construction and perfect action" are the words used by a customer in writing us of a "Hendryx Reel.

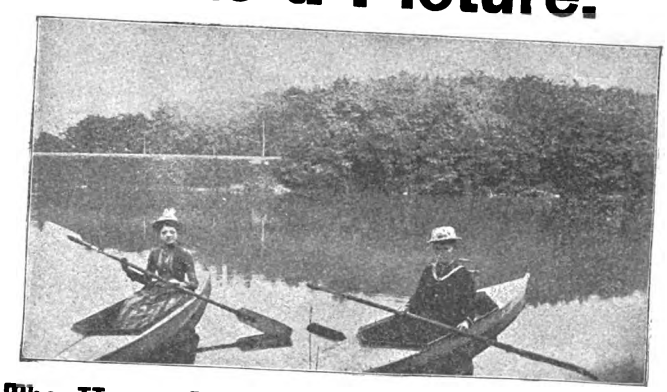
For the season of 1891 we have two hundred and fifty-two styles and sizes of Fishing Reels adapted to Trout, Bass, Tarpon, or other fishing.

Our Reels are of superior construction and finish, and prices are from 25 cents to $18.00.

All dealers ought to have them; if not, write for our Catalogue and we will send any kind of Reel by mail, on receipt of price.

THE ANDREW B. HENDRYX CO. New Haven, Conn.

EDWARDS' ORANGE SPOONS.
Patented Apr. 22, 1890.



Sterling Silver Inlaid at points most exposed to wear, then plated entire. More durable than light Sterling Silver, and not half the cost. A set of six, any pattern, $3.50. Hand-engraved, $4.00; with Gold Bowl, $1.00 extra. If you cannot obtain them of your jeweller send to us for catalogue. Accept no substitute.
The Holmes & Edwards Silver Co., Bridgeport, Conn.

MERCHANT'S

OUR FRENCH ALLIES.

Dark was that hour before the light
That ushered in the morn
Of that great day, when to the world
A nation's life was born.

For foes without, and foes within,
Had threatened at the start,
Till men once brave, and men once bold,
Did falter, faint of heart.

Yet staunch and firm—their faith and trust
Untouched by fear or doubt—
That little band of patriots stood
To fight the battle out;

To fight and win their freehold right
Unto the soil they trod,
The homes their pilgrim fathers held
As a free gift from God.

The homes on which old England laid
The pressure of her hand,
And taxed at will, until uprose
A protest in the land;

And force met force, and might met right,
While parliament and crown
Swore out a mighty oath to bring
"Those boasting Yankees down."

But day by day, and week by week,
And month by month, went by,
And still "those boasting Yankees" dared
Old England to defy.

"What folly this," the British cried,
"What madness, when the end
Is ours to take, and ours to make
These rebel subjects bend,

"And own the power they now defy,
And pay the rebel debt
Of treason's scope, which now they flout
With braggart thrust and threat."

Still grimly-staunch, they held their place—
The little patriot band,
By foes without, and foes within,
Beset on every hand.

Half-clad, half-fed, they faltered not;
When round about their way
The shadows closed, they only said,
"To-morrow'll bring the day."

'Twas then, just at the darkest hour,
When hope was well-nigh spent,
And prophecies of ill were rife,
That France her message sent.

Oh gallant word of cheer and help,
Forerunner of the deed
That followed fast, what life you brought,
In that dark hour of need!

What life, and health, and courage, then,
Sprung up afresh to give
New power and strength, new hope and heart,
And bid the nation live.

Oh generous land, when other lands
Looked on in cold disdain—
Who sent your timely aid to us,
Not once, but once again,

Whose costly fleets brought out to us
Your country's pride and flower,
What hearts have we, what memories,
To overlook that hour!

To hear indifferently his name
Whose youthful ardor spurred
His country on to such response
Of gallant deed and word!

Whose noble eloquence inspired
King Louis' timid soul,
Whose fiery courage caught and held
All France in its control!

Ah, let the land that gave him birth,
Indifferently forget,
Or hear without a thrill at heart
The name of La Fayette,

But never, while the world endures
And time and seasons roll,
Let my America forget
Her debt to that great soul.

Let her remember year by year
What France with him bestowed,
How generously in time of need
Her warm heart overflowed.

Oh my America, to-day
Strong-limbed, of giant power,
Look back with gratitude and love
To that long vanished hour.

Look backward, then with outstretched hands
Go forth to seek her there—
There where she sits beside her Seine,
This kingless "France the Fair."

Go forth with gifts, love-gifts to her,
Nor longer make delay;
Let loose the flood-tide of your heart,
America to-day!

NORA PERRY.

For the Companion.

KILLING THE SOUL.

A man was tried in the criminal court of a Western town not long ago on the charge of poisoning his children. One of them had died; the others were enfeebled for life. The poison, it was alleged, had not been given all at once, but in small doses, mixed with their food during a long period.

The man was an ignorant drunkard, who had inherited a cruel, cold temperament; but his neighbors could not be convinced of his guilt by any proof, so terrible and unnatural was the crime. That a father should slowly kill the bodies of his children, and watch them waste away through months and years, unmoved, seemed to them incredible.

Yet do parents never kill the minds and souls of their children by such slow, inexorable poison?

The man who by the force of example, by words and habits, gives to his sons a love for brutal sports, or for stimulants—what is he doing?

The man who, in the same way, gives to his boys a cynical, sneering temper, who teaches them to laugh at honesty, at the purity of women, and, more than all, at religion, is he less guilty than the murderer who poisons the bodies of his children?

Is the mother innocent of murder, who debases her child's soul by incessant petty doses of vanity? That soul might receive thoughts as broad as charity, and as high as heaven; it might be filled with love and truth and God Himself. It becomes, instead, a shrine for new gowns or scandalous gossip.

"Thou shalt do no murder," was not meant only for those who kill the body.

SIZES OF BOOKS.

The words folio, quarto, octavo, duodecimo, and the like, have almost, if not quite, lost their original meaning. At first they had reference only to the number of leaves into which the sheets used in making the books were folded. Thus, if these sheets were folded once, so as to form two leaves or four pages, the book was called a folio; if the sheets were folded twice, so as to form four leaves, the book was called a quarto; if they were folded four times, so as to form eight leaves, the book was called an octavo, and so on.

The duodecimo, or 12mo, is an irregular size. To make it the sheet must be folded so as to form twelve leaves—not an easy thing to do off-hand, as the reader will find if he tries it. The process is, nevertheless, simple when it has been learned. Fold one-third of the width of a sheet lengthwise upon itself; next fold the paper across its breadth in the centre. Next fold the sheet across its length,—that is, fold the two leaves upon the four. Finally fold it again across, and you have your sheet in duodecimo form, and, what is more, in such shape that it may easily be sewed in with others to form a book.

But though, strictly and historically, quarto, octavo, etc., have reference solely to the manner of folding the sheet, they are, as a matter of common practice, used to specify the sizes of books.

If the sheets on which books are printed were of uniform size, a quarto page would be as unvarying an area as a square foot or an acre; and before the invention of machines for making paper, there was such uniformity in the sizes of sheets.

The paper-moulds in which the sheets were made had fixed, conventional sizes.

But when paper-making machines were introduced, and the use of moulds was abandoned, sheets came to be made of all dimensions. As a result, quartos and octavos had all sorts of dimensions, and the terms, when used strictly to indicate how the sheet was folded, became worthless as designations of size. The use of the old terms was nevertheless not abandoned; but, instead, they were first used to indicate a rather wide range of sizes, and finally were attached to certain more definite sizes, without reference to the method of folding.

The practice of the publisher nowadays is first to determine what size of page he wants. The sheet he uses will be large or small, according to the capacity of the press at his disposal. On that sheet he may print, say, eight octavo pages, or he may print thirty-two; but he will call the book an octavo, though by its folding it should be called either a quarto or a 16mo.

In other words, the publisher calls his book by the name of that one of the old sizes to which it happens to come nearest.

The confusion which resulted from the changes noticed here has not passed away yet; but efforts have been made to give definiteness of meaning to the old words. The American Library Association has agreed upon a set of definitions based upon the lengths—or heights—of books, which are gaining favor, and are likely to become authoritative in America.

AS HEROES DIE.

The famous naval duel between the *Kearsarge* and the *Alabama* was fought in the English Channel off Cherbourg, on the 19th of June, 1864. Dr. John M. Browne, in his description of the battle, in "Battles and Leaders of the Civil War," makes special mention of one of the heroes of the contest, an ordinary seaman on board the *Kearsarge*. His name was William Gouin, and deserves to be remembered. He died in the hospital three days after the fight. Says Doctor Browne:

His behavior during and after the battle was worthy of the highest praise. He was stationed at the after pivot gun, and was seriously wounded in the leg by the explosion of a shell. In agony, and exhausted from the loss of blood, he dragged himself to the forward hatch, and concealed the severity of his injury, in order that his comrades might not leave their stations for his assistance.

Here he fainted, and was lowered to the care of the surgeons. When he revived he greeted the surgeon with a smile, saying, "Doctor, I can fight no more, and so come to you. But it is all right. I am satisfied, for we are whipping the *Alabama*."

Afterward he said, "I will willingly lose my leg, or my life, if it is necessary."

As he lay upon his mattress he paid attention to the progress of the fight, so far as it could be known by the sounds on the deck, and his face showed satisfaction whenever the cheers of his shipmates were heard. With difficulty he waved his hand over his head, and joined in each cheer with a feeble voice.

When a wounded shipmate complained, he reproved him, saying, "Am I not worse hurt than you? and I am satisfied, for we are whipping the *Alabama*."

Directly after the enemy's wounded were brought on board he desired the surgeon to pay him no further attention. He was "doing well," he said, and all aid should be given to "the poor fellows of the *Alabama*."

In the hospital he was patient and resigned, and happy in speaking of the victory.

"This man, so very interesting by his courage and resignation," wrote the French surgeon-in-chief, "received general sympathy; all desired his recovery and lamented his death."

At a dinner given by loyal Americans in Paris to Captain Winslow and two of his officers, a telegram was received announcing the death of Gouin. His name was honorably mentioned, his behavior eulogized.

HIS FOOTPRINTS.

A few years ago a French scientist of wide reputation, who had written several books against Christianity, was one of a party which was crossing the great Arabian desert. The servants were all Mussulmans, and of course, at each sunrise and sunset, and several times through the day, no matter what difficulties were in the way, they knelt upon their little praying mats, in the heat of the sun and on the burning sand, and repeated their Mohammedan prayers.

The Frenchman was very witty, and often made some joke upon their devotions, at which, I am ashamed to say, we all laughed more or less.

One evening, as the sun's red disc was dropping below the horizon of sand precisely as the red moon comes up out of the horizon of water at sea, the men had made their final salaam toward Mecca and were rising from their knees, when the Frenchman spoke to the leader, saying,

"Do you not waste your valuable time in so many of these operations? How do you happen to know so well that there is a God out here in the desert?"

The Arab replied, "Sahib, how did you know so well, this morning, that a caravan had passed our tents last night when you were asleep?"

"By the footprints in the sand, of course," said the Frenchman.

The Arab pointed, very solemnly, to the last fiery tip of the sun's disc as it appeared upon the line of sand, and replied:

"Sahib, that is not the footprint of a man."

For the Companion.

THE BRAVE OLD CEDARS.

The banners of Autumn are waving bright
From tower and hill and mountain,
Her cohorts and phalanxes gleam with light,
By shining river and fountain;
Her armies are standing in dress parade,
Equipped with a martial splendor,
But the gallant old Cedars are undismayed,
They die, but never surrender.

The Maples, in close serried ranks, uphold
Their standards of red and yellow,
The orchard is burning in crimson and gold,
The meadows are ripe and mellow;
The sentinel poplar and sycamore
Give welcome to every new-comer,
And doff the brave colors which once they wore
In honor of sweet, green summer.

But the Cedars lift boldly their rugged arms,
The favors of Autumn scorning,
And keep their green bravery, though the alarms
Of surly Winter give warning.
So loyal and true, so valiant and strong,
The snows and the tempests daring,
The gallant old Cedars, a whole life long,
The same old standard are bearing.

ZITELLA COCKE.

UNCOMMUNICATIVE.

There is no impropriety in addressing a civil question to a stranger in a railway car, or in any other public place; but if the stranger manifests a disinclination to talk, it is rude to attempt to drag him into conversation. He may have perfectly good reasons for wishing to remain silent. Whether a woman should speak to a strange man in a car, is quite another matter. The Cincinnati *Inquirer* reports a recent instance in which one woman was sorry she had taken such a liberty.

A man boarded a train the other day, and took a seat in front of a woman who was very curious about the country. She asked about the crops, the price of land, the characteristics of the people, the climate, and many other things. To all her inquiries the stranger returned a respectful, "I don't know, ma'am; I really don't know."

"Is this as good a climate as New York?"

"I think so, ma'am, but, really, I cannot say."

"Do the people seem to be well contented?"

"I don't know."

"Whom do they seem to prefer as a presidential candidate?"

"I can't say, ma'am."

"Are the farmers low-spirited over the decline in wheat?"

"They may be, but I have no means of knowing."

"Should you say this was a good State for a young man to begin life in?"

"I shouldn't like to give an opinion."

His non-committal answers annoyed the woman. She was silent for half a minute, and then began again:

"Have you been in Michigan long?"

"Three years, ma'am."

"And yet you don't seem to be very well informed about matters and things."

"Well, ma'am, to tell you the truth," he replied, as he turned about, "I'm a resident of Ohio. I came up here and stole a horse, and was sent to the Ionia prison for three years. I haven't been out more than two hours yet."

His questioner rose and took the fourth seat back, "in a way to make the dust fly," as the reporter expressed it, and did not open her mouth again, even to the conductor, until the train was running into Detroit.

MONEY FOR JIMMY.

Persons who are outside of the great world of business can hardly be blamed for not understanding the law and practice of commercial exchange. If a woman is awkward in a bank, a man might not be perfectly at home in a kitchen. For all that, one-half the world enjoys laughing at the other half's ignorance and blunders.

A little old woman, with an expression of awe upon her face, walked into a Chicago bank the other day, says the *Herald*. She looked at every window till she came to the exchange clerk's.

"Is this the place where I can get a draft to send money to California?" she inquired.

The clerk, an obliging young man, assured her politely that it was. "You want a draft on San Francisco, I suppose?" he added.

"Yes," she exclaimed, as her face brightened. "That's where my son Jimmy is, and I want to send him twelve dollars."

She produced from the folds of her dress a handkerchief tied in knots, and after considerable labor displayed a heap of small change.

"A draft on San Francisco will cost you twenty-five cents, ma'am," said the clerk, "but I can sell you one on New York for ten cents, and it will do just as well."

The old woman reached for the handkerchief of coins and pulled it toward her. "Young man," said she, "I have no time to go to New York. I want Jimmy to get this right away."

The polite exchange clerk attempted no explanation, but made out a draft on San Francisco for the twelve dollars and declined to accept any fee.

KEPT HIS WORD.

There are some people who seem fated to be imposed upon at every turn, and Nathan Graves was one of these guileless unfortunates. It did seem as if nothing would ever teach him to be cautious. At one time good fortune had come to him, in the shape of a comfortable legacy from a brother, a well-to-do merchant in the city.

"It looks now as if Nathan was provided for," said his patient wife; but before six months had passed she changed her mind.

An enterprising stranger came to the town, and easily persuaded Nathan to embark with him in a "patent medicine" enterprise, for which the newcomer had plenty of capacity, but no ready money.

Nathan promptly supplied him with this necessary article, and for about two months took great pride in a glittering sign which bore the names of "Sharp and Graves." At the end of that time, however, Sharp suddenly vanished, taking all the money he could lay his hands on, and leaving poor Nathan only the patent medicine, which was literally a drug in the market.

"Pretty hard on you, Nathan!" said one of his fellow-townsmen, who had warned him against the smooth-speaking stranger.

"Well, yes, it is," admitted Nathan; "but then," he added, "the man spoke the truth; he said he'd 'do something by me,' and I'm sure he's done it."

YANKEE SPEECH.

A contributor to the *Christian Union* furnishes a batch of odd Yankeeisms, which he says are taken from "a note-book of twenty-five years' standing." He once asked a rustic citizen of Connecticut, who had recently paid his first visit to New York, what he thought of the great city.

"Waal, I never!" answered the man. "Why, there on Broadway it allers seemed 's though meetin' was jes' out!"

Another Connecticut man was given to addressing his cattle in rather emphatic terms. One day, when the cows were more than usually frolicsome, he was heard to exclaim: "Yes, scatter, will ye! Blast ye! If there war'n't but one of ye, ye'd scatter!"

A third farmer always had a prodigious number of last words to say whenever he was leaving the farm for the city. On one occasion the hired man's patience gave out. "Mr. F——," said he, "you'd be an awful bad man ter die. You'd have so many last words that the undertaker's bill would come in before yer was dead."

Mr. B—— was an odd character, especially noted for his ardent defence of the doctrine of election. One day at dinner he was "argyfying" with a neighbor, and as he lifted a piece of meat upon his fork, he remarked, "I have no more doubt of the doctrine of election than that I shall eat that meat." Just then, with the emphasis of his gesture, the meat flew off, and was instantly devoured by the family dog.

Mr. W——, a Democrat in politics, was greatly incensed when his neighbors plied him with copies of the New York *Tribune* during a presidential campaign. As he told the story himself, he flung the papers into the stove, exclaiming, "I'll teach 'em to cast their pearls before swine!"

A farmer is said to have replied to a customer, "Can't let yer have no eggs to-day; we're a-settin'." Another man, with whose feelings many readers will be able to sympathize, was heard to say, "These confounded corns hurt me so I 'most want to walk backwards."

TOO SAVING.

Aunt Betsey Hicks, a New England woman who had been left a widow after a few years of married life, "carried on" her late husband's farm with a good deal of ability, but with such close economy that her saving devices grew famous in the country round about.

Next to her economy of provisions, her economy of firewood was perhaps her chief concern. At one time a sister of her late husband, from "down country," came to make her a visit, and soon became convinced that Betsey was endeavoring to freeze her out. But perhaps this was not so, since the temperature was as Mrs. Hicks usually kept it.

"I declare," the visitor ventured to exclaim, "I should think you kept it pretty cold here, Betsey!"

"That 'ere pesky thermometer's to blame, Susan," said Betsey. "I guess it's got choked up. I can't get it above fifty to save my life!"

Then she turned over the stick of wood in the sheet-iron stove, while her guest walked up and down the room with her hands thrust up the sleeves of her dress.

The visitor remained at Aunt Betsey's for several days, however, in spite of the choked-up thermometer, spending much of her time in bed, or watching a chance to smuggle a stick into the stove when her hostess was out of the room.

Late one afternoon she happened to go out into the woodshed, and found Aunt Betsey there, with an old shawl wrapped around her shoulders and a stick in her hand, engaged in violently stirring something in a large tin can. A strong smell of petroleum filled the air.

"Betsey Hicks," said the visitor, "what be you a-doin'?"

"Wal, if you want to know," said Aunt Betsey, "I thought I'd see if I couldn't stir a leetle mite o' water int' the karosene. I reckoned it'd go a leetle fu'ther, 'th so much comp'ny in the house as *I* seem to have!"

Her guest went away early the next morning on the stage-coach.

TAUGHT A LESSON.

A man with large business interests and a handsome income married a lady who, accustomed all her previous life to the luxuries of wealth, had never formed any clear conception of the worth and purchasing power of money. For some months the indulgent husband gratified his wife's every whim.

One day the lady, to carry out some caprice, asked for a check for so large a sum that the gentleman was disturbed. He saw that such prodigality, if persisted in, meant ruin; but not wishing to grieve his wife by a downright refusal, he determined to give her a lesson in finance. He therefore smilingly remarked that he could not give her a check as usual, but would send up the money from his store.

About noon the promised money came, not in crisp bills, as was expected, but in silver dollars, the sum total filling several specie bags.

The wife was first vexed, then amused, and finally, as the afternoon wore away, became deeply thoughtful. When her husband came home to supper, she took him gently by the arm, and leading him into the room where the ponderous bags of specie were still standing, said:

"My dear, is this the money I asked you for this morning?"

"It is, my love," was the reply.

"And did you have to take this money all in dollar by dollar, in the course of your business?" was the next question.

"Yes," he answered, gently; "it represents the results of many weeks of hard labor."

"Well, then," she said, with tearful eyes, "send a man to take it back to the bank in the morning. I can't use so much money for so trivial a purpose. I didn't understand about it before."

DISTRESSING OVERSIGHT.

The most famous view in the Yosemite Valley is that from Inspiration Point, where the traveller gets his first sight of the whole valley.

It is a splendid bird's-eye sweep, in which are gathered more scenic wonders than are contained in an equal space elsewhere in the world.

A gentleman who has recently visited the Pacific coast describes the hush which fell upon the occupants of the stage-coach as the driver pulled up his horses at this point. Their delight and enthusiasm were too keen to be put into words.

The silence lasted for a minute or two. Then a woman on the back seat suddenly exclaimed, with a mighty sigh, expressive of the deepest feeling:

"Oh my! I wonder why they don't have lace curtains at the Wawona Hotel!"

For the Companion.

AN UNBELIEVER.

He didn't "b'lieve a word of it"—about the flakes of snow.
That they were dainty feathers from the angels' wings, you know.
Nor that they were the bits of down from out the clouds' soft beds;
Nor that they were but rain-drops with white night-caps on their heads.

Oh no! he knew *much* better, so when some one chanced to say
The flakes were tiny crystals formed in very wondrous way,
He almost laughed to hear it, until some one made him spy
Thro' the microscope the snow-stars that had fallen from the sky.

JULIE M. LIPPMANN.

For the Companion.

THE STORY OF A MONKEY.

The beautiful sunbeams streamed in through the western window of a family sitting-room one afternoon, and shone upon the brown-gold wavy hair of little Stuart Hunter.

He was sitting perched upon a big Webster's Dictionary at the library table, printing a letter. His small mouth twisted itself into very funny shapes as it tried to follow the letters made by the little cramped, ink-bedaubed fingers.

And this is what the letter said:

DEAR, DARLING MONKEY:

I mis you very mutch. Do you mis me? I love you just the same. I hope the dockters will make you well soon and let you come home. The elefant has got his throte cut. Paul did it cuz I whittled up his fore new led pensyls with my new nife. Hannah Jane is having her face painted over. Wen you see her she will have brite red cheeks. Good-by.

from yore loving master, STUART HUNTER.

The monkey to whom this was written was not a live monkey, as you might think, but only a toy.

Years ago a gentleman bought him in London for his little niece, Golden-locks, who lived in New York City; but when he was presented to his little mistress, she ran shrieking to her mamma, and buried her face in her lap.

All their efforts to pacify her were in vain, so the monkey was sent down to Nantucket to little Stuart Hunter, whose mamma was a dear friend of Golden-locks' mamma.

When Stuart awoke, bright and early on Christmas morning, and found a glossy black monkey, with a long, sleek tail, standing up in his stockings, he was perfectly delighted. Seizing him in his arms, he danced about the room, hugging and kissing him wildly.

The monkey thought it a much warmer reception than the one Golden-locks had given him.

There was only one drawback to that first happy day in his new home. Stuart had a little black kitten. He was all black, without a speck of white on him anywhere, and his name was Zebadiah Henley. Stuart named him for a dignified old Quaker gentleman whom he greatly admired.

Now when Zebadiah came into the library, late that afternoon, and saw the monkey sitting in a little rocking-chair by the fire, his own favorite resting-place, he was very angry. With a growl and hiss he sprang upon him. The two black creatures rolled over each other upon the floor, and when at last the children succeeded in rescuing the poor monkey, alas! both of his yellow glass eyes were gone and Zebadiah's sharp claws had torn out several patches of fur.

Stuart cried over the lost eyes, but his mamma fastened two shiny boot-buttons in the monkey's head, and he was satisfied.

Next to the monkey, an elephant stuffed with cotton and an old-fashioned doll were Stuart's favorites.

The doll's name was Hannah Jane. She had very long legs and arms, and a stiff, hard body. Her head was a painted wooden one, and was made on board a whale-ship fifty or more years ago.

When Hannah Jane was dressed in her striped silk, lace mantilla, and old-fashioned bonnet with a dotted lace veil, she was very ancient and aristocratic-looking.

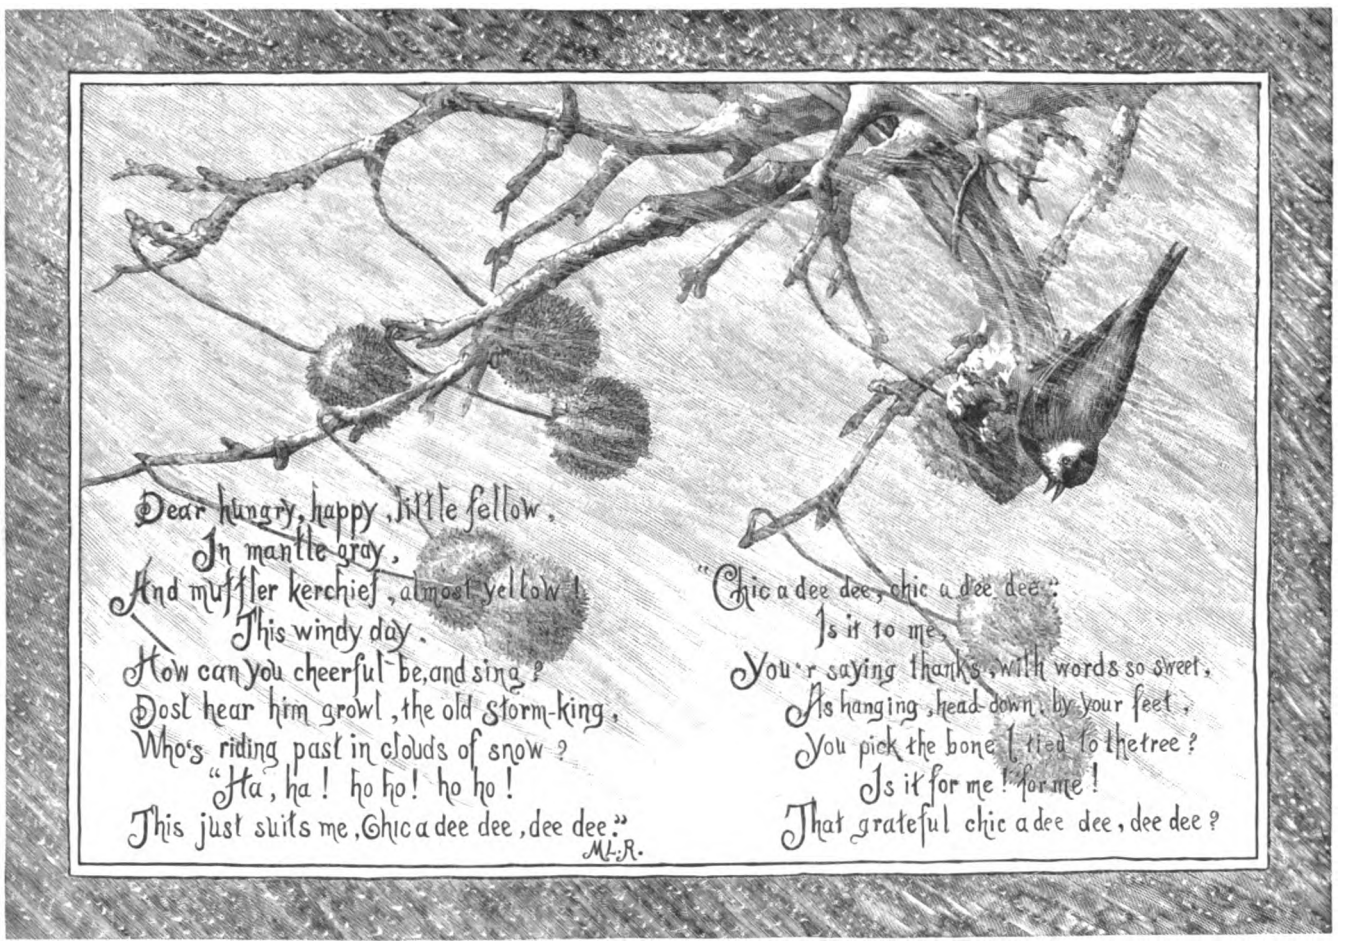
The monkey, the elephant, and Hannah Jane often went out riding together.

People would stop to look at the little family in the baby-carriage. They always admired Hannah Jane, but always laughed at the monkey, which made Stuart very indignant.

By the end of his third year in Nantucket, poor monkey's fur was nearly all worn off, he had been kissed and hugged so much by his affectionate little master. He was a queer-looking object indeed, and people laughed more than ever when he went out riding with Hannah Jane.

One night, about a week before Christmas, Stuart's mamma proposed sending the monkey to the hospital to see if the doctors could not make a new coat of fur grow.

So when Stuart was fast asleep the monkey, who always slept cuddled up in his arms, was taken away and hidden in mamma's big mending-basket,—for that was the hospital she meant, and she was to be the doctor.



Stuart's letter was written to him while he was upstairs being re-covered.

On Christmas morning, there he was, in a brand-new suit of gray fur, standing up in Stuart's stocking just as he did three years before. His welcome home was all any little monkey's heart could desire.

Hannah Jane in her "brite red cheeks," and the elephant with his throat nicely sewed up, were very glad to see him, and this time Zebadiah purred and rubbed against his soft sides, showing very plainly that he wished to make him forget the past.

FANNY LOUISE WEAVER.

"CAN I go with you, papa?" said little Charley, aged four years, as he saw his father preparing for a walk. "Oh, no," said the father, "I am going to walk a long way, and your legs are too short." But the little fellow was not convinced; stretching forth one of his limbs to its utmost length, he exclaimed, "Just look o' there, see what a great long leg that is, and the other one is a great deal longer!"

For the Companion.

WHEN EVERYTHING SEEMS TO GO WRONG.

When it rains, and you hoped 'twould be pleasant;
When the thread knots up in your sewing;
When you're asked at a tea to be present,
And toothache keeps you from going;
When all things look hopeless and dreary,
And your joy seems turned into sorrow;
Don't fret, but smile and be cheery;—
Perhaps there'll be sunshine to-morrow!

For the Companion.

ESKIMO RAY.

Ray had often seen the pictures of the homes of the Eskimos, and thought snow-houses must be very nice indeed, so nice that he decided to make one for himself.

"Not to live in all the time, mamma, but just to rest in when I'm tired of playing," he said.

He began with a small ball, and rolled it over and over through the damp snow until it was almost as high as his head.

And papa helped push it along, until he could stand on his tiptoes and not see over the top of it.

Then he began work in earnest with his bright new shovel, and before night the huge snowball was hollowed out and changed into the cunningest snow hut you ever saw, with a United States flag stuck into the top of it.

"'Course I want folks to know I'm a Yankee, if I *am* an Eskimo," explained Ray.

He did not like to leave his hut when night came, and travelled to the window many times before he went to bed, to see how it looked in the bright moonlight

"What if it storms to-morrow, mamma. What'll I do if it storms?" he asked, anxiously.

"Do as real Eskimos do—make the best of it," smiled mamma.

But the sun rose brightly, and, before noon, the water was dripping from the eaves.

Ray begged a candle to keep in his house, and hunted up all of the broken dishes he could.

Then he harnessed dog Snyder into the hand-sled, and thought he was an Eskimo at last.

Suddenly there was a rumble, a crashing, a smothered scream and a faint yelp.

Mamma ran to the window, and beheld a scene of utter ruin. An avalanche of snow from the roof had buried the beautiful snow hut, Eskimo Ray and dog Snyder from view!

Snyder scratched his way out, and ran for the barn, barking loudly, and as frightened as a small dog could be.

Mamma took the bright new shovel from the snow bank near by, and began to dig for Eskimo Ray. Soon a very astonished and woebegone little face popped up. "Are you hurt, darling?" asked mamma, anxiously.

"No, *I* aint," he answered, and his lip trembled, "*I* aint hurt, but—but my feelings are!"

Then he crept into mamma's arms, and she comforted him as mammas alone can comfort eight-year-old boys.

"I pity the poor Eskimos, mamma," he said, as he stood by the window that evening. "But I don't want to be one any more."

HARRY'S elder sister had been reproving him for making so much noise with his feet, when he went to his mother, saying, "I haven't the life of a dog; I can't even wag my foot."

Enigmas, Charades, Puzzles, etc.

1.

DOUBLE CROSS-WORDS.

In husband, not in wife;
In squabble, not in strife;
In barter, not in sell;
In rattle, not in bell;
In model, not in form;
In sprinkle, not in storm;
In midnight, not in noon;
In Venus, not in moon;
In Christian, not in Jew;
In honest, not in true;
In flounder, not in shark;
In hyphen, not in mark;
In awning, not in blind;
In reeling, not in wind;
In aiming, not in shoot;
In sandal, not in boot;
Two noted events I have hidden here,
Occurring the very first month of the year.

C. D.

2.

DOUBLE DIAGONALS.

1. Generating tears.
2. A peddler of religious books.
3. Anodyne.
4. One who is proposed for some office or state.
5. Fire-arms.
6. Affected with paralysis.
7. Furnished.
8. Disorder.
9. Delicious.

Diagonals.

Left to right: An English poet, born on Jan. 22, 1788.

Right to left: An English author, born on Jan. 22, 1561.

G. F.

3.

ANAGRAM.

Gild one lock.

When you read of me you'll all agree
To say, "What a jolly old man was he!"

4.

PUZZLE.

1. Behead and curtail a monomaniac, and leave moved swiftly.
2. Behead and curtail a kind of fastening, and leave in like manner.
3. Behead and curtail a figure having equal angles, and leave a nutritious starch.
4. Behead and curtail the plea of a person unfairly accused of guilt, and leave a nickname of Elizabeth.
5. Behead and curtail that by which you are called, and leave a form of the verb to be.

The curtailed letters transposed spell one of the largest cities of the world—the beheaded letters transposed spell the country of which it is the capital.

A. M. P.

5.

CHARADE.

Nobody likes to be my *first;* everybody likes to do my *second;* nearly everybody likes to eat my *whole.*

6.

POSITIVES AND COMPARATIVES.

Examples:

1. A writer of note; kills game far or near.
2. A brute of much use; to weaken in fear.

Ans.—Hunt, hunter. Cow, cower.

Is done with the tongue; a fluid this means.
Spanish general dead; book for "bonnie wee weans."

A hardy old tree; a sort of a paint.
A method of cooking; a priest, though not saint.

A magical staff; to travel around.
A pain which annoys; a measure of ground.

A thing which supports; whatever is right.
The spirit; pertains to the sun and its light.

A kind of a bird; a snickering laugh.
A dainty perfume; marks diameter's half.

ELGIE BELL.

Answers to Puzzles in Last Number.

1. Bookworm.

2. "He was a most exemplary man; fuller of virtuous precept than a copy-book." *Key-Words*—Honorable, wainscot, vortex, mystery, palmate, muffle, rue, soup, hock, papa.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

THE PULSE.

The blood is in a state of constant circulation through the system, propelled by the heart through the arteries, and returned to the same organ through the veins. The arterial current conveys material for nutriment, heat and force to all the tissues; the venous current receives the dead waste of the tissues, and conveys it to the different eliminating organs.

The propulsive action of the heart is due to its successive contractions. These contractions occur about seventy times a minute in a healthy male adult, more frequently in women, and much more frequently in infants and children, being at birth from one hundred and thirty to one hundred and forty, and gradually sinking to about one hundred at the sixth year, and to ninety or eighty-five at the tenth.

The arteries are unlike the veins in that they share in the beating of the heart; but the beating of the heart is readily perceived only where an artery passes over a bone near the surface, or when some inflammation of a part causes an enlargement of an artery, and an unusual sensitiveness of the accompanying nerves. In its normal condition, the pulse is most conveniently felt at the wrist.

The blood is the natural stimulus of the heart, and when the poison of disease changes the character of the blood, the action of the heart is correspondingly affected. It is also affected by organic disorders of the heart and arteries; by general weakness; by nervous excitements; by the state of the stomach, and by stimulants or depressants of various kinds. Hence, as the heart-beats and the arterial beats accord, the character of the pulse is of great service in determining the patient's physical condition.

It will be seen that, in feeling the pulse, age and sex are always to be taken into the account. Further, one's pulse when lying down is about five beats slower, and when sitting about ten beats slower, than when standing up. The pulse is slower at night, also, and during sleep. A tall person has a slower pulse than a short person.

An increased pulse-rate indicates a feverish condition, as it rises with every increase of temperature.

There is often an omission of a beat. Sometimes this is at regular intervals, say the tenth or twentieth; at other times the omission is irregular. In some persons such omissions are habitual and without significance; more generally they indicate some disease, nervous or otherwise.

When the pulse is under sixty, it is regarded as slow. In not a few persons this is natural. The pulse is slow also in persons recovering from a feverish condition, the heart being weak and exhausted, like the rest of the body; also in digestive diseases and jaundice. Certain poisons slacken the pulse, while others quicken it. The dying condition is characterized by a very rapid but feeble pulse.

RESISTING COLD.

A correspondent of *La Nature* records a curious observation, made last spring, upon an amaryllis growing in the central part of France. The spring opened in that region unusually early, and by the last of February one of these little plants blossomed in the garden of the writer.

On the first of March a "cold wave" passed over the country, and the thermometer fell in the night to twelve degrees Fahrenheit. The next morning the flower was found bent over to the earth, and apparently dead.

Strangely enough, as the sun rose higher in the heavens and the temperature reached fifty degrees, the amaryllis arose from the earth, resumed its usual upright position, and was evidently none the worse for its untimely refrigeration.

The following night was again extremely cold; the same movement was repeated, and a closer examination of the flower showed that it was, undoubtedly, a measure of self-protection. The bell-shaped corolla touched the earth lightly, but closely, and was cemented to the soil by the frozen moisture around its rim, thus enclosing the stamens and other important organs of the flower in a temporary tent, as it were, and protecting them from the outside cold.

This movement was repeated for four successive cold nights. On the fifth night the temperature moderated, and although snow fell, the flower and stalk remained in their usual upright position; and in due time the flower withered and produced seed.

These remarkable spontaneous movements of the plant seem almost to be allied to those of certain low forms of animal life, and are extremely difficult to explain, as is also the remarkable resistance to low temperatures of many other early flowers, such as the snowdrop and crocus.

AN ANGEL UNAWARES.

It is undoubtedly true that occasionally "one touch of nature makes the whole world kin." The New York *World* gives an instance that illustrates the truth of the old proverb. A newsboy took the Sixth Avenue elevated cars at Park Place, and sliding into one of the cross seats, fell asleep. At Grand Street two young women entered the car, and took the seats opposite the lad.

The boy's feet were bare, and his hat had fallen off. Presently the younger girl leaned over and placed her muff under the little fellow's dirty cheek. An old gentleman in the next seat who had seen the kind act smiled, and without saying anything, held out a quarter, with a nod toward the boy.

The girl understood what he meant, hesitated a moment, blushed a little, and then reached for it.

The next man, who had seen the act and enjoyed it, just as silently offered the girl a dime, to be used for the same purpose. A moment later a woman across the aisle held out some pennies, and before she knew it, the girl, with flaming cheeks, was offered money from every passenger in that end of the car, each smiling and enjoying the little episode.

The young girl quietly slid the amount into the sleeping boy's pocket, removed her muff gently from under his head without arousing him, and soon after rose to leave the car at Twenty-third Street. As she did this, she included all the passengers in a pretty little inclination of the head, that seemed full of thanks, and the possession of a common secret. It was a very pretty little incident, and will not soon be forgotten by those who saw it.

CLEVER COLLIE.

T. Sidney Cooper, the English animal painter, says that he often made valuable studies in Cumberland, at places where Scotch drovers halted with their cattle for the night. On such occasions, he often had a chance to see illustrations of an animal's intelligence, as well as of its physical perfection.

One day, when there was a pouring rain, a man consented to sit for me at the inn where I was staying. He brought his collie with him, and both of them were dripping wet; so he put off his plaid, and laid it on the floor by the dog.

I made a very successful sketch of the man, but before I had finished it, the dog grew fidgety with the wet plaid, and his master said, "Tak' it awa', mon, tak' it awa'!"

The dog took the end of it between his teeth, and dragged it out of the room.

After I had finished the drover's portrait, I asked him if he thought his dog would lie quiet for a time, as I wished to sketch him.

"Oh yes, mon," he answered, "he'll do anything I say to him. Watch! Watch!" he called, and then "whustled" for him, as the Scotch say.

As the dog did not appear, we went together to look for him, and found him sitting before the kitchen fire, with the end of the plaid in his mouth, holding it up to dry. I expressed my admiration of his intelligence, and the master replied:

"Ah, he's a canny creature, sir! He knows a mony things, does that dog, sir. But come awa', mon; the gentleman wants to mak' your picture."

So we returned to my room, and the handsome collie sat for his portrait.

MYSTERIOUS.

Every one who has attempted chemical or other experiments, knows how severely the patience is tried when every detail of the process has been carefully attended to, and yet the expected result does not follow.

A student of chemistry, says the Cincinnati *Times-Star*, was testing the ashes of his cigar for lithium, a very light alkaline metal, which is supposed to be present in tobacco leaves. He applied the proper tests again and again, but the expected red flame did not appear.

In his perplexity he went to his professor. The learned man made one or two experiments, with no better success. Then he turned to the student and said: "My dear sir, you smoke very poor cigars."

BETRAYED.

People who are sly should also be discreet. A lady who had a servant somewhat given to curiosity, inquired, upon returning from a visit one afternoon:

"Did the carrier leave any mail, Mary?"

"Nothing but a postal-card, ma'am."

"Whom is it from, Mary?"

"And did you think I'd be reading it, ma'am?" said the girl, with an injured air.

"Perhaps not; but any one who sends me messages on postal-cards is stupid and impertinent—that's all."

"You'll excuse me, ma'am," said the servant, loftily, "but that's a nice, purty way to be talkin' about your own mother!"

INNOCENT.

When a man is conscious of his innocence, and perfectly sure of his ability to prove it, he has little to fear.

An old negro went to the office of the commissioner of registration in Kansas City lately, according to the *Times*, and applied for registration papers.

"What is your name?" asked the official.

"George Washington," was the reply.

"Well, George, are you the man who cut down the cherry-tree?"

"No, sah; no, sah; I aint de man. I aint done no work for nigh onto a yeah."

Deserving Confidence.—Sufferers from Bronchial Troubles, Coughs, Hoarseness and Sore Throat should try "*Brown's Bronchial Troches.*" They are universally considered superior to all other articles used for similar purposes, and can be freely used with safety. Sold only in boxes. Price, 25 cents. [*Adv.*

MAULE'S SEEDS
LEAD ALL.
Our Catalogue for 1891 is pronounced absolutely the best seed and plant book issued; printed in good legible type, on good paper, it excites the admiration of all. 664 varieties of Vegetables, Flowers, Flowering Plants, Small Fruits, Fruit- and Nut-bearing Trees, etc., are beautifully illustrated, as many as 38 of them being in colors. This catalogue is mailed free to all who ordered in 1890; but as the postage on the book alone is five cents, we must ask all others who are not customers, desiring a copy, to send us twenty-five cents in stamps for it; and in addition to sending our catalogue, we will also mail you, without extra charge, a packet of the wonderful BUSH LIMA BEANS, THE MOST VALUABLE VEGETABLE NOVELTY INTRODUCED IN YEARS; AND A PACKET OF THE NEW MARGUERITE CARNATION, THE FLORAL WONDER OF 1891. These two packets of seeds are worth 25 cents; so it virtually means the same thing as mailing our catalogue free to all who answer this advertisement. Address

THE DINGEE & CONARD CO. ROSES AND SEEDS WEST GROVE, PA.
Roses
We can safely say, in the past 25 years our establishment has distributed more millions of *ROSES* than any other in the world. The *know-how* of producing plants that will thrive where others fail is *OUR SECRET.* Fit company for our *Roses* are our stocks of **Hardy Ornamentals, Popular Flowers, Summer Bulbs, Flower and Garden Seeds,** all prepared for the best retail trade—**Prices Correct.** Orders range from 10 cents to $150—*all are welcome.* **THE NEW GUIDE,** 124 pages, illustrated, complete—*tells how to buy*—**FREE to all** interested, on application. **Orders sent by mail post paid to all post offices.** Safe arrival and satisfaction guaranteed.
The Dingee & Conard Co., West Grove, Pa.

NO illustration or description can do justice to the unique and peerless beauty of this new Rose Aster. Imagine plants completely studded with balls of peerless white flowers exceeding two feet in circumference, whose petals curve gracefully in all directions closely resembling the chrysanthemum, but very much easier grown. This Aster has attracted more attention than any other flower in my gardens. Those who have grown Asters for many years say, they never saw its equal. Your garden will not be complete this season if it does not contain the Alpine Rose Aster. I am the sole proprietor of this new variety and the seed or plants cannot be procured elsewhere. Full instructions for culture accompanies each order. Price of seeds (by mail) 20 cts. per pkt., 2 pkts. 35 cts., 5 pkts. 75 cts. Strong plants by mail in May, 6 for 50 cts. 12 for $1 or 30 for $2; enough to make a magnificent bed. My plants are all carefully packed in wood boxes and guaranteed to arrive in perfect condition. Catalogue of rare bargains sent free. A 50 cent certificate (worth the amount in my flowers) and a packet of new and beautiful DEFIANCE PANSY SEEDS FREE with your order provided you send address of 3 friends who buy seeds. Order at once, this offer will not appear again.
—F. B. MILLS,—
Seedsman, Rose Hill, Onondago County, New York.

THE MOTHER'S SAFEGUARD.
Croup in its worst form, relieved without nausea or disarrangement of any kind by "Dr. Hoxsie's Certain Croup Cure." Contains no opium. If your druggist does not keep it, it will be mailed to your order on receipt of 50 cents. Address, *Dr. Hoxsie, Buffalo, N. Y.*

The Beacon Gaiter

is quickly put on and as quickly taken off. It is the most convenient high overshoe for Ladies', Misses' and Children's wear ever made. You have only to see it—or this picture of it—to recognize how useful, practical and sensible it is.
AT ALL SHOE STORES. ASK TO SEE IT.
"From the Forest to the Foot."
We have recently published a handsomely ILLUSTRATED SOUVENIR, describing in an interesting manner the process of making a Rubber Shoe, from the time the raw rubber leaves the forest until the finished "rubber" covers the foot. Ask your nearest shoe-dealer for a copy, and if he has none write us direct and we will see that you get it.

LATEST DISCOVERIES IN SCIENCE.

THE SUN.

By Professor C. A. Young, of Princeton College.

The sun and the moon are the only heavenly bodies which exert a perceptible influence upon human affairs, and the influence of the moon, near though she is, is not great, except in the matter of the tides.

In the sun, however, we find the main-spring, so to speak, of every form of earthly activity, all other sources of energy being insignificant compared with the solar heat. To this heat science traces more or less directly, but certainly, all the power of wind and water, of steam and electricity, and even the force of animals. The cessation of sunlight for even a single month would reduce our world to a frozen, inert and lifeless mass. Naturally the study of the sun's radiation has greatly occupied the attention of investigators.

It is reasonable to put first in importance, among the recent advances in solar science, the results obtained by Professor Langley, secretary of the Smithsonian Institution, in his researches into the total amount of solar energy received by the earth, and the distribution of this energy in the different parts of the spectrum.

Heat of the Sun.

The first measures of the quantity of heat received by the earth from the sun were made nearly fifty years ago by Sir John Herschel at the Cape of Good Hope, and almost simultaneously by Pouillet in France. Subsequent observations confirm, substantially, their estimate of the amount of heat which reaches the earth.

But in order to calculate truly the heat really emitted by the sun, we must allow for all that is stopped in passing through the earth's atmosphere. Just here a formidable difficulty is encountered, and an insufficient estimate of the loss was for a long time accepted. Professor Langley detected and pointed out this difficulty, and invented a new and exquisitely sensitive heat-measurer, known as the bolometer, with which he was able to secure the observations needed to correct the error.

By observations made at the sea level, combined with others made upon the summit of Mount Whitney at an elevation of more than fifteen thousand feet, he has proved that the amount of heat absorbed by the air is very much greater than had been supposed, and therefore that our estimate of the total quantity of heat radiated by the sun must be correspondingly increased by fully twenty per cent. at least.

Astonishing as were the former statements respecting the quantity and intensity of the solar heat, they were seriously inadequate; the solar fires are considerably more intense and powerful than we supposed.

The crust of ice which the sun could melt from its own surface in a single minute would be fully sixty feet thick instead of fifty; and if the solar heat were uniformly distributed over the surface of the earth, it would melt in a year a shell of ice one hundred sixty-four feet thick, instead of one hundred and thirty-six feet thick, as stated in our recent text-books.

Of what is Light Composed?

Professor Langley's demonstration of the extent of the solar spectrum is hardly less interesting. He has detected in the sun's rays a long range of ether-waves before unknown. Light is composed of minute "waves" or pulsations of extreme rapidity, transmitted to us from the sun, not by air, as sound-waves are, but by the "ether," the subtle substance which seems to fill all space, and constitutes the only medium of communication between the worlds.

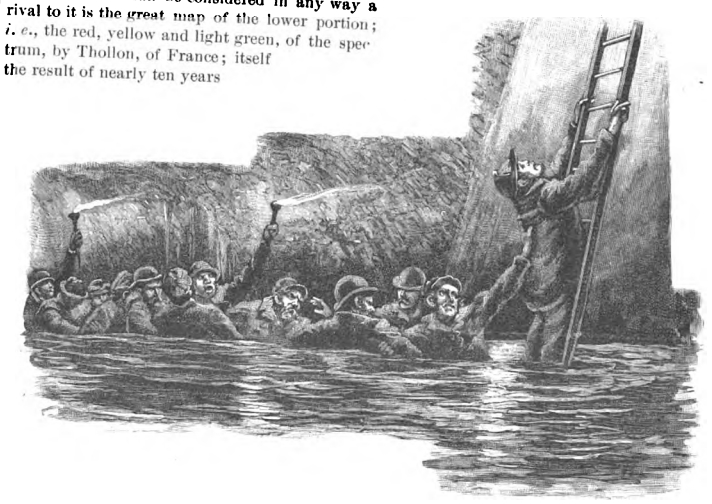
The waves by means of which we see, and which we recognize as light, range in length from about one-thirty-five-thousandth part of an inch to one-sixty-thousandth part; but besides them the sunbeams contain others, some of them much longer and some much shorter pulsations, which though invisible, are yet extremely effective in the transportation of energy and heat.

Two or three years ago the greatest length of any heat-waves known was about one-ten-thousandth part of an inch; but Langley has now detected, with his bolometer, waves fully twelve times as long; and these long, slow-swinging waves—slow, that is, in comparison with the shorter ones—are just those that are characteristic of the heat-rays emitted by a body of low temperature, a block of ice, for instance; for cold bodies radiate heat just as really as warmer ones, though less, of course, and the waves are of lower pitch. In the rays of the sun we now detect the whole range of such radiations as fully represented as in the moonlight.

Hardly less important than Professor Langley's results are those which have been attained by Professor Rowland, of Baltimore, in mapping and identifying the lines of the solar spectrum.

When sunlight is transmitted through the narrow crack or "slit" at one end of a spectroscope, and examined by the eye at the other end of the instrument, the observer sees a long, vividly colored ribbon of light, which is red at one extremity and violet at the other.

If the instrument is not too powerful, he can take in the whole length of this "spectrum" at once; but with a large instrument the spectrum is so extended that only a small portion of it is visible at a time.



Now this spectrum is crossed by myriads of dark lines, some of them fine and black, others broad and hazy; and they always occupy the same positions, and are as capable of being mapped with accuracy as the roads and cities of a country.

They owe their interest to the fact that they are known to be due to substances in the state of gas present in the atmosphere, either of the earth or of the sun—mainly the sun. Their accurate charting and identification is a matter of high importance in the information it gives about the constitution of the sun.

Professor Rowland's Map.

In the mapping of the solar spectrum Professor Rowland has fairly distanced all competitors, so far, at least, as all but the red and orange portion is concerned. By the use of a "concave grating" of his own invention, which is more powerful in separating the colors than a prism, he has been able to make a photographic chart of the spectrum on a scale, and with an approach to perfection, heretofore undreamed of.

It entirely supersedes all previous maps; the only one which can be considered in any way a rival to it is the great map of the lower portion; *i. e.*, the red, yellow and light green, of the spectrum, by Thollon, of France; itself the result of nearly ten years

of solid work, with an immense spectroscope using hollow prisms filled with bisulphide of carbon. The accurate construction of such an instrument as Mr. Rowland's is one of the most delicate and difficult of all mechanical problems. The gratings which he uses have a ruled space about four inches by six, containing about ninety thousand lines.

Chemistry of the Sun.

In connection with the photography of the solar spectrum, considerable advances have been made in the recognition of the chemical elements present in the sun. Copper, silver and vanadium have been transferred from the list of the doubtful metals there to the certain; and very recently Rowland has found clear evidence of the presence of silicon, the apparent absence of which has been long a standing puzzle.

The evidence in favor of the presence of carbon also seems to gain strength, and the same is true in the cases of aluminium, cadmium and zinc. The fact that the lines which reveal the presence of silicon are almost entirely in the ultra-violet, invisible portion of the spectrum warrants the expectation that photography may soon find there evidence of some of the other still missing elements, such as boron, phosphorus and sulphur.

But no new light yet appears in reference to the mysterious absence from the sun of oxygen, nitrogen and chlorine, which play so important a part in the chemistry of the earth; except, indeed, that the results obtained by Janssen last summer, on the summit of Mont Blanc, are conclusive that the great "B" line of oxygen, which is so conspicuous in the solar spectrum when the sun is near the horizon, is entirely of earthly origin, and not in the least solar.

The veteran astronomer, still enthusiastic and full of pluck, though unable to endure any severe physical exertion, had himself carried by a small army of guides and porters to the very summit of the mountain, and there obtained decisive observations.

As regards the "photosphere"—the luminous surface of the sun—and sun-spots, there is little news to note. Janssen at Meudon has made real improvement in the processes of photographing the spots, and the details of the solar surface; and recent observations of the displacement of the lines of the spectrum at the eastern and western edges of the sun, made by Duner of Upsala, have confirmed the law of the sun's swifter rotation at the equator—a law which, though first discovered more than thirty years ago, had recently been called in question.

It still remains as much a mystery as ever, how the great cavities which we see as spots come to be formed in the sun's surface, why they are so limited to the two zones on each side of the sun's equator, and why they show such a regular increase and decrease in numbers every eleven years.

Sun-Spots and Terrestrial Magnetism.

It is worth noting that certain recent, and still unpublished, investigations by Doctor Veeder, of Lyons, New York, appear to show beyond question that there is a distinct connection between the visibility of a solar disturbance from the earth and its effect upon the earth's magnetism; that is, that when an active sun-spot or solar prominence is brought by the sun's rotation to our side of the solar globe, then an effect is immediately felt which was not felt so long as the disturbed area, however active, was out of sight on the other side of the sun.

This seems to indicate that the disturbing energy, whatever its mode of operation, is propagated like light; a result entirely in harmony with the recent remarkable experiments of Herz and others upon the transmission of electric induction.

As regards the solar "prominences," the great flame-like clouds of scarlet hydrogen and other gases, which are usually seen on the edge of the sun during a total eclipse—there is nothing new to report. They can be observed, at any time when the sun shines, by means of the spectroscope, and they have now been assiduously observed for twenty years; but the last ten have added disappointingly little to our knowledge of them.

One or two unsuccessful attempts have been made to photograph them, the difficulty being due largely to the scarlet color of their light. But there is reason to hope that we may soon be able to photograph a red object as easily as a blue one, and when that time comes we may look for more satisfactory results. Photography would have great advantages in securing accurate representations of these objects, which change so swiftly as to defy the most rapid draughtsman.

With the corona, the beautiful halo of pearly radiance which surrounds the eclipsed sun, and is visible only during an eclipse, the case is, perhaps, a little better, and some real progress seems to be making toward an intelligent understanding of the subject.

While in recent years the eclipse expeditions have been unusually unfortunate in the matter of the weather, many photographs of the corona have been collected, taken under very different conditions; and there is reason to expect that the careful comparison and study of these pictures which is now in progress will soon give us a better insight into the real nature of this most lovely and most mysterious of all solar phenomena.

Theories of the Corona.

Two different theories are under special investigation, one proposed by Professor Bigelow, that the streamers of the corona are analogous to those of the earth's aurora borealis, and have their positions and directions determined by the sun's magnetism, just as the earth's magnetism determines the auroral streamers; the other proposed by Professor Schaeberle, of the Lick Observatory, that the streamers are projected radially from the sun-spot zones, and owe their apparent arrangement simply to perspective.

The two theories lead to distinctly different results as to the appearances that ought to be seen, so that a thorough discussion of the existing photographs will lead to a decision between them, or, very possibly, it may result in showing that neither is right.

One thing is already clear; that there is a close connection between the corona and the sun-spots. When the spots are numerous and active, the corona is smaller and more brilliant than usual, and its longest streamers are found over the two sun-spot zones on each side of the sun's equator. In years of sun-spot scarcity, on the contrary, the corona is fainter, but larger; the portions near the sun's equator especially sometimes reach an enormous extension, while the shorter streamers which appear to issue from the regions near its poles are more conspicuous than usual from the clearness and sharpness with which they are defined.

In 1882 photographs were also obtained of the coronal spectrum, and they show that while in the lower portion of the spectrum there appears to be only a single conspicuous bright line, the well-known green "1474" line, discovered in 1869, the blue and violet regions are on the contrary very rich.

The great H and K bands, which form the boundary of the visible spectrum at its violet extremity, are especially conspicuous in the corona for their brilliancy and extent; the lines of hydrogen are also prominent, and there are many others which may or may not be due to the same mysterious "Coronium," as it has been provisionally called, which produces the "1474" line.

To sum up, we may say that while there has been no discovery relating to the sun within the last ten years that can be compared in importance with Kirchhoff's discovery of the elements that go to compose the sun, or with the discovery of the periodicity of the sun-spots, or even with that of the gaseous nature of the solar prominences, and the method of observing them with the spectroscope, yet there has been a steady progress, and there is every reason to hope that before very long we shall reach the solution of some of the problems that have long defied us.

For the Companion.

IN THE ADDINGTON AQUEDUCT.

Caldwell Ransom arrived at Lake Village with a fund of professional knowledge in his head, a Polytechnic School diploma in his pocket, and in his brave young heart a great determination to succeed.

When he began work as assistant engineer of the Addington City Water Works, he found himself at once opposed to a score or so of rude men who could not comprehend his knowledge, cared not a straw for his diploma, and were more than ready to render success impossible.

The twenty-one laborers—heavy, muscular, broad-backed, hard-handed fellows—looked with contemptuous dislike upon the slender young man of twenty-three years, with his refined face and gentle manners, who had taken the place of tough old blustering Ingalls, who was always prepared to back up a rough tongue with a rougher fist.

"Him our boss? That little whipper-snapper?" growled Mart Hoxie, strongest man and ugliest fighter of the twenty-one, and consequently a sort of leader and spokesman. "Why, there aint one of you couldn't put him in your pocket. What business has he givin' orders to men?"

"And getting fifteen hundred a year for it," added another.

"While we break our backs for a dollar and a half a day," concluded a third.

These three speeches, expressing the three passions of scorn, envy and discontent, promised anything but an easy task to Caldwell Ransom in his government of the men; but he was prepared. Engineer Franklin had said:

"Ransom, you will be in charge at the upper dam and along the tunnel. You have a hard road before you, my boy, for the gang need a firm hand, and —"

"And you don't feel sure that mine answers the description," said Caldwell, smiling.

"Well, yes, that's about it," returned Franklin, relieved at being so well understood. "You see, we can't employ the kind of men we'd like, but must take what we can get, and they're a pretty wild set. Ingalls could whip any of them, and would do it, too, without much pressing, and did not get along very well at that; but as for you —"

"As for me, I cannot whip them, and I would not," again supplemented Caldwell, still smiling. "I don't believe in that kind of management, but I do believe that I can manage those men. Although I expect more or less trouble at first, I shall come out all right in the end."

"I hope so."

"I know so."

But in spite of his confidence, Ransom could not help feeling that he was like a very inexperienced tamer just going into a cage of extremely unruly animals, who were much more likely to eat their trainer than to obey him.

In some ways, things began better than he had expected. The men soon found that he understood his business; and this was one great point gained. They also perceived that he considered their comfort as much as he could; and this was another. Then, too, he was plainly not afraid of them; and this was a third.

But though his ability prevented them from

Digitized by Google

criticising his orders, and his kindness kept them in reasonably good-humor, while his disregard for their hostility was not without its effect, they really obeyed rather from the lack of any reason to the contrary, than because they felt compelled to obey. In short, he was not yet their master.

"Good enough little fellow," said Hoxie, summing up the collective opinion, "and smart in his way, but he's got no *zip* in him." By which he meant that Ransom was deficient in pluck and energy of the rugged, danger-defying kind.

Ransom happened to overhear this judgment, and he meditated over it thoughtfully. "Perhaps that's true," said he to himself. "I'm sure I don't know." He did not know; for no one ever does until he is tried.

One of the most important duties of the assistant engineer was the inspection of the tunnel twice a year to ascertain the condition of the masonry, and repair any damage which might have been caused by the immense friction of the water rushing through it night and day for months.

It was a long, disagreeable, much dreaded task; and when the men, some carrying lights, others tools and materials for the work, went down one by one through the narrow man-hole into the black, dripping tunnel, they were all serious and not a few reluctant. Of course the gates had been closed, and the water shut off to enable the party to make their explorations.

"We shall be all day and a part of the evening, Matthews," said Ransom to the man in charge at the dam, "but you may turn it on at eleven o'clock. You understand, don't you? No mistake on that point, you know."

"Oh, I understand," said Matthews. "Eleven o'clock. All right, sir."

The last man was down. It was as if they had suddenly been plunged a thousand feet deep into some mine, so remote seemed the bright sunlight and fresh air they had left behind.

It was, in truth, a dismal place, a great tube of wet bricks, glistening in the unsteady flashes of the torches, filled with a chilly, dank atmosphere like that of a well, and multiplying every sound into complicated echoes reverberating from wall to wall, and from roof to floor.

The men drew close together within the circle of the lights, and were silent. Ransom walked ahead, sharply scanning every inch of surface as he went, until some defect was found, and then, instructing the men what to do, he stood watching the work. The repairs completed, the little procession moved on.

Time went by thus monotonously till it seemed that a whole day must have passed since they had taken leave of the sky; and, indeed, they had been in the tunnel several hours.

The men were now better accustomed to the gloom in which they worked, but nevertheless were far from being in good spirits, no matter for wonder when one remembers that, far up the long cavern, thousands of tons of water were pressing against the gates.

Suppose those gates should break! One roaring gush down the great pipe, and they would be swept away and drowned like insects.

This thought was constantly in the mind of every one of the party, although none spoke of it. Even big Mart Hoxie had once or twice started nervously and turned to look back, as if he expected to see the black front of the descending flood rumbling down upon them.

An unusually bad place delayed them for some time. All the men were occupied upon it, grouped together against the wall, and working quickly in order to finish as soon as might be.

But Ransom seemed strangely negligent of his superintendence. He stood apart, gazing at a little stream which ran down the tunnel, made up of the drainage from its emptying crevices. Several times he sounded it, and measured its width with the long stick he carried.

"Hurry, men," said he, at last. "We've some distance to go yet, and there may be more work ahead."

Some minutes passed. He sounded and measured again. Then he drew out his watch and looked at it.

"Quick! Leave off your work. We must be moving!"

Something in his voice made the men instantly abandon the work and wheel about. One of them uttered a loud exclamation, and threw down his hammer.

"Pick that up again, and keep still!" said Ransom, quietly.

"But the water's raisin'! We'll all be —"

"Keep still, Mackey! Pick up that hammer!"

Mackey, a large, sullen-faced man, somewhat inclined to unruliness and turbulence, scowled at the engineer, who looked him steadily in the face. Finally he stooped and took up the tool.

The other men stood about, some looking at the rapidly swelling current, others casting wild looks down the tunnel, where, as they knew, the nearest man-hole lay, though distant many hundred feet. Several were beginning to sidle off in that direction, but Ransom placed himself before them.

"Listen, men," said he. "There's been a mistake at the dam. Matthews thought I meant eleven in the morning, instead of eleven at night; he's a little deaf, and he's letting on the water. In a few minutes it will be up to our waists, in a few minutes more, up to our necks. But we have time to reach No. 13 man-hole before the stream gets too strong, if you do as I tell you. But if you don't, every one of us will be drowned."

"Oh, we'll be drowned anyway!" moaned two or three. "We'll never walk the top of the ground again!"

"Every man for himself!" shouted another. It was Mackey, who was shouldering his way through the crowd, to make his escape. He must be stopped at all risks, for others were preparing to imitate him, and a panic would certainly follow.

"Hoxie!" called the engineer, in a sharp tone that the men had never heard. "Keep that man back!"

The giant, obeying instantly, put two immense hands on Mackey's shoulders, crushed him down on his knees, and held him there.

"Steady, now," continued Ransom, calmly, "There are twenty-one of you. Hoxie, come forward here with me. The rest form two ranks across the tunnel, and lock arms."

The party did as they were commanded, without delay or demur. Like all men in desperate situations, they yielded to the only one among them who had the brain to conceive a plan of escape, and the strength of will to carry it out. From that moment the question of mutiny was settled.

The water reached their knees by this time, and its force began to be strongly felt.

"Forward," said Ransom. "Keep step and a straight line. I'll set the pace. Don't crowd."

The two ranks tramped along at a rapid walk, following their young leader, who looked like a child beside Hoxie's towering shape, and yet was his superior, and the superior of every man there in the intelligent courage which could alone save their lives.

They all knew it. Already they were in better heart, feeling the support of one another's bodies, and the moral strength that comes from order and a definite purpose.

"Hoxie," said Ransom, in a whisper, "you and I must see this thing through. The pinch will come when we get to the hole, for only one can go up at a time, and the last men will have a hard pull of it."

"Yes, sir," answered Hoxie.

"They will have to help the others, and they may be drowned in doing it."

"Yes, sir."

"I'm one, of course. Will you be the other?"

"Yes, sir."

Ransom shook his hand without saying more.

The stream kept rising, and hissed over the smooth floor with continually increasing power. The men marched on, crouching and leaning backward against the current which swirled around their hips. Occasionally one of the lightest staggered; but his neighbors were able to pull him up again.

They had gone on in this way for some time, when a cloudy, gray light came into view far ahead, daylight streaming through the open man-hole they were aiming for, and a cheer went up from the struggling procession. It was but a faint one, however, for breath and strength were both failing under the incessant effort of walking in the deep water, and resisting its swift rush.

In perfect silence they splashed toward the light. They were submerged to their waists, now, and the ranks, no longer straight, but curving and irregular, were hardly maintained. Occasionally some man fell and was dragged to his feet.

"Halt!" shouted Ransom.

They stopped, at the foot of the iron ladder which led up through the round opening, down which came a cylinder of radiance which dimmed the yellow flicker of the torches. It was but a few steps to life and safety, and every man thought how easily he, if alone, might make them; yet all remained where they were.

"Nobly done, men," said Ransom. "Do as I tell you, and we'll all be saved. But, if you lose your wits, not a quarter of us will get up that ladder."

By his directions the first rank formed across the tunnel, while the second rank, in single file, pressing closely together, began ascending the ladder, one by one. After four or five had gone, the others could not keep their feet, and were swept down against the first rank, which held them by its united weight.

"Go in there, Hoxie, and help them up," said Ransom.

Hoxie, clinging to the foot of the ladder with the bend of his arm, seized man after man by the collar, hauling and lifting them, half under water, half out, until they could reach the rounds themselves.

Finally, only the one rank remained, fighting with the breast-high current to reach the position to which Ransom directed them—above the ladder, in a line up and down the aqueduct instead of across it, beginning at the upper end with Hoxie, the engineer next, and so on down to the ladder, which the last man of the eleven could just touch.

"Let go, Dolan!" sounded Ransom's voice, not so strong or ringing as it had been.

The last man slipped his arm from the one above him, clutched the ladder, and fighting desperately with the torrent which bore him down, succeeded in pulling himself out and began climbing. The others moved down a pace. They were so much the weaker for his safety—some scores of pounds of resistance were gone.

"Connor!"

Another man safe—another hundred-odd pounds lost to the help of the others. So it went on till but three men, grasping one another in a little group, were left. They could just keep their feet, and that was all.

"Let go, Jim!"

"But it's the death of you and the boss, Hoxie, if I do," protested Mackey, somehow changed from coward to hero during the long battle. "It's murdering you both!"

"It aint murdering me," said Hoxie, gruffly. "I can make out. But I can't save the boss alone, and if he don't get out, I don't. He's too light to help himself, and he's nearly gone, besides, Jim."

In fact, Ransom was almost completely exhausted.

"There are two of us for the job," answered Mackey, simply.

Taking Ransom between them, and exerting every muscle in their weakened bodies, the two worked their way toward the ladder luckily gained it at the very moment that the flood carried them off their feet, and after a confused, blind scramble, somehow succeeded in thrusting the young engineer into the hands of the men waiting at the top.

Then Hoxie, dragging Mackey after him by main force, labored through the aperture, and all were saved.

"Hurrah for the boss!" roared the twenty, waving their dripping caps.

"Yes, hurrah for the boss!" repeated big Hoxie, looking tenderly at the slender young fellow, lying white and panting against Connor's broad chest. "He's the best man of us all, and his brains and pluck are worth our muscle forty times over. Now let me hear somebody say different!"

But no one did "say different," for no one thought so. There would never be any doubt about that again.

MANLEY H. PIKE.

For the Companion.

THE BOYS OF MEXICO.

On the highlands of Mexico, where most of the people of that country live, and the largest cities are, no such resources exist for out-of-door amusement for boys as there are in the United States. There are few fish to catch, few ponds or streams in which to row or sail a boat or swim. The large lakes are far apart, while small ponds are scarce. The streams are many miles apart, very swift and often muddy; and sometimes all the water is taken out of them to water the fields.

In some of the rivers are found catfish and suckers, both much larger than those of the eastern part of the United States, and a few small sunfish, shiners and minnows. But in most of them no fish are found that are worth catching; and some of the prettiest brooks, whose foamy waters tumble clear and cold down the dark, rocky glens of the higher mountains, have never contained a trout within the memory of man.

Of course there is no skating and no coasting. On the great mountains like Popocatapetl and Orizaba there is deep snow all the year, and in winter it is cold enough for thick ice; but few of the boys ever climb so high, and thousands live and die in sight of everlasting snow without ever touching it.

Except in the high mountains, there is little timber on the greater part of the highlands of Mexico. There are few groves to roam, few nuts to gather, few squirrels to hunt. One may wander long in search of a shady picnic ground, and even trees large enough to hang a good swing from are none too plenty. Nearly all the low mountains and hills are rocky, and bare of almost everything but low bushes and cactus.

Along the streams there is a little timber, and it grows well enough in most places when planted, but upon the great plains there is little natural vegetation but cactus and low bushes or scrubby mesquite or pepper-trees.

Nearly all the brush is well armed with thorns of all degrees of sharpness; hence there is little pleasure in a stroll beyond the city pavement, and the city boy does not look forward to spending his summer vacation in the country with the same pleasure that the American boy has.

But the Mexican boy has plenty of play, though he cares little for hoops or balls, tops, kites or marbles. Unless he is unusually poor, he has a horse and saddle of his own, especially if he lives in the country; and no matter how poor he may be, he either has a donkey, or can borrow one in five minutes.

He often learns to ride when he is so small that he has to climb up the foreleg of the horse, pull himself up by his mane, swing one leg over the neck of the horse, and then slide down on its back. He soon learns to reach down from the saddle, and pick up things from the ground while the horse is in motion.

One day, starting out to shoot ducks in the State of Durango, I was followed by a native boy about seven years old on horseback, who went to pick up the game.

It was almost as much sport to see him get the ducks, as it was to shoot them. Through mud, water, brush, and among rocks he rode at a gallop with about equal ease, always reaching down from the saddle to pick up a duck, and coming back with it like the wind.

Sometimes, when the water was very deep he made his horse swim out to the duck; and if the mud were too deep along the edge of the pond he threw his lasso over the duck out in the water, and pulled it in to where he could reach it without getting his horse fast in the mud.

Learning to ride so early, and spending much of his time on the horse, the Mexican boy becomes a wonderful rider. He would not make a very graceful appearance in Central Park in New York, but there is no monkey in the museum there that can cling to a prancing horse more firmly than he can. And yet generally he rides without clinging at all. He does not press the horse with his knees or legs, but maintains his position simply by keeping his balance.

The most common plaything of the boy of Mexico, and the one he enjoys above all else, is the lasso or *riata*. It takes the place of pea-shooters, popguns, slings, bows and arrows, and nearly all else but the horse, and is a plaything of which he seldom tires.

He begins to throw his mother's clothes-line as soon as he is able to make a noose in the end of it and coil it. With this he practises until he can throw it quite easily over a post, or the head of his younger brother. As soon as he begins to tire of this, for the reason that it does not show enough skill, he tries to catch the domestic animals as they run. To do this well requires a great deal of practice; but at last he becomes so skilful that he can cast the noose over any foot of an animal in full run, and soon afterward learns to do the same from the back of a horse while in full gallop.

Most of his early practice is upon the dog or cat, or some member of the family, or upon the goat or pig in the yard. Very soon the dogs and donkeys in the street begin to suffer; but when donkeys are scarce, and the dogs have all taken to their holes, the boys practise upon one another, taking turns in running past their comrades, and trying in all possible ways to avoid the noose with their feet.

Many of the dogs in Mexico have been lassoed so often, that they will run for cover at the sight of a rope in a boy's hands; while others have become so hardened that they will stand and watch the rope with cool indifference, and spoil the boy's fun by not running at all.

This is a harmless amusement, for the rope is so light that it does not hurt, and animals learn to stop the moment the rope is fast around them. It is an amusement that might well be practised, under proper guidance, by boys in our own country; for the ability to coil a rope, and cast a noose over an object forty feet away in less than half a minute is an accomplishment that may be useful in many ways before one is done with this world.

Mexican children are very seldom rude or saucy. They are taught to be polite under all circumstances, and to all people. Some parents would rather have their boy be almost anything else than a *grosero* or rude person. For this reason one hears little quarrelling or rough talk among children playing, and sees hardly any fighting or bullying of little boys by larger ones.

For the same reason Mexican boys are not as mischievous in many ways as the children of some other countries. The glass would stay for years in the windows of an empty house in Mexico, and one is never in danger of being tripped by a string stretched across the pavement.

Many of the children brought up away from the cities in Mexico never go to school, and never learn to read or write. On the great farms or "haciendas," thousands of children are born, grow old and die without seeing or knowing anything of the great outside world. Some of these farms are larger than certain whole counties in the United States, and some of them have hundreds of laborers, all of whom, from father to son, are born, live and die on the same farm.

The boys in such a place begin to work when very young, generally herding cattle on horseback, and seem to enjoy life as much as any boys.

But in every town of good size there are public schools, as with us. These are well attended, though most of the rich Mexicans send their children to the schools of the City of Mexico or to foreign countries, or have private teachers for them; and to finish their education, they are often sent to Europe or the United States. The great majority are left at home, however, and the schools are well filled.

A public school in Mexico sounds like a large beehive. During one-half the day the children all study aloud, each one trying to make as much noise as possible. The rivalry thus stirred up is relied upon to make each one look at his book and learn something, whether he wants to or not.

The young children generally are quite as bright as those of the United States, and many a little Indian boy whose father can give him nothing to eat but plain cakes of corn or wheat with a few beans and peppers can read, write and spell as well as the boys of our own country.

One of the most interesting things to a strange boy in Mexico is the regiment of the School of Correction at the City of Mexico. This is composed of nearly a thousand naughty boys who, instead of being sent to jail or allowed to run the streets, are sent to school and trained to be soldiers.

They have a full field uniform with little knapsacks and little rifles, and a brass band of some twenty pieces, which plays pretty good music, although none of the players are over fourteen years old, and few of them over twelve.

The regiment is divided into companies according to the size of the boys, the largest being made up of boys from twelve to fourteen, and the smallest of boys from seven to eight.

All the officers except the colonel and the leader of the band are small boys, and some of the officers are not more than ten years old. Besides these there is a battalion of boys too small to carry arms. These, too, are all in uniform, and have a band of little buglers.

Every week or two all these little soldiers have a parade in the streets in full dress, when they go through their drill, marching and countermarching, and making all the military movements, both private soldiers and officers looking as earnest and proud as those of an army just returned from victory.

T. S. VAN DYKE.

For the Companion.

FOOTSTOOL WITH WASHABLE COVER.

From strong cotton cloth cut two round pieces each thirteen inches in diameter.

Sew a strip of the goods nine inches wide around one of these, and fill the bag as full as possible with excelsior, or anything that will answer the purpose. Sew the remaining round of cloth over the top (Fig. 1), and the footstool will be ready for the cover, which may be made of blue denim couched in decorative design with heavy soft white cord, or of common crash outlined with the heaviest turkey red cotton.

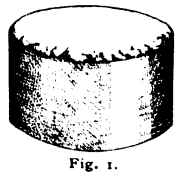


Fig. 1.

To make the cover, cut a circular piece of the denim thirteen inches in diameter, and sew on this a strip twenty inches wide, which has previously been hemmed on the upper edge.

Place the cover on the stool, and with strong doubled thread gather it up in the centre on the top (Fig. 2), leaving a frill for a finish.

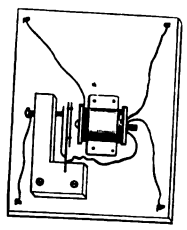
Fig. 2.

The cover can readily be taken off, and laundered when it becomes soiled. If a casing for a drawstring be made at base of frill, then it may be drawn up like a shopping-bag, and the cord tied in a bow with small tassels on the ends would enhance the appearance of the cover.

White Bolton sheeting embroidered with heavy yellow wash linen floss in different shades would

Digitized by Google

make a dainty and serviceable cover, as it could be laundered without injury; or any combination of colors or materials that will harmonize with the furnishings of the room can be used.



For the Companion.

AN INDUCTION COIL.

In rheumatism, neuralgia and nervous diseases, electricity often is of great benefit. If it does not effect a cure, it may still render important service in alleviating the sufferings of the patient. The electricity employed is what is termed induced electricity, and, to be effective, must be supplied in a series of rapid shocks.

Instruments which can be used for this purpose are, as a rule, quite expensive; but the amateur may easily construct one for himself. The instrument is but a slight modification of an electric bell, which was described in *The Companion* a few months ago.

Around a round stick, three-eighths of an inch in diameter, wind two or three thicknesses of paper, sticking them together with flour paste. After they have been dried, remove the hollow paper cylinder, previously cutting it to a length of two and a half inches. In one end of this fasten, by means of glue or sealing-wax, a piece of three-eighths round, soft iron, half an inch long, allowing an eighth of an inch to project. Then attach at each end a button of pasteboard an inch and a quarter in diameter.

On this paper spool wind four layers of silk insulated No. 22 copper wire, connecting the ends as shown in the cut, and as was done in the case of the electric bell. Outside of this coil, and not connected with it, wind a large number of layers of the finest silk-covered copper wire that you can obtain; No. 34 would be the proper size. Fasten the coil, thus wound, to a base, by means of a strap of tin plate. Connect the two ends of the fine wire with two binding-posts.

Cut a number of straight pieces of No. 16 iron wire, two and a half inches long. Bind them together into a bundle having a diameter a little less than three-eighths of an inch, and so that it may be easily slipped in and out of the paper cylinder.

After the coil has been fastened to the base, place on the side of the end containing the solid piece of iron an interrupter the same as on the electric bell. This consists of an L-shaped piece of wood, in a slit in which is inserted the bent end of a piece of spring brass which has been bent back upon itself.

On the end of the spring which is next to the coil is bound by fine wire a piece of soft iron, an eighth of an inch thick by one and a half long. The other end of the spring rests against the point of a brass screw, which passes through the longer arm of the L.

One end of the battery is connected with this brass screw, and the other end goes to one end of the inside winding of the coil.

The brass spring is then connected with the other end of the inside coil. The battery causes the spring to vibrate, which in turn opens and closes the main circuit. Each time that it vibrates it produces an induced current in the outside coil of fine wire, which is led to the body of the patient. The strength of this current can be regulated by pushing the bundle of iron wires in or out of the hole in the centre.

Electrodes, with which to apply the electricity to different parts of the body, may be made by attaching small sponges to a round wooden handle. These can be kept in place by a few turns of bare copper wire, leaving one end of wire long enough to attach to the binding-posts.

GOOD ADVICE.

That there may be more than one interpretation to passages of Scripture which each reader considers quite simple has been demonstrated again and again.

A little pupil in an English girls' school, hearing the story of Joseph for the first time, took a decidedly original view of Joseph's words to his brethren. It is easy to see how unquestionable the logic of her reading must have seemed to the small commentator.

A London school-mistress had been talking to her first-class girls about that pathetic portion of the closing chapters of Genesis which deals with the reconciliation of Joseph to his conscience-stricken brethren.

After the lesson, by means of "question and answer," she elicited from the girls how Joseph "could not refrain himself" in the presence of his brethren, but wept aloud before them; how he cried, "I am Joseph. Doth my father yet live?" how he told them that they must return to Canaan, and straightway bring back the aged patriarch, and, finally, how the great wagons were brought out for the journey.

"And now," continued the mistress, "what did kind Joseph give his brothers before they started?"

Of course she expected the reply, "Provisions and changes of raiment." However, this was not the answer she received.

"Yes, you may tell me," she said, pointing to one of the girls.

"Some good advice," responded the pupil without hesitation.

"What do you mean?" inquired the puzzled teacher.

"Why, madam," replied the little girl, "Joseph, knowing that his brothers were not accustomed to the use of wagons, thoughtfully said to them, 'See that ye fall not out by the way!'"

DONALD KENNEDY Of Roxbury, Mass., says:

I have kept a Scrap Book for a good many years of letters received from patients; some are long, too long to publish; some are short, short and good. Rainy days I sit down and read them, and have learned a good deal about the human body from some poor, sickly woman or over-strained man. Here is one of them. I call it a good letter:

TRENTON, TEXAS, Sept. 28, 1886.

"To Kennedy of the Medical Discovery, Roxbury, Mass. I am so proud of my recovery as to express my feelings in thanks to you. The RHEUMATISM has made me four-legged for six years. At last I have traded off two of them to Bell—Druggist—for four bottles Kennedy's Discovery. I am yours, gratefully and unsolicited, J. B. IVY."

VOSE & SONS PIANOS ESTABLISHED IN 1851. 26000 SOLD AND IN USE. They combine ELEGANCE, DURABILITY, and MODERATE PRICES. Among the many other IMPROVEMENTS which they contain, are the PATENT REPEATING ACTION, producing a touch as delicate as that of a Concert Grand Piano; the CAPO D'ASTRO BAR, which sustains that beautiful singing quality of tone, so wanting in most Upright Pianos; the MOUSE PROOF PEDAL, which is an absolute protection against mice getting into pianos and making havoc with the felts. SCALING THE HEIGHTS.

It takes a small brother to inform the world of a big brother's accomplishments, says a contributor to *Harper's Magazine.*

Two boys were bragging of the respective merits of their older brothers, when one was overheard to say:

"My brother's doin' a big business. He makes ten dollars a week by sittin' at a big desk and doin' sums."

"Poh!" returned the other, scornfully; "my brother writes poetry. He's had two half-calf books printed already."

JUST LIKE HIM.

The features of a pug dog are of an irregular cast, and in themselves considered, are hardly to be called handsome.

A young gentleman gave his sweetheart a pug dog as a birthday present, says the Philadelphia *Times*. It was of the purest blood, with its nose burned off particularly short.

The grateful recipient was profuse with her acknowledgments.

"Oh, thank you, James!" she said; "thank you! You are so kind! It's just like you!"

A HYPOCRITE.

Hypocrisy is always the pretence of other people —not our own. Witness this little dialogue:

"I despise a hypocrite," says Boggs.

"So do I," says Cloggs. "Now take Knoggs, for example; he's the biggest hypocrite on earth. I despise that man."

"But you appear to be his best friend."

"Oh yes; I try to appear friendly toward him. It pays better in the end."—*Brooklyn Life.*

AN Illinois newspaper wickedly invents the story that the Massachusetts State Board of Health has recommended that "every ship sailing upon the high seas should be well supplied with chewing-gum, so that in case of shipwreck the unfortunate passengers may have something with which to beguile the weary hours."

W. L. DOUGLAS

For GENTLEMEN.

$3.00 Is made in fine calf, seamless, and laced waterproof grain, and its excellence and wearing qualities cannot be better shown than by the recommendation of wearers of **250,077** pairs in 1890.

$5.00 Genuine hand-sewed. An elegant and stylish dress or street shoe which commends itself. This shoe will give equal satisfaction to those costing much more, as one trial will convince you.

$4.00 Hand-sewed welt. This shoe cannot be duplicated in style and durability for this price. Satisfy yourself on this point by comparison with other makes of shoes.

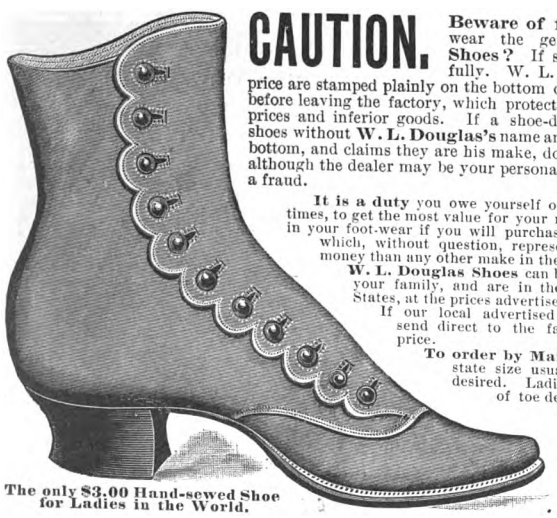
$3.50 Goodyear welt. You can scarcely distinguish this shoe from the best hand-sewed goods. Easy, stylish, and durable, it has become the standard dress shoe at a popular price.

$3.50 Police and Farmer's Shoe is especially adapted for outdoor work. For policemen, farmers, letter-carriers, railroad men, etc., it cannot fail to please and give the best satisfaction.

$2.50 $2.25 and $2.00 for workingmen are all well worth more than the price asked. They are specially prepared to meet the purses of all desiring a first-class shoe. Warranted not to rip.

BOYS $2.00 and $1.75 School Shoes are made of the best material, no shoddy, but leather throughout. They will not rip, and will stand more hard usage than any other shoe sold at this price. **74,282** pairs sold in 1890.

$3.00 SHOE



For LADIES.

$3.00 Is a hand-sewed shoe, and the only hand-sewed shoe sold and warranted at this price. It is made of the best Dongola, will wear well and keep its shape; no shoddy or paper used in any part of it, and is of solid leather throughout. Made in the following styles: **"Opera," "Common Sense."** Sizes, 2 to 7, including half-sizes. C, D, E, EE widths.

$2.50 Is a new departure, and promises to become a very popular-priced shoe. It is made of the best bright Dongola on stylish lasts, and finished in the best possible manner. Made in the following styles: **"Common Sense;" "Philadelphia Toe"** (new); **"Opera."** Sizes, 2½ to 7, including half-sizes. D, E, EE widths.

$2.00 Is made in both bright Dongola and Pebble Goat, in a most finished manner, thus giving a fashionable and durable shoe at a moderate price. They are warranted similar to the other lines. Made in the following styles: **"Common Sense;" "Opera."** Sizes, 1 to 7, including half-sizes. C, D, E, EE widths.

$1.75 FOR MISSES, made expressly to meet a long-felt want for a shoe combining style with the hygienic principles so necessary in the footwear of misses and young ladies. Styles, **"Spring Heel;" "Regular Heel."** Sizes, 11 to 2, including half-sizes. D width.

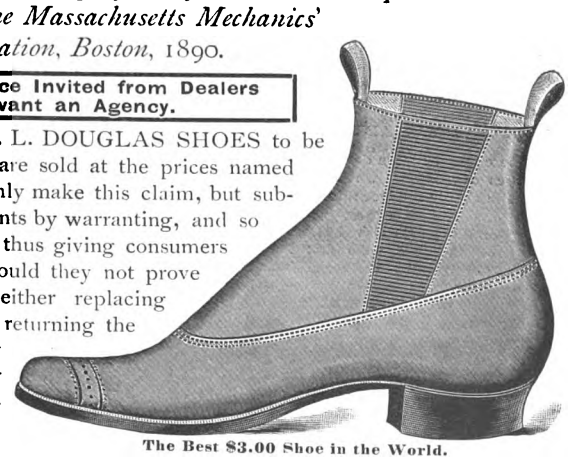
The only $3.00 Hand-sewed Shoe for Ladies in the World.

CAUTION. **Beware of fraud.** Do you want to wear the genuine **W. L. Douglas Shoes?** If so, read this caution carefully. W. L. Douglas's name and the price are stamped plainly on the bottom of all his advertised shoes before leaving the factory, which protects the wearer against high prices and inferior goods. If a shoe-dealer attempts to sell you shoes without **W. L. Douglas's** name and the price stamped on the bottom, and claims they are his make, do not be deceived thereby, although the dealer may be your personal friend, put him down as a fraud.

It is a duty you owe yourself or family, during these hard times, to get the most value for your money. You can economize in your foot-wear if you will purchase **W. L. Douglas Shoes,** which, without question, represent a greater value for the money than any other make in the world.

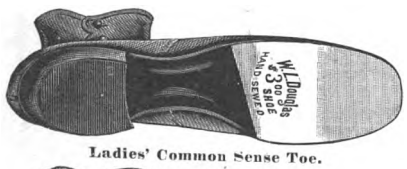
W. L. Douglas Shoes can be worn by every member of your family, and are in the reach of all in the United States, at the prices advertised above.

If our local advertised agents cannot supply you send direct to the factory, enclosing advertised price.



To order by Mail, Gentlemen and Boys will state size usually worn, style and width desired. Ladies will please give the style of toe desired, size and width usually worn, and if a snug or loose fit is preferred. For Misses state size and kind of heel. Address,

W. L. DOUGLAS,
Brockton, Mass.



W. L. Douglas $3.00 Shoe was awarded the medal for superior quality of material and proficiency in workmanship over all other shoe exhibits, by the Massachusetts Mechanics' Charitable Association, Boston, 1890.

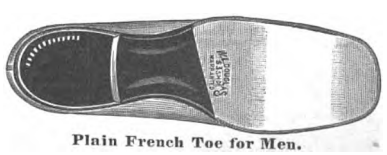
Correspondence Invited from Dealers who want an Agency.

We claim all W. L. DOUGLAS SHOES to be the Best made that are sold at the prices named for each. We not only make this claim, but substantiate our statements by warranting, and so stamping every pair, thus giving consumers the fullest redress should they not prove as represented, by either replacing with a new pair or returning the amount paid, if any imperfections occur through fault of manufacturing.

The Best $3.00 Shoe in the World.

Ladies' Common Sense Toe.

Ladies' Philadelphia Toe.



London Cap Toe for Men.

Ladies' Opera Toe.

Narrow London Cap Toe for Men.

Plain French Toe for Men.

These cuts show the most popular styles of lasts of both Gentlemen's and Ladies' Shoes — and no matter what style you select we guarantee a perfect fit.

KENT HAMPDEN.

IN SEVEN CHAPTERS.—CHAPTER V.

SEEKING A TRACE.

One of the robbers who had pounced upon Nero was at his horse's head, and the other tried to drag the little peddler out of the wagon; but Nero clung to the seat with one arm, while with the other he dealt heavy blows with his loaded whip upon the man's head and shoulders.

The highwayman had just drawn a knife from his belt, when the boys rode down the hill, yelling wildly. The man hesitated.

"Fire on them!" shouted Nero.

The rifles blazed at the same instant, but both the boys aimed over the heads of the robbers.

"It's easy enough, you see, to shoot at a bear or snake," Tom explained afterward to the Wild Beast Slayers, "but a man is a different matter. Something inside of me knocked up my arm as I pulled the trigger."

The men found the noise and firing together more than their courage could face, and hastily disappeared into the swamp. Nero sent a shot after them.

"Hi, yi!" he shouted, derisively, dancing on the seat of the wagon. "You're no highwaymen! You're nothing but miserable sneaks, trying to rob a poor cripple!" Then he scrambled down, panting and puffing, and hugged and patted his horse.

"Well done, Billy! You stood like a man! We settled them! Did you see me whack that fellow, Billy?

"I beg your pardon, boys," he said, with a sudden change of voice. "Billy and I are old companions, and when anything uncommon happens, if I don't speak to him first about it, he feels it. He has the feelings of a gentleman, sir. Most horses have. Well, shall we go on?"

The red and tiger-striped wagon soon was rumbling up the hill, with Tom and Kent on each side as guard. As they reached the top of the hill a bullet *pinged* past their heads. The boys stopped, but Nero urged them on.

"It's those miserable bullies! Don't let them see we're afeard of them!"

When they were safe on the other side, Nero said, "Gentlemen, now that those fellows can't hear, I'll confess that I owe you my life. If you had not come up, it would have been all over with me. Nero Fife will not forget it!"

They rode in silence for a little way. "There's a good inn here," said the peddler. "Let us stop until morning."

The boys gladly dismounted, and all were soon seated before a meal of fried chickens and waffles at a snug little table in a separate room. The dwarf turned the key in the door.

"We will say nothing of our adventure," he said, "until I reach Philadelphia. Here is what the rogues wanted." He unstrapped a belt from his waist. "I have over a thousand dollars here; I had it changed into bills of a hundred each, to be light of carriage."

As he smoothed out the notes, Kent took up some of them. "These bills are all marked with a little red cross," he said. "Do you always mark your money?"

Nero examined the notes with a perplexed look.

"No," he said, "I did not mark them." He placed them one by one again in his belt. "Well, good-night, gentlemen! I won't forget that you saved my life to-day."

He left the room with a sweeping bow.

The boys slept soundly that night, and were up with the dawn. The morning was bright, the sky a pearly blue, hoar-frost glittering on every leaf and spear of grass.

"We shall find the clue to-day!" said Kent, as they trotted down the road before the wagon. "I'm going to take Nero into our secret, Tom. He's a true friend."

The peddler listened in silence to the story. "I heard something of this in Wheeling," he said, after a pause, "and I guessed your arrant as soon as I met you. Oh, Nero Fife has learned to keep his eyes open and his mouth shut in his business!"

There was another long silence. Then he said, "I'll help you in this matter if I can."

The road wound through beautiful valleys and low, rolling hills. Now it penetrated the forest, and now passed large farms, the soil of the fields showing rich and black beneath the light frost.

The dwellings were, for the most part, spacious houses of brick or of gray stone, already crusted over with brown and purple lichen. The old homesteads of the early settlers in Western Virginia and Pennsylvania were substantial and picturesque. Many of these great stone mansions, with their overhanging eaves and large apartments, still stand unaltered.

"Fire on them!" shouted Nero.

It was to one of these, near the Pennsylvania town of Washington, that Nero conducted the boys to find Mrs. Digby. She was a young widow, and managed a large estate and a swarming household of negroes, lately freed, and white bondmen, or ticket-of-leave men, redemptionists at that time and place.

They found Mrs. Digby a self-confident, comely little woman, wearing a kerchief of fine linen about her neck, and over her fair hair a cap of the same material.

"Lost the package?" she exclaimed, when she heard Kent's story. "Of course! I expected nothing else! I told him he would lose it. It swung in an oil-cloth case over one shoulder, in full view of everybody. It would have been an easy matter to substitute a bundle of paper for the notes while your father was asleep—and he slept every afternoon on the coach. But you say that the bundle substituted exactly resembled the one stolen?"

"Just exactly. Both were wrapped in brown paper, and tied with a red cord."

"Then," said Mrs. Digby, promptly, "the thief must have seen the bundle inside the oil-cloth case, and had time to prepare the substitute leisurely. Now the case was securely fastened; your father showed its contents to no one while I was in the coach. What he did afterward I cannot tell!"

She said this as if her opinion of Mr. Hampden's discretion was very low.

"Then," said Kent, rising, "there is no use for me to stay here longer. You can think of no clue?"

"None whatever," said Mrs. Digby, with decision. "It is useless for you to look for one. The money may have been taken any day, from the time your father left Wheeling until he arrived in Philadelphia. But you must not leave this house until after dinner. You have Doctor Nero with you? I see his wagon outside. A most worthy, honest man! I have bought of him for fifteen years. Go out, my boy, and tell him and your friend to come into the house."

"Thank you," he said. "We will stay, though I cannot afford to lose time. I must push on to Cumberland. I must find the thief!"

Kent was thoroughly disheartened; he had been balked at every step. Mr. Armitage was gone, Mrs. Digby had no clue, and more than all, it was apparent that she stated the exact truth when she described his father's carelessness. What could this minister at Cumberland tell him?

The more hopeless his search appeared, however, the more obstinately Kent was resolved to go on with it. His father might be careless, but he was innocent, and God would surely help him to prove his innocence.

Tom, meanwhile, made the acquaintance of Mrs. Digby's sons, and eagerly explored the house, the kitchen where the negroes were making large stores of pickles, the loom-room where some white maids were weaving table linen, and the parlor, the walls of which were covered with a paper which represented Robin Hood and his merry men chasing a stag, the hunters and prey almost life-size.

A horn was blown at noon for dinner. The meal was spread in a large room, the walls of which were panelled with black walnut, carefully painted white. The table was bountifully spread with chicken-pie, game, venison pudding, hot bread, vegetables, a thick soup and coffee, all served at once.

Besides the boys and Nero, there were two other guests, Methodist itinerant preachers. At that day there was always a welcome at every table for the minister, no matter what his creed. One of these visitors was an old, feeble man, who belonged in the neighborhood. The other, a small, dark, keen-looking man, whom Mrs. Digby addressed as Brother Kaimes, was a traveller, and, as Kent discovered from his conversation, was from Cumberland.

It required a good deal of courage in those days for a boy to speak in a company of elder people, and it was only when the meal was nearly over that Kent said, modestly addressing the preacher:

"I wish to go to Cumberland, sir, to find a minister of your denomination. Perhaps you can tell me if he is there. It is the Reverend Jabez Elkhart."

"Jabez Elkhart? No, my lad, you will not find him in Cumberland. In fact, you would have a long search to find Brother Elkhart anywhere just now. He started two weeks ago on a missionary tour with the great Lorenzo Dow through the wilderness of the Northwest, to be gone until spring."

Kent, who was raising his cup to his lips, set it down hastily. He felt as if he were choking.

"I told you it was a mad undertaking," said Mrs. Digby, as they rose from the table. "You had better take my advice, and return to Wheeling. Brother Kaimes goes there to-morrow. Content yourself here until then, and journey back in his company."

"I cannot go back to my father without good news," said Kent. "I don't know what to do!"

Mrs. Digby, looking at the boy's face, took his hand kindly in hers. "It must come right!" she said, soothingly. "Come aside here, and tell me what were your plans."

"I had no very clear plans," said Kent, feeling as if his whole expedition had been as mad as she thought it. "Nothing could be done at home to prove my father's innocence. He is ruined unless it is proved. His business will be destroyed; he is giving up every dollar he owns to repay the money—and—and there are other things —"

"What other things?" she said, gently.

"I hoped to be appointed to West Point, but the son of a suspected man has no chance. My mother thinks, too, that such a suspicion will be like a black cloud on my sister Carey's life."

"Your mother is right," Mrs. Digby said, authoritatively. She was touched, and suddenly became eager and zealous in Kent's cause. "Your father's innocence must be proved. You must trace the stolen money!" she exclaimed. "What did you purpose to do?"

"I intended to follow his route to Cumberland, making inquiries as I went. There were three persons from whom I hoped to get a clue: yourself —"

Mrs. Digby shook her head.

"Mr. Elkhart —"

"No hope there. Who was the third?"

"A blind man in Hardscrabble, who was in the coach the first day. But he is in Pittsburg."

"I know; Peter Armitage. He is a shrewd fellow; the loss of one sense has quickened all the others. But how could he help us? He left the coach before I did, and assuredly the bundle inside the case was not changed then. But if you think you would like to consult him, stay here to-night. He will be here to-morrow morning on his way home."

Kent's heart gave a throb. "I'd like to see him!" he said. "I somehow counted on that blind man more than on any one else!"

"Very like a boy!" said Mrs. Digby, laughing. "Go out now, to the other boys. They are riding their ponies in the field. You can do nothing for your father to-night. Go; ride with them and forget your troubles."

Tom jumped off his horse and ran to meet Kent as soon as he came on the field. Nero was perched on a fence, superintending their evolutions. Kent told them that he had decided to stay and consult the blind man. The dwarf's face took on its look of grizzly age as he pondered this in silence.

"You're right, my boy," he said, at last. "People that have lost their sight or hearing or speech have a wit that other people don't have; and if the blind man doesn't help you, I will. I'm going back to Wheeling with you!"

Tom and Kent exchanged looks of dismay. The great cancer and corn doctor was hardly an auxiliary that would help their cause at home.

"I'm afraid it will delay your journey," said Kent.

"What can you do to help Mr. Hampden, Nero?" asked Tom.

"I'll do the head-work for you. Nero Fife never leaves a debt unpaid, and I owe you my life, gentlemen. I'll stick close to you till you're out of this scrape!"

He began to whistle and dance, clapping his

Digitized by Google

hands on his knees to keep time. The farm-hands and negroes gathered about him, and he delightedly resumed the celebration of his own praises.

"No, gentlemen! Nero Fife is true to his friends! I follow the example of the great and good Roman that I'm named for! They tell me that once when he was leading a battle, and parched with his wounds, a soldier brought him some water. He poured it on the ground, saying, 'I'll not drink it unless I can go halves with my friends!' What d'ye think of that? That's my make-up exactly. Hurrah for the Emperor Nero!"

"Hurrah for Doctor Nero!" said Kent, laughing.

Tom, leading his horse back to the stable, encountered Mrs. Digby and the ministers, who had come out to look at some colts. As he came up, they were leaning over the fence, listening intently to some story which Brother Kaimes was telling.

Mrs. Digby's face was flushed with interest. "That is one of the most remarkable stories I ever heard! And the man has totally disappeared?"

"No. After sixteen years' absence, there was a report that he was seen in Cumberland a few weeks ago, inquiring in a secret way for the two women."

"You are in search of him now?"

"Yes; I make that one object of my journey."

"If you should find him, and justice should be done at last!" exclaimed Mrs. Digby. She drew aside to allow Tom to pass with his horse.

"By the way!" said Brother Kaimes, "our young friend here may be able to assist me in my search. The missing man is supposed to have gone into Western Virginia."

Tom paused, ready to be of use in unearthing this fugitive from justice of whom they spoke.

"He may," said the minister, in his deliberate way, "have gone to Wheeling. Do you know a man in your town of the name of Stoughton?"

"No, sir; no one of that name," said Tom, promptly. But as soon as the words were spoken, his countenance altered. He had heard Mr. Jarret's story of the advertisement for a missing man who, it was suspected, was Kent's father. The recollection came to Tom with a flash of alarm, but he controlled himself and stood attentive and silent.

"Stoughton," repeated the preacher. "Ralph Hampden Stoughton. A remarkably handsome man, with a pleasant smile and winning blue eyes. A gay, light-hearted fellow. I'm disappointed; I hoped to run him down in Wheeling."

"You'll never run him down by my aid!" muttered Tom, as he led his horse into a stall.

He sat down on the edge of a manger to think. His brain, never very cool, was in a whirl. Why were they in pursuit of Mr. Hampden? What crime had he committed that had induced him to change his name? He had been in Cumberland lately. What if, haunted by remorse for some sin of his youth, he had tried to atone for it with money? The package was lost then —"

"I'll not believe it!" said Tom, starting up. But he sat down again and slowly, unwillingly, drew out a note-book.

"The cave, September fourth, 1824. K. H."

"There can be no doubt. It *is* Kent's writing. Can father and son both alike be —?"

His face reddened with shame. He sat a long time in the dark stable, one minute doubtful, suspicious, miserable, while the next his heart would swell and throb with pride and zealous affection for Kent.

He rose at last. "I'll put an end to this! I'll show him the book and ask him what it means," he said. Holding the little volume open at the Wetzel cave entry, he crossed the stable.

"Hello! Tom, where are you?" shouted Kent's voice outside.

"Here! Coming!"

He thrust the book into his pocket. The peddler at the moment came into the stable to look after his horse.

"I never ate a meal in all the years Billy and I've been comrades without giving him his first," Nero said.

He talked to the horse precisely as if he were another Nero Fife. The boy was wretched with doubt and anxiety, and the peddler's homely face shone with honesty and kindness. Tom went to him and laid his hand on his arm.

"Nero, I want to ask you something. Suppose you had a friend you had known all your life. Suppose downright proof should be put before you—proof to your own eyes that he was a worthless scamp; what would you do?"

All the clown dropped from the dwarf as he listened. He had the dignity of age and reason as he answered, looking full into Tom's eyes:

"Just that thing has happened to me—about Billy. Billy and I have been companions for years. I know every thought in his mind, sir! I know his nature. I say he's of good blood, mild and game. He belongs to the horse-gentry, sir. But folks tell me he's of a low, ornary breed—they show me the signs of it in his build and coat and gait.

"But what do I care?" He put his arm about the horse, who whinnied and thrust his head down to be stroked. "I know it's a lie. I know Billy!"

"You're right!" said Tom. "I'll back my man, as you do your horse!"

Going to the house they found supper in progress—the table again heaped with bear-steak, venison, tea, coffee and several kinds of warm bread. Mr. Kaimes sat near their hostess.

"Do you think you will go on to Wheeling, Brother Kaimes," she asked, "since you seem not likely to find this man Stoughton there?"

"Yes; I shall go on in the morning. There may be a chance. Young Congdon may not know him. He is doubtless very poor."

Tom overheard this conversation, and looked uneasily at Kent. Should he warn him of this new, impending danger to his father? But what could Kent do? Tom decided to say nothing. But when the two boys went to sleep that night young Congdon tossed, restless and gloomy, on his bed half the night.

He had the note-book hidden under his pillow, but when his hand touched it he drew it back as though it had been a coal of fire. He fell asleep at last, and woke with a start, his brain full of the same wearisome doubt and pain.

It was a gray, wintry morning. The wind blew with threatening gusts, and a flurry of snow whitened the air. Kent was splashing at the ewer and basin, whistling and singing excitedly to himself. Tom lay watching him in silence, until Kent caught sight of him.

"Hello! Awake, old fellow? I'm up early. Mr. Armitage comes in the coach, and it will pass in a few minutes. What ails you, Tom? You were as dumb as a mole all night."

Tom sprang out of bed. "It's this that ails me!" He pulled out the note-book. "I can stand it no longer. Whose book is that?"

Kent, astonished, took the book. "It is mine. Where did you find it?"

"Look at that turned-down page!" urged Tom, breathlessly. "The writing!—It is not yours? Is it a forgery?"

Kent shot a keen glance at him over the book, then bent his head as if to examine the writing.

"Yes, it is mine," he said, quietly.

REBECCA HARDING DAVIS.

(To be continued.)

For the Companion.

AUNT MIRIAM'S DUCKS.

"I *do* wish people'd mind their own business," Aunt Miriam Yates was saying, as I stepped into her sitting-room one bright afternoon in May; and as she said it, her voice broke a little, and she lifted to her eyes an end of the stocking she was knitting, as if to wipe away a tear.

"Why, Aunt Miriam," I cried, "what's the mat—"

Quick as lightning the stocking dropped into her lap, and with snapping eyes she interrupted my question before it was finished:

"And I didn't make any exceptions when I said I wished people'd mind their own business; so you can close your eyes and mouth, Ruth Mabie! What do you see the matter?"

I have no doubt that my appearance justified this rather scathing rebuke, but as this was the first time in all my twelve years that I had seen Aunt Miriam weep, or otherwise display sorrowful emotion, I could not help feeling that there was some excuse, however slight, for my open-eyed and open-mouthed wonder.

Nor could I account for her curt treatment. She was usually the kindest of aunts. Her matchless pumpkin pies and delicious cookies were always at my disposal, and the occasions were very few when I had visited her without getting a choice slip of some kind of flower.

"Mrs. Perkins gave me two, Ruthie, so there's one for you," was the usual form of presentation on such occasions. The love of flowers, I think, was the chief bond of union between us.

Then, too, I could see, hanging empty on the kitchen wall, a little basket which I often found filled with big white and pale green ducks' eggs, to be handed to me as I was going. Altogether, my reception was so unlike that usually accorded me, that I was quite taken aback.

To hide my chagrin, and a trifling moisture which was rising to my own eyes, I stepped to the back door and looked out upon the flowers, and away to the little brook at the foot of the garden, where the ducks, a beautiful flock of seventeen, mostly white ones, made their headquarters.

Presently a voice which betrayed the change of heart that had taken place in Aunt Miriam's breast since she last spoke, inquired:

"Did your mother send you on any errand, Ruthie?"

"No, ma'am. I just came in on my way from school."

"Go get yourself some cookies, then; I'm narrowing this toe, and I don't want to lay it down till it's finished."

"No, thank you, Aunt Miriam, I'm not hungry. I'm going out to get some wistarias. I see they're opening. Then I'll go find the ducks; they must have dived under the cross fence and gone away; I don't see them down there."

"No, and you won't see 'em," she replied, in a tone of sullen melancholy. "There aren't any ducks to see."

I remembered, in time, to keep my eyes and mouth in their normal positions this time, but was very much surprised, for even her beloved flowers were not so dear to Aunt Miriam's heart as her ducks.

"Why, what's happened to them?" I asked.

"I've given 'em away," said she, going into the pantry as she spoke; and when she returned, after an absence that was very long, considering that her errand was simply to get a plate of cookies and some jam, she continued:

"I gave 'em away on Mrs. Wilson's account, Ruth. She's been finding fault ever so long about 'em. First it was that they climbed through the fence and ate up her grass; then, when I built a picket fence across the brook, she complained that they made such a noise every morning, just at daybreak, that she couldn't sleep.

"I acknowledge they did make some noise; but she was two doors away, and my next-door neighbors on both sides never complained a bit, even when I asked them if the ducks bothered them; and I know very well they never bothered me.

"And they just didn't trouble her, either, Ruth," she continued, with some vehemence. "It was nothing but spite. I complained when her puppy worried two of them to death when they were little, and she never could abide my ducks since. That's the long and the short of it."

"And you gave them away!"

"Yes, I gave them to Cousin Pheenie, in the country. She isn't any too well off, you know, and she'll appreciate them, and take good care of them. I tell you, Ruthie, I hated to do it. I thought a great deal of my ducks, but I can't live in a pitched battle all the time, and rather than do it I let 'em go."

The narrative saddened me, for I, too, was fond of the ducks. It could not well have been otherwise, for none but the stoniest heart could help responding to Aunt Miriam's accounts of their accomplishments, their virtues and their affectionate ways, and they really were remarkably intelligent, for ducks.

So the brook looked very lonely, and even their corn-pan, half-full as they had left it when last they "shovelled" from it, took on a pathetic look.

I could see a little line of paddling tracks in the earth of the garden, leading out toward the gate. At sight of it, I found it necessary to bring the corner of my apron to my eyes.

Everything was accounted for now — Aunt Miriam's vexation, and the empty egg-basket.

I cut my visit short without partaking of the cookies and jam.

"Ruth," Aunt Miriam called, as I was going away, "isn't this your examination week?"

"Yes, ma'am."

"Well, then, ask your mother to let you stay over night with me, part of the week at least, so you won't get all tuckered out walking."

I lived a mile and a half from school.

"That is," she added, "if you'd like to, of course." She knew perfectly well that it was a treat to me, but she liked to have me assure her of it, as I did promptly.

"Very well, then, bring your piece-work, and come as early as you can."

This on the morrow I took care to do, and four o'clock found us cosily seated at work, I at my delightful patchwork, and Aunt Miriam at her knitting. I had just got one point of my "rising sun" put together, and was lost in admiration of it, when in came Cousin Pheenie, with some excitement showing in her meek, pale face.

"Miriam," she said, "didn't you send me those ducks yesterday?"

"Didn't I? Why, of course I did. What do you mean, Pheenie?"

"Why, when I went out to feed 'em this morning, I couldn't find so much as a feather of them, so the only way I could account for it was, that possibly I might have dreamt it. I do have such real dreams, sometimes," she went on apologetically, seeing the look of amazement in Aunt Miriam's face.

"Dreamt it! No indeed, you didn't; I sent them out by your neighbor, Mr. Cowles. But where are they? Haven't you found them?" she cried, losing her logic in the excitement. "Did you hunt for them?"

"Yes, I've hunted everywhere, but it's no use. They must have been caught by muskrats."

"Muskrats!" said Aunt Miriam, in a scornful aside to me. "No, I guess muskrats didn't carry 'em off," she said, aloud. "They may have been stolen."

"Oh no, they haven't been stolen! There's nobody in the neighborhood mean enough to do that. I know my neighbors are honest."

"Well, well, my poor ducks!" said Aunt Miriam, in a quick, impatient way, while her fingers worked on her apron as if running a scale on a piano, a nervous trick she must have brought with her from girlhood, when she had "taken lessons," for I had never seen her play. Then, with an effort, she put the matter away, and invited her cousin to stay to tea. But Cousin Pheenie said she could not stay.

Not a word was said during the meal. Aunt Miriam showed no agitation, but I noticed a little red spot on each of her cheeks.

When the tea-things had been cleared away, and we were sitting again at our sewing, I ventured to return to the question.

"Why don't you think the rats took them, Aunt Miriam?" I asked.

"Why, child, do you suppose those ducks didn't know any better than to get themselves eaten up by muskrats? No danger of it! Now if she'd said weasels, it would be a different thing, for weasels are cute, there's no denying it. But muskrats! two-legged muskrats, I say."

She paused a moment, and went on. "But I wasn't going to insist on it to Pheenie. It would hurt her more if she really thought one of her neighbors was dishonest, than if she'd lost all the ducks in the country. She hasn't much feeling in the matter; she didn't raise them. But she has the most faith in human nature of anybody I ever saw. A good thing to have, I suppose, but if she had neighbors like some folks's, I'm afraid she wouldn't be so charitable."

I did not sleep very well that night. The little town was newly blessed with street-cars, which ran semi-occasionally, and always passed the house just as I was on the verge of sleep.

When they had stopped running for the night, a chorus of cats started up, punctuated twice during the night by the roar of a train, so that, altogether, the place was far less quiet than my own home, where only the bullfrog broke the silence of night in May.

At last I fell asleep, and seemed to have been sleeping about five minutes, although it must have been as many hours, when the bed began to rock violently, so that I was rolled from side to side.

Dreadfully frightened, I awoke to find Aunt Miriam shaking my shoulder, and calling softly:

"Ruthie, Ruthie—do you hear anything—did you hear that?" She spoke in an awe-struck whisper that chilled my blood, for burglars were the only thing I could think of, so I clung to her, and hid my head on her shoulder.

"Ruth Mabie, do wake up!" she cried, mistaking my actions for drowsiness. "There it is again."

Collecting my sleepy senses, I drew myself away from her and listened intently.

This time I heard it — an unmistakable soft "quack, quack," such as ducks, wild and tame, make in the morning at the first streak of light.

Aunt Miriam's brown eyes were looking in mine for encouragement before she permitted herself to hope. "It's the ducks, Aunt Miriam; it's your ducks," I said.

"I believe it is," she said, solemnly. "They've found their way home!"

We jumped out of bed, dressed hurriedly, and then ran out into the yard and through the tall, wet grass to the brook, where the most perfect picture of contentment I had ever seen presented itself to us.

Aunt Miriam's ducks, every one of the seventeen, were softly quacking, and taking turns, in the limited space of the "pond," in rising to their greatest possible height, and fanning the air with their beautiful wings—a performance which was kept up by each duck for nearly a minute.

When they espied their mistress, Mrs. Wilson must have wakened to a sense of her trials; for surely seventeen ducks never made such a noise before. Then I glanced at Aunt Miriam, and for the second time in two days—and twelve years—fancied I saw tears in her eyes.

"Ruth," she said to me, as she looked up defiantly at Mrs. Wilson's windows, which the sun was just reddening, "I shall never part with them again, come what may."

Then an unlooked for thing happened. Mrs. Wilson's door opened, and that lady came out, and approaching as near as the division fence would allow, beckoned to Aunt Miriam.

"Miss Yates," said she, "I see your ducks are back. Did they come home themselves?"

She had probably drawn her inference from our actions at the brook.

"Yes, ma'am, they did," answered Aunt Miriam, uncompromisingly.

"And are you going to send them away again?"

"No, ma'am, I'm not." Aunt Miriam's air was almost aggressive.

"Well, I'm glad of it," answered Mrs. Wilson. "I haven't felt so mean in a long time as I did night before last, when I saw those ducks bundled into a wagon and taken away, and I don't want to feel so again. Good morning."

She turned abruptly, and went into the house.

Aunt Miriam looked at me in a confused sort of way, and as we entered the kitchen, with the

Digitized by Google

corn-pan losing its contents from its careless slant on her arm, she turned to me and said:

"I'm afraid I'm a hard old woman, Ruthie. Faith in human nature isn't such a bad thing, after all!"

NELLIE E. C. SCOTT.

FUTURE AND PAST.

Let us model our spirit to chance and change,
Let us lesson our spirit to hope, and range
Through pleasures to come—through years unknown;
But never forget the time that's flown!

AT LOS VALLES GRANDES.

IN SIX CHAPTERS.—CHAP. V.

A Siege and an Ambuscade.

We watched long and anxiously the slowly rolling log as it came more plainly into view across the level space before our western door. Not a glimpse of the motive power could be obtained; but it ground and crushed its way along with ominous certainty, straight in our direction.

I turned over in my mind many projects for staying its progress, not one of which was practicable. At the rate the log was moving, we could hope for no assistance to reach us from the Valleys in season to save our lives. Just as I had come to this conclusion, the log stopped. I looked through my glass, and saw the cause.

"Sergeant," I exclaimed, "the log has struck a rock. Draw a bead on the log. Don't let a man jump over it to remove the stone!"

The Sergeant stood at the open door, the barrel of his rifle pressed against the right door-post, ready for a movement of the enemy above the log, which had, in fact, struck the only obstacle lying between it and our refuge—a loose fragment of sandstone. All the efforts of the men behind the log had no effect, except to swing the end farthest from the obstacle slightly ahead.

"There seems to be nothing for them to do but to remove the stone. Keep a sharp eye on the log, Sergeant."

I had hardly spoken when a sudden discharge of rifles ran irregularly along the length of the log, and under cover of the fire a stalwart warrior leaped over, seized the stone, and had lifted it nearly to the top, when Sergeant Cunningham's rifle spoke sharply.

The stone dropped on our side; the Indian fell forward, with his arms extended toward his friends, who pulled him over the log, and he was screened from our sight. The fire of the Navajos did us no harm.

The fire on the roof was replenished from time to time, and a vigilant watch was kept up.

At last the Sergeant, who was still at the open door, exclaimed, "Lieutenant, the stone is moving! It's dropping into the ground!"

I was at the moment looking out of the east window. By the time I reached the opposite window, there was no stone to be seen in front of the log.

"It's gone, and here comes the log! They must have dug under the log with their knives, and sunk the stone."

"Yes, sir, and they're safe to move that breastwork up to the cabin door and roast us out."

"If there were two or three more such stones in the way, Sergeant, the delay might serve us until help comes."

"Let's put 'em in the way, Lieutenant."

"What do you mean?"

"If you'll cover me with the two revolvers, I'll run out there and drop a couple of stones in the way."

"All right, Sergeant, and when you return I'll drop two more."

We went quickly to work to carry out our plan. The Sergeant once more replenished the fire, and then selected from the loose rubbish which had been torn from the top of the chimney two good-sized stones.

Removing his shoes, the Sergeant, with my assistance, raised two big stones to his breast, and stood in the doorway with them clasped firmly in his arms. I took the revolvers in my hands and whispered the word, and he started out at a rapid walk, setting his feet down carefully and without noise. He dropped the stones, one before the other, without attracting attention, and regained the cabin without a shot being fired on either side.

Now it was my turn. I made the same preparations the Sergeant had made, but, being a less muscular man than he, I chose stones of less weight. I felt that I must not be outdone by my brave comrade, so I went beyond the place where he dropped his last stone.

At that instant an Indian raised his head above the log and fired. The bullet struck the falling rock, and sent a shower of stinging splinters into my face. I turned and fled.

With the discharge of the Indian's rifle, Sergeant Cunningham opened a rapid fusillade with the revolvers, and successfully covered my retreat to the cabin; but we saw that our last chance at stone-dropping was past.

Several terribly long hours had crept past since we saw Vic turn the butte on her errand to the Valleys, and judging by the time it had taken the Navajos to bore a tunnel under their log and undermine the first trigging-stone, we estimated that two more hours must pass before the four obstructions we had placed in their way could be removed, unless they took some more speedy method.

It was quite nine miles to camp, and the dog could reach it easily in an hour. If she had arrived, help should by this time be fairly on the way; but if she had been killed by the besiegers before she reached the north end of the butte, or had been torn in pieces by wolves!

Should the log once reach our door, we could not hope to do more than make the price of our lives dear to the enemy.

While the Sergeant and I stood at the windows, speculating in no very hopeful vein over these probabilities, there came a scratch at the eastern door. As we stood startled by the unexpected sound, the scratch was repeated, accompanied by a whine which swelled into a low bark.

"Bless us, Lieutenant, it's Vic come back!" exclaimed the Sergeant, springing to the door and flinging it wide open.

In trotted Vic, and coming up to me, she dropped a stick at my feet bearing the words: "*In the collar as before.*"

It took some little time to secure Vic. She capered about the room, licked our hands and faces, jumped up to the noses of the horse and mule, and behaved crazily. We dared not leave the window, lest our watchful foes should have a chance to pick up the obstacles to the progress of their log.

But Vic came to me at last, and submitted her neck for inspection. I found in a little sack a letter which read as follows:

Camp at Los Valles Grandes,
November ——, 1863.

Lieutenant: Message received. Corporal Coffey and eight men leave here at 10.15 P. M.

Respectfully Yours,
James Mulligan,
Sergeant Co. "F," —th Infantry.

"Come here, little doggie!" said Sergeant Cunningham. "If we get out of this, the company shall pay for a new collar and a medal of honor for you."

"If that detail marches at the regulation gait of three miles an hour," I said, "it should be here by a quarter past one, and it now lacks a quarter of twelve."

I had no time even to think of the full extent of my gratitude to the dog.

"The men will do better than that, sir, if they keep on the road. The trouble will be in sticking to the trail. They have never been this way."

"I think the crossing of this and the hot springs trail cannot be far from here. Let's take a shot at that log once a minute from now on, and the noise may attract our friends."

We began firing at once, aiming at the under side of the log, where it touched the earth. I am confident that this sent some gravel into the eyes of the rollers, if it did them no other damage.

Two of the stones we had dropped were soon undermined and sunk, and the log had stopped at the third, less than a hundred yards away.

As it came on, Sergeant Cunningham, who had gone up the chimney to replenish the fire, said he could see the prostrate body of a warrior revealed beyond—good evidence that his first shot had been fatal. If the next two stones should be removed as rapidly as the others, we feared the Indians would reach us, unless the rescuing party prevented, at about half-past twelve.

The time, marked by our periodical shots at the log, dragged wearily on, the Indians slowly and surely approaching the cabin. Knowing nothing of the use to which we had put our dog, they looked upon us as sure prey, and I have no doubt made no haste in their approach, that they might torture us with visions of the horrible fate which they thought surely awaited us.

The third stone disappeared, and the log moved with a louder grating over the gravelly soil to the last obstacle, about thirty yards away, and paused.

"I believe, Lieutenant," said Cunningham, "I could hit those fellows' legs now from the top of the chimney."

"All right, Sergeant; go up and try it," I replied. "A redskin with a broken leg could do us as little injury as one with a broken head."

The words were hardly spoken, and the Sergeant had barely reached the fireplace, when, as if in anticipation of this movement, two figures leaped over the end of the log nearest the perpendicular rock, ran to the corner formed by the cabin and the wall, and by the aid of the dovetailed ends of the logs, clambered quickly to the roof, the shot I sent at them having no effect.

As if the whole thing had been previously planned, the two Indians no sooner reached the roof than they began throwing the flaming brands of our bonfire down the chimney, where they broke into fragments and rolled over the floor, setting fire to the scattered straw.

A blanket was thrown over the top of the chimney to prevent a draught, and soon the whole interior was thick with stifling smoke.

The horse and mule plunged frantically, sending the coals in every direction. Our eyes began to smart painfully, and we felt ourselves strangling and choking in the thick and poisonous atmosphere.

To remain in the house was to be burned alive; to leave it was to perish, perhaps, in a still more horrible way. Just as I was on the brink of despair, the Sergeant gasped rather than spoke:

"They are here, Lieutenant! hark! hark!"

Ping! ping! We heard the sound of rifle-shots, and then a good, honest cheer. Was there ever sweeter music?

The blanket was quickly withdrawn from the chimney-top, and two thuds on the east side of the cabin showed that the Indians had left the roof. A general scurrying of feet and other thuds down the perpendicular wall back of the spring showed the besiegers were in full and demoralized retreat.

We threw the doors open, and our friends rushed in, and before a greeting was said, feet and butts of muskets were sweeping brands and straw into the fireplace, and the roaring draught was fast clearing the air.

Well, we were glad to see the nine men! We shook hands all round, and then went outside to see whether the volleys of the rescuing party had inflicted any punishment upon the Navajos. Two dead Indians lay near the cabin, and farther away the one we had killed. There were traces which showed that others had been wounded.

We kindled a fire outside the cabin, and sat about it for a time to rest and take a lunch. The horse and mule had been badly singed about the legs, but were not disabled. Within an hour afterward we took up the line of march for the Valleys, where we arrived at daybreak.

The evening of the same day, the men who had been left at Jemez arrived without adventure on their march; and Cordova, with his son, at once set out on the trail of the Navajos who had stolen his animals, to ascertain why they were in our vicinity.

Cordova and his son returned after four days of scouting. They found that the Indians had left their camp on the Jemez road promptly after their defeat, and had struck straight through the hills toward the Rio Grande, where they had joined the main body, the same which had attacked us on the ninth of October, and which had recently made several successful raids on the flocks and herds near Pena Blanca and Galisteo.

Piloting the Stolen Cattle.

It was Cordova's opinion that the detachment which had besieged me in the cabin had been to the Valleys to see what chance there was for running the stock through there. Their report must have been favorable, for Cordova said that a party of forty-seven Navajos were now encamped in Los Vallecitos, apparently intending to pass us the following night with their booty.

I prepared at once to retake the stolen stock, and capture the Navajos. Though they were now but forty-seven in number, others might join them before they reached La Puerta.

That the Navajos, if they were watching our movements, might not surmise that we knew of their being near us, I ordered the scouting party not to go out the next morning, and all the men to keep within the parade.

The next evening I marched all the company, except the guard, by way of the reserved trail into the valley of St. Anthony, and entered La Puerta from the western end. This was done for fear some advance guard might witness the movement if we went the usual way, and because so large a party would leave a trail visible to the red men even by starlight, and there would be moonlight before they could cross the valley.

It was my intention to make an ambush in La Puerta. In the narrowest part of that cañon, where it was barely fifty feet wide, the walls rose perpendicularly on each side. A hundred yards east and west of the narrows were good places of concealment. I placed thirteen men under Sergeant Cunningham at the western end, and took as many with me to the eastern.

The Sergeant was instructed to keep his men perfectly quiet until the head of the herd had passed their place of concealment, and then, under cover of the noise made by the moving animals, to slip down into the cañon, and when the rear of the herd came up, make a dash across in front of the Indians and commence firing, taking care not to hit us.

For myself, I intended to drop into the valley with my detachment when the Navajo rear had passed, deploy, and bag the whole party.

It was a long and tiresome wait before the raiders appeared. The men had been told that they might sleep, and many of them had availed themselves of the permission. The moon rose at ten o'clock, and made everything nearly as bright as day in the rarefied atmosphere peculiar to the arid region of the plains and Rockies in which we were.

I sat on a bowlder, and watched through the tedious hours until three o'clock, when Cordova approached.

"What sound is that, Teniente?" he whispered.

I listened, and heard the distant bleating of sheep, occasionally accompanied by the deep lowing of cattle.

Soon afterward I noticed a sound like the rushing of wind in a pine forest. It was the myriad feet of the coming flocks and herds hurrying along the grassy valley.

This was the signal of preparation, and all the men were aroused and made ready for the approaching struggle.

Another half hour passed, and over a roll in the surface of the valley, revealed against the sky and looking many times their actual size in the uncertain perspective, appeared two tall figures, which nearer approach showed to be two mounted Indians piloting the captured stock, which followed close behind.

The Indians entered the defile, and the goats and sheep, which had been spread widely over the open valley, scampered, crowded and overleaped each other as they closed into the narrow way.

There seemed to be fully two thousand of them, intermingled with a motley herd of horses, mules, asses and kine of all sizes and descriptions, numbering three hundred more, all driven by a party of seventy-four Indians.

The cattle-thieves were evidently congratulating themselves upon having run the gauntlet of the military camp and being out of danger, for they had abandoned the traditional reserve of the Indian, and were talking loudly and hilariously as they passed my wing of the ambuscade.

CAPT. C. A. CURTIS, U. S. A.

(To be continued.)

SNOW-FLAKES.

Out of the bosom of the air,
Out of the cloud-folds of her garments shaken,
Over the woodlands brown and bare,
Over the harvest fields forsaken,
Silent and soft and slow
Descends the snow. —*Longfellow.*

SOMETHING ABOUT BELLS.

No single object within the walls of the Kremlin at Moscow, that citadel and city within itself, attracts the stranger with more interest than the famous King of Bells, which is said to have been cracked in the furnace, and now lies at the foot of the Tower of Ivan.

A large piece is broken from the side, but it still weighs about a hundred and ninety tons, for it is over nineteen feet in height, and more than sixty in circumference. When it was cast in 1733, by order of the Empress Anne, the gold, silver and copper consumed in the operation were valued at nearly half a million dollars.

The casting took place, accompanied by religious ceremonies, and royal ladies vied with each other in throwing the gold ornaments worn upon their persons into the great caldron of molten metal. Doubtless this very generosity of contribution served to impart brittleness to the material.

The largest bell in actual use is also at Moscow, and is said to weigh a hundred and twenty-eight tons. The great bell of Pekin, China, is recorded as weighing fifty-three tons, and that of the Cologne Cathedral weighs over twenty-five tons.

Bells were in use in China, Japan and India long before they were known in Europe. In the space fronting the temples of Nikko, Japan, there are enormous bells of exquisite purity of sound, too heavy to be suspended in any tower which this people build, and so they are swung on low frames of stout timber, the bell being only three or four feet from the ground.

They are rung by means of battering-rams, made of long joists of hard wood, suspended so as to swing by the united aid of many human hands. They give out soft and muffled, though deep and far-reaching, notes.

There is a bell before the temple of Amarapura, Burmah, which is hung, after this Japanese fashion, low down near the ground, and which weighs over eighty tons.

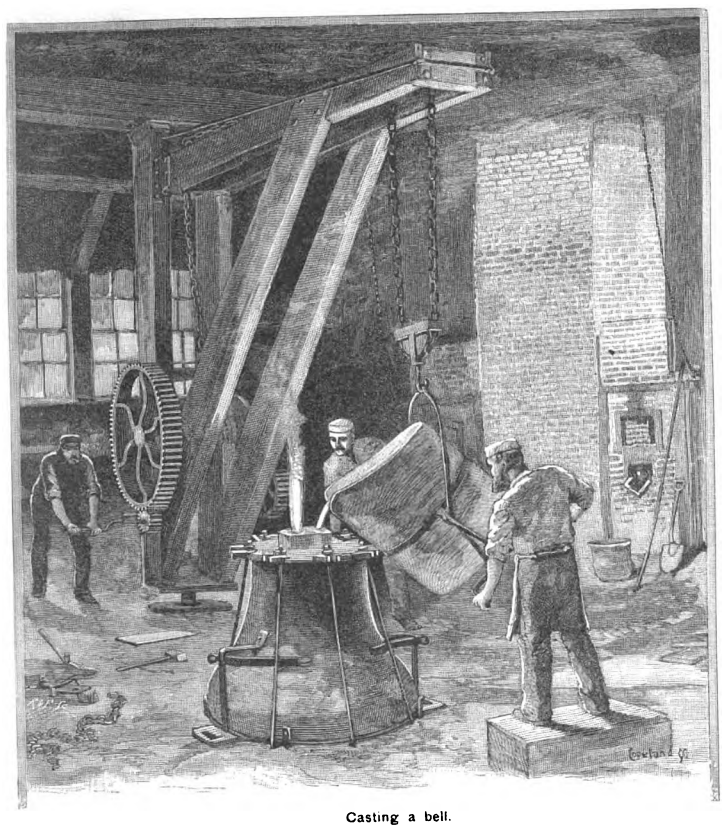
The early influence of bells upon architecture is obvious, since we undoubtedly owe to them the building of nearly all the famous towers of the world. Originally these were only raised just above the church-roof to admit a central light, but when bells became common, they were adapted to their use.

Bells are mostly cast from a composition of copper and tin, though other ingredients are often used. When the right proportions of these two metals are combined and reduced by intense heat to liquid form, the mass is poured into a clay mould of the desired shape and size.

The small bronze bells found in the ancient palace of Nimrod contained ninety parts of copper and but ten of tin; in our day the proportions are, say, eighty parts of copper to twenty of tin.

Hand-bells vary more than those designed for public use, and are often composed of brass, silver and even gold. It is a common idea that silver is mixed with other metals in the casting of bells to mellow the sound, but this is a mistake; any large quantity of silver would seriously injure the tone.

It is not alone the composition which determines the quality of a bell; very much depends upon its shape. Moreover, the proportions between its height, width and thickness are all to be taken into consideration. The dimensions, roughly stated, which are deemed to be the best for large bells, are one-fifteenth of the diameter in thickness, and twelve times the thickness in height.



Bells have been cast of steel, but they do not produce the perfect notes resulting from the use of copper and tin. The Swiss have even cast bells of glass, which emit extremely fine sounds, but the brittleness of this material renders them sure to crack in using.

From long usage bells have come to be most

Digitized by Google

intimately connected with religious services in all Christian churches, which is thought to be the reason why Mohammedans do not use them, but substitute for them the cry of the Muezzin from the top of the mosques, by which the faithful are summoned to prayer.

The Assyrian chariots were hung with bells intended to terrify the enemy, and spur the warriors to the fray. The head-gear of Grecian war-horses was similarly adorned, designed to create a panic in the ranks of the foe.

Casting a bell.

There are many superstitions about bells. It is recorded that the bell of old St. Paul's Church, London, was rung in ancient times in order to still a raging tempest, and to overcome the electric force of the lightning.

This bell was only tolled on the death of a member of the royal family, and it was long popularly believed that when it did ring it turned all the beer sour in the neighborhood.

Chimes of bells have been brought to great perfection, and we have in this country many fine specimens; but the inventive genius of the Netherlands has rendered that country famous in this respect. In some instances these tune-playing bells are performed upon by means of a cylinder, on the principle of a barrel-organ, though, as is the case in this country and in England, they are generally played by hand.

In the Tower of Ivan, at Moscow, there is a chime of silver bells which daily ring forth the national anthem of Russia, with pleasing effect if one is near the banks of the winding Moskva River.

The custom of hanging bells upon the necks of animals is of very ancient origin. Their usefulness is too apparent to require explanation. The camel-driver of the desert is familiar with them, and the mule trains of South America do not move without them. The leading animal wears the bell, and is instinctively followed by the rest; if the instrument is by chance removed from the leader, the whole train will at once become demoralized.

In an accident which occurred at the Saxon silver mines not long ago, most of the workmen, twelve hundred feet below the surface of the earth, were warned in time to save their lives by the *silence* of their faithful watchman, the bell.

In these mines of Saxony one hears at all times, floating musically through the drifts, the notes of a bell, two minutes only intervening between each stroke of the hammer. It is called the bell of safety, and its peculiarity is that its silence gives the warning of danger.

Flooding is the exigency to be guarded against in these mines. The automatic bell is so operated upon by a water-wheel, that if flooding begins, owing to any obstruction to the deep drainage or otherwise, this faithful watchman ceases to utter the notes of safety.

The Neapolitans deck their gaily caparisoned horses with many bells; the muleteers of the Alps mingle bells and ornamental ribbons upon the necks of their beasts; the young girls at vintage time cap their ribboned poles with them, and the cattle of the Tyrol are heard while yet a long way off upon the hills by the tinkling of their bells.

If the reader should chance to visit Havana, let him not fail to ascend the towers of the ancient Cathedral which contains the tomb of Columbus. Here he will see a number of antique bells, which have summoned the people daily to matins and to vespers for a hundred years and more.

There is an old bell-ringer, a veritable hermit and enthusiast about bells, who lives here with these brazen-tongued instruments as his only companions. He will tell you how, for many years, man and boy, he has summoned the devout by means of these resonant voices; he will speak of the alarms he has sounded, and of the numberless marriage and funeral chimes he has rung out.

It seems almost incredible, but we are told upon good authority that a mere scratch may break the largest bell, and the more perfect its note, the more certain its destruction. A small cord tied closely round the barrel during the vibration will break the structure as surely as will a direct and heavy blow from a sledge-hammer.

M. M. Ballou.

A SUNBEAM.

One sunbeam shot across a cloudy day
Can brighten all the drear expanse of skies;
One loving smile can make a weary way
A path to paradise.

Clinton Scollard.

THE FRENCH REPUBLIC.

Two recent events in France tend to show that the Republic, instead of growing weaker as time goes on, is becoming stronger, and more, instead of less, satisfactory to the mass of the French people.

One of these events was the election, early in January, of a certain number of Senators for terms of nine years. In this election a decided gain of Republican Senators was made, by which the Republican majority in the upper house of the French Parliament is materially strengthened.

The French Senators are elected, not directly by the popular vote (as the Deputies are), but by an indirect method. A convention, composed of the members of the councils of the department, delegates chosen by the communal and city councils, and the deputies who represent the department in the lower house of the Parliament, assembles and chooses the Senators for the department.

This method gives a better chance than universal suffrage for the selection of men of monarchical, or at least conservative, opinions, and thus the election of additional Republican Senators is more significant than would be the case with the election of deputies.

The other symptom of the increasing strength of the Republic lies in the declaration in its favor of a number of prominent leaders in the French Roman Catholic Church.

Foremost among these is Cardinal Lavigerie, who has become famous in recent years for his zealous efforts to suppress the slave-trade. He has declared that the French Roman Catholic Church should not remain in opposition to the settled government, and that it should not encourage pretenders who are seeking to overthrow the Republic, and set up a monarchy in its place.

The stand thus taken by one of the most eminent and liberal-minded princes of the Church has been adopted by other eminent prelates, such as the Archbishops of Tours, Cambray and Rouen.

It is also said that a very large body of the French priesthood have submitted to this view of the prelates, and have declared for the Republic.

The support of the Church is a matter of high importance to the Republic; for hitherto, whenever a republic has been attempted in France, it has always had to meet the hostility of the great mass of the bishops and priests.

They have always been monarchists, believing that the monarchy was the form of government whose interests would best harmonize with those of the Church, and which would be the most ready to defend the Church from the attacks of its enemies.

The French Church, it is true, gave a lukewarm support to the Empire of Napoleon III.; but even during the prosperous reign of that sovereign, the greater number of priests and bishops were at heart in favor of a restoration of the old monarchy.

It is probably good policy for the Church to rally to the Republic. The present government has already shown its ability successfully to resist many and formidable assaults. It has now nearly completed its sixteenth year, its constitution having been voted by the National Assembly on February 25, 1875; while in reality it has existed since the overthrow of the Empire in 1870; and it is much stronger than was any previous French government of the century, although it has attained a greater age than any of them.

The First Empire fell after it had been in power about eleven years. The restored Bourbon monarchy was overthrown in its fifteenth year. The Orleans monarchy and the Second Empire each lasted for eighteen years.

With the suppression of its dynastic enemies, and the accession to its support of the great body of the bishops and priests, which will doubtless bring to it also the support of large numbers of the peasants, the Republic seems, according to present indications, to have still a long life before it.

KING BY AND BY.

In his bright reign all debts are paid;
The ghosts of all crimes and blunders laid;
The penniless one can borrow;
No shadows darken his shining track,
No burdens rest on the toil-worn back,
No clouds hang over us grim and black,
In the glorious reign of To-Morrow.

Selected. —*Lucy A. Furnum.*

THE SUPREME COURT.

The President recently appointed a justice of the United States District Court, Judge Henry B. Brown, of the eastern district of Michigan, to the Supreme Court of the United States. Not long before he promoted Justice Brewer, of the United States Circuit Court, to a place upon the same bench.

These two appointments tend to confirm a tendency, already marked, to recruit the Supreme Court by drawing members from the two lower federal courts.

The Circuit Court, which was created in 1869 to relieve the pressure of business upon the Supreme Court, consists of ten justices. The District Courts are fifty-eight in number, and there is one judge for each district.

The Supreme Court, besides being a body of the highest dignity and importance, is remarkable for the character of permanence which it possesses.

Its justices hold their office for life, and though the United States Senate is also a permanent body, being renewed merely by new elections of individual members, its membership has not, in fact, the character of permanence which marks the Supreme Court.

No other body in the world surpasses the Supreme Court in this quality of permanence. Four lives of its members span the entire continuous period of the existence of the republic under the Constitution—a period of almost one hundred and two years.

Justice Stephen J. Field, who is the senior member of the court, was appointed in 1863 by President Lincoln. When he came in he found upon the bench Justice Wayne of Georgia, who had been a justice since 1835, when he was appointed by President Jackson.

Justice Wayne, in entering, had found Chief Justice Marshall, appointed by President Adams in 1801, still upon the bench, and one of the original justices, William Cushing, appointed in 1789 by Washington, was still in service when Marshall was appointed, and continued in service nine years afterward.

These four terms of service are by no means the four longest of justices of the Supreme Court, but are simply those which overlapped one another in the history of the court. They not only have measured the span of the republic's existence, but have thirteen years to spare.

Justice Story served exactly as long as Chief Justice Marshall upon the bench—thirty-four years. For twenty-four years, from 1811 to 1835, these two illustrious men sat in the court together.

For sixty-three years, from 1801 to 1864, the Supreme Court had but two chief justices—Marshall and Taney.

Several Presidents have had no opportunity to appoint a justice to the Supreme Court, though this has not been the case with any President who has served a full term.

This peculiar character of permanence is eminently fitting. The Supreme Court is itself a substantial guarantee of the permanence of the republic, since its power of passing upon the constitutionality of acts of Congress removes causes of dispute which might otherwise be dangerous to the Union.

No one President, party or decade constitutes it, and it is not subject to passing movements and passions. The President takes his oath of office from its chief; and to influence its decisions, or to affect its character save by at the most two or three appointments, is beyond his power.

MANNERS SHOW THE MAN.

American social life offers more varied and remarkable phases than that of any other country, because of the chances which each citizen has of rising from the lowest to the highest position, and because of the rapidity and frequency of such changes.

A senator, for example, whose parents had been uncultured and ignorant, but honest and respectable people, and who had been himself received in foreign courts, ate with his knife until the day of his death, blew his food to cool it, and embellished his conversation with many "Great Scotts!"

So common is the change in social position, that the lack of education in gentle manners is the most embarrassing difficulty which our people have to meet. The struggle, the hard work, the difficulties in the way of a man who is pushing upward are more easily met than the sharp pain of finding himself awkward and boorish in trivial details of conduct, when he is brought into the companionship of those who have, from childhood, been trained in the social graces.

A poor widow who supported her family by doing chores in the houses of wealthy people was surprised by a visitor lately while at dinner with her children.

The table was daintily laid, and the boys and girls were obliged to observe all the forms which their mother had seen in the houses of her employers.

"Why should they not be taught to behave as well as the rich boys and girls?" she said, without any air of making an apology. "And besides, they may be rich themselves some day. Who knows?"

Few poor boys in America have mothers so keen-sighted or so wise as was this poor woman; and the boys themselves forget, in their hurry to acquire the money or position which will give them distinction, the importance of acquiring the manners without which their distinction may be made ridiculous.

A czar, or a saint, or a great poet might travel incognito around the world, his rank or merit undiscovered. But a man cannot enter a car or eat an apple without betraying how just is his claim to gentle breeding.

THE RIGHT SPIRIT.

"I see," he observed, walking into the sanctum, "that you need the services of a leader-writer on your paper."

"That position has been filled, sir," was the reply.

He sighed.

"I notice, also," he went on, "that you advertise for a person to address envelopes. Is that position still open?"

"It is."

"Then I'll take it."

This conversation is chronicled in a comic weekly, and is supposed to illustrate the fall from the sublime to the ridiculous; but it shows something else that the writer never thought of. It shows the spirit of common-sense.

Senator Stanford once remarked that he remembered the days of '49 in California, when any man could make four dollars a day, and yet there was a beggar on every corner. Their invariable excuse, when they deigned to give any, was that there was no work at their trade. At the present day there are people in every community who are on the way to starvation or the life of a tramp, because what they can find to do does not suit them.

The boy with the right spirit and the boy with the wrong spirit come into competition every day. A merchant advertises for a boy to help on the books, and gets him. In comes another applicant, and when informed that the vacancy is filled, walks out with his chin in the air. A third boy, on receiving the same answer, applies for a place as errand-boy. Ten to one he gets it, and is soon promoted to a clerkship.

In the early days of Bismarck, now the capital of North Dakota, a city ordinance was passed requiring brick chimneys to be built, and there was not a bricklayer in the place; but the chimneys were built by two painters, one plumber and a carpenter, who would work at anything rather than beg.

This is the right spirit—the willingness to take anything rather than nothing. Success in life depends largely upon adaptability, and it is almost an axiom that the man who looks for something may not find it, but the man who will do anything can always find something.

OUR HEALTH-GIVING GAMES.

A distinguished American author, writing from England, remarks that the "canker" of athletic sports is just as prevalent in the schools and colleges of Great Britain as it is in those of the United States.

Canker is a strange word to use in such a connection. It meant originally the same as cancer, a Latin word for crab, but in modern days applied to a terrible disease that slowly and secretly eats its way to the vital organs.

As all good things are abused, so are athletic exercises, but surely there is nothing about them that ought to suggest cancerous disease. If this American traveller will cross over to Germany, he may there discover a state of things in the colleges

Digitized by Google

and universities that savors strongly of canker. He will not find any popular enthusiasm about ball games, nor any athletic or aquatic contests between rival universities; but he will meet abundant evidence that too much anxious study, relieved by fighting duels and drinking beer, produces effects upon students that may be correctly called deadly.

The abuses of our athletic system are known and lamented; but we should not on that account undervalue those sports which not only strengthen and discipline those who take part in them, but furnish exhilarating topics of thought and conversation to the whole community of students.

With us, the years spent in the high school and the college are generally our happiest, and it is rare indeed that an American student has so much as a thought of wickedly taking his own life, or of putting to hazard the life of another.

HER RIDING-HABIT.

An old legend, which makes no pretence to truth, tells us how a kingdom was lost for want of a horseshoe nail. But a recent volume, of sober historical and biographical purpose, written by the Count d' Hérisson of France, makes it appear that the Empress Eugénie, after the battle of Sedan, lost the chance to preserve the empire of her husband by not possessing exactly the right sort of riding-habit.

It was the evening of the third of September, 1870. The news of the surrender of the French army and of the Emperor Napoleon at Sedan had spread about Paris. The city was excited, and there was talk of a revolution, and the banishment of the imperial family.

At this juncture Emile de Girardin, a man who was trusted by the Empress, and who had had no little experience during previous changes of government, arrived at the palace of the Tuileries.

"If your majesty were to appear on horseback in the midst of the people," Girardin said, "and announce the abdication of the Emperor in favor of the Prince Imperial, your own assumption of the title of Empress regent, and the appointment of Thiers as prime minister, the Empire might be saved. Something must be done to turn the tide."

The Empress accepted the advice.

But when this leader of the world's fashion, the reigning empress of proprieties, sought for a proper costume for her performance, it could not be found!

The only riding-habit in the Tuileries was a fantastic one of green, embroidered with gold and silver, made for a festal hunting occasion; and the hat was a not less fantastic three-cornered affair, of the epoch of Louis XV.

The Empress felt that it would not do to appear in this festal garb on such an occasion. Her appearance in it might have the opposite effect upon the people from that which she intended.

The plan had to be given up, the Empress and the Prince Imperial were banished, and the Napoleonic empire was at an end.

GRATEFUL FOR LITTLE.

Turkish justice is a tediously slow as well as an uncertain goddess. The man who goes to court in the Sultan's dominions may expect to be long under the capricious sway of the words, "*Bakaloum, bakaloum*" (We shall see about it).

The author of "Thirty Years of My Life on Three Continents" tells a story which embodies the general belief of the natives as to the mode of administering justice in the Ottoman Empire.

A merchant of Bagdad carried up to Constantinople an appeal against an adverse decision given by an inferior court. The Grand Vizier, the highest fountain of justice next to the Sultan, who is unapproachable, had recently been bullied by a foreign ambassador, and was in a very bad humor.

He would not listen to the appeal, but dismissed the case summarily. He would not even examine the papers.

The merchant, as soon as this hasty decision had been given, began kissing the hem of the Grand Vizier's robe, and invoking blessings on the head of the great man.

"But," exclaimed the puzzled Grand Vizier, "why do you pour benedictions on me? I have dismissed your appeal. You have lost your case, your time and your money. Are these things to be thankful for?"

"Highness," replied the merchant, "I see that the Sultan—whom may Allah protect!—calls only to your high post men of lofty intellect. You have seen and judged my affair in two minutes' time, and condemned me. The will of Allah be done! The reason for my thanking you is that another Grand Vizier, with his '*Bakaloum, bakaloum*,' might have kept me waiting for months to get the same answer, after wasting much of my time and money. Now I can return to my wife, family and business, and hence do I invoke blessings on your head."

The Grand Vizier laughed, and reversed his decision.

SAWDUST.

For several years certain Germans have been experimenting, with a view to utilizing sawdust as a material for mechanical purposes. It was discovered, years ago, that vegetable fibre, after being subjected to certain chemical action, and afterward to a pressure sufficient to expel all liquids from it, could be made into a substance almost indestructible by the elements, and of great utility in the mechanical and ornamental arts.

The difficulty has been that but few kinds of fibre were capable of the transformation by any known process. It might almost be said that the fibre of cotton alone produced satisfactory results.

Scientists are aware, however, that all vegetable fibre is, to a certain extent, identical; that is, it is cellulose more or less mixed with other substances; and they have believed that there must be some means by which the coarser kinds can be made useful for the purpose as well as cotton, which is nearly pure cellulose.

A German scientific journal gives the results of experiments in that country. A substance has been made from common sawdust by means of an acid process, that promises to be of great value. It is described as being exceedingly firm of texture and of great hardness, incapable of being bored by a common gimlet, more impervious to the action of the elements than the ordinary metals, and practically indestructible by fire.

It is said to be stronger than timber, and but a fraction of the weight of iron or steel. The cost of manufacture is asserted to be so low as to bring it into competition with both wood and iron. If all these claims can be made good, the result will be a great change in many important industries.

A RUBICUND ORPHEUS.

In "A Book of Vagrant Men and Vagrant Thoughts," Alfred T. Story gives the following graphic description of a street incident. "I was once," he says, "an eye-witness of an amusing, and at the same time pathetic incident in an East End thoroughfare, in which a poor flutist was the chief actor. It happened one bleak night in December. The streets were almost deserted, and a bitter wind was driving down the streets, carrying everything before it. Few people were about. Nevertheless, a wretched flute-player, despite the wind, was trying to blow a few coppers from the pockets of the chance wayfarers.

"He seemed to be in the last stage of consumption. His long, black coat was pinned across his throat in a way that suggested his shirtless condition, while on his face was written a whole jeremiad of woe.

"Although he blew into his pipe with all the might he could command, yet he produced no sound. The gale was too strong for him. The fierce gusts seemed to be blown through and through the poor fellow, and with such searching keenness that the wonder was that the soul of the man was not blown out of his lean body.

"Presently a big, lusty, well-favored man came along. He observed curiously for a minute or two the poor flutist's efforts to raise the wind; then quietly taking the instrument out of his hands, he applied to it his own lips, at the same time telling the poor fellow to go before and hold the hat.

"He did so, whereupon the worthy citizen commenced to blow out such a liquid flood of melody that every passer-by stood and listened, and many of the listeners put their hands into their pockets, and cast their maravedi into the reversed headcover.

"Thus the two men went the length of the street. Then the rubicund Orpheus returned the flute to its owner, wished him a good-night and a better supper, and turned to go.

"But the poor fluter, grateful for his unexpected windfall, gently detained his benefactor, and thinking he was in the profession, proposed to divide with him the results of their joint efforts; but the stranger would not hear of it, and hastened quickly away, the other meanwhile delaying his much-needed supper to look after him with dimming eyes."

GIVING A LIFT.

It is not often that we find animals giving mutual aid, except in the line of their domestic duties. To meet with instances of helpfulness in creatures so low in the scale as are the "sea-urchins" on our coast is really remarkable. Professor Elder, of Colby University, communicates to London *Nature* what he observed among the *echini* of Casco Bay.

Among the specimens brought back from one excursion were four of the common *echini*. The last one taken had been left exposed to the sun some time before it was noticed and properly cared for.

These four animals were placed alone in a small aquarium, and as we wished to study their action, each was turned mouth up. Soon the action began, with which every naturalist is familiar, and three of the captives slowly rose on edge, and then deliberately lowered themselves into the normal position.

The fourth, the injured one, made much less rapid progress; all it could achieve was a slight tipping of its disk. The two nearest *echini*, from six to eight inches distant, now moved up and stationed themselves on opposite sides of their disabled comrade.

Fastening their tentacles for a pull, they steadily raised the helpless urchin in the direction in which it had started. As soon as it was possible, one of the helpers moved underneath the edge of the disk on the aboral [back] side, and when the half-turn was accomplished, the other took station on the oral side, gradually moving back as the object of so much solicitude was gently lowered to the position nature had made most convenient.

DID NOT LIKE POTATOES.

It seems singular that that nourishing tuber, the potato, now looked upon with such favor throughout the civilized world, should have been severely assailed so recently as the early part of this century. Says Cobbett, a prolific agricultural writer of that period:

"This root is become a favorite, because it is the suitable companion of filth and misery.

"It can be seized hold of before it be half-ripe; it can be raked out of the ground with the paws, and without the help of any utensils except, perhaps, a stick to rake it from the fire; can be conveyed into the stomach in the space of an hour.

"We have but one step farther to go, and that is, to eat it raw, side by side with our bristly fellow-creatures, who, by the by, reject it as long as they can get at any species of grain, or at any other vegetable.

"I can remember when the first acre of potatoes was planted in a field, in the neighborhood of the place where I was born, and I very well remember that even the poorest of the people would not eat them. They called them hog-potatoes; but now they are become a considerable portion of the diet of those who raise the bread for others to eat."

A NICE DISTINCTION.

The following amusing fling at Boston's "culture" appears in the Chicago *Tribune*:

"I desire to insert this small advertisement in your paper to-morrow morning," she said.

"This," said the advertising clerk, looking it over, "will go among the 'wants.'"

"Have you no 'wish' column?"

"No, mum."

"Then, sir," said the young lady from Boston, haughtily, "you need not insert it. I simply *wish* a situation as governess. That is all. It is not a case of *want*. Is there any newspaper printed in English in this place?"

No wonder the name of Burnett is so well known; ask for the best Flavoring Extracts in any part of the world, and Burnett's are handed you. At last the foreigners are finding this out. [*Adv.*

GRAND NEW FLOWERS.

The Wonderful Manettia Vine—the most magnificent flowering vine in cultivation—price 20c. Fuller's new Giant Pansy Seed, 10 packages, magnificent sorts, 25c. Selection of 12 choice packages of flower seeds, 25c.; 12 packages Vegetable Seeds, 25c.; Fuller's Grand New Seedling Gladioli, 12 fine mixed bulbs, 20c. The Excelsior Pearl Tuberose, spikes of pure white, double flowers of great fragrance, 6 large bulbs, 25c., 12 for 40c. Beautiful Catalogue sent free.

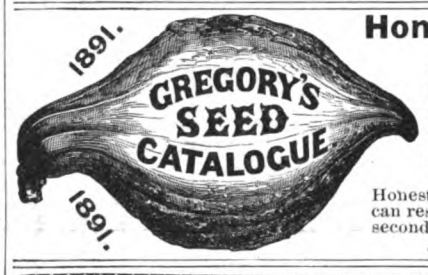
BECAUSE THEY ARE

THE BEST.

D. M. FERRY & Co's Illustrated, Descriptive and Priced



SEED ANNUAL

For **1891** will be mailed **FREE** to all applicants, and to last season's customers. It is **better than ever.** Every person using *Garden, Flower or Field Seeds,* should send for it. Address

D. M. FERRY & CO.

DETROIT, MICH.

Largest Seedsmen in the world

Home Grown, Honest, Reliable.

I offer you my Vegetable and Flower Seed Catalogue for 1891 **FREE.** Note the immense variety of seed it contains, and that all the best novelties are there. Not much mere show about it (you don't plant pictures) but fine engravings from photographs of scores of the choice vegetables I have introduced. Would it not be well to get the seed of these from first hands? To be the oldest firm in the United States making mail and express business a specialty proves **reliability.** Honest and honorable dealing is the only foundation this can rest on. My Catalogue is **FREE** as usual. A matter on second page of cover will interest my customers.

J. J. H. GREGORY & SON, Marblehead, Mass.

TO PROVE the SUPERIOR QUALITY of

BURPEE'S SEEDS

WE WILL MAIL ALL THESE

5 Finest Flowers —FOR— 26 cts. together with our complete FARM ANNUAL for 1891.

NEW FANCY GERMAN PANSIES. Special selection of only the *brightest and best,* superbly spotted and stained, striped and margined, *Imperial Prize Pansies,* of striking beauty. Flowers of perfect form and large size. The *illustration* shows only one of the *many beautiful types.*

FRINGED STAR PHLOX. *An odd novelty* of surpassing beauty; 40 varieties of elegantly edged and fringed flowers of *star-like form.*

GOLDEN GATE POPPIES. *A grand novelty.* Entirely unique in wondrous variety and brilliancy of bloom; myriads of most gorgeous flowers of every conceivable shade.

CROZY'S CANNAS— **New Large Flowering, Ever-blooming Dwarf French Cannas,** with immense clusters of magnificent flowers, as *richly colored as Orchids,* and *more profuse flowering than Gladioli.* See *colored plate* in *Catalogue.* Neat, dwarf growth, with handsome foliage. They bear their beautiful, large flowers, of many colors, all summer, the *first year from seed.*

ECKFORD'S NEWEST SWEET PEAS. Embracing the *latest novelties,* largest and most beautiful named varieties in *superb mixture.* **Never before equaled.** Pkt. 10 cts.; oz., 20 cts.

For 26 cts. (13 two-cent stamps) we will send all the above— **FIVE FINEST NOVELTIES** with full directions for culture printed on each packet. *If you do not want all of these seeds,* you can select any **Three Varieties** for **16 cts.** If you want any other Seeds, ask for

BURPEE'S FARM ANNUAL for 1891,

DISCUSSION.

Resolved, That Minorities are as likely to be in the right as Majorities.

See Matthew Arnold's lecture on "Numbers," in "Discourses in America."

Many moral reforms were at first opposed by Majorities.

The Constitution makes a two-thirds majority necessary in important cases.

For the Companion.

CARMELITA.

"Neber hearn tell o' dat, honey?
'Twas more'n twenty year ago
When we sent dem soldiers flyin'
An' dey didn't run noways slow,
When dey tuk to de woods down yander
Jes' at de set ob sun,
Caps off, an' coats a-flappin'—
Laws! how dem Yanks did run.

"You see it happened dis way;
Ol' marse done gone away,
An' me an' Miss Carmelita
We'se all alone dat day;
Way off in de field ob cotton,
Whar ye see dat riber bend,
All hands were busy to sabe de crap
From de raid ob de Linkum men.

"Men an' women an' chil'en
Singin' an' workin' away,
An' eben de oberseer, Marse Brown,
He had to work dat day;
Kase word had come in de mawnin'
Dat down in de big bayou
Two gunboats waited, full ob arms
Fer de use ob de boys in blue.

"I kin see dat picture now, honey,
A purple mist dat lies
Like a wreath ob smoke on de hilltops,
De fleecy clouds in de skies,
De billowy waves ob cotton
As de soft breeze crept along,
An' de ripplin' wash ob de riber,
Mixed wid de darkeys' song.

"Out on de east veranda
Ol' marse's hammock hung,
An' to an' fro, like a hang-bird,
Miss Carmelita swung;
Wid a bresh ob peacock's feders
I breshed de flies away,
Dat buzzed an' buzzed in de sunshine,
Dey wuz pow'ful mean dat day!

"From de cotton-fields' tossin' billows,
Came de songs now faint, now near,
An' in an' out'n de shadows
Swep' de riber broad an' clear,
An' to an' fro in de hammock
Miss Carmelita swung,
When suddent out'n de bushes
De crack ob a rifle rung.

"Out sprang Miss Carmelita,
Wid a bound like a startled deer,
A little wisp ob a girl, honey,
Jes' turned o' her fifteenth year;
Then ober de hillock yander
Two columns came in view,
The bonnie blue flag wid Early,
An' dem Yanks from de big bayou.

"An' dar stood Miss Carmelita,
As still an' as white as death,
Hardly she stirred a finger,
Hardly she drew a breath;
Wid her wild dark eyes a-starin',
She watched dat bloody fray,
De waverin' lines oh de Union blue,
An' de rallyin' ob de gray.

"Up to de very summit,
Struggled dat line o' blue,
Stood still, an' den retreated,
As de gray came into view;
Dey say 'twas only a scrimmage
Dat passed fo' our eyes dat day,
But de braves' hearts in de kentry
Beat neaf de blue an' de gray.

"An' still in de bloody struggle
Two flags waved in de fight,
One like a strip o' de day-dawn's blue,
An' one all starred with white;
An' still in de waverin' balance
De fate ob dat contest hung,
While cheer, an' yell, an' rifle crack
Through de wooded valley rung.

"An' dar Miss Carmelita
All white an' tremblin' stood,
Hands clasped an' white wid terror,
A-gazin' on dat wood,
Where de struggle still grew fiercer
An' still de banners flew,
De bonnie blue flag wid Early,
An' de ol' red, white an' blue.

"Suddent she turned an' whispered,
In a voice half choked wid fright,
'O, Chloe! will nothin' stop them?
Will nothin' end the fight?'
In de hall, all limp an' tattered,
A riddled flag she sees,
Quick as a flash she seizes it,
An' waves it in de breeze.

"'Fling out de ol' flag, Chloe!
An' I will beat de drum,
Each side will think the other
Has reinforcements come;
Let but the merest fragment
Of the banner meet their view,
An' none can tell the bonnie blue flag
From de ol' red, white an' blue.'

"Den down through dat wooded valley,
An' fur up de mountain side,
Rung de long-roll ob de drum call
Through de battle's fiercest tide,
An' down by de big road yander
Dem flyin' Yankees ran,
An' ober de bluffs went Early,
An' his soldiers—man for man!

"Women aint good fer fightin'?
Wall, mebbe not—but den,
Dey's mighty good fer skeerin'
De braves' kin' o' men!
An' which o' dem men was braves'
Is a question I leave to you,
Some say dey fought neaf de bonnie blue flag,
Some say neaf de red, white an' blue."

JULIA MILLS DUNN.

For the Companion.

CHRISTIAN WORK.

One of the most beautiful and helpful charities in this country is a Babies' Home, in one of our large cities, where children under six years of age, whose parents are not able or not willing to care for them properly, are tenderly nursed and tended.

The peculiar feature of this institution is that, on the first of each month, children whose lot in life has been happier than that of these little waifs are brought by their mothers to the home. Each one chooses a baby to "adopt;" this baby's expenses are paid by the mother for her child, who is taught to think of it as of a little brother in trouble, to share its toys and clothes with it, to visit and play with it, and to pray for it as it does for its mother and brothers.

A visitor describes these children, with their "adopted brothers," playing hide-and-seek in the garden of the Home, poor and rich together, but all clean, rosy and happy. No sermon in after life could so teach them brotherly love as this childish play.

At a recent convention of workingwomen in New York, the daughters of millionnaires and of laborers united heartily in devising practical schemes to widen and elevate the lives of women who are obliged to earn their living outside of their homes.

These and many other such movements show how powerful a hold practical Christianity has taken upon the hearts and lives of English-speaking people of the present day.

Christ's life was never so closely imitated by His followers as it is now, in its direct effort to help the poor, the ignorant and the criminal.

LAMPS AS STOVES.

We often hear people say, "That kerosene lamp is almost as good as a stove," or something to that effect; but the statement is generally considered an exaggeration, and the speakers themselves would probably be surprised if told that their words were literally true. Let us see if they are so. The burning of a pound of kerosene, or other mineral oil, produces about twenty-one thousand units of heat; that is, an amount of heat sufficient to raise the temperature of twenty-one thousand pounds of water one degree Fahrenheit. The unit of heat used in all such calculations is the quantity of heat which is required in order to raise the temperature of a pound of water one degree.

Air is more easily heated than water. One unit of heat will raise the temperature of about four pounds of air one degree. Therefore, the heat produced by burning a pound of kerosene will heat eighty-four thousand pounds of air one degree, or eighty-four pounds one thousand degrees. Eighty-four pounds of air is equivalent to rather more than eleven hundred cubic feet, or about half the air contained in a room fifteen feet square and ten feet high.

This quantity of air can, therefore, be heated about five hundred degrees by the combustion of a single pound, or a little more than a pint, of kerosene, a quantity which is consumed in about three hours in one of the powerful tubular lamps now so much in use. As a matter of fact the air of our rooms never attains any such startling temperature, for several reasons.

In the first place, unless the ventilation is very bad, the air of the room is renewed several times in the course of three hours, so that several roomfuls of air are warmed by the lamp. Again, a large part of the heat of the lamp is radiated directly to the walls, which absorb it if they are cold, and in any case conduct a great deal of it to the outside air. The heat of the warmed *air* of the room also escapes by conduction to and through the walls, to some extent.

The little calculation which has been given, however, shows that an ordinary lamp is by no means contemptible as a source of heat.

A coal-stove, suitable for the room we have been considering, would burn, perhaps, four or five pounds of coal in the three hours in which the lamp consumes a pound of kerosene; but it must be remembered that a pound of coal produces only about two-thirds as much heat as a pound of kerosene, and also that a large proportion of the heat of the best stoves goes up the chimney and is wasted.

There is no such waste in the case of the lamp, the hot gases from which are mixed directly with the air, and heat it very rapidly. The air is heated much less rapidly and directly by the stove, by means of contact with its hot surface, and with the walls of the room, which have been warmed by direct radiation from the stove. It is plain, therefore, that so far as the air of a room is concerned, the heating effect of a single large lamp is not much less than that of an ordinary stove.

The heating effect of a gas jet is also very great, for similar reasons, and hence gas- and oil-stoves are quite commonly used for warming the air of rooms.

No such apparatus should ever be employed in a bedroom or sitting-room unless the ventilation is exceedingly good. The hot gas which their chimneys discharge directly into the air of the room consists chiefly of air whose oxygen has been partly or wholly replaced by carbonic acid and the vapor of water.

If the oil-stove is used for a long time in a close room, it will reduce the oxygen and increase the carbonic acid of the air so greatly as to render it unfit for breathing. Furthermore, such stoves usually produce small quantities of other and very poisonous gases, which soon give rise to unpleasant and dangerous symptoms. Of course, the oil or gas-stove may be connected with a chimney, but its use is then much less economical, as the greater part of the heat escapes up the chimney.

L. B. F.

LOST MONEY.

It was a dark night, and down a retired street in Paris a man rode alone on horseback. Suddenly the horse stopped as if frightened. Then a man rose from the pavement, in the middle of the street, and jumped to one side with a cry. The rider was angry, and exclaimed, "Are you drunk, man, that you lie about in the middle of a dark street to get yourself run over?"

"You might better lend a poor fellow a hand than scold in that way," exclaimed the other. "I had three hundred francs in gold in this bag, carrying it to pay a bill for my master, and the bag has broken and it is all lost over the street. If you have some matches they will do me more good than your curses."

"It's no easy task to find lost money on a night like this," said the rider, dismounting. "I have no matches, but perhaps I can help you. Have you any of the pieces left?"

"Only one," replied the unfortunate fellow, with a sob.

"Give it to me," said the other.

The poor man hesitated. But the stranger repeated the words in a tone of authority, and the last coin was handed to him.

The stranger whistled and a great Danish mastiff stood beside him. He held the coin to the dog's nose, and leaning to the rough pavement, said, "Find them."

The dog sniffed the gold-piece and began the search.

One, two, three; he began bringing in the coins and dropping them into his master's hand, while the poor servant stood by in silent wonder.

Thirteen times he returned with a twenty-franc piece. Then, after a long search, he came back empty, with a grunt that seemed to say, "There are no more."

"We are yet lacking one piece," said the stranger. "Are you sure there was just three hundred francs?"

"Sure as sure can be, sir," the servant replied.

"Then look in the bag again. There must be one left there."

The man looked, and sure enough, found the last gold-piece still there.

"Oh sir!" he exclaimed, as the stranger sprang into his saddle, "you are my deliverer. Tell me your name, that my master may know who has done him such a service."

"I have done nothing," said the stranger. "Tell your master that the one who helped you was a very good and intelligent dog, by the name of Joie."

It was some years afterward, when France had seen troubled times and the royal family was no more, that the master was telling the incident to a party of friends, one of whom had been employed in the palace.

"Joie! Joie!" he exclaimed. "There never was but one dog of that name, and there never was a more remarkable and faithful dog than he. He always accompanied his master when he went in disguise about the city."

"Who was his master?" they all asked.

The reply was brief: "The Emperor Napoleon."

For the Companion.

THE SOUL OF A LYRIC.

With words that flutter their thoughts to utter,
Winged thoughts for the world to hear,
With a trumpet-call, or the rise and fall
Of a fountain crystal clear;
Like the magic roses that dawn uncloses,
Dream-roses that hold no thorn,
With the light immortal from heaven's portal,
Is the soul of a lyric born.

From Death unfettered, like old wine bettered
By the mellowing breath of years,
With a Maytime measure whose tuneful pleasure
Has an undertone of tears;
Through all the ranges of Time's vast changes
With the gold that its thought can give,
Euterpe's token of words unbroken,
Does the soul of a lyric live!

WILLIAM H. HAYNE.

BURNING TO DEATH.

Among the horrors of the battle of Chancellorsville was the catching fire of an abatis and the burning of wounded soldiers, both Union and Confederate. A wounded man, months afterward, told Mr. Goss, who relates the story in his "Recollections of a Private," that he watched the flames and counted the minutes when they would strike him, but was unexpectedly saved by a little pool of water which arrested the fire just in season. Another man, a hospital comrade, said to Mr. Goss:

"I was among the wounded just outside the abatis when it got afire. This leg you see was as limp as a dish-rag, but I couldn't see the poor fellows burn in that way. So, using my musket for a crutch, I began to pull away the burning brushwood, and got some of them out.

"I tell you it was hot! Them pines was full of pitch and rosin, and made a fire as hot as a furnace! I was working away, pulling out Johnnies and Yanks, when one of the wounded Johnnies, pale as a ghost, toddled up and began to help. He allowed he wa'n't goin' to have a Yankee beat him at anything.

"The underbrush crackled and roared, and the poor fellows howled and shricked when the fire got at them; and by and by another Confederate—I guess he was a straggler—came up and began to help, too, and we fought the fire all together.

"We were trying to rescue a young fellow in gray—the fire was all around him. The last I saw of that fellow was his face. It was a handsome face. His eyes were big and blue, and his hair like raw silk surrounded by a wreath of flame, and then I heard him scream, 'O mother! O God!' It left me trembling all over like a leaf.

"After it was over, my hands were blistered and burned so I couldn't open or shut them, but me and them rebs tried to shake hands. Them two fellers weren't so bad; one of them helped me down to the crossing the next night, and got a darkey to set me across the river.

"What? Well, yes! That leg's a-goner, but I'm not sorry."

VALUABLE CITIZEN.

A lady who had bought a summer home in a small Vermont town found herself in need of several different sorts of workmen. "Who is the best carpenter in the place?" she asked a friend who had owned a house there for several years.

"Carpenter?" said the friend. "Oh, Jerry Calkin is the best man for anything in the carpentering line."

"And whom shall I get to repair my chimney?" she next inquired.

"Oh, Jerry'll put that in order better than anybody else could," said the friend, without hesitation.

"And my well needs cleaning. Who'll do that?"

"Jerry Calkin is the very man. He says he really enjoys cleaning wells."

"Jerry Calkin seems to be a rather unusual man!" said the new-comer, with some astonishment, as she rose to go in search of this paragon among workmen. "By the by," she said, in parting, "I suppose there's no way of my getting ice in this small place?"

"You're greatly mistaken," said her friend. "Jerry Calkin has a large ice-house, and he'll supply you every day, if you like."

During the season the accomplishments of Jerry Calkin became still better known to the summer resident; but his last capability only reached her ears just as she was getting ready to return to the city in October.

"I do wish," she said to her friend, "there was any way of keeping those grapes on the vines for another fortnight! They'll be ripe then, and I think you'd like them for preserving, as you'll still be here. But I know Farmer Brown's boys will have eaten them all long before that; they've taken some already."

"Why," exclaimed her adviser, "just tell Jerry Calkin about it. He's one of the selectmen, you know, and he'll talk to those boys so they won't dare to touch a single grape!"

HER BABY'S GRAVE.

The keeper of a cemetery in one of the Eastern States says that he was at work in the cemetery not long ago, when a poorly dressed and feeble-looking gray-haired woman entered the gate, and said that she wanted to make arrangements for setting up a small tombstone.

"Where is the grave?" asked the sexton.

"I can't tell you just where it is," answered the woman, "but I can go to it."

She led the way to a remote corner, where there were few graves, and there, close to a pine-tree and almost hidden under its low-growing branches, was a little sunken, neglected grave.

"This is it, sir; this is it," said the woman, dropping upon her knees upon the grave, with streaming eyes.

"It's the grave of my little boy, sir; the only child I ever had. I buried him here nineteen years ago. He was only four months and three days old, but he was a dear little fellow, sir, and it almost killed me to give him up."

Wiping her eyes on a corner of her shawl, she added:

"I've never been here since the day we buried him, but I knew I could come right to the spot. I've seen it in my mind every day for nineteen years. We lived close to the graveyard, and in the evening of the day he was buried I slipped over here and set out this little pine at the head of the grave, for I'd no money to buy a stone.

"We moved West soon afterward, and we've been kept poor all the time; but I've saved, little by little, all these years, and now I want to have his grave fixed up, and a little stone put to it—the dear little fellow!"

She laid her wet cheeks down in the rank and tangled grass, and tenderly stroked the sunken clay, and the sexton quietly withdrew, leaving her alone with her dead.

WOLF AFFECTION.

M. Frédéric Cuvier relates a story of a wolf which was brought up as a young dog, became familiar with the persons he was in the habit of seeing, and in particular followed his master everywhere, evincing chagrin at his absence, obeying his voice, and showing a degree of submission scarcely differing in any respect from that of a thoroughly domesticated dog.

His master, being obliged to be absent for a time, presented his pet to the Ménagerie du Roi, where he was confined in a den. Here he became disconsolate, pined, and would scarcely take food; but at length he was reconciled to his new situation and recovered his health.

He became attached to his keepers, and appeared to have forgotten "Auld Lang Syne," when, after the lapse of eighteen months, his old master returned. At the first sound of his voice, the wolf, who had not perceived him among the crowd, exhibited the liveliest joy, and being set at liberty, lavished upon him the most affectionate caresses.

With some difficulty he was enticed back to his den, and this second separation was followed by demonstrations of sorrow, which, as before, lasted for a considerable time.

Three years passed away, and the wolf was living happily with a dog which had been placed with him, when his master again appeared, and again the long-lost but well-remembered voice was instantly replied to by the most impatient cries, redoubled as soon as the poor fellow was at liberty. Rushing to his master, he placed his forefeet on his shoulders, licking his face with every mark of the most lively joy, and menacing the keepers who offered to remove him.

A third separation followed, and proved to be too much for the poor creature's temper; he became gloomy, refused his food, and for a while it was feared he would die. Time, however, which blunts the grief of wolves as well as of men, brought comfort to his wounded heart, and his health gradually returned; but henceforth he permitted the caresses of none but his keepers, manifesting to all strangers the natural savageness and moroseness of his kind.

EIGHT PRIZES.

Any one who has ever visited a "county cattle fair" knows for what a great variety of animals, articles and contests prizes are awarded. It is seldom, however, that one exhibitor has such a successful set of possessions as those of Uncle Ahab Drake.

Uncle Ahab, with his entire family, a large stock of fruit and vegetables, a yoke of oxen and various other animals, went to the fair at Greenby, one fine September day, and returned in triumph two days later. He presented himself at the village shop half an hour after his arrival, evidently anxious to be questioned as to his winnings.

"Well, Uncle Ahab, how'd you come out?" asked one of the men.

"Pretty fair—pret-ty fair!" replied Uncle Ahab, cautiously.

"How many prizes d' you take?" asked another.

"Eight!" said Uncle Ahab, with evident satisfaction. "Yes, I made out to take eight, this time. There was drawin' an' haulin' (oxen), sow an' pigs, cucumbers, bread, butter, garden sass, braided rugs, an' *mother!*"

"Why, how did Aunt Sally come in for a prize?" asked one of his awe-struck listeners.

"Heaviest weight there, to-day," replied Uncle Ahab, cheerfully. "A merciful Providence kept Ann Slater of Greenby Hill away; her boy's twisted his ankle. Ann would ha' turned the scales twenty pound higher than Sally; but as 'twas, there wa'n't another woman there weighed over a hundred and seventy, an' we fetched that prize home along with the rest."

NOT A WRECK.

It is not often that a ship, abandoned as a wreck, reaches port in safety. But such was the case with the ship *Nathaniel Hooper*, of Boston, which struck on the South Shoal, off Nantucket, July 8, 1838. To lighten the ship, Captain Bogardus threw overboard several hundred boxes of sugar; but she remained fast, and as she was pounding heavily, he abandoned her, fearing she might go to pieces.

All hands put off in boats for the nearest shore, and as soon as he was on land Captain Bogardus hurried to Boston. It was two days before he reached the office with his bad news.

"Why, Captain," said the owners, "you are dreaming. The *Hooper* is safe at India dock."

"Impossible!" cried the Captain.

"Go and see," said the owners.

Down to the dock went Captain Bogardus, and scarcely could believe the evidence of his senses. He rubbed his eyes and took a second look. Yes, there certainly was his ship, that he had left aground on South Shoal, with a storm coming up.

Immediately after the crew had left the vessel the wind changed and blew her off the shoal. She drifted until the next morning, when a Gloucester fishing-smack fell in with her, and with the hope of salvage the crew boarded her and made for the port of Boston.

Captain Bogardus was too good a seaman to lose, and after some pretty severe bantering, the owners again gave him command of the *Hooper*.

BANEFUL RAINBOW.

The "bow of promise" is to the people of some parts of China a harbinger of evil.

An English traveller relates that he was once on the road with a company of native followers, when there came on a shower. As the rain ceased, a brilliant rainbow appeared. At this all his servants covered their mouths with their hats, to escape the poisonous vapors which, as they declared, are always given forth by rainbows!

The Englishman, as a matter of course, laughed at their foolishness, and kept his hat on his head.

The curious feature of the adventure was that, when he had gone only a few hundred yards, he was by some coincidence seized with a sudden fit of vomiting.

He received no sympathy, and without doubt his misfortune will long be cited in that neighborhood as fresh proof of the rainbow's baneful influence.

A POOR RULE.

Said Mary to Johnny, "O dear!
  This play is too poky and slow;
There's only one bubble-pipe here—
  O Johnny, please, *I* want to blow!"
"No, I'll blow them *for* you," said he;
  "Just watch, and you'll see every one.
That leaves all the labor to me,
  While you will have only the fun."

Said Johnny to Mary, "O my!
  That apple, so big and so bright,
You can't eat it all if you try;
  O Mary, please, *I* want a bite!"
"No, I'll eat it *for* you," said she,
  "And show you just how it is done;
I'll take all the labor, you see,
  And you will have only the fun!"

A LONG NIGHT.

The wind was blowing a great gale, whirling the fine snow past the windows in such thick white clouds that Dollie and Viny Collins could scarcely see the sky at times, as they stood at the window anxiously watching for papa to drive home from the station.

How the long, pliant limbs of the great bare elms writhed and tossed as the strong blasts swept over them!

All the doors and windows clattered and rattled, and there was a low, rumbling roar up and down the throat of the great chimney as though it were choking with its own dense smoke.

Viny and Dollie felt very timid, for this was their first winter in Maine. Their home had always been in Georgia.

"Don't mind it, dearies," said grandma, consolingly. "It will be over with by morning. Then there'll be splendid drifts to slide on! Why, when I was a little girl and lived up in one of the north counties there came a terrible storm—worse than this. We lived in a low, log-house of one room, with one window and one door. There was a cow-house close by. We had no barn, for father had just begun him a farm. He went into the woods logging that winter and every winter.

"Grandmother was taken very sick one day during the winter, and sent for mother; so she had to leave us children for a few hours to go to her. There were five of us, and the oldest, Jane, was ten. We thought we should have great fun keeping house, and we did for a little while; then it began to get lonesome, and it began to snow.

"Oh, how it did snow! By noon everything looked all muffled up. We carried some wood into the kitchen, and built up a huge fire to cheer us.

"Toward night the wind blew fearfully, making everything rattle and bang. It would rush down the chimney in spiteful gusts, sending the sparks and ashes flying out into the kitchen, and the smoke nearly choked us.

"Then we knew that mother couldn't get home that night. We burnt up all the wood, and went to bed, feeling pretty sober—Jane and I and little Mercy in the great 'turn-up' bed and Tim and Hezekiah in the trundle-bed.

"Child-like we soon forgot our troubles in sleep. After what seemed a long night, we awoke. The wind was still blowing, but it was yet dark, and Jane bade Hezekiah and Tim to stop their noise and go to sleep, and not be a-gabbling in the middle of the night. But we couldn't go to sleep. We felt all rested up and ready to begin another day.

"Jane kept us quiet a long time; but by and by the boys began to kick and scold, and, in spite of Jane's threats, they scurried out to the dresser cupboards, grabbed each a great crust of brown bread, and scampered back and began to gnaw it under the bedclothes.

"We lay there in bed, and whispered and listened to the wind roaring over the roof, and tried to go to sleep. Pretty soon old Brindle began to bellow, and the rooster crowed with all his might. Now little Mercy whined for her 'breakshuf' and wouldn't be put off; so Jane got up, and as she was poking about in the ashes for a live coal to light a fat pine splinter, she happened to look up, when lo and behold, there was a little patch of blue sky above the chimney!

"We all rushed out of bed, and Hezekiah opened the door. A great wall of snow shut it in dark and tight. Jane drew aside the low window curtain, and it was dark there.

"We lighted a splinter. It was twelve o'clock! Straight noon! No wonder the boys kicked, for I was hungry enough to bite, myself.

"The snow had drifted clean over the little log-house so that it was as dark as a pocket. We couldn't get out, and the wood was gone, so there was nothing to do but crawl into bed again, with a crust, to keep warm.

"Along toward night we heard somebody trampling over our heads, and in a minute more mother hollered down the chimney. Just as soon as the storm had abated, she had started for home—four miles—on snow-shoes, Uncle John coming along with her.

"He found a spade in the cow-house, and he and mother dug through to the door. Mother made a great kettle of mush, Uncle John milked Brindle, and we had a feast, and sat up till nearly midnight."

For the Companion.

HOW THE LOST WAS FOUND.

Two things were suddenly missing one day.
One of them was the baby.
He could not have gone far, for he wasn't a year and a half old.

Grandma thought he was upstairs with mamma.

Mamma thought he was in the kitchen with Hannah.

Hannah thought grandma was getting him to sleep in his crib.

Grandpa came in just as they missed the baby, and without a word to scare any of them, took his cane and hurried down through the garden as fast as he could, for the river ran just below. To be sure, baby had never walked a quarter part as far.

Mamma went out to explore the barn, Hannah hunted through the lower part of the house, while grandma toiled up into the chamber and the attic, all calling "Baby! Baby!"

The other missing thing was the piece of dried beef, all there was in the house.

Hannah was sure that she laid it on the kitchen table. Passing through grandma's bedroom, Hannah heard a little noise like a mouse gnawing, nibble, nibble, nibble.

Lifting the spread, there sat baby on the floor under the bed, gnawing the dried beef!

IN THE MAIL-BOX.

In a warm bed in an old soap-box in the cellar old Tabby kept her three little black kittens. But sometimes when she sprang into the cellar window and went to the box, she found it empty. Then she always went upstairs to the sitting-room to look for her kittens, and she was sure to find Lulu playing with them.

Lulu was only four years old, and she liked to play with the kittens better than with her dolls. She would dress them up in the dolls' clothes, and take them to ride up and down the room in her little carriage, and put them in the dolls' bed and try to sing them to sleep.

Lulu was very fond of her little cousin Amy, who lived in another part of the city, and came to see her sometimes, and she thought she would like to give Amy her kittens.

So one day she put the three kittens in her apron very carefully and carried them to the street corner, on which stood a big mail-box, painted red.

It was for packages and newspapers that could not be put in the little box.

Lulu had very often seen her mamma put packages in there to send away, and she thought that in order to send the kittens to Amy she had only to put them in the box.

So she lifted the lid, and dropped the kittens in one by one. Then she ran home, very happy over what she had done.

When she had played with her dolls a little while she went upstairs to her mother, and asked if five o'clock had come yet.

"It is almost five," said her mother.

"Then Amy will almost get my kittens," said Lulu, for she had heard that the carrier came every day at five o'clock to take up the mail.

Her mother asked her what she meant, and when she heard that the kittens had been put in the mail-box she laughed a great deal.

"I think we had better go out, and see if they are still there," she said to Lulu.

They reached the mail-box just in time, for the carrier had opened it and taken the kittens out, and very much surprised he looked. He was very glad to put the three mewing little creatures into Lulu's apron, and she carried them home again, where Tabby was looking for them and growing very uneasy.

Amy was given one of the kittens the next time she came to see Lulu, but she carried it home in her arms, and did not try sending it by mail.

FLORENCE B. HALLOWELL.

Enigmas, Charades, Puzzles, etc.

1.

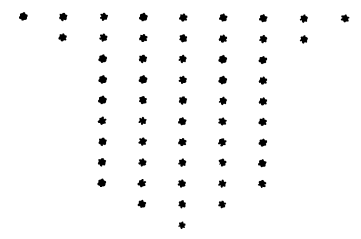
BEHEADINGS.

My *whole* is a word of six letters. I'll state
Its meaning: with lines to variegate.

Behead, and a stomach is left, understood,
When rightly prepared, as a nice kind of food.

Again you behead, and by that means secure
A word which means ready, and also mature.

Again: From my *whole* the last letter curtail,
And a long, narrow piece you will find without fail.



And this you behead, and a journey you leave,
Which means to move lightly, as you will perceive.

Behead it again and a rent will appear—
All these you can find if you but persevere.

ELGIE BELL.

2.

AN ESCUTCHEON.

Across.

1. An aromatic plant.
2. To transfer.
3. A kind of puzzle.
4. A forked instrument used by clothiers in dressing cloth.
5. A graver.
6. To provide food.
7. A musical instrument.
8. To despise.
9. A mermaid.
10. Existence.
11. A letter from Boston.

Centrals read down: A Scotch poet who was born January 25, 1759.

3.

RIDDLE.

Not too deep to be measured,
Free from fault or decay,
What you hear with your ears:
The three at once say.

4.

ACROSTIC COMBINATIONS.

Each word consists of four letters. The primals of the second acrostic are the finals of the first; those of the third, the finals of the second.

Acrostic No. 1.

1. An animal living in water.
2. A feminine name.
3. A mineral salt.
4. A battle fought between Austrians and French, 1800.
5. To slaughter.
6. To enroll for service.
7. A Bible name, found in Chronicles.
8. A part of speech.

Primals: The name of a statesman born on January 17, 1706.

Finals: The name of a statesman born on January 11, 1757.

Acrostic No. 2.

1. One of two equal parts.
2. A masculine name.
3. A kind of hammer.
4. An image worshipped.
5. A rich earth.
6. A beginner.
7. Fragrance.
8. To summon.

Finals: A President, born on Jan. 7, 1800.

Acrostic No. 3.

1. A place of defence.
2. Noting entrance.
3. A weaver's frame.
4. To jump.
5. A painter; born, 1621—died, 1666.
6. A bone.
7. Restraint.
8. To quiet.

Finals: An infidel, born on January 29, 1739.

CYRIL DEANE.

5.

CHARADE.

My *first* is hasty;
My *second* is tasty;
My *whole* is wasty.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

IRRITABILITY.

Some people are naturally calm, and not easily disturbed. Others are quick to feel, and strong in the expression of their feelings. The difference is constitutional.

But every one, whatever his natural temperament, is liable to become irritable as a result of physical disturbance. Marked irritability is often the first symptom of undue brain-work. A man who may have been remarkable for his self-control, is surprised to find himself disturbed by trifles. Annoyances such as he once hardly noticed now fairly unnerve him. He is impatient, and expresses himself in tones, if not in words, of which he is soon ashamed.

Overwork of the brain is not confined to professional men. Merchants, the uncertainties of whose business often involve the keenest anxiety, are at least equally liable to it, and in this case the trouble is often aggravated by a luxuriousness of social and personal habits.

Nor are wives and mothers free from the same danger. Woman's work is never done. For her, care seldom ceases while she is awake, and too often it pursues her even in her sleep. Fashion and social life sometimes make large demands upon her, while the petty annoyances of home fall to her lot almost exclusively. At length unwonted impatience, fretfulness, and severity with her children give warning of nervous prostration, and her husband may perhaps precipitate the crisis by his unjust reproaches.

Irritability may have its source in the stomach. The dyspeptic is notoriously fretful and low-spirited. What a difference between him and the well-fed man, who knows only from books that he has any digestive apparatus!

In softening of the brain, one of the first indications of something wrong is increasing irritability; which, however, is seldom referred to the true cause. If the patient is a mother, she finds fault with her children on the slightest provocation, and punishes them with unwonted severity.

Irritability and general feebleness of the nervous centres are frequently due to a lack of suitable nerve-food, just as the muscles may be enfeebled through lack of the food essential to their proper nourishment.

Friends of the morbidly irritable should guard against increasing the evil by their own conduct, and generally should take counsel with a physician.

For the Companion.

NEW DISCOVERIES ON MARS.

Schiaparelli, the Director of the Observatory of Milan, was the first to announce, in 1877, the existence of single or double canals on the surface of Mars. A few astronomers had faith in the discovery, but many doubted, and waited for confirmation. The Italian astronomer, nothing daunted, went on with his work, finding new proof that his practised eyes were not in fault, with every succeeding observation.

The most favorable time for studying Mars is at or near his oppositions. He is then in line with the earth and sun, the earth being in the middle. This brings him at his least distance from the earth. He is, however, much nearer at some oppositions than at others, on account of the great eccentricity of his orbit.

When Mars is nearest to the sun, and the earth farthest from the sun, the two planets are at the least possible distance from each other. This most favorable condition occurs once in about fifteen years. Such will be the case in 1892, and such was the case in 1877, when the two Martian moons were discovered.

For several years no other eye detected the double lines that had been revealed to Schiaparelli's clearer vision, but at the opposition of 1888 two European astronomers, Perrotin and Terby, confirmed his discovery, the doubling of the canals being plainly perceptible to them. Thus the case stood till the opposition of 1890, Schiaparelli, Perrotin and Terby being the little band of believers in the enigmatical lines. A fourth observer now comes forward, and renders full justice to Schiaparelli, Stanley Williams, a well-known astronomer in the south of England. He has identified forty-three of the canals, and clearly seen the doubling of several of them.

When Mars approaches the opposition of 1892, all the powerful telescopes in the world will be turned upon his ruddy face, and everything within human power will be done to solve the mysteries of his being.

TELL-TALE PEPPERMINT.

"The way of the transgressor is hard." Everything works against the criminal; very trivial circumstances may lead to his detection. Though he hold his tongue never so discreetly, and lie never so ingeniously, his very breath may testify against him. So it was with an Indianapolis rogue, whose story is related by the *News:*

The principal of one of the ward schools has been annoyed for some time by the theft of small articles from her office. After a short absence from the room, she was very likely to miss a pencil, an eraser, or an apple; never anything of great value, but always something.

For several weeks she was in perplexity, but gradually her suspicions fastened upon the little son of the janitor of the building She could get no actual proof, however, and if the boy was really guilty, he was exceedingly sly.

One day the principal brought a package of peppermint candy to her office, and placed it in a conspicuous place on the desk. Then she went out for half an hour or so. When she returned, the candy had vanished.

She set out at once in search of the janitor's boy. He was found industriously sweeping one of the brick walks, and as the principal approached he looked up with a bland smile.

He was a good deal surprised when the lady seized him by the shoulders, stooped down, and looked earnestly into his face. He blushed and wriggled, but for a moment she held him fast. Then she rose with a grim smile of satisfaction. The boy's breath was heavy with the aroma of peppermint. The sequel is not related.

FOUGHT FOR THEIR LIVES.

Four woodsmen from Ottawa, Ontario, had a desperate fight with a pack of wolves while returning from work to their camp on the Kippewa River. Two brothers named Barrett stopped on the road to examine a trap, and their two companions went ahead. The latter had not proceeded far when they heard loud shouting, mingled with the barking of wolves.

They hurried back and discovered the Barretts, with their backs to a tree, desperately defending themselves with their axes against a pack of ravenous wolves.

The men looked about them, and were appalled to see that the pack was being reinforced by a number of equally desperate animals.

After fully ten minutes of fighting for their lives, the men fortunately killed seven of the wolves, which had an effect upon their companions, for they turned and fled. All the men were bleeding from the legs and sides, where they had been bitten.

HER FATHER.

The faith of little children in their fathers and mothers is one of the most beautiful things in the world, but its manifestations sometimes provoke an involuntary smile. The New York *Tribune* reports that a Broadway car ran into the rear end of an express wagon with such force as to tip it completely over. A little girl about six years old was on the seat with the driver.

The man was pitched head-first upon the sidewalk, but landed on his hands and knees, and received only a few slight bruises. The child, who clung to the seat, fell underneath the wagon. Fortunately the high seat prevented the weight of the truck from falling on her, and she was drawn from under the wagon-box uninjured.

One of the bystanders, as he stooped to brush her dress, asked if she was hurt.

"Oh no," said the little girl, "my papa wouldn't let me get hurt."

LYING VERSUS STEALING.

There is a half-truth in the reply of the child in the following incident, which is quite impressive; but a lie, frankly acknowledged, is as much a "thing taken back" as is the return of anything that has been stolen.

She came to her mother with the question: "Which is worse, to tell a lie, or to steal?"

The mother, taken by surprise, replied that both were so bad that she couldn't tell which was the worse.

"Well," said the little one, "I've been thinking about it, and I think it is worse to lie than to steal. If you steal a thing you can take it back, unless you've eaten it; and then you can pay for it. But," and there was a look of awe in the little face, "a lie is forever."

DREAMS.

Physiologists theorize a good deal about dreams, but really tell us little more about them than does the little East London girl who writes this quaint essay.

Dreams are those queer, short tales which come into your head when you are asleep. They are not true. If you have had a good supper, they are rarther longer, and not quite so true. Meat or fried fish makes them very long.

When you have had no supper at all, you either do not dream, or else you can't remember them. We genelly dream some dreams over and over again.

FIRST AND LAST.

The increasing prevalence of the scientific spirit, with its passion for exact statement, makes it more and more necessary for men to say precisely what they mean, and nothing else.

"What is your last name, my little man?" asked the new teacher.

"Tommy," answered the boy.

"Indeed! What is your full name?"

"Tommy Jones."

"Then Jones is your last name."

"No, ma'am, excuse me. When I was born my name was Jones, and they didn't give me the other for more than a month."

To cleanse and preserve the teeth use *"Brown's Camphorated Saponaceous Dentifrice."* Microscopical examinations have proved that the use of soap is the only safeguard against the accumulation of animal and vegetable parasites on the teeth. Camphor strengthens and relieves soreness of the gums. Price, 25 cents a bottle. Sold at drug stores. [*Adv.*

$500 FOR A TOMATO

This **Prize Tomato** is the largest ever offered. The engraving shows one plant grown by O. R. Foster, Florence, Mass., hight is **11 ft. 5 in.**, and completely loaded with large, smooth, bright red tomatoes. Hundreds of my customers have had equal results. The quality is excellent; after you once test it you will grow no others. Two plants if well cared for will produce all Tomatoes one family can use. If started early, fruit ripens from July 4th until frost. Single Tomatoes have grown 6 inches in diameter and weight nearly 3 lbs., and as hard all through as a hard boiled egg, with only a few seeds in a Tomato, and entirely free from rot. This mammoth strain can only be obtained from me. I want to get a tomato weighing 3 lbs., and will pay **$500 cash** to any person producing it. Plant some, you may get the 3 lb. Tomato—grow rapidly and are very ornamental for garden or lawn.

SURE HEAD CABBAGE

Is all head and sure to head, very uniform in size, firm and fine in texture, excellent in quality and a good keeper. Single heads have weighed over 64 lbs.

EARLY SNOWBALL TURNIP

Is the earliest in the world, easy grown, good size, excellent quality. Will be far ahead of your neighbors.

☞I will send a packet each of Prize Tomato, Cabbage and Turnip with my catalogue of bargains, for only 25 cents.

☞Every person sending silver for above collection and addresses of 3 persons who buy seeds, will receive free a packet Silver Ball Lettuce, finest variety ever grown, and a fifty cent certificate for seeds, your choice from my catalogue, free. Address

F. B. MILLS, Rose Hill, Onon. County, New York.

For $1 Free by Mail,
SIEBRECHT & WADLEY
will send a choice growing
ORCHID.
For 50 cents, **A Palm.** For 25 cents, **A New Begonia.** All three for **$1.50,** with full directions of treatment.
409 5th Ave., New York.
SEND FOR CATALOGUE.

MY NEW STRAIN OF FAIRY PANSY IS NO doubt the acme of perfection. Nothing that we can say can give to the reader an adequate idea of their beauty and splendor. Their **everblooming quality,** giant size, velvety texture, marvelous combination of colors running through almost every imaginable shade, is found in no other strain in America. Package post paid, **25c.** My Catalogue contains colored plate of same painted from nature. Send **10c.** for same, or **25c.** for pkg. of **Fairy Pansy,** and receive Catalogue *free.*

JOHN A. SALZER, La Crosse, Wis.

THE TRUE MANETTIA VINE

Here shown is the most magnificent flowering vine in cultivation, either for the house or garden, for it is loaded with bloom every day in the year. In the house it can be trained all around a window, and will be a solid wreath of bloom both summer and winter. In the garden, its charming beauty surpasses everything. Flowers, intense scarlet, tipped with yellow, the most brilliant and striking combination, and borne by the thousand, each flower keeping perfect over a month before fading. It is of the easiest culture, and sure to thrive for any one with ordinary care. It can be trained on a trellis, strings, or used for drooping from hanging baskets; in any way a perfect mass of the most lovely flowers and foliage from the root to the tips of the branches. Its great beauty and novelty attract every eye. Supply limited, and this offer will not appear again. Order at once, and if you are not ready for the plants now we will send them later; just when you say. **PRICE** of strong plants, of the true variety, **ALREADY BUDDED OR BLOOMING,** by mail, post-paid, guaranteed to arrive in good order, **30 cents** each, two for **50 cents,** five for **$1. To every order we will add another elegant novelty free.**

THE GREAT SPIDER LILY. An elegant large bulb of the Amaryllis family which commences to bloom soon after it is potted, sending up great spikes of lovely, large pure white blossoms of exquisite fragrance and unsurpassed beauty. It is one of the oddest, sweetest, and loveliest flowers grown. Large bulbs which will soon bloom, **25 cents each,** three for **50 cents,** post-paid, or for **50 cents we will send Manettia Vine, Spider Lily, a Superb Seed Novelty and Catalogue.**

SEEDS, BULBS, PLANTS, Extra Choice, by Mail Post-paid.

12 Extra choice mixed Gladiolus, flowering bulbs,	25c.	5 Grand Lilies, 5 sorts, including Auratum,	50c.
6 New Double Pearl Tuberoses " "	25c.	5 " Cacti, different sorts named,	50c.
5 Rare Chrysanthemums, 5 sorts named,	50c.	20 Bulbs and 10 pkts. Flower Seeds, all different,	50c.

SPECIAL OFFER. The above liberal offers are made to introduce our superior goods. We will send, post-paid, everything offered **for only $2.50:** Manettia, Spider Lily, Gladiolus, Tuberoses, Chrysanthemums, Lilies, Cacti, Bulbs, Seeds, etc.

OUR BLUE CATALOGUE. (A superb work of art in blue) of **FLOWER AND VEGETABLE SEEDS, BULBS, PLANTS, AND RARE FRUITS,** is the finest ever issued. 128 pages, hundreds of elegant engravings, Stipple Lithograph Covers and 5 large colored plates. We offer the finest novelties in Flowers, Vegetables and Fruits, notably: Our great Japanese Wineberry, Floral Park Plums, Butterfly Orchid, Star Phloxes, Water Plants, New Roses, Dahlias, Gladiolus, Chrysanthemums, etc. Also the greatest collection of rare Cacti and Flowering Shrubs. This elegant and expensive Catalogue will be sent for only **TEN CENTS,** which is only a part of its cost to us, or if you order anything here offered and ask for a Catalogue, it will be sent **FREE.** Address,

JOHN LEWIS CHILDS, FLORAL PARK, QUEENS CO., N. Y.

For the Companion.

UP THE TRAIL.

They stood, a boy and a girl, at the entrance of the Grand Cañon, in the deep shadow of the cliff. They were not absorbed in the wonders of nature, but were gazing solemnly at each other. The boy was known, at least by sight, wherever he went; he had such a straight, clean-cut, well-knit little figure, with honest, friendly gray eyes, and a ready smile.

"He is the stirrin'est boy," the burro-keeper said; "and the girl, she's the stirrin'est girl I ever see. There's just nothing that there little girl couldn't do."

There was evidently no relationship between this "stirrin' pair." She was of a lighter build, more alert, of more nervous activity. The pleasant little face was one to change expression with every passing thought. Just now the soft, dark eyes and pretty mouth showed the serious nature of the consultation.

Pike's Peak was the subject. Pike's Peak was always the subject. They knew what it was, at Colorado Springs, to feel that strange, inexpressible thrill that comes when one looks down the broad avenue in the early morning at Pike's Peak, as it looms up almost overhead, so still, so mysterious, and so grand.

It seemed then as if they could walk to the top in a few hours, and must do it. But at Manitou, "Pike's Peak" was in everybody's mouth. Burro parties went up frequently. A few people walked up, and to walk up was a distinction that the strong and active sought to attain.

The fever seized the children. They had begged to be allowed "just to walk up Pike's Peak," only to be chagrined by the evident amusement of their elders at the proposition.

To accomplish this one thing was their dream. It was discussed at every opportunity. The Cave of the Winds, the Garden of the Gods, Cheyenne, the Ute Pass—nothing was of consequence compared with walking up Pike's Peak.

Now they had decided that go they must. Their plans were deeply laid. On the next day they were to start. It was their last chance, and they knew of no party going up. From the guides they had learned about the trail. It was twelve miles to the Peak from Manitou. Five miles up was the Half-way House; then came three miles of level, and three miles from the Peak was the engineer's camp, where surveys were being made for the cog-road.

They knew the laws of the trail, that the pedestrian should be careful not to drink much, no matter how thirsty, nor how tempting the cold, bubbling springs or streams, and that it was necessary to go slowly and rest often.

Their plan was to start about seven o'clock. "And then, Connie" said John, concluding the conversation, "we shall reach the Peak about two o'clock, eat our lunch, and come just rushing down—that won't take long! And won't the folks leave off their laughing then! Why, I couldn't go back home and tell the fellows I hadn't walked up Pike's Peak!"

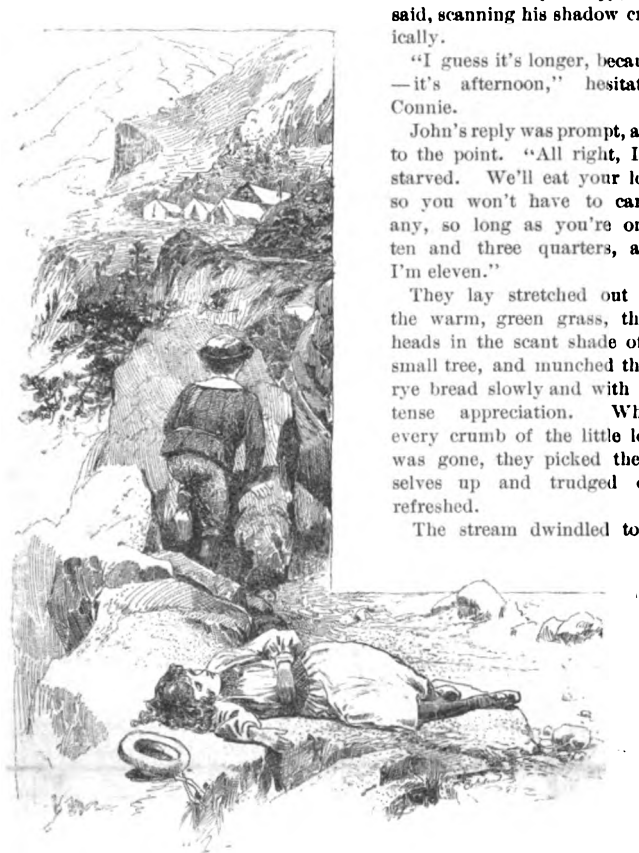
They shook hands, and parted with a gravity befitting the occasion.

At eight o'clock the next morning, successful at every turn, they were well on their way up the trail, each carrying a little twisted loaf of rye bread. John had a small, flat flask for water in his jacket pocket. Even at so slight an altitude above Manitou, breathing was a little difficult, and they were willing to stop frequently, and drink in the fresh, sunny air, not yet too hot; to look up wonderingly where the steep, scarred sides of the cañon cut the sky with jagged edges; to notice the few twisted dwarfed trees clinging here and there; to hear the pounding roar of the stream so far below that they could not always see it; to watch the little ice-cold, trickling springs dripping into tiny basins scooped out by the guides beside the trail; to laugh and hear the laugh echoed from cliff to cliff.

By degrees the chasm with its steep, inclosing sides seemed to fade into the background, and they knew they were near the Half-way House. Most of the ascent had been very steep. It was hard work to breathe; the sun was intensely hot, and their sensations inclined them, on the whole, to side with those people, who, having walked only to the Half-way House, declared that was the worst of the ascent, and that the rest of the trip was a mere nothing.

They rather dreaded passing the Half-way House, fearing that some one would stop them there. But their fears were needless; no one was in sight, and they passed the building unmolested.

On the other side the trail wound through a meadow, following the stream, which was now a very mild-mannered stream, indeed, and could be crossed anywhere on stepping-stones. On each side rose gently-sloping wooded hills. They sat on the grassy bank to cool their feet in the water.



"John," said Connie, thoughtfully, "a good while before we reached the Half-way House we had little bits of fat shadows."

John looked startled, and stood up.

"It isn't so very dumpy," he said, scanning his shadow critically.

"I guess it's longer, because—it's afternoon," hesitated Connie.

John's reply was prompt, and to the point. "All right, I'm starved. We'll eat your loaf so you won't have to carry any, so long as you're only ten and three quarters, and I'm eleven."

They lay stretched out on the warm, green grass, their heads in the scant shade of a small tree, and munched their rye bread slowly and with intense appreciation. When every crumb of the little loaf was gone, they picked themselves up and trudged on, refreshed.

The stream dwindled to a tiny thread, so shallow that John had hard work to fill the flask. Then the trail left the stream altogether, and struck off through thin pine woods that did not seem to give any shade from the oppressive sun.

"I thought we'd have reached the camp long before this, Con," puffed John, feeling the backs of his legs tenderly.

"The camp's above timber line, you know," Connie replied, "and that high hill over there has trees on top."

On they went, silently, to save their breath, resting frequently; measuring each new ascent with a thought to the amount of strength it would require; taking little swallows from the flask to cool their parched throats, though the water was now anything but cold; struggling up, breathing harder and harder, and thankful beyond expression when the sun went under a cloud.

When they were about on a level with the top of the hill Connie had noticed, the trail turned, and they had a wide view spread before them. They could see their track through the meadow, but not farther, hills seemed to cut it off, and then on down below the hills great reaches of flat country, divided off into little parallelograms, reaching to the horizon.

Connie stretched herself out on a flat rock, and lay there panting, watching the darkening sky. The air was cooler.

John undertook to reconnoitre. From a higher rock he saw the engineers' camp, three or four large, square canvas tents. The trail ran past the tents; below the trail, down the steep declivity, were straggling pine-trees. Above the trail, up beyond the tents, were rocks, nothing but rocks. A man, with shirt-sleeves rolled up, and who looked as if he might be cooking, came to the door of the largest tent.

There was no use in trying to pass that man. John sat down by Connie, and they discussed the situation. Their plan was simple in the extreme, merely to wait for a good chance, and hurry by the camp.

They waited and talked in low tones. They even felt enough surplus energy to shy stones down among the timber. The clouds darkened. A mist gathered, and then changed into a fine rain.

The children looked at each other in dismay. "What do you think, Connie? Shall we stop? It's sure to rain now!"

"We won't give it up now! No, sir. I never felt better. I'm all rested. It's only three miles to the top, and you know the mile after you leave the camp is real level."

John's face cleared and brightened. They knew that the last two miles of the three made an ascent of two thousand feet, without a break; but they did not understand the application of that fact to their trembling little legs.

They heard voices, and looking, saw the engineers coming down the trail to the camp, swinging their lunch-pails and talking. They wore heavy boots and oil-skin coats. John looked at his light jacket and shirt-waist, already damp, at his short trousers and black cotton stockings, then at Connie's soft felt hat crowded down on her dark, curly hair, at her flannel dress just to her knees, and constructed chiefly for coolness and comfort, at her thin black stockings, and the scuffed-up little low shoes.

They heard the men say it was hailing farther up, and bitter cold, and that they had quit work. Then the men disappeared in the big tent, and all was quiet.

Their chance had come. The tents were safely passed. John stopped to refill his flask at the spring, the best water on the mountain, the guides had said. John was sure it was at least the coldest; it was so cold that filling the bottle made his fingers ache.

The trail was not very steep; the soil was pebbly, and little green things and tiny yellow flowers grew wherever they best might. The view was fine. The wooded hills and bits of meadow between, the gleaming pools, the level distances were all seen through a soft, transparent mist that lent an unreal glory. The children felt the beauty of it, and held each other's hands and gazed, when they stopped for breath.

They did not talk much; level as the trail was they could go but a few steps at a time. The air was growing piercingly cold; the rain changed to a cutting, wind-driven sleet. John took off his jacket, and put it over Connie's shoulders. She promptly returned it.

"Connie, if you don't put that on I'll leave it right here, and we'll both freeze," he said, stubbornly.

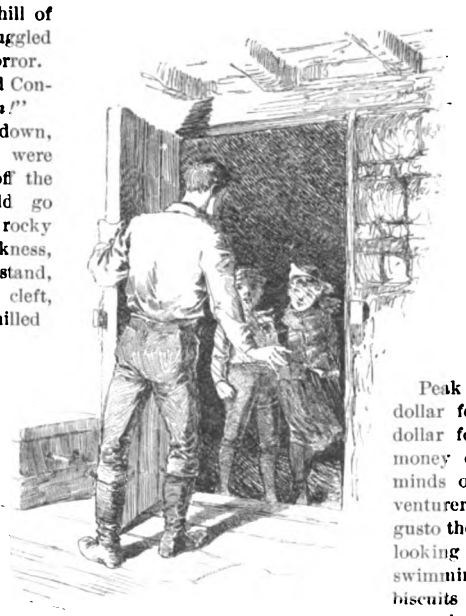
Connie made a movement as if to stick to her refusal; then she quietly put on the jacket, and said they would take turns in wearing it.

Then the trail struck the rocks, and seemed to turn straight upward. It was growing darker and darker; they could just see their way. Their breathing was very labored, and they could hear the heavy beating of their own hearts.

"We'll get there, Con," said John, cheerily; "it's only two miles now, and it can't take forever."

But soon they could not see the trail. They kept in it only because there was no other place to walk. The wind buffeted them, the hail slashed down mercilessly. When they stopped to rest, the cold was bitter, and the rocks chilled them through their thin clothes.

Everywhere there was a sound of running, trickling, gurgling water. It washed down in the trail; they were walking in ice-cold water. When Connie stepped into the little hollows, she could feel the water wash over her low shoes. She felt numbed to the knees. She could hear John's labored breathing just behind her, and fancied she could hear the beating of his heart.



She remembered hearing that some people at the top of Pike's Peak fainted, because the air was so light, and that people with something the matter with their hearts might die from it. Suppose John had something the matter with his heart!

It was so hard to move one foot after the other, and all the time she was saying to herself, half-consciously, "O God, please make me a good girl, please make me a good girl."

Then she stumbled over a rock. John tried to hold her, and fell with her. The rock had acted as a dam for the water, and before they could lift themselves they were soaked with it. Oh, the icy chill of that water! They struggled on, and then came a horror.

"John," half-sobbed Connie, "we're going *down!*"

If they were going down, that meant that they were lost, that they were off the trail, that they would go stumbling around that rocky peak in the fearful darkness, as long as they could stand, only to fall into some cleft, utterly worn out, and chilled past endurance, and—

"Down? We must stop!" said John. "Just wait, Con, don't move."

He went back a few steps. In spite of the rushing of wind and water, she could hear him slip and stumble. Suppose he should fall, and she could not find him?

But she heard a short, quick call above the storm. "Come, Con, right along where I did."

She went, and reached him. They held each other's hands tight, while they waited for breath.

"We'll follow the water; that must come down," was John's brief explanation.

That was the hardest struggle. They did not seem to be in the trail, for they climbed over rocks, up and on, blindly, despairingly, breathing as though their lungs and hearts would burst. Then John gave a desperate cry, and fell face downward on a rock.

Connie dropped beside him. "John, John," she said, chokingly, "don't give up!"

He clutched her hand, and they lay there, whipped by the fierce wind, their bodies heaving with every breath.

Looking down off into the night, Connie saw rows of lights crossing one another, like a little garden; quite near they seemed, and yet so immeasurably far away, so terribly far away.

"Look, John!" whispered Connie.

He roused himself. "Colorado Springs, I guess," he said, after a pause. Then came the thought of Manitou, and his mother. His heart gave way, and he sobbed.

Connie gulped back the knot in her throat, and kept saying to herself mechanically, "O God, please make me a good girl, please make me a good girl."

A lethargy was stealing over John. He thought it was time to go to bed, and he started to say his prayers, and thought his mother was there. "Now I lay me down to sleep," he murmured.

"No, John, no!" Connie shook him with all her fast-ebbing strength. "We must move, we *must!*"

"You go, Con. If we had only reached the top, I wouldn't care so much. It's worse for you, Connie, you're your mother's only one, and there's six of us, Con. Nat can have my—knife."

Connie raised herself by a tremendous effort, and tried to drag John, but she was too weak. She could see a little more plainly; the sky was lighter overhead. It came upon her like a flash that they had reached the top. She was sure she saw something dark ahead, perhaps a rock, perhaps a building.

"John," she cried, with a thrill in her voice that roused the boy at once. "We're here! We're here! John, we've walked it!"

It was the one touch that could have fired the boy.

"Walked it!" He jumped up, new life in his veins.

Surely, the ground was level. It was only a few steps to the dark mass, and it was a building, but there was no sign of habitation.

"It's not the right one, that's all," said John, stoutly. "There are two men at the old signal station all summer, and you know it. *There's* the light now."

They did not mind that awful blackness of darkness; they did not feel the cold, nor the hail and snow, nor their wet clothes. They did not feel the exhaustion beyond effort, nor that horrible beating of their hearts.

They were there! Up to the door they marched, saw the bright light shining through the low window, and rapped on the door with a will.

A young man opened it. There, in the broad path of light, stood the two wet children.

"My soul!" gasped the man, and pulled the children in out of the snow. "My soul, Bob, *babies!*"

The other man stood aghast. John waked up to the humor of the situation. They were in a warm room, not out on that desolate mountain side.

"We walked up," he said, his cheeks glowing, his eyes flashing. "We walked up the trail from Manitou, and we thought we'd get here about noon, but we didn't. Oh, but we 'most died, out here!" He sank down in a chair.

"Please, sirs," said Connie, shaking back her damp hair, and looking from one to the other, "May we have some hot water? John must soak his feet—my mother always says so, and ginger-tea we get at home."

The men put the children close to the stove, made the blazing wood fire seven times hotter, heated water and made ginger-tea. The children laughed and joked, and thought it a "great picnic."

Cots were made up in the room, not far from the fire, and coverlets heaped upon them.

Other travellers who stayed at the Pike's Peak House over night paid a dollar for their lodging, and a dollar for each meal; but no money questions disturbed the minds of these two young adventurers. They ate with great gusto their breakfast of strange-looking fried eggs, fried potatoes swimming in grease, doughy biscuits and muddy coffee, and were planning their return meanwhile. They decided that they could never return down the trail, but would go by the carriage road to Cascade. They knew the distance to Cascade was seventeen miles, but that was nothing to them. They insisted that they did not feel lame, nor tired. The air was invigoration itself; the sunshine seemed to possess a quality unknown to lower levels.

The view was magnificent; it was such a novel

Digitized by Google

experience to look at the snow lying all around them, and then off over the green hills, valleys, and fields, so far below them.

Standing on the crest, they could see the carriage road wind like great S's down to the timber-line and farther, and promptly reached the conclusion that they could save several miles going "'cross lots." Watching their chance, and with a parting yell, feeling that they had a fair start in case of pursuit, down they went, helter-skelter, pitching, falling, laughing, up and on again. Life was grand!

They spent the dime that represented John's all for some milk and biscuits at a shanty just above Green Mountain Falls. Conversation with the vendor decided them to go down the Green Mountain Falls gorge, instead of to Cascade, since it was much nearer. Down they went, trembling from sheer exhaustion if they stood still, their legs aching, but their faces smiling and jolly. They had walked up Pike's Peak, and down again, and were nearly home.

Not far from the foot they met a man climbing up, who eyed them narrowly. "Are you the two children who are lost?" he said.

"We're not lost!" they answered.

"I believe you are, you scamps! Your mothers are fairly crazy with grief, and the whole country is being searched. I saw your father, sir, down below here, looking as white as a sheet."

The fun was all gone. Frightened, trembling, feeling all the weariness in them, realizing that it was late in the afternoon, they went on, more and more slowly.

Then they were met by a man who was out seeking them. They hardly knew what happened next. Every one seemed to know about it; strangers wiped their faces and shook hands; women kissed each other and cried; every one on the train from Green Mountain Falls to Manitou congratulated every one else.

A crowd followed them to the hotel. Their mothers were there, and the "stirrin' pair" were cried over, and kissed, and praised, and scolded. Then the two mothers hurried them into their respective rooms and beds, and the children went to sleep like clock-work.

The burro-keeper wound up a certain favorite story of his for weeks afterwards with: "Yes, sir! I'll be blessed if they didn't walk clean from Manitou to Green Mountain Falls, over the top of Pike's Peak! That there boy and that there girl are the two stirrin'est children ever born into this 'ere world."

ELVIRTON WRIGHT.

For the Companion.

STARS IN JANUARY.

One of my earliest recollections is of standing by an open window watching the "Yard L," as it rose slowly above the tops of the trees, and wondering if the line of three stars which forms its stem was exactly three feet in length.

I dare say the reader has never heard of the "Yard L." It is not one of the old "constellations;" that is, one of those quaint figures of men and monsters with which the imagination of ancient star-gazers covered the starry firmament. Indeed, I have never met with the name in print; but that is the name by which I first learned to know the three bright stars—and one fainter star near them—which form the belt of Orion, and which are sometimes called "Jacob's Staff" and sometimes the "Three Kings."

All must be familiar with this splendid constellation Orion, which stands in the heavens like a gigantic letter X, forming on these winter evenings the most conspicuous ornament of the southern skies. To me, its most attractive feature is still the "Yard L."

The ancients saw in this striking group of stars the figure of a giant. Orion was fabled to have been a mighty hunter and warrior of the olden times, who, after his death, was placed among the stars. A very ancient giant he certainly is; we find mention of him in the very oldest books we have—for instance in the Book of Job, where the question is asked, "Canst thou bind the sweet influences of Pleiades, or loose the bands of Orion?" This is an allusion to the supposed influence of the stars over the weather and the seasons.

But it is not of these stars as a constellation that I wish particularly to speak. We will take this group as a starting-point for a little ramble among the stars of this region of the heavens, darting about here and there, and picking up such items about them as seem to be of interest.

"Magnitudes."

The stars are not all of the same brilliancy. Astronomers have classed them, somewhat roughly, according to "magnitudes," a word that refers not to the size of the star, but to the brilliancy of the light that reaches us from it. The very brightest stars are said to be of the first magnitude. Orion contains two stars of this class—Betelgeuze, in the upper left-hand corner, and Rigel, in the lower right-hand corner—names given to them by the old Arab astronomers.

There are in the heavens but eighteen or twenty stars of the first magnitude, of which twelve only are visible in the United States, the rest being so situated in the southern hemisphere that they never appear above our horizon. The unequal distribution of the bright stars over the heavens is illustrated by the fact that, of these twelve, six are in or around the constellation Orion, as we shall see.

Stars not quite bright enough to be classed as of the first magnitude—for instance the three in the belt of Orion—are said to be of the second magnitude. Then there are stars of the third, fourth, fifth and sixth magnitudes, the last being the very faintest stars visible to keen eyes on a very clear night.

But we by no means perceive all the stars with the naked eye. The telescope brings into view at least ten thousand times as many other stars, all so faint as to be beyond the range of our vision; and the magnitudes are continued on down to the sixteenth and seventeenth, stars of the last being so exceedingly faint that only so powerful an instrument as the great Lick telescope can bring them into view.

To the left of Orion, and nearly on a line with the three stars in the belt, we may see an exceedingly brilliant star—as brilliant, in fact, so astronomers say, as five ordinary stars of the first magnitude. This is Sirius, more familiarly known as the Dog-star.

Sirius.

There is a curious history in this name *Dog-star*. The name has of course no reference to the madness to which ignorant people have supposed the canine race to be peculiarly subject during "dog-days," in August; nor, perhaps, was it given originally to the star because of any fancied resemblance to a dog in it or in the group to which it belongs.

The name was given to it by the Egyptians three thousand years ago, for a reason which illustrates one very important service which was rendered in former times by the stars and constellations. If you were to rise on a morning about the middle of August, at say four o'clock, while the stars were still shining, you might see Orion hanging low in the east, and beneath him this star, Sirius, just visible above the horizon.

This is what the ancients meant by the "rising" of a star or a constellation; it was its first appearance at daybreak above the horizon in the east. And since the constellations all rise at particular seasons of the year, some in summer and some in winter, they were excellent guides for the farmer in those days before the invention of calendars and almanacs, enabling him to keep an accurate trace of the seasons.

In Egypt, three thousand years ago, Sirius rose, not in August, but about the middle of July, for a reason which we need not stop to explain. Now it so happened that about the same time began the annual overflow of the Nile, which was a great blessing to the Egyptian husbandmen, since it watered and fertilized their land. Naturally the Egyptians, being star-gazers, associated these two events—the rising of Sirius and the overflowing of the Nile; and since the star seemed to preside or keep watch over this latter occurrence, they called it "the sentinel," "the dog,"—a name which has clung to it ever since.

In the Egyptians' tongue the name of this star was Sothis. Its brilliancy and the important service which it was supposed to render to the farmer made it an object of especial veneration. It was believed to be the residence of the soul of the goddess Isis; and the day of its rising was the beginning of the Egyptian year.

This is, by some authorities at least, regarded as the origin of the name. But the Greek astronomers, perhaps seizing on the idea without investigating the reason, found and pictured in their charts of the heavens two dogs. Sirius is in the head of the larger, or Canis Major, while near by is the constellation of the lesser dog, or Canis Minor.

You may see, above Sirius, and at about the same distance from it and from Betelgeuze, another first-magnitude star, named Procyon. These three stars form the corners of a nearly equal-sided triangle. The name Procyon signifies "before-the-dog." This star was so called because it rises a short time before Sirius, and seems to give warning of its approach. It is in the constellation of Canis Minor.

To the right of Orion, and nearly on a straight line drawn from Sirius through the belt, and at about the same distance as Sirius from these three stars is Aldebaran, sometimes called the "Bull's Eye," which is also a star of the first magnitude—the principal star in the constellation Taurus, or the Bull.

Here are five of the six very bright stars of which I spoke. To find the sixth, look directly overhead, at a time when Orion is almost exactly south, and you will see Capella, the Kid, which is the principal star in the constellation Auriga, or the Charioteer.

The Distance of Sirius.

Sirius, because of its great brilliancy, may no doubt be supposed to be the nearest of the stars. Although it is not the nearest, yet it is among the nearest. I doubt if I can give a very distinct impression of how far Sirius is away; but let us see.

From here to the sun is about ninety-three million miles. If we could travel toward the sun with the highest speed of an express train—say at a rate of sixty miles an hour—without stopping day or night, and bearing with us a charm against old age, we should reach our destination in about one hundred and sixty years. Now, the distance to Sirius, according to the latest estimates, is fully six hundred thousand times the distance to the sun. Express-train speed would hardly suit us on a trip to that star.

Suppose that we were to travel with the enormous speed of light, which reaches us from the sun in a little over eight minutes. We would hardly care to travel faster than that; but even at this inconceivable rate, it would take us nearly ten years to reach our journey's end and alight upon Sirius.

And what should we find when we reached our journey's end, and, indeed, long before we reached it? Not a star, as you can easily imagine, but a sun, and a very enormous sun, too. The exact size of Sirius is not easily determined; but in all probability it is a stupendous fiery globe, having a diameter six or possibly eight or ten times that of our own sun.

Our sun, placed by the side of Sirius, would make but a poor figure, shining as a star of about the fourth or fifth magnitude. Indeed, our sun, which to us appears so grand a luminary because we are comparatively near to it, is, after all, a rather unimportant member of the family of celestial bodies, being probably smaller than are the most of the stars which are visible to the naked eye.

The Great Nebula.

We will return to Orion—to the "Yard L," from which we started. Directly beneath the lowermost of the three stars which form the stem of the L,—I insist on calling these stars an L, because I so learned them,—at a distance about equal to the length of this line, is one of the most mysterious objects in the whole heavens—the great Orion nebula. It can be seen well only through a large telescope; but even an opera-glass will enable one to discover here a little whitish spot, resembling a blurred star.

"Nebula" means cloud. It is a name given by astronomers to a class of objects, which are interspersed in great numbers among the stars, some very minute and some of a considerable size, which have the appearance of luminous mist or flecks of bright cloud.

The Orion nebula is the largest of these. It is a splendid object when seen through a good telescope, resembling strangely the head of some monster animal, being quite bright on one side, where its mouth and its proboscis or trunk may be seen, while on the other side its light fades away into a sort of shaggy mane.

Astronomers have long studied this mysterious object and wondered what it is. It is only since the invention of that wonderful instrument, the spectroscope, that they have been able to decide this question; and they tell us that this misty object is a mass of luminous gases.

What is it doing here? Well, it is a strange thought, and yet not altogether a mere guess, that these gases are slowly condensing, and that out of the material which they contain will be formed, ages upon ages hence, new stars, new worlds—stars which will shine in the heavens long after the light has departed from our sun and all life, human, animal, and vegetable, has disappeared from our little globe, the earth.

GEORGE S. JONES.

For the Companion.

CHEATING INSURANCE COMPANIES.

FIRST PAPER.

It was never known how the barn took fire, but certain it is that Joshua Farnsworth never recovered one penny of the large amount for which he had been insured.

He was a sharp, grasping, scheming man, eager for wealth and unprincipled in his dealings, and ready to take advantage of a legal quibble in repudiating any bargain which he regretted, or in compelling the carrying out of any agreement which, however unfair it might be to another, was profitable to himself.

Those who had business with him had to be cautious and alert to save themselves from imposition. He was shunned in the village, and did not seem to regret his loneliness.

But, unpopular as he was, sympathy was not withheld from him, when one morning his home was found in ashes—a heap of charred timbers in place of a commodious house and outbuildings; and suspicion was rife that the fire had been the work of some one who sought revenge.

Joshua himself was positive that it could be traced to an incendiary. Neither lamp nor kitchen fire had been lighted in the house the previous evening, and he had been in bed several hours when aroused by the smoke and flame. He spoke of offering a large reward for the discovery of the miscreant, and turned his back on those who attempted to condole with him, as if he held them responsible in a measure for his misfortune.

Nor did he need condolence particularly. The property was insured for all it was worth, and he at once put in his claim for the amount of the policy.

A Detective in Town.

About this time a gentleman attached to the insurance company came to the village, as it was supposed, to adjust the loss. He was a bland, soft-mannered, low-voiced person, dressed in black, with white hair and white side-whiskers; a clergyman, one would have said, or a retired merchant with a taste for philosophy. He soon became acquainted in the village, and instead of spending but a day there, and then returning to Boston, he remained a week. He liked the air of New Hampshire, he said, and there was nothing to prevent him from taking a little rest.

In conversation he was reticent, and it was only after he went away that those who had talked with him bethought themselves how skillfully he had drawn them out, prompting disclosures without appearing to do so, and asking leading questions without exciting any suspicion as to his motives.

What information he took away with him is not known, but the company did not pay Joshua Farnsworth's policy. He threatened to bring a lawsuit, but he never did. Then it was whispered that he himself had set the house on fire, intending to defraud the insurance company, and that the quiet gentleman had picked up all the evidence necessary during his sojourn in the village.

This suspicion had slumbered and been forgotten for a year or more, when it was revived by the arrest of Joshua Farnsworth for arson in Kansas, to which State he had removed from New Hampshire after the fire. The evidence against him there was conclusive, and he was promptly convicted and sent to prison.

The writer of these lines knows the quiet gentleman very well. He is the special agent of the insurance company, and is employed in investigating claims which are believed to be fraudulent.

"Maybe there's more things in a cyclopedee," I once heard a farmer say of him, "but *his* head aint empty, I tell you."

Ferreting out Fraud.

No lawyer in the land is more adroit than he in the art of cross-examination. He leads the witness on by appearing to agree with him in everything, and thus encourages him to abandon all reservation. He always appears to be on the side of the policy-holder, and determined to vindicate him, while in reality, perhaps, he is convicting him on his own evidence. The innocent, of course, have nothing to fear, but it is seldom that the wrong-doer, like Joshua Farnsworth, escapes this astute detective, whose note-books would supply a dozen novelists with plots. Especially interesting are those cases which he narrated to me, of attempted frauds in life insurance.

Sometimes death is feigned by those whose lives are insured, with such an appearance of reality that doctors are deceived. Again, the policy-holder mysteriously disappears, leaving behind him strong presumptive evidence of his death, though the body cannot be found.

Still another kind of fraud is that by which an applicant for a policy represents himself as another person, who does not appear, the latter being in ill health and uninsurable, while the applicant who impersonates him is in all ways eligible.

An insurance company is brought by these attempted frauds between two fires. In the first place, it must not appear to resist any rightful claim, since to do so would frighten away possible insurers, and thus damage its business. On the other hand, it must be wary and watchful to protect itself from the extremely ingenious plots which are often formed to defraud it.

Let us take an incident out of the special agent's note-book, to show how crafty some of the plots are. Names will be changed, of course, but in all other respects the story is quite true.

Where a Crime Was Committed.

Berkeley is a fishing village, a cluster of straggling houses of gray shingles and clapboards. The high white tower of a light-house rises among them, out of a hollow in the wind-driven ridges of sand, which stretch from the sea-line as far inland as the eye can reach.

Ocean and sand fill the scene in all directions; the sea rolling in with a deep, booming sound, even when the surface is smooth and the skies are cloudless. In the distance is the bright green of the salt marshes on the further shore, and the foliage around a village steeple; but the only vegetation on the outer beach is a bristling fringe of grass along the hillocks and a few clumps of dwarf cedars which have been pitiably warped and bent.

How do the people live in so forlorn a spot? The sea yields them all they have, and sometimes after a storm it tosses up richer spoil than they ever find in their nets. In the dark little village store there are fabrics and flagons which never saw the inside of the custom-house; it's an ill wind that blows no good, and now and then a choice bit of cargo is washed ashore from a wreck on the outer bar.

Besides, the gunning and the fishing are so good—ducks, snipe, mackerel and bluefish—that visitors often come down from the city for the sport. They are usually staid and well-to-do business men, whose clerks would never recognize them in the slouch hats and leather or oil-skin jackets which they wear in their expeditions.

Who Did It.

Such a foppish sportsman is seldom seen among them as the "arrival" who entered "Harry Hastings" as his name in the dog-eared register of the tavern, with a boldness of flourish that would have done credit to a professor of penmanship.

Everything about this young man was new and of the latest pattern, from his gun-case to the dainty little tennis cap he wore on his head. His creamy flannel trousers, the belt that held them around his slender waist, the plated buckle—even the pale yellow moustache on his upper lip and the crisp curls on his head—somehow looked as if they had never been worn before.

Fastidious as he was in dress, he was friendly and hearty in manner, and the prejudice which his first appearance created gradually passed away. Only one person expressed a settled feeling against him, and that was Fred Rutgers, a young boatman and fisherman, who, after a few conversations with him, dropped his acquaintance.

Mr. Hastings, who did not appear to be more than twenty-one or twenty-two years old, gave himself out as a stock-broker in Wall Street, and marvellous were the stories he told of the ease with which fortunes were made there. He glowed as he recounted the sharpness of the operators and the gullibility of the public. The public, he said, consisted of a parcel of fools, and it was a good thing when they were victimized.

"There's no need to have the eyes peeled to see what sort of a business that is," said Fred Rutgers, who was standing by.

"What would you call it?"

"Swindling," replied Fred, coolly.

Mr. Hastings winced and tittered as Fred walked away.

No one listened with so deep an interest to these recitals as Harvey Tucker, a gaunt, sallow-faced young man who acted as clerk of the tavern of which his father was the landlord. In his dress he imitated what he called "city style." All that Harry Hastings was, he would have liked to be, and they became friends and companions at once. They had several qualities in common. Hastings was sharp and unscrupulous; Harvey was unscrupulous but not sharp; though, of course, he believed himself to be a keen-witted youth, whose destiny was to make a stir in the world.

An Accomplice.

A month passed, and the dapper little visitor still lingered in the village, though his reason for prolonging his stay was a mystery, since he seemed to care little for either fishing or shooting. He was too fond of luxury to rise at four o'clock on cold mornings and paddle out into the narrow bays and channels in the salt meadows where the birds might have been found, and he boldly declared that bluefish suited him best when cooked with plenty of seasoning and served for supper.

He announced one day that a chum of his was coming down from the city for a day's sport, and, after instructing Harvey to procure a boat, he invited him to make the third in the party.

A small sloop, with a long, overhanging stern like that of a cutter, was hired, and an abundant luncheon stowed away in the lockers. The "chum"

Digitized by Google

arrived in the evening, and soon after daybreak the next morning the three set sail in high spirits, heading for the winding channels of the salt meadows. For an hour or more the white topsail was visible, like a bird hovering over the vividly green sedge, and then it melted in the increasing light of the advancing day.

The Crime.

It was late at night when the boat returned, and Fred Rutgers, who was seated at the end of the crazy old pier, sneered as he saw how carelessly she was handled. She struck the piles with such force that she rebounded, and the mainsail settled down upon the heads of those on board. Harvey was the first to come ashore, and the visitor quickly followed; but Hastings was not visible.

"What luck?" said Fred, as they passed him. He noticed then that Harvey was shaking as with the ague, and the lantern in the boy's hand showed that his face was a ghastly white.

"He's lost—he's drowned!" he cried, in a trembling voice.

"Poor Harry!" said his companion. "He fell overboard soon after dark, and we couldn't see anything of him. He must have struck his head as he fell."

They agreed in their account of the accident. They had been cruising about the "thoroughfares," as the passages in the meadows are called, and had caught some fish and shot some ducks. Harry had been in his gayest mood, laughing and singing all day long. After supper he had gone into the bow, and while they were making for home, and he was still sitting with his legs dangling from the jib-boom, he had fallen overboard.

They had at once put the boat about, hoping to pick him up, but they had not been able to see him, nor had they heard a sound save a gurgling cry, a moment after he fell.

It was remembered that he had always said he could not swim, and that in bathing in the heavy surf on the outer beach he had been very cautious.

The elaborate wardrobe of the unfortunate youth was packed up, and a search for the body having been futile, the friend from New York, whose name was Mallison, returned to the city.

A few days later the special agent of an insurance company appeared on the scene—the same benevolent-looking gentleman who has already been described. Harry Hastings's life was insured in the company for ten thousand dollars, and he had assigned the policy to Verplanck Mallison.

The agent made inquiries, and had a long interview with Harvey Tucker; but, ingenious as he was, he could draw out nothing beyond the simple facts that have already been recorded. He went away satisfied, so it appeared, that Harry Hastings was dead, and that his friend Mallison had a legitimate claim on the company.

So it appeared, but in reality he was not satisfied at all. Without mentioning his suspicions in Berkeley, he went to Atlantic City and quickly employed several surfmen to renew the search for the body.

As usual, he was not mistaken, though it was not the surfmen who verified his suspicions.

The Rogue Caught.

Strolling along an unfrequented part of the beach one night, Fred Rutgers, gun in hand, saw a light glimmering in an old wreck, and, moved partly by curiosity and partly by the spirit of adventure, he noiselessly approached it. The fore part of the wreck had long ago sunk out of sight in the sands, but the poop was still above the surface. The light came through a gap in the cabin, and a faint column of smoke curled up in the cold night air.

Fred peeped within. If he had believed in ghosts he would have quickly retired, for Harry Hastings was there beyond a doubt. Rutgers was startled for a moment, but then he remembered that ghosts do not cook their suppers, as the apparition in the cabin was doing.

He coughed, and put his head into the aperture.

"What—what's the matter?" cried the fugitive, as soon as he recognized him.

"I'm keeping my eyes peeled," Fred replied, calmly. "Just come along with me. If the people of Berkeley were never glad to see you before, they'll welcome you now."

Fred escorted his prisoner home, and in a few days both Mallison and Harvey Tucker were also under arrest. It was soon proved, however, that Tucker had been duped, and that he really believed that Hastings had been drowned.

The confederates had needed a witness to the alleged accident, and had chosen him as one who could be imposed upon easily. Their intention was, of course, to cheat the insurance company, and every detail had been prearranged.

The moment Hastings fell, Mallison took the tiller, and while appearing to put the boat about, had headed her away from the spot. Hastings had kept still on the water until she was out of hearing and had then, being an excellent swimmer, struck out for the shore, intending to escape some night by a yacht which he was looking for when Fred Rutgers surprised him.

WILLIAM H. RIDEING.

A POSTAGE-STAMP BASKET.

A pretty little accessory to the writing-desk is a miniature waste-basket.

Of thread No. 40—or thereabouts—crochet a solid bottom. Crochet it round and round, in single crochet, until its diameter is 1¾ or 1⅞ inches.

Then crochet the sides shell-stitch. Make it gently flaring, like a peach-basket, and of a height to correspond with the bottom.

With gold or silver paint go over the whole carefully, taking special pains to preserve the open-work effect.

It is quite a dainty little affair, and useful to hold small scraps or postage-stamps.

DORCAS EYELET.

FOR SCROFULA
scrofulous humor in the blood, ulcers, catarrh, and consumption, use
Ayer's Sarsaparilla
The most economical, safe, speedy, and effective of all blood-purifiers.
Has Cured Others will cure you.

HOW BABIES SUFFER

When their tender SKINS are literally ON FIRE with ITCHING AND BURNING ECZEMAS and other Itching, Scaly, and Blotchy Skin and Scalp Diseases, none but mothers realize.

To know that a single application of the Cuticura Remedies will, in the great majority of cases, afford instant and complete relief, permit rest and sleep, and point to a permanent and economical (because so speedy) cure, and not to use them without a moment's delay, is to be guilty of positive inhumanity. No greater legacy can be bestowed upon a child than a *skin without blemish and a body nourished with pure blood.*

CUTICURA

Remedies are the greatest skin cures, blood purifiers, and humor remedies, are absolutely pure, and may be used from infancy to age, from pimples to scrofula, with the most gratifying and unfailing success.

TREATMENT.—CUTICURA, the great skin cure, and CUTICURA SOAP, an exquisite skin purifier and beautifier, externally, instantly allay the most intense itching, burning, and inflammation, soothe and heal raw and irritated surfaces, clear the skin and scalp of crusts and scales, and speedily restore the hair, while CUTICURA RESOLVENT, the new blood and skin purifier and greatest of humor remedies, cleanses the blood of all impurities and poisonous elements, and thus removes the cause.

"ALL ABOUT THE BLOOD, SKIN, SCALP, AND HAIR" mailed free to any address, 64 pages, 300 Diseases, 50 Illustrations, 100 Testimonials. A book of priceless value to mothers, affording information not obtainable elsewhere.
CUTICURA REMEDIES are sold everywhere. Price, CUTICURA, 50c.; CUTICURA SOAP, 25c.; CUTICURA RESOLVENT, $1. Prepared by POTTER DRUG AND CHEMICAL CORPORATION, Boston.

Facial Blemishes, pimples, blackheads, red, rough, and oily skin and hands, and simple humors and skin blemishes of infancy and childhood are prevented and cured by that most effective of all Skin Purifiers and Beautifiers, the celebrated Cuticura Soap. Incomparably superior to all other skin and complexion soaps, while rivalling in delicacy and purity the most expensive of toilet and nursery soaps. *The only preventive of inflammation and clogging of the pores, the cause of most facial blemishes.* Sale greater than the combined sale of all other skin soaps. Sold throughout the world. Price, 25c.

HANDSOME DOUBLE CUSHION.

Cushions of all kinds—large and small, flat and plump, richly decorated and plain, for ornament and for use—are seen this season wherever one goes, glowing bits of color brightening shadowy corners and recesses or toning down with dark, artistic tints some gaily furnished apartment.

They range all the way from toilet cushions to large, plump double or triple cushions which furnish temptingly easy low seats or serve to add to the luxurious comfort of a broad couch or divan.

None of the large cushions are prettier or more useful than the square or oblong pillow-cushions. The sketch shows a pair of pretty square ones, one placed above the other, tied together at the corners with heavy tassel-tipped cords matching the cord with which the edges of the pillows are finished.

The covers are all of different, though harmonizing shades; one is embroidered, one plain, one brocaded and one braided.

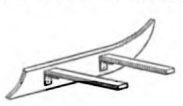
By turning one or both cushions, the color arrangement may be varied, and a desired shade brought into prominence for the upper cover to suit the place it is to occupy.

Such changes may be easily effected, for the cords which cover the seams are left free—but closely drawn—for a little distance at each corner (a few *extra* strong stitches being taken at the ends of the little spaces thus formed), and through these openings the corner cords are passed and closely tied in short loops and ends; of course it takes but a few moments to remove and retie them.

Any handsome material, from silk plush and velvet to Persian-wool goods, is allowable for the covers; four satin-brocaded handkerchiefs are sometimes selected for the purpose. Ribbon bows are sometimes preferred in place of the cords and tassels; then the seams are plainly finished and short ribbons are sewed in, at each corner, which are afterwards tied in bows with tightly drawn centre-knots but full, soft loops and double-pointed ends.

Handsome, warm foot-cushions—for invalids, or others who suffer with cold feet—are made in this way. They should be very plump, but not hard, and about sixteen inches square—or a trifle larger.

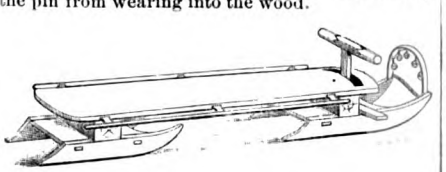
Wool furniture-plush or remnants of velvety carpeting make nice covers.



Instead of ribbons or tassels, superfluous on a foot-cushion, pretty gilded or silvered rings are used, one at each corner with both edge-cords passing through it; the rings are also convenient to move or lift the cushion by.

BUILDING A DOUBLE-RUNNER.

It is fine sport to coast down hill on almost any kind of sled, but the pleasure is doubled if the sled is of one's own making. I saw, not long ago, a "double-runner" which a boy had built entirely with his own hands, with the exception of a small amount of iron work. It possessed so many advantages over the sleds one commonly sees, that I have drawn an illustration of it for other young wood-workers, who enjoy making a thing, as well as using it.



The first advantage which this sled possesses is that it is wide and moderately low, two points that add greatly to the safety of coasting. Moreover, it has a shaft and handles, so that it can be steered with the hands as well as with the feet, and a rail upon each side of the seat to assist in "holding on."

The sides of each sled should be made of hard wood, and two cross-pieces of similar material should be mortised into them, and allowed to project a little on the outside. Iron braces should be screwed into the angles which these cross-pieces make with the sides, as shown in the figure.

The steering apparatus should be stout, and of hard wood, to withstand any strain which may come upon it. The upright piece should be firmly secured to the top of the sled by iron braces. The seat should be of inch and a half plank, thirteen inches in width, exclusive of the rails. At the forward end a piece of hoop-iron may be screwed around the edge, to keep the seat from splitting where the slot is cut for the steering apparatus.

The rear sled should of course be fastened firmly and immovably to the seat. The forward sled turns in any direction upon an iron pin that passes down through the seat and the intervening piece of wood. A thin plate of iron, having a round opening to correspond with the one in the wood, should be screwed upon the top of the sled to keep the pin from wearing into the wood.

The bells may be attached as shown in the figure, or in any other way that the builder may fancy. The forward sled should have a strip of hard wood screwed upon its top, and projecting for three or four inches on either side, upon which to place the feet in steering. The two sleds should be about seventeen inches in width, in order to diminish their liability to upset. W. D.

For all purposes of a pain-reliever, for both internal and external use, "*Brown's Household Panacea*" is highly recommended. Price, 25 cents. [*Adv.*

"NO MORE TOSSING O' NIGHTS," said a fond father, after a thorough trial of Dr. Hoxsie's Certain Croup Cure, in his family of croupy children. Causes no nausea, contains no opium. Ask your druggist to get it, or send 50 cents with address to **Dr. Hoxsie, Buffalo, N. Y.** It will be promptly mailed.

WILBOR'S
COMPOUND OF PURE
COD LIVER OIL and PHOSPHATES
PHOSPHATES OF LIME, SODA, IRON.
FLESH BLOOD NERVE BRAIN
For the Cure of Consumption, Coughs, Colds, Bronchitis, Debility, Wasting Diseases, Asthma, Influenza, Scrofulous Humors.

ALMOST as palatable as cream. It can be taken with pleasure by delicate persons and children, who, after using it, are very fond of it. It assimilates with the food, increases the flesh and appetite, builds up the nervous system, restores energy to mind and body, creates new, rich and pure blood: in fact, rejuvenates the whole system. This preparation is far superior to all other preparations of Cod Liver Oil: it has many imitators, but no equals. The results following its use are its best recommendations. Be sure, as you value your health, and get the genuine. Manufactured only by **Dr. A. B. Wilbor, Chemist,** Boston.

Invest your surplus in Kirkland, Washington, where the Great Western Iron & Steel Co. is building a million dollar plant, the first on the Pacific Coast. Two railroads and water communication. Large returns for investments. Reference, Puget Sound National Bank, Seattle. SMITH & MCCARGER, Seattle, Washington.

Enough for baking sifted in one minute. It pleases everybody. Satisfaction guaranteed. Sent by express on receipt of price. To hold 25 lbs., $2.50, 50 lbs., $3.00, 100 lbs., $4.00. **Agents Wanted. Write for Circulars.**
SHERMAN, TANGENBERG & CO., 489 & 491 Carroll Avenue, Chicago, Ill.

DONALD KENNEDY Of Roxbury, Mass., says:

My Medical Discovery seldom takes hold of two people alike! Why? Because no two people have the same weak spot. Beginning at the stomach, it goes searching through the body for any hidden humor. Nine times out of ten, inward humor makes the weak spot. Perhaps it's only a little sediment left on a nerve or in a gland; the Medical Discovery slides it right along, and you find quick happiness from the first bottle. Perhaps it's a big sediment or open sore, well settled somewhere, ready to fight. The Medical Discovery begins the fight, and you think it pretty hard, but soon you thank me for making something that has reached your weak spot. Write me if you want to know more about it.

Please state what periodical you saw our adv. in.

KENT HAMPDEN.

IN SEVEN CHAPTERS.—CHAPTER VI.

On the Trail.

The boys dressed without a word. The accusing note-book lay on a table between them.

Tom went out of the room a few moments, and on his return found Kent on his knees by his bedside.

Kent often forgot his morning prayers, or rattled them over with his head full of school, or his dog and gun; but being sorely in need of help now, he prayed like many older people, with suddenly quickened devotion.

As he rose from his knees, Tom faced him.

"Kent Hampden, you're either a saint or a hypocrite!" he said, hotly.

Kent laughed. "I'm neither, Tom. What is it you have against me? Have it out, old fellow. You and I can't afford to quarrel."

"I don't want to quarrel. I've known this thing for a week, and said nothing. I took your part to my father, to Mr. Jarrel, to all the boys!"

"Took my part! I don't understand. What do they accuse me of?"

Tom stammered, choked, and was silent, turning away from Kent's amazed, indignant face.

"Had this note-book anything to do with it? Where did you find it?"

"One of the boys found it in Wettel's cave the day we —"

The color faded out of Kent's face. "The day we found the stolen traps and powder? And they thought that I was the thief?"

"No! no! Nobody really thought it — unless it was Mr. Jarrel and Si. They were hard on you," said Tom, stammering in his eagerness. "Don't be hurt, Kent; it was only whispered about. But you remember that you objected to our going in search of the thief, and you didn't want to go to Wettel's cave?"

"Yes, I remember."

"It thought that looked bad. Of course he made the most of it, to influence my father not to give you the appointment; but father did not believe it, or I should not be here now."

The blood had come back to Kent's white face. He laughed, and said, cordially, "Yes, you have been a good friend, Tom. Who found that note-book in the cave?"

"Si Jarrel. He seemed to be very much worried and scared at first. I threatened to whip him if he told of it; but his father let it leak out."

Kent walked to the window and stood silent, thinking. "Tom," he said, at last, "there is a secret about Wettel's cave. But I'm not bound to keep it, now that my honesty is doubted. When we are at home, I'll tell you the whole truth; but not until then."

"I don't want any explanation!" protested Tom. "I'm ashamed that I told you!"

"Your father and you will not be sorry that you trusted me," said Kent, quietly.

At that moment the note of a bugle was heard, and a cloud of dust rose on the road. The boys seized their hats, and rushed downstairs and across the green in time to see the red Good Intent stage-coach drawn up before Mrs. Digby's house, and a gentleman in a furred cloak and wine-tinged hat cautiously dissend the carpet-lined steps which the guard rattled down.

"It is Mr. Armitage! He is our last chance!" said Kent, under his breath.

The boys would have gladly dragged him aside to tell their story at once, but they were forced to be patient. He disappeared into the house, guided by Mrs. Digby. Soon afterward they were summoned to breakfast, and saw the blind man at the other end of the table, the most honored guest.

The meal was long and wearisome to Kent, who was burning with impatience. Mrs. Digby nodded kindly to him when she rose from the table, and led Mr. Armitage into her sitting-room. In a few minutes she sent for Kent.

"This is the son of our recent travelling companion, Mr. Hampden," she said, when he entered. "He must tell you his own story. He hopes much from your advice."

Mr. Armitage held out his hand. He was still a young man, and had one of the kindest and most cheerful faces Kent had ever seen.

He held Kent's hand in one of his own, while

Mr. Armitage makes a Test and a Discovery.

he passed the other swiftly and lightly over the boy's face.

"Pardon me, but I must see you in my own way," he said, smiling. "Now sit down. Tell me all you know about the lost package, from beginning to end. Do not hurry. Tell me every little detail."

Kent sat down beside him, and told the whole story, from the visit of Judge Morris and Mr. Jarrel until the return of his father, including his mother's attempt to lighten the package by a change in the wrappings, and the statements which his father had made concerning his care of it while on his journey.

"He says, positively, that the package never left his possession from the time he started from Wheeling until he opened it in his room at the Philadelphia hotel twice."

"Then," said Mr. Armitage, "he entrusted it to Mr. Ekhart. *He* did not open it. Once to me, and I did not." He sat lost in thought for some time. At last he said, "I have no eyes, you know, to help me form my opinions; nothing but my fingers. Have you the package that was substituted for the money? Can I take it in my hands?"

"Yes, sir, of course. I will bring it to you."

Kent ran out and across the green to get it. On his way he met Tom, and brought him back with him, introducing him to the blind man as "my friend who is helping me."

Mr. Armitage took the package, felt it carefully, and weighed it in his long, nervous hands. As he did this, his face grew perplexed and anxious. Mrs. Digby, Kent and Tom watched him eagerly.

"The notes," he said, "if I understood you aright, were, when they were brought to your father, wrapped first in white foolscap, and then in several thicknesses of stiff brown paper?"

"Yes, sir. My father complained of the weight. My mother supposed so many wrappings had been used in order to protect the notes from dampness."

"Then she substituted —" began Mrs. Digby.

"Chinese silk paper," resumed Kent.—"two folds. It was light, tough and water-proof. Outside of that she wrapped a single sheet of brown paper."

Mr. Armitage again carefully fingered and weighed the bundle in his hands. The surprise and perplexity on his face deepened.

"Now this package," he said, "is made up of as many wrappings of brown paper as the original one, with white paper inside to take the place of the notes. It is much heavier than the notes wrapped in the Chinese silk tissue would have been."

"Very likely," said Kent, "but my father would not notice that. I believe that the bundle was taken out of the oil-cloth case, and this one put in on the coach. He would not be likely to notice the difference in weight. He is not a very close observer."

Mr. Armitage smiled. "But I am — with my fingers! I supposed until now, as you do, that the bundle had been changed after your father left me. But —"

"Well, sir?"

Kent leaned forward breathlessly. The blind man's face was grave. He stood up, still balancing the package on his fingers, speaking slowly and with reluctance.

"I know the importance of what I am going to say. It is a bold assertion, since I cannot see. But when your father gave me the package to hold, while he was killing the rattlesnake, I weighted it in my hands, as I am doing now — it is a habit which is natural to me. And — *this is the same package.* Notes folded in Chinese silk paper would have been much lighter and more pliable."

Kent stared at him, bewildered and dumb.

"You think, then," said Mrs. Digby, "that Mr. Hampden was robbed before he left Wheeling?"

"Yes. But you must remember," turning quickly to Kent, "that this is but the opinion of a blind man."

"I thank you," said Kent. "I thought you would give me a clue." But he continued to look at him with the same dazed, confused eyes.

"You do not agree with me?" said Mr. Armitage, quickly, noticing the meaning of his tone.

"It is so different from what we thought! It seems impossible!"

"I have only my fingers to support my opinion," said Mr. Armitage, with a little laugh; "but, Kent, they never yet have deceived me. I am positive that this is the same package which I held in my hands while your father killed the rattlesnake."

"Then the sooner we go back to Wheeling, the better," said Tom. "Come, Kent! Let us see to our horses."

He pulled him by the sleeve. Kent moved unwillingly to the door. Mrs. Digby followed them.

"Heather Kaines starts in an hour," she said. "I will give you some lunch and feed for your horses, so that you need not lose time at inns by the way."

Tom thanked her earnestly, but Kent did not hear her. He was going with lagging, despondent steps to the stables. Nero was waiting for them, and as soon as Tom had poured forth the news, he gave a shrill cheer.

"Back to Wheeling! I thought the scent lay in that direction. I'm with you, Kent! What ails you, boy?"

"I am at fault! What clue have I? None! I am going back empty-handed, as I came, and your father there, waiting — hoping!"

The boy's voice choked. Tom and Nero were silent. The three horses were brought out, and-stery, from the visit of Judge Morris and Mr. dled and harnessed.

Mr. Kaines, on a stout brown mare, was waiting for them when they returned to the house. A great basket of provender was stowed into Nero's tiger-striped box. Mrs. Digby, Mr. Armitage and the whole household came to the door to see the departure of the travellers.

Kent and Tom went together to the room in which they had slept to bring their knapsacks, and Kent strapped his with a heavy heart. He had been so sure of success when he packed it, and now he was going back, without a word of comfort for his father, and with nothing but the wild guess of a blind man!

"There's the note-book on the table," said Tom.

Kent stretched out his hand for it. A ray of sunlight broke through the gray clouds, and fell on the table. It was a cheap pocket accounts-book, with a coarse leather binding.

Kent's eyes fell on a discolored patch on the cover. He gave a cry; the blood ebbed from his heart, and he grew sick and faint.

He leaned over the table, caught the book in both hands, and carried it to the window.

It was but a patch of mould!

His eyes seemed blurred. He rubbed them, and looked again.

"Thank God!" he cried, and thrusting the book into his pocket, ran past Tom, who stood dumb with astonishment, down to the green, and

Digitized by Google

began to buckle his knapsack to the saddle with furious haste.

"What is it?" whispered Tom, when he came up to him.

"The clue! The clue! Don't ask me now! Wait until to-night!"

Tom caught his excitement, and fell into such a mad hurry of preparation, that he delayed their starting at least half an hour.

Mrs. Digby and Mr. Armitage came out on the road after Kent was mounted, to say good-by once more.

"I wish I could help you, my boy!" said the blind man, wringing his hand. "I shall come down to Wheeling in a few days, and pay my respects to your father."

"So shall I," said Mrs. Digby. The boy's flushed face and resolute eyes touched her. "God help that lad in his work!" she said, as she turned away.

The day was tempestuous and gloomy. The wind blew fiercely, and the sky was gray and heavy with snow that did not fall.

The little cavalcade was not a merry one. Mr. Kaimes and Tom began by talking and laughing cheerfully enough, and Nero now and then volunteered a song, or a few remarks on the merits of the Roman Emperor, Billy, or himself. But they both gradually fell into a sombre, anxious mood.

Kent's silence, the dumb, passionate excitement which possessed him, affected them like an electrical current.

"What is that boy's story?" said the minister to Tom, as they rode apart. "Tell me, if you can. He interests me strangely. I feel as if I must join myself to him—must help him."

Tom told the story of the lost package, and Kent's search. It was no secret; all the town knew it.

"Let me see; what is his name?"

"Hampden."

"And his father's name?" said the minister, excitedly.

"Ralph Hampden."

Mr. Kaimes made an inarticulate sound of amazement, and rode on hurriedly to the front. He did not, as Tom saw, join himself to Kent, nor attempt to speak to him, as he had meant to do.

They halted once or twice to eat the provisions which Mrs. Digby had supplied; but Kent neither ate nor drank. He was in a fever of impatience, urging his horse into a gallop whenever he led the way.

Tom saw him take out the note-book from time to time, and pore over the spot on the corner. Could he have gone mad? The strain on him had been long and heavy.

"What have you there, Kent?" he said at last, riding briskly up alongside.

Kent laughed, wildly, as it seemed to Tom.

"Look at it, old fellow! Can you make anything out of it?"

Tom took it eagerly.

"Nothing but a patch of mould—no, it is a thin web that is sticking to the leather—gray, with flecks of red in it. What is it?"

Kent took the book. "It is the one chance of proving father's innocence. Don't ask me. I may be mistaken." He shivered, but not with cold.

As the afternoon wore on, a heavy fog rose from the creeks. It grew very dark. Nero urged haste, so that they might reach the town before midnight. But Kent, who had been unreasonably eager to push on, now as unreasonably insisted on remaining at a roadside village all night. He appealed to Mr. Kaimes.

"I hope to take with me tangible proof of my father's innocence when I enter Wheeling, but I cannot work in the dark. Do not go on," he pleaded. "Stay until morning, and be my witness that I act fairly."

Tom, who was now almost convinced that Kent's mind was wandering, remonstrated, but the minister decided that they should remain. He went to the house of some of his friends in the village of the Three Brothers, while the others put up at the inn.

Tom, whose curiosity was greatly excited, hoped to get at the secret when they were alone together. But Kent, exhausted by fatigue and excitement, was asleep as soon as his head touched the pillow.

He was up at dawn, however, and had left the house long before Tom was awake. They waited breakfast for him an hour, and when he did not come sat down without him.

The meal was almost finished when he appeared, coming up the road accompanied by a stout, elderly man, and a boy of Kent's age, all three on horseback.

"The boy," said Tom, peering out curiously, "is Henry Doty, Joe Doty's cousin. Joe introduced him to the Wild Beast Slayers one day. He lives out in this neighborhood. What can Kent want with him?"

"The man," volunteered Nero, "is Zach Jourdan, the constable. What can he want with *him?*"

"Kent must be on the track of the thief!" cried Tom, jumping up in wild excitement to meet them. "Come in, Kent! You've had no breakfast."

"I want none, thank you. No, Nero, I can't drink it," he said, as the peddler brought him a cup of coffee. "It would choke me. I can't waste another minute. I must finish what I have to do! Are you ready to take the road?"

"Yes," said Tom. "I'll have the horses out while Nero locks his box. There comes Mr. Kaimes, up the street. Is Henry Doty going with us? Is the constable, too?"

Kent nodded, but made no farther explanation.

He rode apart, while the others were saddling and harnessing their horses. The landlord came to the door to speed his guests. He looked earnestly at Kent, and called to him.

"Aren't you Colonel Hampden's son, down to Wheeling?"

"Yes," said Kent, proudly.

The landlord lounged down the steps, while the hostler, negroes and loungers from the forge next door lent attentive ears.

"There was a man here last week," the landlord went on, "who said he reckoned the folks at Wheeling 'u'd make your father mayor. Hey?"

Kent did not speak for a full minute. Tom, with his foot in the stirrup, waited, his face reddening, his breath quickening, watching Kent.

"Think he'll be elected, hey?" said the landlord again.

"Yes," said Kent, with peculiar distinctness. "I think he will."

With a nod of good-by he rode quickly down the street, followed by the rest of the party.

Tom pushed forward to his side. Kent glanced at him affectionately. Tom noticed that his features were sunken and pinched.

"That's right, Tom. Keep close to me. It gives me courage. But I can't talk. If I should be mistaken after all!"

They rode rapidly through the long valley, and up the range of hills. The day was clear and frosty. In an hour the sun shone out, melting the thin ice upon the mountain streams.

Kent stopped under an old oak that stood by the roadside.

"I must ask you to dismount here, gentlemen," he said, "and follow me on foot."

They climbed down the side of the hill until they came to a trail through the underbrush that led to Wetzel's cave.

Kent drew aside the vines and undergrowth which hid the entrance.

"Now, Henry Doty, lead the way!"

Doty and the constable pushed their way into the cave.

"Shall we go in?" asked Mr. Kaimes.

Kent did not hear him. He was watching for Doty to come out again, to bring the proof! If he should not bring it!

The men, seeing his face, kept silence.

Suddenly there came from the cave a cry of terror, and a tumult of angry voices.

"They have found the thief himself!" shouted Tom.

REBECCA HARDING DAVIS.

For the Companion.

DICK'S TREE.

"Don't tease! Such a torment as you are! I haven't time; do go away. Ask Nancy, she will mend it for you."

"I will wear it ragged!" said Dick, angrily. "I do not choose to ask the cook to mend for me!"

"What a temper! Really, Dick, I would endeavor to control it. It makes you very disagreeable."

"I might say the same of your selfishness!" retorted Dick, slamming the door as he left the room.

"He is growing positively unbearable!" exclaimed Henrietta, angrily. "He has no more manners than a bear!"

"Poor Dick!" said her cousin, with a laugh, which ended in a sigh.

"It *is* so," Henrietta went on. "He doesn't make the slightest effort to be polite—not even when I have company. You must have noticed it, Emma."

Her cousin busied herself in mixing a fresh supply of paints, and made no reply.

"I know, of course, that you have seen it," Henrietta said, directly, "but, really, I have no influence with him, and papa exercises no authority. I've often said, 'Papa, I think you should tell Dick that he must obey me.' But he only laughs—he is so easy-going. Oh dear! It makes it very hard for me. I think it encourages Dick to be impertinent and overbearing."

Still no response from Emma. Somewhat nettled, Henrietta continued:

"He ought to be sent away to school. It might make a man of him. If poor mamma had lived, she might have had some influence in inducing papa to send him. But I have none. I have used every argument, but it is a waste of time. I cannot think why it is! Papa is easy in everything else, giving me absolute control over the housekeeping, yet he's as firm as a rock about Dick."

"You have a responsible position, Hetty. Does it never seem a heavy burden?"

"Oh, no, indeed! Papa gives me plenty of money, and Nancy is an excellent servant. Papa is quite satisfied with me, I assure you."

"And Dick?" hazarded Emma.

Henrietta's face flushed angrily. "Dick is passionate and impertinent!" she answered. "He will not yield to my authority—he laughs at it, Emma! See! there he goes now, with his elbow out of his jacket. He thinks it will mortify me. He does it purposely! Yet you heard me tell him to ask Nancy to mend it for him."

"Yes, I heard you."

"And you see him now! It is his revenge, Emma; it is his dreadful temper."

"Possibly Nancy was busy."

"There!" said Henrietta. "It is quite time that I should give Nancy her orders for the dessert. Please excuse me, Emma; we are to have papa's favorite pudding to-day, and I am very particular about my sauce; very particular. Nancy quite understands that if it is not exactly right, I shall send it down to the kitchen."

"And eat your pudding without sauce?"

"I never eat pudding myself; I prefer pie. Dick grumbles, of course, when I order it taken away, but papa laughs. He understands that it is the proper way to train a servant."

Her cousin followed her with her eyes as Henrietta left the room, and gave a long sigh. "She is a strange mixture of the child and the woman," she reflected, "and I fear there is some truth in poor Dick's charge. Unlimited authority is apt to foster selfishness. Yet she is little more than a child, and I must not let her suspect that uncle appealed to me. I must work slowly and patiently."

Meanwhile Dick, his heart sore at Henrietta's words, was maturing his revenge. "She needn't have spoken so before a cousin who is almost a perfect stranger to us, and as old as both of us together," he thought, "but I'll pay her for it!"

He walked, as Henrietta had predicted, up and down the streets, displaying the rent in his jacket openly and ostentatiously.

On his way home he passed a small carpenter's shop, which had been always a source of pleasure to him. With a dim thought in his mind, he entered it, and with the freedom of a constant visitor, proceeded to examine the strips of wood which lay scattered upon the floor and workbench.

Half an hour later, he left the building, whistling a lively tune as he walked along, and his face wore a gratified smile.

"It will pay to try it," he thought. "My! won't she be angry, though!"

During the next week he was seldom seen by his sister and his cousin, save at the meals. His cousin furtively studied his face at these times. "If I am to help these poor children to know each other, and to bear and forbear," she thought, "I must first gain their love and their confidence."

She was rapidly taken into favor by Henrietta. "I am so glad to have you with us," she daily affirmed. "I know papa is pleased, and I can already perceive a change in poor Dick. He is less boisterous, I think. I begin to hope that he may yet curb his frightful temper. It would be so trying for me to feel that I had utterly failed in my efforts to aid him! I have so often told him of his faults, yet he seldom receives it well."

At the close of the week, Dick came to dinner, one day, in a particularly gracious mood. He was enthusiastic over some of the dishes, and so lavish in his praises that Henrietta became suspicious.

"He is planning to annoy me!" she thought.

"Let me see," said Dick, as he leaned back in his chair; "this is the afternoon of your Shakespeare Club, isn't it, Hetty?"

"Yes. It is Thursday."

"Is Cousin Emma going with you?"

"Certainly. Why do you ask? Now don't go into my room and meddle with my things while I am absent. Do you hear? I shall know, mind, if you open a single drawer or box; and keep away from the conservatory. Papa does not wish the grapes touched until they are ripe."

"All right."

Dick said this with a good nature that was proof positive to Henrietta that he intended to do mischief. She looked sternly at him, and her voice rose to a sharp, high key.

"Mind you do not go into the drawing-room and put everything out of place!"

"All right!" he said, still cheerfully.

"We shall be at home by six. If I find that you have disobeyed me, I shall not allow you any dessert for a week!"

Even this threat failed to make him show any sign of anger. Looking into his face, Henrietta thought she perceived a faint smile. This was not to be tolerated. Respect for her as mistress of the house must be maintained.

"Remember!" threateningly, "neither puddings nor pies nor sweetmeats."

Dick laughed. "Bread and water and a dungeon, while you are about it, Hetty!"

Henrietta was fully convinced. She left the dining-room, accompanied by her cousin. As they ascended the stairs together, Emma said, "Hetty, dear, do you think you adopt just the right method with Dick?"

"Certainly," said Hetty, in a tone of surprise. "Why do you ask?"

"Only that I have thought a different tone might be wiser. You are so very little older than he, my dear, that perhaps he resents your attempts at control."

"I am two years his senior," said Henrietta, stiffly; "and if papa will not be strict with him, I must. Poor mamma would not have allowed him to be rude to me."

Dick was not in the house when Henrietta and her guest returned.

"He's gone across lots to your Uncle Seth's," said Nancy.

"I did not give him leave! I do not allow him to go out to tea, without first asking papa or me."

"He told me to tell you he'd left something for you in your sitting-room, and maybe he will not stop to tea, and your pa aint at home, either," said Nancy, eager to shield Dick.

"Very well. You may serve tea in half an hour, Nancy. Papa will be here by that time."

"Will you come into my own little room, Emma?" she said. "I must know what excuse Dick offers; he knows my rules quite well."

But upon the threshold, she paused and gave a sudden exclamation. "I knew it! I knew it! I saw it in his face!"

"What has he done?"

"That tree!" said Henrietta, "if it is a tree. Think of it; think of his daring to drag that thing into my own room! He shall pay dearly for this!"

"Suppose we see what it is. I can't make out in this uncertain firelight."

"I will light the gas. Sit down here on this sofa while I find a match. Yes, it is a tree—a tree fastened down by blocks of wood! How dared he!" Henrietta stamped her foot angrily.

"It's a joke, Hetty. Treat it as such, I beg of you. But what did the mischievous boy hang upon it? Is it a tree? It might be almost anything else, from its very curious appearance."

It was, indeed, a young and slender fir-tree which barred the entrance to Henrietta's favorite bay-window. It was fastened to the floor by heavy blocks of wood, and narrow strips of wood were nailed upon the trunk. They formed a cross, and from them there hung a motley collection of torn and ragged jackets, coats, caps, stockings, handkerchiefs and other articles of wearing apparel.

"What did I tell you?" shrieked Henrietta. "I told you he was a bad, revengeful boy! This is his revenge!"

"Wait, Hetty," said Emma, firmly, as Henrietta advanced with the evident intention of tearing the clothing from the tree. "Do not touch them yet. I would like to examine them, if you please."

"Rags and tatters," she slowly said, after inspecting them; "rags and tatters. Poor Dick!"

"*He* made the rags! He tore those holes! He did it purposely. He wished to mortify me!"

"Hetty, I fear you are a little severe."

"In what respect, please? I am sure I try to be a mother to poor Dick. Not a day passes that I do not point out his faults. Certainly I am not the one to blame, Cousin Emma, if he is rude and self-willed. How am I severe?"

"Hetty," said her cousin, "those articles of clothing, which Dick has thus brought to your notice, were not purposely torn, as you will see if you examine them when you are in a calmer mood. They bear the marks of long neglect. Wait, Hetty, dear," she went on, as the young girl drew herself up haughtily, "do not be angry at my plain words. I cannot see you and Dick constantly misunderstanding each other without the wish to help you."

"Excuse me, Cousin Emma, but tea is waiting, and I hear papa's footstep. Perhaps you will finish what you have to say after tea."

She rose as she spoke, and held the door open for her cousin. Two bright red spots glowed upon her cheeks, but by force of will she subdued her voice to the calm tone of the dignified hostess.

"I trust Nancy has the muffins hot," she said. "I am very careful that they shall be precisely the right temperature."

"She is very angry, poor child!" thought her cousin, "yet she controls herself, in order to play the mistress of the house to perfection. If I can only bring that will to bear upon her relations to Dick, how much of misery will be spared them!"

Dick stole in, by way of the kitchen, as the clock was striking nine.

Nancy looked up from her coarse knitting as he softly closed the door. "I guess the storm's most blowed over," she said, encouragingly, "and you'd better sit right down here and toast your feet and eat the muffins I've kept hot for you. Here they are, all buttered and crisp, and precisely the right temperature."

Dick laughed. "Yes, *precisely the right temperature*," he said. "That's not bad, Nancy. And these," beginning to eat the muffins, "why, these are prime."

"I heard her say it," continued Nancy, "as I was fetching 'em in, and I just almost dropped the whole plate of 'em, I was so tickled. But Miss Hetty's got a good heart, and I know it, else I couldn't stand her mistressing as I do. She's plenty of sense."

"That she has!" said Dick, eagerly, "and if she would let me alone and not order me around, I don't believe we'd quarrel so much. But how can a fellow help getting angry? I say, Nancy," with a furtive glance over his shoulder "how did she take it?"

"Pretty bad, judging from the look of her eyes. But I rather guess Miss Emma will soften her down. I heard them talking sort of seriously a while ago, and I wouldn't wonder if she was telling her she'd better have looked after your clothes a bit. 'Twouldn't have hurt her a mite,

Digitized by Google

and I've never been handy with my needle. Anyway, it won't do her any harm to see the ragged things you've been wearing for clothes."

Following Nancy's advice, Dick went to bed without seeing his sister that night. There was a slight constraint in Henrietta's tone the next morning, both toward her cousin and her brother; but after breakfast was over, she said, in her usual manner:

"I have my orders for the day to give, Cousin Emma, but you will find the morning paper in the library. I will join you there directly."

"I wonder if *it* is there yet!" thought Dick, as they left the room. He started and colored deeply when he felt a hand upon his arm, and turning, met his cousin's gaze.

"Will you take a walk with me this afternoon?" she asked.

"I'm in for it!" thought Dick, as he agreed to her proposition.

"So," said Henrietta, an hour later, "you advise me to say nothing to Dick?"

"I do, Hetty. It seems wiser to me."

There was silence for a time, and Henrietta walked around the room and busied herself in re-arranging the bric-à-brac.

Suddenly she came to the window where her cousin sat reading. "I have decided," she said, abruptly. "I have thought of all you said last night; and I have decided to be really Dick's sister, instead of his fault-finding mistress. How well the sister will succeed, I cannot tell, but she can try."

"It is practice that makes perfect," said her cousin, "and it is love, patient love, that brings happiness. Hetty dear, I am glad."

"I have thought of something," added Henrietta. "It will surprise poor Dick. Only you must not tell him."

She proceeded to unfold her plan to her cousin.

Dick marvelled, that afternoon, that his cousin did not once allude to the episode of the tree, nor comment upon his too frequent rudeness to his sister. She only chatted pleasantly with him, and entertained him with half-comical stories of her brother, and of his thoughtfulness and attention for herself. "I thought I was trapped for a lecture," he meditated, after tea, "but not a word did she say about it. Yet I—jiminy!" he exclaimed, springing up from his chair, "I believe she meant that story about herself and her brother for me!"

He marvelled still more as the days passed. "What wonderful thing has happened to Hetty, Nancy?" he asked. "She hasn't lost her temper for three days."

"Well, maybe it's that tree; maybe it shamed her. But perhaps you haven't provoked her."

"Where is that tree?" suddenly demanded Dick.

"I haven't seen it since I helped you rig it. I kind of mistrust it's in Hetty's closet, since she's kept it locked lately, and she never did before."

"She's planning her revenge," thought Dick, astutely. "She isn't keeping still so long for nothing. 'Tisn't like her. She always gets angry at a fellow. I'll just keep my eye on her. There's some mystery here."

The mystery was solved the next week. As, one evening, the family separated for the night, Henrietta, who had been very friendly, said, "It is your birthday to-morrow, Dick, as well as the year's. A happy birthday, Dick."

"A happy New Year!" said Dick, as he sprang up the stairs.

"A *happier* New Year," said Henrietta, quickly, looking up at him with a smile.

"Now, what does she mean by that?" puzzled Dick, as he went on and entered his chamber. "'A *happier* New Year!' Well, if she means that the last year hasn't been a very happy one, she is about right. She s nagged me almost all the time, and I—well, I'll not deny that I've been—hello! what's that!"

He turned the gas higher. "It is that very identica. tree!" he exclaimed. "It is her revenge! She's outside! I hear her!"

He sprang to the door, but no one was in the corridor.

"I thought I heard her laugh," he muttered, as he returned and began a closer inspection of the tree.

"Yes! it is the same one!" he said.

It was, indeed, the same slender fir he had placed in his sister's room. "Jiminy!" he exclaimed, discovering among its branches the skates, the books, the seal-skin cap and the box of tools he had hoped to receive at Christmas.

"I was angry then," he meditated; "I thought she was the cause of my not getting them. She knew how I had hinted for them. This is her revenge. She hasn't forgotten a single thing."

Presently his eyes fell upon a pile of clothing.

"Mine!" he ejaculated. "Mended—every one of 'em!"

He comprehended now the meaning of Hetty's words. He rose hastily and counted the money in his purse.

"I'll buy her a ring like Cousin Emma's," he said; "and—if trying counts, we *will* have the happier New Year!"

MARY A. SAWYER.

For the Companion.

DOWN THE MOUNTAIN.

The kitchen clock was purring, preparatory to striking, when Ben awoke, sufficiently aroused to count the strokes.

"Five o'clock," he said, with a contented sigh, and turned over for another nap, for five o'clock is very early on a cold winter's morning, even on a farm.

The particular farm where this took place was located upon a hill-top, and consisted of a little "garden spot," a few acres of meadow, and a few more acres of stony pasture land. It was in New England, of course, and after a fashion it supported the Becket family.

A footfall in the kitchen adjoining fell upon Ben's sleepy senses; then a line of light glimmered under his door, and in spite of himself he was wide awake.

He had no thought of burglars, for no thief in his senses would choose the Becket house to rifle. "Somebody must be sick," he thought, as he jumped out of bed and dressed hastily; but when he stepped into the kitchen, and saw no one but his sister sitting at the table, writing, he felt as if he had been imposed upon, and had been turned out of his good, warm bed by something like a false pretence.

"*Well*, what in the world are you doing up at this hour, I'd like to know?" he said to his sister in a tone not at all amiable.

"S-sh!" replied Allie, softly. "Come over here and I'll talk to you. You see," she continued, half-apologetically, as he looked severely at some sheets of paper all written over and interlined, "I've been writing essays in my dreams all night, and on all kinds of subjects. One was 'Why Grasshoppers have more Legs than Frogs,' and another was 'Evidences of the Silurian Age in Connecticut,' and the rest came in anywhere between."

But the frown still remained on Ben's face, and as he said nothing, Allie looked up and exclaimed, impatiently, "Oh, go back to bed if you feel so bad! I didn't mean to disturb you."

"Well, I'm glad it'll soon be over," he said, in a gentler tone. "You think too much about it, Allie," he continued, anxiously. "You may not succeed, you know."

"I guess I do know it, Ben," she said, "but I don't mean that it shall be my fault if I fail, for it's the only chance I shall ever have to get a profession."

"Oh yes, Allie, there'll be other chances."

"I don't know where they're coming from. You know how we have to work and manage now, and it's just all we can do to get a living and something decent to wear. And you remember we had hardly that until mother and I made servants of ourselves —"

"Servants! Whose servants are you, I'd like to know?"

"Well, I wonder what you call it—making ice-cream and cake and pies, and furnishing cold milk and hot coffee to every one who comes up the mountain in summer to enjoy 'the chawming view.'" Allie languidly closed her eyes and drawled out the quotation, which, in spite of himself, made Ben grin.

"And the patronizing air they put on in speaking to me! I tell you, Ben, I'm tired of it. It does seem as if I couldn't stand it another summer. I feel that God made me their equal, if I am poor, and I don't want to be looked down on any longer if I can help it. That's why I want to write the best essay—if I only knew what the subject would be, Ben!" she added, meditatively. "But if practice counts for anything, I surely stand a chance."

"Yes, one in a hundred. Don't set your heart on the thing—that's my advice."

When he had given it, Ben returned to bed for "just forty winks," and Allie continued her writing.

"I've got to go to Bolton to-day, Ben," said Mr. Becket at the breakfast table. "I hear there are some likely horses there, so I'll take Tom along, and maybe I can trade or sell him. You can hitch up the one I brought home last night, and take Allie to the station this noon. I hope you'll win, my girl," he said to his daughter, who looked up with a smile to say good-by. "It'll be a great thing for you if you do; more than I've ever been able to do for you, though I'd have done more if I could."

Allie put up her hand quickly, and covered the hard fingers that were laid upon her head as she answered, softly, "I know you would, father."

She looked after him as he went out of the kitchen door and down the path to the barn, and knew he was reproaching himself for the poor way in which his family lived.

Allie could not bear to let him dwell upon it. She finished her coffee hastily, and taking his overcoat on her arm, followed him out. She knew her father loved to have her with him. She laid the coat on the wagon-seat, and with a bright and cheery air began helping him harness the horse.

"Good-by and good luck!" he called out, as he drove through the bar-way into the road.

Mrs. Becket, watching from the window, said to herself, "She's cheered him up again—he's smiling. Dear girl! There's no one can lighten the shadows as she can."

As the day advanced, the cold grew less intense, and for an hour the snow fell thickly. Then came a drizzling rain, which froze as it fell.

"We can take a sleigh, I guess, mother," said Allie. "There's been so little sleighing this winter that I shall enjoy this ride. It seems to me I never saw such a blizzardy winter—plenty of snow, too, but all drifted so that it has been of no use."

"Yes, I like to see the ground white again," said Mrs. Becket, "but I hope it won't be very deep, for your father took the wagon."

"Not much danger now, since it's turned to an ice-storm. It will probably thaw before night."

At half-past ten Mrs. Becket put a "drawing" of tea in the white crockery teapot, and set it on the stove.

"Tell Ben to harness the horse, Allie," she said, "and do you get ready, child. I know it's early, but you'd better not take any chances."

The girl obeyed, and soon returned dressed for her journey, and carrying a little package of stationery, a box of pens which she proceeded to test, and a bottle of ink.

The cause of this excitement in the Becket household was an offer of a prize to the scholar under sixteen who should write the best essay. The prize was to be a thorough education for whatever profession the winner might choose, and the contest was confined to the school-children of the county. This was the afternoon set apart for the candidates to assemble at the county-seat, where the subject of the essay would be made known, and the contest take place.

"Allie!" called Ben, putting his head inside the door. "Come out and hold up the shafts for me, will you? It's a strange horse, you know, and I don't like to let go his head."

She met him at the stable door. He was leading the horse by the bridle, but the animal's fore-feet were all he could be induced to put beyond the sill.

"Why, Ben, he's balky!" exclaimed Allie, in dismay.

"Oh no, I guess not," answered Ben, lightly. "He seems to be stiff somehow, though he walked all right when father brought him home last night. Run and get a few oats in a measure, Allie, and hold them before him."

At sight of the oats the horse stepped outside, and a few paces beyond the door. Then one of his feet slipped sidewise, and in terror, he fairly sat down on his haunches. The sight was so comical that the boy and girl laughed outright.

"I guess he's a Southern horse, and never saw ice before," said Allie.

"No," said Ben; "he's smooth shod. A little coaxing will fetch him."

Allie tendered the oats again. "Come, good old Bill, get up!" she said, patting his nose and walking slowly before him; but as soon as that inducement was removed, "good old Bill" stood quite still.

"Well, if I've got to lead him to the station with an oat-measure, I don't see where the advantage comes in!" she cried, impatiently. "Ben, what are we to do?"

"Children, what's keeping you?" called Mrs. Becket from the door. "You must hurry, Alice, or you will not be in time."

"Mother," she answered, "the horse won't go a step on the ice."

Mrs. Becket hurried out.

"You never will get to the station with that horse," she said. It was quite plain that she was right.

"But I can get her there, mother," said Ben, suddenly, "if you don't mind—and if she isn't afraid," turning to his sister.

"Afraid of what?" asked the girl.

"Afraid to ride down the mountain on my big sled."

"With you?"

"Of course with me. You'd make a good hand at steering, wouldn't you?"

"Yes, I'll go—if mother'll let me," she said, turning an appealing face to Mrs. Becket.

"It's the only way, mother, and I'll take care of her," said Ben.

Mrs. Becket did not deliberate long. It must be decided at once, and perhaps her daughter's future was at stake.

"Come!" she said. They ran into the house, and soon, her wraps and waterproof thrown on, a package of cookies and apples in her pocket, and her little satchel in her hand, Allie came out of the door.

In a moment Ben, who had meantime put up the horse, had tucked her snugly into the front of the long, home-made sled, and had jumped on with his feet out behind.

Allie bent her head to the left so as not to obstruct his vision, and in ten seconds more they were beyond the first "thank-ye-ma'am," and out of sight of Mrs. Becket, who stood in the gateway.

What a glorious ride it was! Not a ride, but a flight did it seem as they sped down the icy mountain almost as fast as an express train could travel. Fortunately the wind was at their backs. If the icy mist had driven into their faces the ride would have been impossible.

"Somebody's coming up the mountain, Ben!" said Allie, suddenly.

"Well, let him turn out then, there's room enough to let us pass."

"He *isn't* turning out! Call to him, Ben."

"Hi, there!" yelled Ben at the top of his voice, but the driver of the approaching ox-team paid no attention to the call.

"O Ben," cried Allie in horror, "it's Nate Adams, and he's drunk!"

All this had passed in hardly more than an instant, and meantime the sled on which Ben and Alice were seated was flying toward the approaching team.

They could not stop the sled, as well might one think of stopping a storm. Nor could they slip off it. To attempt that might mean instant death for one or both of them. Moreover, the road was a cut at that point, and the sled could not be run upon the bank.

Allie was praying, although her white lips were unable to move. Ben bent his head over her shoulder, and said in her ear:

"Hold on like grim death, Allie; we'll get through all right, we'll reach Denman's pasture before we meet the team."

"Denman's pasture" was an almost level strip, about six rods in width, which opened directly off the road—a little table-land with the sloping mountain wall on one side, and an abrupt descent on the other.

But could they reach it? That was the question that flitted through Ben's brain again and again, quicker than light.

Digitized by Google

Yes; they were just in time. Here was Denman's pasture, and the team still two rods away! Ben threw himself sidewise to turn the sled upon the level ground, but even here, where the road was far less steep than on any other part of the mountain, it was not easy to make the sled respond, and half the "table" was passed before the sled crossed its border.

The momentum was still great, and after whirling completely around, the sled went over the rock, and landed in a snowbank nearly twenty feet below.

A scream from Allie as they went over was quickly stifled in the snow, and when Ben scrambled to his feet his sister and the sled were nowhere in sight.

But the break in the crust showed him where to look; so he thrust in his arms to the elbows, and found Allie's fingers, which scarcely closed over his own.

Snow flew in all directions for a minute, and then Alice was sitting on the strong crust of the drift, while Ben supported her with his arm, and tried to stop the blood which was flowing from her fingers. She had, indeed, held on "like grim death," and her hands, which had struck first, were badly cut by the hard snow.

"Poor Allie! poor Allie!" Ben was saying, and each word was almost a sob. He had never before seen his strong sister in even an approach to fainting, and thought she must be dying.

"Never mind, Ben," she said, lifting her head from his shoulder, and looking at him in pleased surprise at the unlooked-for tenderness. "I'm not hurt much, but I was terribly frightened."

"Can you stand up, dear? Rest against this tree for a minute till I get the sled out, and then I'll take you home."

"Home!" the word roused her instantly. Struggling to her feet she peered through the sleet down into the valley, where the railroad was in view for miles.

"No," she said, "we will go to the station, and we shall have to hurry. Here, tear your handkerchief into strips, and tie up my hands, quick!"

"Allie, you don't think I'm goin' to take you to the train now—after this!"

"Yes, I do."

"Well, I sha'n't do it—you're goin' home."

"I'm not going up that mountain to-day, Ben Becket, not one step! So if you won't take me, I shall go alone."

As Ben finished tying up one of her hands, she pulled the waterproof hood over her head, pushed her loosened hair into it, and took up her satchel.

Ben tried hard to be stern and unrelenting, but a look in the pale, scratched face, still full of determination, was too much for him.

"All right, then, Allie, I'll take you; sit on here."

He shook the snow from the buffalo-robe, and placed it on the sled.

They soon reached the foot of the mountain, and then Ben took the rope around his waist and started for the station, now but a short distance away.

The "station" was simply a large box, where trains did not stop unless signalled, but the conductor of the train fortunately saw Ben hurrying over the icy ground, pulled the bell-rope and stopped the train.

"Well, youngster," said he, "why didn't you take a team, or wait for a pleasant day?"

Then seeing the bandages on Allie's hands, one of which pressed a handkerchief to her smarting cheek, he stepped from the platform with a sympathetic expression on his kind old face.

"How did it happen? Where is she going?" he asked in a breath.

Ben hurriedly explained.

"You'll look out for her, conductor, won't you?" asked the boy, anxiously; "she's most used up. I'd go with her if there was any way of getting word to mother, but she'd worry if I didn't get home."

"I'll look out for her—my wife is on the train, and *she'll* take care of her," said the conductor, as he helped Allie up the car steps.

Ben turned wearily to his trip up the mountain.

"Here, Jane, is a patient for you," said the conductor, Mr. Price, introducing her to his wife.

"Why, you poor child," the lady exclaimed, when Allie was seated opposite her.

"It's nothing but my fingers, madam," said Allie, somewhat embarrassed by the lady's kindness. "Just fix my right-hand fingers, please, to keep them from getting stiff."

"Oh, they won't get stiff, my child; or if they do it'll be only for a day or two."

"Yes, but they mustn't get stiff to-day, I don't care about to-morrow. You see I'm going to Harwood to compete for the scholarship, and I must be able to write, of course; penmanship may decide the contest if two papers show equal merit, so that's why it won't be of any use to have my fingers limber to-morrow if they're stiff to-day."

Mrs. Price took Allie to her own house, for a short rest, when the train reached Harwood, and then sent her to the place where the competition was to take place, refreshed and ready to do her best.

In two or three weeks the "notification" came to Allie, the notification of the award which each competitor was to receive, and Ben said as he came up from the post-office with it, "Here's your big envelope."

He said it somewhat superciliously. Ben had never had so much confidence in his sister's ability as the rest of the family; but he changed his mind very shortly, for the notification was a personal one, to the effect that Miss Alice Becket was the winner of the scholarship.

It is now five years since Allie added M. D. to her name, and the little farm on the mountain-top, if it does not yield better crops, is the home of a more prosperous family than it was on that cold winter morning when Ben was tricked into early rising.

Alice comes home as often as she can be spared from her practice, and she never passes the point where the hill road broadens out into Denman's pasture without thinking how narrowly she escaped death when she was setting out to win her scholarship.

LATEST DISCOVERIES IN SCIENCE.

THE MOON.

By Prof. E. S. Holden, Director Lick Observatory, Cal.

If you should go to one of the famous observatories of Europe, for instance to that of Greenwich, you would very likely find it surrounded by a high wall, and under the charge of a grim keeper, who would not let you in at all unless you brought a special letter to the astronomer. Even if you should get in, there would be little chance of your looking through the telescopes, which are kept for purely scientific uses.

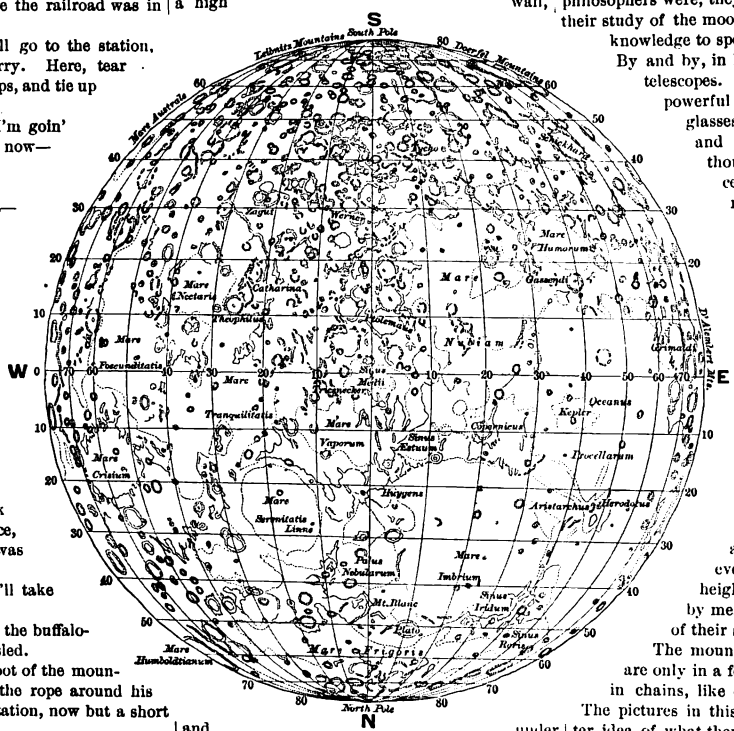

Fig. 1.

In America it is usually different. In many observatories visitors are admitted on one night in the week, the remaining nights being kept for astronomical work.

I think the more liberal spirit in our own country is very largely due to the example and precept of a very great and good man, Professor Henry, who was for many years the chief of the Smithsonian Institution in Washington. He was never tired of insisting that scientific establishments, including observatories, should attend not only to their main business,—the advancement of science,—but also to the diffusion of knowledge. Professor Henry lived long enough to impress this idea as a duty upon a whole generation of younger men, who are now at the head of various scientific institutions in the United States.

At the Lick Observatory, which was founded by Mr. Lick in order that it might be "made useful in promoting science," we attend to the other half of our duty also, and endeavor to diffuse knowledge among the hundreds and thousands of people who visit us every year.

If one of the readers of *The Companion* were to climb up Mount Hamilton on one of our visitors' nights,—Saturdays,—he would see the great observatory perched at the very summit of the peak, on a little flat space which has been levelled off to receive it. Under the great dome he would see the magnificent telescope that is Mr. Lick's gift to California and to the world.

If it were a moonlight night, the telescope would surely be pointed at the moon, and the visitor would have a chance to see for himself just what the moon is like, and to ask any questions he pleased.

Now what would the moon be like? As we look at it with the naked eye, it seems a shining, brilliant disc, with a few darker spots on it, which make the face of the Man in the Moon. If you just glance at it, the image is a full face; but if you look more carefully, it changes into a profile of a man's head, with the eyes turned to the left.

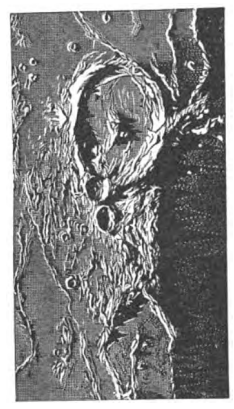

Fig. 3.

The ancients thought that the moon was another earth, and they called the dark regions, "seas," and the brighter ones "continents." Some of them, however, declared that it was nothing but a great metallic mirror in the sky, and that the seas and continents of the moon were nothing but the reflections of the land and water on the earth.

Wise and thoughtful as some of the ancient philosophers were, they could not go very far in their study of the moon, for lack of some definite knowledge to speculate upon.

By and by, in 1609, Galileo made his first telescopes. They were a little more powerful than our common opera-glasses, which magnify about two and one-half to three times, though they were not such excellent instruments in many respects; but they sufficed to add a multitude of new facts on which to reason. Milton made a visit to Galileo, and undoubtedly saw the moon through the telescope he had made. In his "Paradise Lost" he tells us how Galileo, "the Tuscan artist," could "descry rivers and mountains on her spotty globe."

Galileo began to make a map of the moon, laying down the principal mountain-chains and peaks, and he even estimated the height of some of them by measuring the length of their shadows.

The mountains on the moon are only in a few places arranged in chains, like ours on the earth. The pictures in this article give a better idea of what they are like than any description can give The typical form is a ring-shaped wall, ten, twenty, thirty, even sixty miles in diameter, surrounding a fairly level plain, with usually a central peak.

Kepler supposed these walls to be the fortifications of the Selenites,—people that he fancied lived in the moon,—but they really are the rims of great extinct volcanoes.

On the inside faces of these walls are great terraces, or steps, extending around the interior like sea-beaches. The old floor of the crater was much higher than the one we see now, and joined the outer walls in one of these terraces.

The hot lava underneath the floor was constantly pouring out through the central cone, making the floor of the crater heavier, and emptying the space below.

By and by the whole floor would suddenly sink a thousand or five thousand feet, and high up on the walls we can still see the terraces left there at each successive fall of the crater floor.

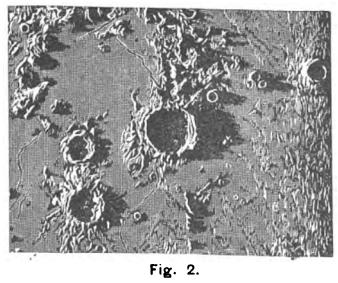

Fig. 2.

At the volcano of Kilauea, in Hawaii, exactly the same thing is happening to-day, and the old beaches, or terraces, are plainly to be seen far up on the cliffs. Just such terraces are found in abundance on the inside walls of many lunar craters.

I should like to give you a notion of the way in which our present knowledge of the moon has been obtained—by what immense and patient labor. Galileo, Kepler and a host of the astronomers of the seventeenth century observed the moon, made maps of its surface, and drawings of its separate craters.

The greatest service was done by Hevelius, at Danzig, whose *Selenographia* (1647) is a huge folio of five hundred pages, with forty copper-plates drawn and etched by himself. In those days an astronomer had to do everything, and Hevelius printed and illustrated his own books after he had made the astronomical observations which they described.

For a hundred years Hevelius's chart continued to be the best. Hevelius's observatory, with all his instruments, and with nearly the whole edition of one of his books,—which he had printed but not yet bound and distributed,—was destroyed by a great fire in 1679. Of all his copperplates, only one exists to-day, and that is a map of the full moon which some thrifty person had made into a tea-tray!

Many of the objects on the moon are still called by the names which Hevelius gave to them, such as the mountain-chains of the (lunar) Alps, Apennines, and so forth, and the seas—so-called—of Serenity, and so forth—*Mare Serenitatis*. It must not be supposed that he considered the great level plains of the moon as real seas and lakes; he expressly said that he did not.

A lunar map by Riccioli (1651) gave the names of celebrated philosophers and astronomers to the different mountains. This system—not a very good one—is in use to-day.

As science grew more and more exacting, the maps and measures of Mayer (1748), Schroeter (1791), Lohrmann (1824), and of Beer and Maedler (1836), began to be marvellously complete. The best of these maps were three feet in diameter, so that an inch was about fifty miles.

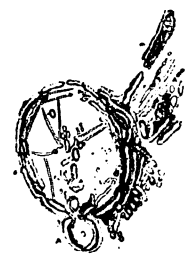

Fig. 4.

I suppose that there is no map of the State of Arkansas to-day, which is as accurate and as detailed as such maps of the moon. Maedler worked at the construction of his map for six years, and it shows nearly everything that can be seen with a telescope of three and one-half inches aperture.

The finest chart of the moon is, however, that of Dr. Julius Schmidt, lately Director of the Observatory at Athens. It is six feet in diameter, and full of details. There are thirty-three thousand craters on it, for example, each one in its right shape and in its right place. The scale is about one inch to twenty-five miles, as if, for example, we drew the State of Connecticut on a rather large visiting-card.

Schmidt's observations on the moon extend over thirty-four years, from 1840 to 1874. When he was only fourteen years old he began to make drawings of the moon as it appeared through a small telescope, and this labor of love was continued for nearly the whole of his life. The final result is wonderful, and it can hardly be improved upon for the purpose which he had in view.

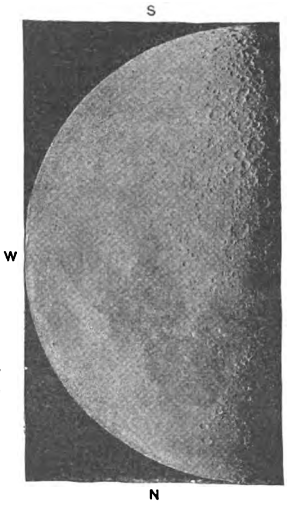

Fig. 5.

Now, what was this purpose? The object of all astronomical observation is to find out the laws which govern the heavenly bodies; and to discover these laws we must usually find out first what changes are taking place in the body, and then secondly, why they take place.

The object of these elaborate maps, into which men put the working energy of a lifetime, is to make such accurate delineations of the moon's surface that a change can be detected if it takes place. Schmidt's map is so detailed and so accurate that if two square miles or so of the surface were materially changed, the change could be detected.

It is as if some one were watching the United States with a large telescope from somewhere off in space, and were able to say when a very large farm in Minnesota was first broken, and the vegetation turned from green grass into yellow wheat.

There have been only two material changes in the moon really proved, and one of these was discovered, and the other verified, by Schmidt. In the first a deep crater-pit *(Linne)* was filled up; in the other a new depression *(Hyginus)* was formed in the midst of a plain.

Photography is sure to become an invaluable means of research in such questions. The comparison of two photographs will yield evidence of far greater certainty than can be had from even the best drawings.

At the Lick Observatory we have already made very promising experiments in this direction, and I do not despair of obtaining a map of the moon as large as Schmidt's which will show far more

Digitized by Google

than his, and with each detail impartially and naturally depicted. Comparisons of such a map with the moon or with other photographs will surely detect any changes that may occur, and each one of these changes will help us to understand the nature of things at the moon's surface.

Certainly all conditions are very different there from those which prevail on the earth. There is practically no atmosphere; a barometer on the moon would not stand higher than one-twenty-fifth of an inch, instead of at thirty inches as we have it; and if there is any water, it is surely in the form of ice or snow.

Gravitation acts to pull down mountains and to fill up valleys on the moon as on the earth; but frost, melting and freezing, which is our great agent in such changes, probably does not act on the moon's surface. It is more than probable that the temperature is never above freezing at all.

There are one or two things about the moon that every one should know. Let me mention them.

How bright is the full moon, do you think? Suppose you look up at the moon on the next clear night. The sky is a pure, pale blue and the moon is almost dazzlingly bright against it. If the whole canopy of the sky were made up of full moons, and if one were in the centre of such a shining shell, one might think that the glare would be intolerable.

But let us see. This very same moon you have often seen in the daytime as a pale white disc just barely visible against the background of the sky. In fact, unless you know exactly where to look, you may require a minute or two to find it.

This means that the daylight sky is not so very different in brilliancy from the nearly full moon; or it means that you could very well live under a sky whose every part was just as bright as the moon itself.

We may say, then, that the brightness of the moon is not so very much greater than the brightness of the same area of sky. The total light of the full moon can be compared with the total light of the sun, though it is a very difficult problem, and the result will be that the sun is as bright as six hundred and eighty thousand full moons!

Once again, you ought to know and remember how large the moon is. Its diameter is about two thousand miles—one-fourth of the earth—and its *angular* diameter is about half a degree. As there are one hundred and eighty degrees from the east point to the west point of the horizon measured through the zenith, there is room for three hundred and sixty full moons in an arch spanning the heavens from east to west, each one touching the rims of those next it.

Another thing, too, you should notice and understand. The moon looks larger near the horizon than it does when it is overhead. The common explanation of this fact is essentially the true one; that is, the low moon is near enough to the horizon to be compared with hills, or trees or houses, and consequently it looks large; while the high moon is isolated, and one has no term of comparison.

In both cases the angular diameter is about half a degree, as you can prove for yourself with a little ingenuity.

One of the very commonest and most natural of questions is whether there is "life" on the moon. If it is meant by this, Are there men there,—people like ourselves,—it is safe to say no. There may be vegetable life which, like Arctic mosses, will resist such intense cold; and it is possible to imagine animal life which could exist almost without air.

But we can form no accurate conception of "life" under such conditions; and while its existence cannot be flatly denied, it is safe to say that it is almost certain that no life at all is to be found on the moon, and perfectly certain that there is no human life there.

The moon is essentially a dead world. Even the volcanoes are long since inactive. There is no air, or next to none, and hence there can be no sound. There is no free, flowing water—only eternal ice and snow at the best.

All is cold, silent, dead. It is a picture, too, of what the earth must some day become; for all our life depends upon our regular supply of heat from the sun. We are spending this capital, and by and by we shall have spent it all. When that time comes the earth will be like the moon.

There is something immensely impressive in following out the full course of the history of a planet, from its birth down to its death; but there need be nothing depressing or disheartening. The immortal part of us is independent of material change and decay.

Now let us come back to the question with which we started; how do you suppose the moon would look in the great telescope?

The easiest way to understand just what you would see is to examine the illustrations in this article very carefully. They are taken either from photographs, or from very careful drawings, or from equally careful plaster models.

In these cuts you have a view of the moon as a whole, and of certain parts of it on a large scale.

Fig. 1 is a map of the moon, from Young's Astronomy. Only the more important features are laid down on the map. The points N., E., S., W., are marked as they appear in an inverting telescope. If you are observing with an opera-glass, you must turn the picture upside down. Try to identify the places of the craters shown in the cuts of this article. Archimedes is just ten degrees north of Huyghens.

Fig. 2 shows the Inner Apennines and the crater Archimedes, after a plaster model by Nasmyth. The highest peak of the Apennines is eighteen thousand five hundred feet. Archimedes, the largest crater, is fifty miles in diameter, and its wall is full of terraces. The crater nearest to Archimedes is Autolycus, and the one just below the latter is Aristillus. Aristillus is thirty-four miles in diameter, and eleven thousand feet deep, and is an excellent example of a ring crater with a central mountain. Radiating streams of lava extend into the plain around it.

Notice in Fig. 2 how the shadows show where the sun must be. By measuring the length of these, the height of every peak can be determined. Another curious feature of the moon—radiating cracks in the surface—is well shown in this picture.

Fig. 3 shows the Inner crater Gassendi. Compare this drawing with Schmidt's map (Fig. 4). Gassendi is fifty-five miles in diameter, with an area of no less than two thousand square miles. The principal peaks are ten thousand feet high.

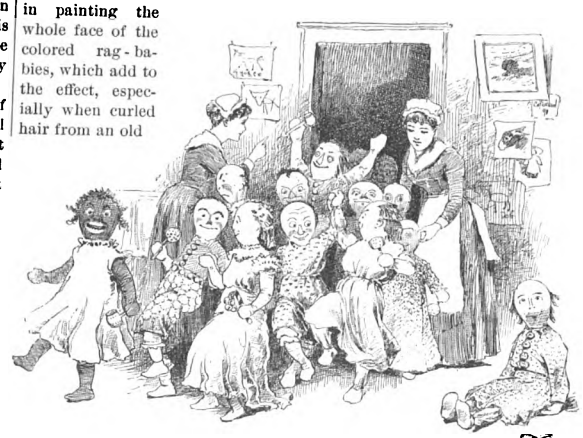
The bright streaks on the floor of the crater shown in Fig. 3, and more accurately in Fig. 4, are *rills* or cracks filled up with lava, probably. So carefully has this crater been studied that more than thirty such rills are known now. It is worth while to map them so carefully because the newest formations are, of course, on top, and in this way we have some idea of the order in which the present features were formed.

Fig. 5 is a reproduction of a photograph of the moon taken at the Lick Observatory in August, 1888. The diameter of the original picture is five and a half inches. If you will take the next opportunity and examine the moon for yourself with an opera-glass,—or, better, with a powerful field-glass,—you will have a real basis for your future knowledge.

If you should ever be able to look at the moon through a larger telescope, you will know exactly what to look for; and if you will think a little about what is written here, and especially about what you have seen for yourself, you will have a whole volume of questions to ask. If you will come to the Lick Observatory, some of us will be glad to try to answer them.

For the Companion.

WINTER EVENING ENTERTAINMENTS.



The Rag-Babies' Ball.

The "rag-babies' ball" is a never-failing source of amusement, and both young and old can participate in it.

All are dressed as rag-babies, with the masks described below, a short calico dress of red, yellow or any bright color, gathered at the shoulders and waist. The feet, legs, arms and hands are covered with cotton hose; those covering the hand are sewed into the form of a hand, the rougher the better.

The mask is made by placing a yard of white cheese-cloth over the head, and drawing it down over the whole head, and sewing it firmly over the shoulders and neck, front and back, the seams being concealed by the dress. Cover the back part with black Germantown worsted, which is parted in the centre, and back-stitched to look like the parting of human hair. Another row of back-stitching at an interval of an inch, and others thus arranged on each side, will give the appearance of crimped hair. The face is made by painting the cheeks with a bright red color, the outline of the mouth in the same color, for which rouge or cranberries may be used.

Burnt cork will serve for the eyebrows, and will also be useful in painting the whole face of the colored rag-babies, which add to the effect, especially when curled hair from an old

mattress is used instead of yarn for the hair. The eyes may be painted to suit, and when a china doll is needed, the eyebrows may curl upward.

Boys and girls alike can be dressed in this style, and great variety be used in costume, studies for which can be found in every nursery. Even the artist who decorates these rag-babies need not know who is going through the process, and the most amusing mistakes and adventures are sure to happen.

The voices of the speakers may be changed by pieces of wax or chewing-gum held in the mouth.

Two nurses are in charge of the party, costumed in dark dresses, caps and kerchiefs. When all are ready, the rag-babies emerge in two lines from their dressing rooms, and each takes the partner he first meets, and all march around the room until the ring is full and all are ready.

They then proceed to form the Sicilian Circle, if a dancing-party is desired.

If a concert is preferred, they march about the stage or one end of the room, and form in as many lines as the stage will accommodate comfortably. The last line stands on tables placed in

a row at the back of the room, the next on boxes, and the others on the floor.

At a signal from the nurse, all sing, keeping time with rattles. Elliot's "Mother Goose" set to music, and "Nursery Quadrilles" by John Farmer, have plenty of music adapted to this concert, and the latter pieces furnish excellent material for a set of lively dances.

At a pause, the boys in the line may fall down in a heap, limp and exhausted, and all must hang their arms listlessly by their sides, and when they stop singing, the rattles must drop from their hands, and the nurses must pretend to fasten them again in place with pins.

For the dresses, old-fashioned red and yellow calico, with small figures, will be most useful. Much fun can be had in dressing and painting these quaint figures, and no one who sees or joins in it will ever forget the rag-babies' ball!

Household Fairies.

This fascinating pantomime can be easily prepared by children in any room at short notice, with such appliances as any kitchen can supply, or be used on a stage to raise money for charity.

Two proud sisters, richly dressed, enter at the same moment from two rear corners, or from any doors if no stage is used, in which case they may wear every-day dresses, with sheets or shawls pinned on the shoulders in a box-plait to train on the floor.

They meet in the centre, express great disgust at being obliged to do housework, to express which they try various kinds of work for a moment, and the lady on the right goes to a churn, washtub and ironing table, while the lady on the left devotes a few moments to chopping hash, sweeping and folding clothes.

Each pauses for a moment to come to the centre and complain to her sister in pantomime. The lady on the left touches her sister on the shoulder and points off as if struck with an idea, and then goes off and drags in Mignon, who is very simply dressed in a loose white waist, dark skirt held up by one strap of same color as the skirt, which strap crosses from right to left over the shoulder.

One sister drags Mignon by her right arm to the churn, but hardly has she begun to work when the other sister seizes her by the left arm, and drags her across to the implements of work on the left side.

The first sister then interrupts Mignon, and calls her attention to her own work in the same unkind manner.

This action is kept up until Mignon has been introduced to each kind of work, and then the first proud sister advises her not to neglect any of the work on the right of the stage, and the second sister gives her the same order as to the work on the left, and both go out in the same manner as they entered. Poor Mignon goes to work steadily, trying in turn each variety for a little while, then, despairing of being able to complete all the manifold tasks, she draws a chair to the centre and sinks down upon it to rest.

Soon Mignon yawns, rubs her eyes, and gradually falls asleep, at which little fairies spring in haste from every basket, tub, churn, and table, and each works with might and main, two waltz rapidly around the room, one sweeping and the other dusting.

The tiniest fairy takes up the washboard, places it in the tub, and washes away with all her might. The others take their stations at churn, hash-bowl and ironing-board, and the scene becomes very animated, and never fails to please.

Soon the busy fairies complete their kindly tasks, and after expressing their delight they join hands and dance gaily around Mignon in a merry ring, then dance wildly about the room, and form a line, and, led by the smallest, they march or waltz around each article of household furniture in a gay revel, swinging their arms uplifted high above their heads, and as Mignon begins to show signs of waking, they vanish, and run off the stage.

Mignon slowly wakes, and seems to be alarmed at the lateness of the hour, and goes up to each implement in turn and expresses the greatest surprise that the work is all done. She then seizes a pan from the table, and using it as a tambourine, executes a burlesque ballet dance.

Exhausted by her gay dance around the furniture, Mignon sinks into the chair just as the sisters enter from their sides of the stage, and each seizes her in turn and drags her as before up to the various implements in turn, and as they find the work all done they seem delighted, and embrace Mignon.

The three dance around, and then join hands with Mignon in the centre, and balance to each side and forward to the front and retreat, then they stand still with uplifted hands.

The fairies enter, thread in and out, go around the sisters, then each stands under the arches made by the uplifted hands of the sisters, the other fairies take their places on each side of the sisters in line, and all bow as the curtain falls.

When this pantomime is prepared hastily the children may wear white dresses of any kind, with a little gilt paper sewed on; when presented in public a fairy dress is made by folding two cross pieces over the waist, and sewing six skirts of coarse tarlatan muslin into one band, and spangling the outer one with gilt paper stars.

Sheets are used to cover the table-churn, basket and chairs behind which the fairies hide, when there are no folding doors or curtains. The fairies take their position in the basket, tub and churn of a barrel-churn, and hide under the tables and crossed chairs; a broom, feather-duster, hash-board and knife are also used.

Cherubic Infantry.

The many young people who have enjoyed the Cherubic Infantry, which has been performed in hundreds of places since its publication, will be pleased to hear of it in a new guise.

Its author was invited to Hampton, Virginia, to raise money enough to support a Holly-Tree Inn for the scholars of the Normal Institute, and decided to use the material in an Art Exhibition of a rich and varied sort. Here were scholars of every hue, from the bronze to black, and copper color to clear white, and every type from Caucasian to darkest African.

But the brightest and funniest of all this motley throng were the six lovely little bright black girls who personated the infantry.

Seated on a long table close side by side, each wore a long robe reaching to the floor, and a close-fitting cap of white muslin, a bright sash around the waist. The effect of the shining black faces, bright eyes, laughing red lips and pearly teeth set off by the white costume was very picturesque and pretty.

They were attended by their teacher dressed as a nurse, a beautiful woman with gentle manners and voice like a bird. They sang "Jack and Jill," keeping time with their rattles, "Sing a Song of Sixpence" to the music of their bowls and spoons, and as they tended their dolls sang "Rock-a-Bye Baby" in perfect time.

Last of all they sang "Bye-Low Baby," and all dropped asleep at the last word, each leaning on the next in a graceful row of sleeping cherubs.

A group of real Sioux Indians next appeared in the real costumes of the tribe, now very hard to obtain, which were brought by their wearers from the far West. The weapons, skin-robes and household utensils were also correct, even to the frame, in which the real pappoose was strapped to the back of its squaw-mother.

A most realistic scene followed, the dream of civilization, in which five races appeared in correct costume, each personated by a native of the country, the Polynesian in his huge feather headdress, and shield and buckler of straw.

The Chinese, Nubian, Ethiopian, Indian in war paint and in civilized costume, the colored soldier

Digitized by Google

in the uniform of the school, and in plantation garb.

The performance was well patronized by guests from the Hygeia Hotel, including gentlemen and ladies from New York and Boston, who expressed their pleasure in prolonged applause.

But a new surprise awaited them. A studio scene was shown. In a large frame fair teachers appeared as pictures, while in the foreground many others personated classic statues very naturally.

Soon in the midst of them a great bronze statue towered above all the rest on a high pedestal. The effect was wonderful. A bronze-colored muscular man, draped in cloth of the same color, stood in the attitude of the quoit-thrower, immovable and grand. The plaudits which greeted this unique group pronounced it the most successful climax to a very remarkable exhibition.

GEORGE B. BARTLETT.

For the Companion.

HIRAM'S BEAR.

"Hi-*rum!* Hi-rum!"

Mrs. Briggs stood in the open doorway, one hand resting against the door-post, the other grasping a two-tined steel fork, as she thus sent her voice across the road, exploring the sheds and barnyard for her step-son Hiram. Nothing came of the search but a faint, derisive echo from the side of the old gray barn.

Mrs. Briggs drew back into the kitchen, and the screen-door closed after her with a sharp snap. She stepped quickly across the floor, and lifting a tin cover from a steaming iron kettle on the cooking-stove, thrust her fork energetically through the brown-jacketed potatoes that lay in its depths.

"Biscuits brown," she muttered, "pertaters mos' done, 'n' not a sign of that boy yit! Beats me sometimes what men-folks was made for! I sh'd think the Lord 'd be mos' tempted to sweep 'em off the face the earth when He looks at 'em. I aint got His patience. I declare there he is now!" she added, in a different tone.

A long, lank boy appeared outside the screen-door. Both his big hands were filled with brown and white eggs.

Mrs. Briggs dropped the kettle-cover, made three steps to the door, which she pulled open, gathered the eggs into her apron, and then hurried back to the stove, and began breaking them into a spider of hot fat that stood beside the potatoes.

"Hens haint stole their nests, have they?" She raised her voice a little to make herself heard above the sputtering of the fat.

"No'm, guess not," drawled Hiram.

He finished rubbing his bare splay feet on the little braided rag-mat at the door, and stood watching his step-mother as she flew from the stove to the table, from the table to the pantry, and from the pantry to the stove again, but he attempted no reply to her curt:

"Well, you was gone long enough to a-went to Bobadil. I begun to think you was makin' hens, 'n' waitin' for 'em to lay."

Soon the hired man, Leonard, came in from the shed, and they all sat down to the table. Then while he and Leonard despatched the buttermilk biscuits, the boiled potatoes and the fried pork and eggs, and while Mrs. Briggs poured the coffee, Hiram ventured to say, his mouth filled with egg as he spoke, "Seen Rush Foss while I was out aft' th' eggs."

"*That's* what made you so long, then," said Mrs. Briggs, smartly, "gabbin' with that brag!"

"What's Rush got on hand to-day?" inquired Leonard, good-naturedly, as he jabbed his fork into the heart of his fourth potato.

The answer did not come immediately. Hiram had to swallow his egg, and wash it down with half a cupful of rye coffee.

"Wal," he said at last, "he's got a bear-story now."

"Bear!" ejaculated Mrs. Briggs, contemptuously. "He'd never get near enough to a bear to know whether 'twas pink or sky-blue."

"Haint killed none round here lately, has he?" was Len's jocose query.

"He aint nothin' to do with it," said Hiram, stolidly. "It's only what he's heard. He says Perliny Hatch 'n' Nora 'Mandy Perkins went over ter Long Run yist'day, black-b'rin', 'n' *they* seen the bear. They didn't know what 'twas first when they see somethin' movin' the bushes; but they was kind of sca't, 'n' kep' still, 'n' they seen him all plain, pickin' black-b'ries 'n' eatin' of 'em, jes' like anybody."

"Pickin' 'em with his han's 'n' puttin' 'em in his mouth, wa'n't he, sonny, or did he have a pickin' dish 'n' a pail to empty 'em into?" asked Leonard, patronizingly, as he left the table, picking his teeth with a bit of pine wood.

Leonard was a few years older than Hiram, and he seemed to consider that his longer experience of life had given him the right to put all the pricks possible into it for the discipline of those who followed him.

But Hiram was a poor subject for jests. He thrust the last half of a biscuit into his capacious mouth, and pushing back his chair, followed Leonard out to the barn.

"We goin' to mend the line fence this forenoon, Len?" was his question when he reached the barn door, where Len was stopping to eat an apple as easily as if breakfast had been over for hours.

"Yas, 'less you're goin' after th' bear," replied Len between two bites.

Hiram went on to the tool-house without answering, picked up his axe, and started for the upper field.

Leonard followed, eating his apple as he walked leisurely along.

The morning in the field was a quiet one. Once Len cried, "There's your bear, Hi! Shoot 'im quick with a fence-stake!" when a squirrel skipped along a neighboring stone-wall. He made other facetious remarks, which he enjoyed immensely, when the summer wind or a bird stirred an alder thicket near them.

Hiram answered all his jokes with a quiet grin or especially energetic blows of his axe. He would have let the bear-story go as one of Rush's extravagances if Len had not kept it continually before him.

At dinner the truth of the story was, to his mind at least, confirmed. Mrs. Briggs said the minister had called on her in the forenoon, and he was half inclined to believe in Rush, this time, at any rate.

"It's been so dry on the mountings," said Mrs. Briggs, "he thinks it likely the bears is hungry, and has come down to prowl round. Everybody knows they're dretful fond of fruit, so most likely the girls had the right of it. Nora 'Mandy didn't ought to go up there berryin' 'thout somebody to take care of her, did she, Len?" added Mrs. Briggs, mischievously.

Len choked himself with hot Indian pudding, as he mumbled something about "'spose women-folks couldn't do much, ketchin' bears," and then applied himself to mixing milk and sugar in his tea with great care and diligence.

Mrs. Briggs absorbed herself in blueberry short-cake, and did not pursue the subject; half to his regret.

Hiram enjoyed Len's embarrassment so much that he began to wake up. The minister believed in Rush, and Hiram believed in the minister. He didn't think it possible a man could have so much to say as often as every Sunday unless he possessed a tremendous reserve of words that nobody had measured or could measure.

After dinner he stood idly in the woodshed door, waiting for the clock to strike one, and wondering if there really was a bear about, when Len came out of the kitchen.

Hiram heard him say, as he stood holding the door-latch in his hand, "I'm goin' over to see Jim Nichols after supper, 'n' if he thinks there's anything in it, we'll turn out 'n' have a hunt. Holloa, young feller, what you 'standin' there for?" he added, good-naturedly, as he saw Hiram. "You'd better be diggin' them pertaters. I'm goin' to cut second crop."

He walked off toward the barn with his scythe, while Hiram went the opposite way into the garden.

Hiram dreamed that afternoon as he never had before. The strokes of his hoe were aimed at the bear, the brown potatoes he unearthed were the dollars poor Bruin's skin would bring, and the bounty the State would pay for killing him.

The afternoon was warm, and the sun beat down with midsummer heat on Hiram's back and bare neck.

Once as he lifted his sweaty face, and drew his gingham shirt-sleeve across it, he saw a man coming through the field that lay beyond the garden, and as the words "Jim Nichols" left his lips, the young man leaped the fence and stood beside him.

"Where's Len?" he asked, abruptly.

"Down gittin' second crop," returned Hiram.

"All right," and Jim strode across the garden, leaped the beet-bed, swung over the fence on the other side, and disappeared behind the corn-barn.

Hiram had turned the potatoes out of a dozen hills before Jim came back. As he stepped up behind the boy, he asked, pleasantly, "Want to help hunt the bear, Hi?"

"When?"

"Oh, to-morrer night, I guess! Come over t' my house 'long of Len after the chores is done. I'm goin' over t' Hunt's Corner, 'n' git Sam Mason t' lend me his hound if I can," and he walked away whittling.

Hiram's hoe moved more slowly after Jim had put the fence between them again. Len wouldn't let him go on the hunt, he believed.

"If he does, it'll only be to lug the carkis home," he said to himself, almost bitterly.

He had no doubt that Jim and Len would get Bruin if they went after him.

When his work was done he lifted his heavy basket and started for the corn-barn, where the potatoes were spread on the floor to dry before going to the bins in the cellar.

He heard a hoarse toot—toot—toot as he went up the path. Mrs. Briggs was blowing the great conch-shell she kept on the kitchen mantel to tell that the five o'clock supper was on the table; but Hiram stopped to dream a few minutes after he had emptied the basket.

He wondered what would happen if he should get a gun, of his own, perhaps, with the proceeds of his potato-patch this year. The prospect was dazzling, too dazzling for him to consider long, so he put away his hoe, washed his hands in the tin basin that stood on a bench in the shed, and went in to supper.

Mrs. Briggs thought he had been too busy hoeing to come in earlier, so she helped him liberally to new apple-sauce, and made no remarks on his tardiness.

She and Len were talking of going to the meadow the next day to look at the cranberries; and before Hiram had eaten his third biscuit they left the table, Len going to finish bunching his hay, and Mrs. Briggs to look after the milk. Hiram lingered until he had finished the last scrap of warm gingerbread, then he went to the pasture for the cows.

All but one were waiting at the bars for him. Daffy, his own heifer, had failed to come up with the rest, and after the milking was over and the other work was done, Hiram insisted on going after her.

"Want to go along, Len?" was the invitation he tossed carelessly to the young man as he started. Len declined. He had a little business "over t' th' corner," he said. "A little projec'" he was thinking about, "me 'n' Jim Nichols."

"P'r'aps I dunno what 'tis," chuckled Hiram, as he trudged off toward the pasture. "What would you say, ole man, 'f you knew I'd been invited to it? Jim's a good feller if he can't keep nothin' 'tween his teeth," added Hiram, stopping to pick a particularly luscious blackberry that overhung the path.

Daffy was not in the pasture. Hiram called her; she had always come at his call. He tramped along cow-paths, he explored thickets, he looked in every direction, he even climbed a tall pine-tree to make an observation, but all to no purpose.

After he came down from the tree he examined the fence for breaks. The fence at the back of the pasture was made of great stumps and logs, now partially decayed, with brush interwoven between them.

Hiram found a place where the brush had been pulled away, and he thought it possible Daffy might have got through into Captain Goodwin's pasture. The Captain's Jersey had been pastured with Mrs. Briggs's cattle the previous summer, and she and Daffy were friends.

Hiram carefully looked over the fence he suspected of treachery. "I don't b'lieve anything's been through here," he said, "an' Daffy haint a bit breechy—nohow—that's so!"

He pondered a while longer, and then concluded to go on with the search. Captain Goodwin's pasture was a large one, and his house was two miles away, on the farther side of it; but Hiram determined to go to the house if he didn't find the heifer in the pasture, for, as he reasoned, if she went to the barn with the Goodwin cattle, the hired man would only turn her into the pasture again the next morning.

There was a fine moon almost at the full, and it would have been a great delight to the boy to be out in the soft summer night if he had had company. Even at times much despised Leonard would have been vastly better than nobody.

He was not an imaginative boy. In the long, dark shadows stretching away from trees and bowlders, he saw only shadows, but he remembered with a little shiver as he passed through a clump of young pines, that a wild-cat was killed not far away half a dozen years before, and there might yet be creatures in these thickets an unarmed boy would not care to meet.

The moaning of the pines was not reassuring. He instinctively stooped and picked up a heavy pitch-pine knot that lay in the path.

"Je—whew!" he exclaimed, as he raised it. "Aint that a staver! I'll take this home to burn in the fireplace some Sunday night aft' it comes cooler."

He had passed over half the pasture, and would soon be out in sight of Captain Goodwin's house, when an ominous stirring in a clump of bushes on his left startled him.

His feet involuntarily stopped. He thought his heart stopped, too.

"Pooh, it's nothin' but Daffy now," he said, collecting his wits, and making a forward movement, when the bushes opened and the bear stood before him.

Hiram's brain reeled. Then a low growl from the bear recalled his senses, and, scarcely knowing what he did, he raised his pine knot, and brought it down with all his strength.

He had not aimed, he had no idea where the blow fell, but to his amazement Bruin toppled under it and fell on his side to the ground.

Then in his terror the boy hailed blow after blow on the head of the bear, until, satisfied that the creature, which had not stirred after the first assault, must be dead, he rose to his feet, breathless and almost doubting his own being.

He stood and stared at the dead body. Was that the bear? The bear Len meant to kill?

Hiram chuckled now. When he said "Len," things began to seem real again. He must go home and get some one to help him carry the bear to the house.

He moved a few steps, but as soon as he had left his victim he doubted the whole affair. Perhaps he had only killed a big dog.

He went back and looked the animal over. He felt the skin, the shape, the claws, and at last, exclaiming, "It is a bear if they is bears!" he started for home again, exultant.

What would Len say? And his mother? Perhaps she would think him *most* as smart as Len, and Hiram's lip came nearer curling than ever before, for to be treated like a little boy is one of the greatest trials of a big boy's life.

He had to sit down under the orchard fence awhile when he got almost home. He wanted to appear cool about his adventure, as if it were as tame a stroke of work as picking stones in the "Whitten pastur'."

When he felt sufficiently calm, he went on through the garden.

Mrs. Briggs's voice came high and shrill through an open window, "'N' then it's all ready to knead when I come down in the mornin'."

She was mixing bread in the pantry, and talking to Esther Newbegin, who sat in the kitchen holding the cat. Len and Jim Nichols were lounging on the doorstep.

"Your cow fetched in first," said Jim, lazily, as Hiram came up.

"Where's she been to?"

"Oh, she was mixed in 'long of Deacon Stover's cows somehow, 'n' that smart youngster he's got this summer never found it out. He tied her up, 'n' 'f the deacon hadn't happened into the barn she'd 'a' stayed till morning. 'S 'twas they turned her int' th' road, 'n' she come home." Jim liked to tell the news.

"Walk didn't amount to much, did it, young man?" said Len, as Jim finished.

"Something," replied Hiram, dryly. He felt that Len's time for patronizing him was short.

He stepped over the young men, Jim holding one of his feet playfully, while the other reached the threshold, and called,

"Ma'am, can I take the drag 'n' steers down to Goodwin's pastur'?"

Mrs. Briggs came out of the pantry.

"What do you mean, Hiram Briggs?" Her tone was reproachful.

"I've killed the bear down there, an' I want ter git 'im home."

Hiram tried to speak carelessly, but it was only by an effort that he separated his tongue and the roof of his mouth.

"Aint you ashamed to talk so! You've all got bear on the brain."

Mrs. Briggs thought this nonsense was being carried too far.

The young men had not spoken, but Hiram persisted.

"I aint foolin', ma'am. I have truly;" and Esther Newbegin pushed by Mrs. Briggs, the cat in her arms, with,

"Now, truly, Hi, be you foolin'?"

"No, I aint foolin'. The bear's down there, 'n' I want ter fetch 'im up to-night. Say, ma'am, can I take the drag?"

Mrs. Briggs was bewildered.

"If you aint foolin', Hi, we'll go with yer," said Jim, getting to his feet, "but if you're

Digitized by Google

playin' any game on us, we'll jest lick ye, won't we, Len?"

Len said yes, emphatically, and as Mrs. Briggs finally yielded to Hiram's insistence, and consented to the drag's bringing up "all the bears Hi'll ever kill," the three set out for the pasture.

Esther Newbegin only waited until they were out of sight before she ran to the Widow Sparks's to tell the news. Benny Sparks immediately sped to the Starbirds', and as Len and Jim told their business to the two or three people they met, the yard was well filled with men, women and children when the drag and the carcass of the bear reached Mrs. Briggs's door.

"Took 'im right on the snout, ker-tunk!" said old Caleb Milliken, as he examined the dead body. "You couldn't do that agin in a lifetime, Hiram."

AT LOS VALLES GRANDES.

IN SIX CHAPTERS.—CHAP. VI.

A Hard Winter.

As soon as the Navajos had entered the cañon, I led my party down to the trail, and, under cover of the noise of the hurrying animals, deployed in their rear without attracting attention.

We had hardly done this when half a dozen rifle-shots rang out, and I knew that Sergeant Cunningham had secured his position.

Almost at once, without whoop or other outcry, the whole party of Indians came down in my direction at a run. A few shots from us caused every pony to stop suddenly, and every rider went to the ground as if he had been killed.

Dead silence ensued, so far as the savages were concerned, and lasted so long that we began to wonder whether our few shots could have annihilated the whole party, or whether they were devising a scheme to turn the tables against us.

At last a voice called out, "*Amigos!*" (Friends.)

I called upon them, in Spanish, to come in and surrender, one at a time.

Soon a solitary figure came toward us, leading a pony, and when within our lines, laid down his arms, which were promptly gathered up by the two Cordovas, and taken with the pony to the rear. Warrior followed warrior, until all had surrendered and were disarmed.

By the time the last one came in day was breaking, and we could see the sheep and other animals contentedly grazing in the valley which opened to the west.

The Mexican captives were assembled, and found to consist of three young girls and six boys, ranging from ten to sixteen years of age. Cordova caused these—boys and girls, for all had been used to the care of sheep and cattle—to be mounted on Indian ponies, and set to work to turn the drove back to the valley near the camp.

The prisoners were retained in a group until the last of the stock had passed, when a chief asked permission to bring in the dead. Consent was given, and we soon saw the dead braves appear, lashed across the backs of ponies. Thereupon we all started for camp.

A troop of cavalry came from Santa Fé in answer to a dispatch, and took my prisoners to the reservation at Fort Sumner on the Pecos River.

When all the cattle whose brands had been verified by the claimants who came flocking in had been driven off, there remained unclaimed fifteen head, all without brands or marks. These were turned in with our beef herd, and I felt that I had recovered, with interest, all that I had lost in my first encounter with the Navajos.

The autumn and winter, up to the middle of December, had been not unlike October in the Northern States; but on the fifteenth of that month about twelve inches of snow fell. Believing that it had come to stay, I caused a sled to be made for hauling wood. The snow deepened rapidly.

On the other side of the mountains, a dozen miles away, there was hardly any snow all winter, but I doubt if any New England or Northwestern winter was ever colder than that in our valley.

The arrival in camp of a surgeon, sent to care for several sick who were getting beyond my skill, somewhat broke the monotony of my camp-life. Doctor Rankin moved into the adjoining room of the double cabin, but was seldom there except to sleep, spending his days and taking his meals in my quarters.

The weather constantly grew colder through January, and the snow deeper, so that it was impossible to pass out of the valley with either a wheeled vehicle or a sled. By constant daily use we kept the wood-road open and well trodden, and steadily increased the size of our woodpile against a possible blockade.

Before long we had reason to congratulate ourselves upon our foresight, for on the twentieth of January a storm set in which closed all communication with the forest, and made scouting and wood-chopping impossible for the rest of the winter. As the cattle could no longer graze, all but four were butchered, and the frozen meat was hung up in the storehouse.

I had no thermometer to indicate the temperature, but it was so cold that the sentinel, let him wrap himself never so thickly, could not walk the usual tour of two hours without freezing his nose, ears, fingers and feet. The thickest clothing seemed to afford no protection against the piercing wind.

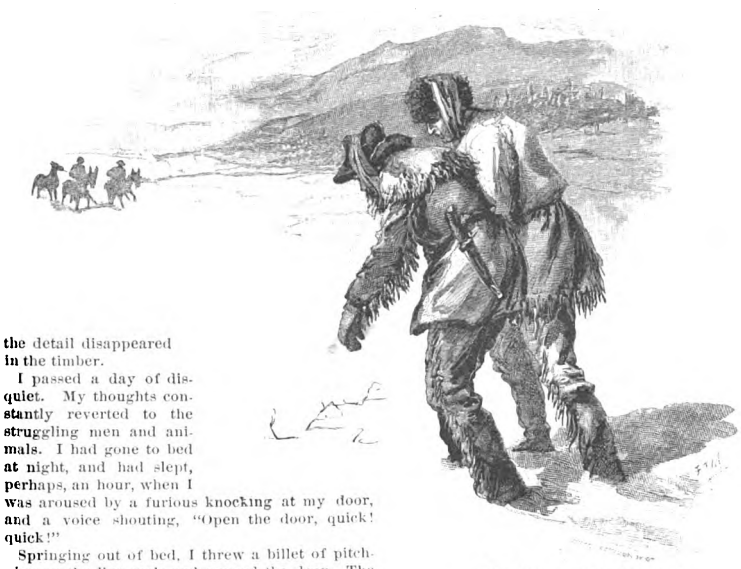
The tours of the sentinels were shortened to one hour, and then to half an hour, and as the cold increased, the guard was taken off entirely, and Jack Frost left on post, the solitary and efficient sentinel, across whose beat no enemy would dare to venture.

For a week this weather continued. No clouds were in the sky—nothing but the flying snow, which swept along the surface of the valley so thickly as to give us but fitful glimpses of a cold, silvery sun through the haze of snow.

Hungry gray wolves and coyotes prowled nightly about the storehouse, attracted by the smell of meat, picking up the scraps from the pantry, and mingling their howling, snarling and wrangling with the roaring of the storm.

By the first week in February the gales had ceased, and a still, all-pervading cold reigned through the Valleys. The roads had been broken out, and the wood-hauling resumed, and the sentinels again walked their beats.

At that time I found our store of grain was nearly out, and sent to the quartermaster at headquarters for a new supply. He directed me to purchase it of the Pueblo Indians at Jemez, and not to pay more than a certain price. I immediately made preparations for the trip.



From the top of our lookout the valley presented an unbroken sheet of snow, which we knew was from two to six feet deep. It certainly was a cheerless prospect, and the task of making a path over a trackless waste was not inviting. Something had to be done, however, or our animals would starve.

I sent for Cordova, and found that he thought it possible to get through. Once in the forest, he said the snow would not be drifted, and with each mile travelled the snowfall would be lighter.

The doctor expressed a desire to go with the party to Jemez. I gladly accepted his services, and placed him in command. A corporal, four men and the two Mexicans made up the party.

Next morning at six o'clock, in a biting atmosphere, the detail left camp.

A few hours later I waded to the lookout, and found the party had not gone much more than three miles. The animals were floundering along, and frequently the men dismounted and trod a path for them through a drift. It was noon before the detail disappeared in the timber.

The Return of the Cordovas.

I passed a day of disquiet. My thoughts constantly reverted to the struggling men and animals. I had gone to bed at night, and had slept, perhaps, an hour, when I was aroused by a furious knocking at my door, and a voice shouting, "Open the door, quick! quick!"

Springing out of bed, I threw a billet of pitch-pine on the live coals and opened the door. The pine burst into a brilliant blaze, and by its light Doctor Rankin staggered into the room, grizzled from head to foot with frost. Without pausing to dress, I began to help him out of his wraps, overcoat, boots and stockings.

The first glance at his face showed that his nose and ears were frozen, and upon further examination the ends of his fingers and toes proved to be in the same condition.

"Where are the men?" I asked.

"Outside," he shivered, rather than spoke.

"All of them?"

"All but those Mexicans."

"Where are they?"

"Don't know—left them on the road."

"Are any of the men frozen?"

"Yes, all, more or less. I think Corporal Coffey is the worst."

I ordered the doctor's room turned into a temporary hospital, a big fire started, and cots put up. Several good nurses among the men, and Mrs. Sullivan, the laundress, were on hand without being called, and were soon busy over the men.

Under direction of the doctor, I compounded medicines and dressings, and all were made tolerably comfortable. Corporal Coffey had nose, ears, cheeks, fingers and one foot frozen, but not seriously. Two privates had escaped with frozen ears.

I learned from the men that the travelling had improved after entering the forest, and grew gradually better as the party went on. At three o'clock they were within a mile of the crest of the Hot Springs' Cañon. Here a dispute arose between the doctor and the guides about the way, and the doctor decided to take a route against the advice of Cordova. He soon became bewildered and lost.

When he found he was wrong, the Mexicans had disappeared. They had dismounted from their animals, and slipped away into the forest. Not being able to find the right trail, the party was forced to return to camp.

Next day, at noon, the sentinel reported two objects coming up the valley. Through my field-glass I made them out to be the guides, following the path to camp. They were making slow progress, and Manuel was assisting his father, who sank to the ground from time to time.

I sent two men, mounted on mules and leading two others, with blankets and cordials, to assist the guides into camp.

When the men returned, I found that José Cordova was frostbitten, and chilled apparently beyond hope of recovery.

From Manuel, who was but little affected, I learned that as soon as they found the doctor was determined to go wrong, he and his father dismounted and followed the trail back to Vallecitos, where they turned off to the cabin where I had undergone a siege of the Navajos, intending to pass the night there. When they reached the butte they found that the cabin had been burned, only the chimney standing against the face of the rock.

They built a fire, intending to pass the night, and return to camp next day, but the night was so cold that José was badly frozen.

Before night Cordova sent for me, with a request to summon Padre Gutierrez from Jemez, in order that he might prepare for death. I had intended to make no further attempts to obtain corn from Jemez, but Cordova's request determined me to make one more attempt, and go myself in command.

The following day, with a detail of the same number as on the preceding one, and made up in the same way, except that there were no guides, I left the valley for Jemez. There had been no wind, so that I was able to follow easily and quite rapidly the path which the other party had broken.

At Cañoncito I left word with the family of Cordova of his misfortune, and a younger son and his mother set off for the Valleys without delay.

The dying scout was a man of note among his townsmen, being distinguished as a hunter and Indian fighter. During the time he had been attached to our camp, he had kept us well supplied with wild meat, and since snow fell had killed two panthers and three bears.

One day in the autumn he brought in the scalps, weapons and ornaments of two Navajo warriors whom he had discovered lurking in the vicinity of our camp. Cordova always carried a bow and arrows, as well as his rifle. "It is well," he said, "to be able to take a silent shot. In this country, the very grass has ears."

It was long after dark when I reached Jemez, and delivered my message to Padre Gutierrez. He departed with two attendants, one carrying a lantern on a pole to show the trail.

Next morning I called on the chief of the Pueblo to see if any of his people would take corn to Los Valles Grandes for the price I was authorized to pay.

No one was willing to do it, or for twice the price. I accordingly loaded the pack-saddles of our six mules with shelled corn, and set out at noon.

Arrived at Cañoncito I secured quarters for the night with a Valencia family. By some unsoldierly oversight, in the bustle of leaving Jemez I had neglected to put in any lunch for myself for the road, and at Cañoncito I learned that the entire community were reduced, through bad crops and the Indian War, to a diet of beans.

Over my head in the sala, where I slept with all the rest of the family, were roosting two lean game-cocks, tied by their legs to opposite ends of a roost. I proposed to my host that one of these should be killed for my supper. My host said that nothing short of ten dollars could buy one of those roosters, for they were the champions of the whole region.

In the light of the pitch-pine blaze of the fireplace the rival roosters crowed defiantly from the opposite ends of the pole.

"*Ay, como canta mi gallo, tan claro!*" (How my rooster sings, so clear,) said my host, gazing fondly at the red bird on the right end of the roost.

"*Valgame! que pajarito tan hermoso es el mio!*" (Bless me! what a beautiful bird is this of mine!) replied the eldest son, admiring with equal fondness the yellow trimmed fowl on the left end of the roost.

Evidently, I was not to be allowed to make my supper off one of these champions of the *plaza de gallos*, and upon further inquiry I learned there was not another fowl in town.

I sent a note to Corporal Sullivan, directing him to deliver to the bearer a quantity of corn, the government corn purchased at Jemez. Shortly afterward I heard the grating of a hand-mill in an adjoining room, and knew there was a prospect of corn-cakes for supper. In due time a bowl of *sopa de frijoles* and a stack of tortillas was set before me.

After breakfast, the following morning, I paid my entertainers, and went out to oversee the packing of the mules. When it was completed, I noticed that one bushel sack lay empty on the snow.

"Where is the corn that was in that sack, Corporal?" I asked.

"That's what the Lieutenant ate for his supper and breakfast," answered the Corporal.

"You are sure you did not feed the mules from that sack?"

"No, sir. Each mule was fed from a sack of his own pack."

"Do you mean to say those Mexicans used a bushel of shelled corn for my two meals?"

"That's what the young man said when he brought back the empty sack, sir."

It was useless to scold. The whole household had probably filled themselves from our corn. They sadly needed the food.

Cordova died three days after our return, which was without adventure. His remains were buried on the ridge near the lookout, and the following spring a plain stone, the work of Private Thomas Clary, was placed over his grave.

Under a cross, it bore the following inscription:

AQUI YACE JOSE MARIA CORDOVA,
VECINO DE CANONCITO,
MORIDO DEL FRIO, EL DIA 15 DE FEBRERO,
DEL ANO 1864.
ORA POR EL, CHRISTIANO, POR DIOS.

[Here lies Joseph Maria Cordova, a native of Cañoncito, who died of cold on the 15th of February, 1864. Pray for him, Christian.]

Spring opened early, and in March all the snow disappeared, and the green grass began to show throughout the valley. One day word came from headquarters that the last band of Navajos had surrendered, and had gone to the reservation. We were ordered to prepare to join a column about to start for Arizona.

On the ninth of June we left the scene of the adventures I have related, and at noon of that day I turned my horse, at the entrance of the forest, and took a last look at the broad, beautiful green valley surrounded by its granite peaks, never, in all probability, to see it again.

CAPT. C. A. CURTIS, U. S. A.

The End.

For the Companion.

CARNIVAL IN LIMA.

The merry season of Carnival is prepared for by all Peruvians, several weeks in advance of the eventful period. Numberless *cascarones*, which are hollow shells, generally made of stearine or wax moulded in forms of tiny cannon, bunches of grapes, fish, and other articles, are filled with diluted Florida water.

The cook saves all egg-shells whole, by blowing their contents out for culinary purposes, and then fills them with scented water.

In many families bushels of *cascarones* are laid away for Carnival warfare, and a thriving trade is worked up each year by manufacturers and venders of the missiles thrown in the three days given over to the sports and license of the season.

The Sunday previous to Ash-Wednesday opens the Carnival, and the exercises begin on that day soon after morning mass.

About noon every house seems converted into a fortress, the inmates constituting the belligerents. Señoras, señoritas and children hiding on balconies, peering out from behind screens, darting suddenly from all manner of strange places on the roofs, pelt *cascarones* at the passers by, and the sticky pieces of shell, fastening themselves upon the face, hair and clothing of the victims, make them look like animated pieces of papier-mâché.

The sweetness of the accompanying showers of delicate perfume hardly compensates for the rudeness. The cautious pedestrian, during Carnival, takes the middle of the street, and with an umbrella off the spring, ready to fly open in any direction, thinks himself well protected.

But suddenly some powerful syringe throws out a stream of water from an unsuspected source, and the sparkling drops fall around him in showers. His scowls and other demonstrations of displeasure avail nothing, and he has only to pass on to encounter, perhaps, a still more formidable drenching.

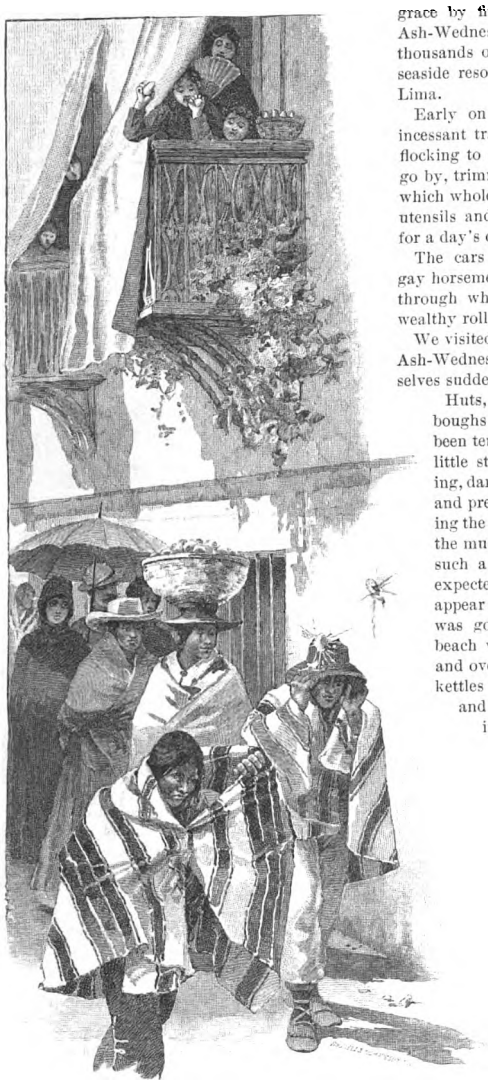
This amusing sport forms itself into a kind of thermometer, measuring the heat of temper in different individuals.

The hot-blooded Irishman, when made the sport of some fair one, involuntarily turns around, and makes use of very bad Spanish, if not bad Irish.

The haughty Englishman is slow to perceive that his dignity has been encroached upon, but when he realizes that the time has come to laugh, does so heartily.

The natives enjoy the fun thoroughly, running the gauntlet with unequalled skill, pelting back their tantalizing tormentors, when they get a chance, and, with their spirits on the crescendo, reach a height of enjoyment a less excitable people can hardly understand.

We were sitting in our hall by an open door one evening when the Carnival had just begun, as we felt the need of a little fresh air after the heat of the day, and were trusting to luck for our protection, when several friends gathered round us. I ought to explain that any gentleman, whether acquaintance or stranger, is fair game for any lady during this season.



Almost before we were aware of it, we were objectively engaged in the Carnival.

We were reluctant to defend ourselves, as it was the Sabbath, and made a retreat as quickly as possible, thoroughly perfumed with Florida water

Digitized by Google

administered by strangers passing, as well as by friends standing near.

Very early the next morning, our young people awoke in a high state of excitement over the expected festivities. Enough water lay secure in

Carnival Fun in Lima.

cascarones in our house to cause a deluge on a small scale.

I soon saw that a general demoralization of the family had taken place, and that our patience would have to be maintained through much tribulation. Before the hour for breakfast the clothing of each child was thoroughly soaked, and soon after breakfast they were saturated again.

At eleven o'clock this wild sport was, by an accident of the play, shifted to a neighboring native house, all the family taking an active part. The throwing of water was not confined to the garden; rooms handsomely furnished, and halls richly carpeted, were thrown open regardless of the damage that would result from the play.

The actors, dressed in bathing costumes, employed their skill and inventive faculties for many an hour, and surprised each other with all manner of curious ways of applying the water. The Carnival had resolved itself into a mimic battle.

According to the custom of the country, after the conflict was over and the participants had changed their clothing, the lady of the house served a lunch, over which a truce was established for a few hours.

Tuesday night being the last of the Carnival proper, the excitement reaches its greatest height. Foreigners as well as natives, completely drawn under the influence of the absurd custom, enter into the sport with energy.

Collected on the balconies and tops of the flat-roofed houses, they not only drench each other, but throw buckets full of water upon unfortunate persons passing by on the pavement. Those who think themselves safe in passing at a distance are reached by the aid of a hose. Bright-colored paints are also brought into requisition.

Some idea of the utter abandon of everybody at this time may be gained from the following incident: A day or two before Carnival a young lady anticipated the occasion by playing a little trick upon her dentist.

He was putting a neat filling of gold into a tooth—one of those delicate and difficult pieces of work of which a dentist is so proud—and was performing the most delicate part of his task, when the young lady quietly passed her arm around him, and bringing her hand up to his ear, burst a *cascarone* into it!

He said it sounded like a thunder-clap.

The water ran down his ear and neck; his nerves received a shock as from an electric battery. The job of dentistry was spoiled, the work had to be done over again, and the father had an increased bill to pay. But this was Carnival fun, and the parties were obliged to laugh and make the best of it.

We enjoyed the novelty of this new experience, but felt, after it was all over, like moralizing upon the foolishness of keeping up such a meaningless custom year after year.

The Peruvians give themselves one day's grace by finishing their Carnival season on Ash-Wednesday. Each year, on this day, thousands of people visit La Punta, a lovely seaside resort situated a short distance from Lima.

Early on Wednesday morning begins the incessant tramp of men, women and children flocking to the place of rendezvous. Wagons go by, trimmed with boughs of evergreen, in which whole families are packed, with cooking utensils and all kinds of crude conveniences for a day's outing.

The cars are crowded to suffocation, and gay horsemen keep the roads veiled with dust, through which the elegant carriages of the wealthy roll luxuriously along.

We visited the impromptu encampment one Ash-Wednesday afternoon, and found ourselves suddenly in gypsy-land.

Huts, constructed of shawls, blankets, boughs of trees and pieces of boards had been temporarily erected in lines forming little streets; within them were wild-looking, dark-eyed Indians, coal-black negroes, and pretty Spanish girls. Some were dancing the *Zamba-cueca*, the national dance, to the music of instruments which produced such a weird, unearthly sound, that we expected at any moment to see hobgoblins appear around us. On every side cooking was going on. Stones from the shingle beach were used in making tiny ovens, and over the fire fishes were being broiled, kettles were hung, filled with green corn and other vegetables, coffee made, and indeed the air was so filled with savory smells that our appetite was sharpened into partaking of many of the dishes.

Huge bowls of *chicha*, the native beverage, were seen at every step, and every one was drinking. They stopped in the dance to drink; they drank standing and often, and this constant drinking excited them to the wildest revels. Thousands were upon the grounds, rushing about frantically, so that one had to be on the alert to reach points of safety.

The pretty cottages by the seashore were made doubly attractive by bright flags waving over them, and handsomely dressed señoritas promenading up and down the verandas. With Ash-Wednesday Carnival ends, and the six weeks of Lent are entered upon with a devotion and ritual prescribed by the Church of Rome, preparatory to the sublimely solemn observance of Holy Week.

MARIA LOUISE WETMORE.

NATIONAL DEFENCE.

There are probably not many Americans who would not oppose with all their might any policy tending to make the United States an armed camp. No one wishes the rising generation to be trained to the profession of arms, and no one would like to see the land and sea forces so large that their very existence would be a temptation to engage in warlike enterprises.

But a dislike of the militarism that prevails in several of the countries of Europe, or opposition to war, does not require one to object to a reasonable system of national defence. No matter how peaceable the policy of the country may be, a war may come, unless the United States Government is prepared to grant in advance any demand, however preposterous or humiliating, that may be made upon it.

Let us illustrate what might occur by supposing something which could not occur. Suppose Great Britain were to send word to the Secretary of State that it rejects every principle which implies that this government has any rights in Bering Sea superior to those of any other country, or any control over the seal fishery.

Suppose Lord Salisbury were to add that the Queen's government would regard the sending of a single armed vessel to Bering Sea, for the purpose of protecting the seal fishery, as an act of war.

The receipt of such a notice as that would certainly lead to war. The country might be totally unprepared to fight, but the people would demand, in a voice that would drown every remonstrance by the advocates of peace, that such arrogance be resented. It might be deplorable that the warlike spirit should carry away the people, but human nature is so constituted that even the weakest and most defenceless nation that prizes independence would fight to the death rather than swallow the insult.

Were England to attack this country in its present unprotected state, it could inflict enormous injury before it met with a check. And not England alone, but Germany, France, and even Italy, are so much stronger in the naval arm of the service than is the United States, that the coast cities, New York, Boston, Portland, San Francisco and others, could be laid in ashes before they could be defended.

Those who can recall the events of a few years past will be able to remember more than one question that might have led this country into war, if there had not been good sense and a peaceable disposition on both sides. Not very long ago there was a dispute about Samoa that might easily have brought on a collision with Germany.

Most of our diplomatic controversies with first-class powers, however, have been with Great Britain. In the last quarter of a century there have been three subjects on which a great deal of irritation has been excited: the Alabama claims, the Canadian fisheries, and now the Bering Sea trouble.

It is not wise to create a large army, or even to train the youth of the land to the use of arms. But it would be reckless not to manufacture and store a quantity of rifles and cannon, large and small, for use in case of need.

Every one would oppose an attempt to match the navy of either of the great powers of Europe; but men of all parties are now united in favor of replacing the old-fashioned and worn-out ships of the American fleets with swift cruisers that would be able to break the force of any attack that might be made suddenly upon the country.

Perhaps it will not be long before there will also be provision for a moderate and yet adequate system of defence of the sea-coast. When such a system has been completed, the United States will be in exactly the position every nation should desire to occupy. It will be strong enough to laugh at the bluster of foreign governments, and ready to defend itself from their assaults; but not strong enough to swagger about and to threaten others.

For the Companion.

THE RACE.

He who to run life's race doth dare
With wrong at heart, though fleet he flees,
He may not win although he wear
The sandals of Hippomenes.

But he who keeps a stainless soul,
Albeit by pain and trial shod,
Will reach at last the priceless goal
That stands before the throne of God.

CLINTON SCOLLARD.

THE SPREAD OF EUROPEAN IDEAS.

Two notable gatherings took place in December at Calcutta, the capital of the great Asiatic Empire of Hindostan. One of these was the "National Indian Congress," and the other, a conference to consider reforms in the social laws and customs of India.

Both of these assemblages were composed of natives of various religious creeds. Among them were Hindoos, Mohammedans, Parsees and Christians, and some Indians of high rank took part in the proceedings.

The main subject discussed by the Congress was whether a limited suffrage should be granted to natives, and a portion of the legislative council of the empire should be elected instead of being appointed, as at present, by the Crown and the Governor-General.

In the social conference various schemes of reform were debated, the most notable proposition, perhaps, being one to abolish the present practice of infant marriages.

Both of these gatherings show how far European ideas of government and society have penetrated among the native and heathen races of India. They understand the European political system so far as to perceive the benefits of suffrage and a share in legislation, and to seek for them by meeting, and in earnest debate giving expression to their desire.

India is not the only Asiatic nation which has in recent years received and tried to realize European political ideas and forms.

It was announced several months ago that the Shah Nazr-ed-din of Persia—the most despotic of Asiatic rulers, who holds the lives and property of his subjects in the palm of his hand—proposed that his envoys should study carefully the European forms of constitutional government.

The Shah declared that in case these forms seemed, after such examination, capable of being successfully introduced into Persia, he would be willing to yield up such of his hereditary power as would be necessary to establish a constitutional system.

Japan has already actually entered upon a trial of the European system. It has adopted a constitution, formed a Parliament, and established a ministry, after the English model. Its Parliament has a House of Lords and a Representative House; and the Mikado has given up many powers which he inherited with the crown.

Not only in Asia, but in other parts of the world, we see the adoption and successful operation of the idea of a constitutional, parliamentary system, with responsible ministries, and elected legislatures.

This is true of all but one of the colonies in Australia, and of one of the English colonies planted in Africa, that of the Cape of Good Hope; of colonies in the American seas, such as the Bahamas and Bermudas; of Canada and Newfoundland; of the Republic of Mexico, and the Republics of Central and South America.

In all of these countries, the form of government, at least, is like that presented by the United States, Great Britain, France, Italy, Spain, and to some degree by Germany and Austria. In South America the form is sometimes used to establish a dictatorship; but the value of the system has even there been recognized by its general adoption.

The rapid spread, through so many regions of the earth, of the constitutional, parliamentary idea, among races so exceedingly diverse in history, inherited traits, and conditions of life—replacing, in some instances, institutions revered for their great age—would seem to show that this system is the best so far devised by the wit of man, for the orderly government and growth of nations.

FIRST IMPRESSIONS.

"What lazy people!" called out a fresh young voice at the dining-room door. "Just begun your breakfast, and the sun has been up these two hours! Why, I've started on my list of calls!"

There was laughter and welcome, but the dearest face of all looked at the visitor a little gravely.

"What is it, uncle?" she asked, as, at the close of the meal, he offered her his arm for the customary walk on the porch. "Is my hat awry? Weren't the muffins good? Is the new lecture refractory?"

"You call us lazy, do you? We all know it; but never forget, child, that in going before an audience you should compliment, not slander them."

Nowhere does "Well begun is half-done" apply better than in the case of first impressions. A little care at the beginning often saves great exertion farther on.

"If my fairy godmother would make me beautiful just while I am being introduced to nice people," a clever girl said to me, "I could manage the rest. At school, when distinguished visitors come to our table, Elizabeth has only to raise those violet eyes to have all the choice remarks addressed to her. It takes a week for my presence to be noticed."

Why is it we instinctively label our new acquaintance as charming, delightful, refined, cultured, or as shoddy, careless, aggressive? We do not know their characters; we only speak our first impressions. They may be wrong, but they are powerful.

"That woman's hair is adorable, but its glory can never blind me to my first glimpse of it in curl-papers."

"I never heard of this book, but I caught one happy expression as I opened it at the counter, and brought it away."

The golden hair may have won the gentleman, the book may have turned out utterly inane, but the one was against a hundred odds; the latter had a hundred in its favor.

What people think is not, then, to be disregarded. A conciliatory tone may not be a crime. At any moment a new eye may be directed toward us, a new ear open to our speech.

Those who remember how much first impressions count for are taught to be lenient toward others.

Say to yourself, "I will let the rule work both ways. For myself, I will strive, whenever I honorably may, to make that good impression which will help me to friends and to influence; for others, I will remember that the character first displayed is often untrue and assumed—the rugged, defensive armor of a sensitive and ignorant, but beautiful, soul."

A HELPING HAND.

Among the famous benefactions of American men of wealth are several which excel all others in the respect that they are bestowed in a way to direct the energies of working people, stimulate their energies, and lend them a really helping hand in their struggle with the world, often urged against heavy odds. Conspicuous among benefactions of this kind were those of Peter Cooper, of New York.

Recently a series of gifts of this nature, all coming from one man, or from a single family, and for the most part directed toward helping the deserving poor in a way which does not wound their sense of honor or pauperize them, but, on the contrary, tends to make them self-supporting, and increase their earnings, have been concentrated in the hands of a single and novel association.

This is the Robert Treat Paine Association, recently organized in Boston, and so far as at present constituted, composed entirely of members of one family.

The association is a trust created and endowed with a large amount of productive property, to manage a series of gifts and benevolent enterprises already in existence. The creators of this trust, possessing a large fortune, and publicly acknowledging their responsibility, both to the very poor, and also to the great mass of honest, industrious, hard-working men and women, have sought to make some return in this way for the favor of Providence to them.

The most prominent feature of the work is called the People's Institute. It includes a People's Coffee House, where working people may resort for meals and for innocent amusement, and also be educated in selecting economically and preparing healthfully the most judicious articles of food.

In this Institute are reading-rooms, social and amusement rooms, toilet and bath-rooms, and class rooms for useful industrial instruction. There is a department of trade discounts, through which the people may save themselves large sums of money by coöperating in the purchase of supplies at wholesale rates.

Another feature of the trust is the Workingmen's Loan Association, which is devoted to improving the homes of working people, and fostering measures to promote their owning their own homes. This department of the work is a very important one, and has already helped many families to excellent homes, at the same time that it has made them much more thrifty and prosperous than they ever were before.

Working Girls' Clubs are another recipient of the aid and encouragement of this trust; the Associated Charities, for the maintenance of systematic

Digitized by Google

charity among the poor, receive a share, as do also certain other purely charitable objects.

The work of the association is not limited, however; and its members, who, it is proposed, shall include all the children and descendants of the family who create it, and such other persons as they shall associate with them, are in effect pledged to perpetual effort to carry out its founders' purposes in the way that seems best to them.

A GENEROUS MAN.

The failure of the Confederacy wrecked many noble men. One of these wrecks was Pierre Soulé, whose life was a romance, and who therefore fittingly represented Louisiana, the most romantic of States. When a very young man, he exiled himself from France to escape punishment for editing a journal opposed to Charles X.

When twenty-four years of age he came, penniless, to this country, and after a short stay in Baltimore, removed to New Orleans. He rose rapidly to distinction at the bar of that city, although he had to begin by learning English, and twenty-two years after landing in the United States represented Louisiana in the Senate of the United States. With a handsome face, lustrous eyes, melodious voice and graceful gesture, he took high rank as an orator.

Mr. De Leon, in his book "Thirty Years of My Life," relates an anecdote characteristic of the generous, trustful nature of the man. On his appointment by President Pierce as Minister to Spain, Pierre Soulé offered to secure for Mr. De Leon the post of Secretary of Legation under him. Soulé was a warm friend of the young man, and anxious that he should remain with him.

Mr. De Leon declined the appointment, as he preferred the independent position of Consul-General to Egypt, which had been offered him by the President.

"I believe," said he, "that in my position, you would act as I am doing."

Soulé paused for a moment, and then said, "Frankly, I believe I should. I respect your independence; but you must let me do something to show my friendship."

He took a sheet of note-paper, endorsed his name on the back of it, and said, "You are going to Paris, where you will be sure to get out of money, and my endorsement at my banker's will always get you what you want."

De Leon thanked him warmly, but assured him that he should not need it. As Soulé persisted, his friend said:

"But at least fill up the paper with a fixed sum."

"Put it in your pocket; do not exceed so much," answered Soulé, naming a liberal sum. "When I repose confidence, it is a whole confidence. I know you will never abuse it."

The senator was prophetic. De Leon did require more money at Paris than he had provided, and was forced to avail himself of his friend's generous provision.

REDISCOVERED.

Walter Besant describes in a London journal his visit to the recently discovered remains of a Roman city at Silchester, in Kent, England. The Antiquaries' Society is excavating the place in sections, which after being studied and sketched, are covered again for preservation.

"You might look across the flat land to right and left," says Mr. Besant, "and never dream that a foot or two below the surface lie the foundations and floors and tesselated pavements of a great city, of which not a tradition or memory survives."

The town was built in square blocks, which can be traced where the corn is standing. The most interesting part of the place is the Forum, the official centre of the town. Here are the great Basilica, a hall two hundred and eighty feet long, chambers for legal and public business, and the shops where the business of the city was carried on.

A perfect ground plan of a villa has been laid bare. The tenant of this house, which was probably of one story only, had a cloister built around three sides of a quadrangle, the fourth side remaining open; it enclosed a small garden; a large garden lay outside.

Behind the cloister were large rooms, those for winter being warmed by hot-air pipes connecting with great underground stoves which can be seen. Behind these chambers was another cloister, and at the back were kitchen, pantry and larder.

The large area occupied by this one villa seems to indicate that the population could never have been very great; but this may have been an exceptionally large house. A great stone wall stretches around the town, enclosing an area of one hundred acres.

LACHAUD'S RUSE.

An adroit lawyer, as all the world knows, does not always depend entirely upon the logic of his case or his mastery of the art of persuasion to bring a jury around to his way of thinking. He has an eye to the individual peculiarities of the jurymen, and does not let an opportunity pass to impress them favorably.

It is related of M. Lachaud, the most famous of French criminal lawyers of the present century, that in pleading a certain case, he perceived that one of the jurors seemed to be hostile to him and his argument.

In the faces of all the other men in the box he saw, with his practised eyes, signs that his oratory or his shrewdness was having its effect; but this man, in spite of all he could do, remained frowning, suspicious, obdurate.

M. Lachaud kept on with his work, and presently saw that his opportunity had come. It was a hot day, and a ray of sunlight had penetrated a crevice on the curtain, and was shining upon the top of the head of this juryman, who was quite bald.

The lawyer paused in his argument, and addressed himself directly to the court.

"If your honor would please," he said, "to order that the curtain in yonder window be lowered a trifle, I am sure that the sixth juryman would appreciate it."

This sign of watchful attention won the obstinate juryman's heart, and M. Lachaud's case.

BISMARCK'S MOTTO.

It is said that Bismarck, when a young man, studying law at Potsdam, never forgot his rank and importance and was careful to preserve what he considered his rights. One day, his chief in law matters, with whom he had business, appeared to forget him; and Bismarck recalled his wandering attention by drumming on the window-sill.

At another time he thought he was kept waiting in the ante-room altogether too long. On being at last asked his business, he replied, "I came to ask for leave, but now I apply for dismissal!"

In spite of his haughtiness in regard to his own claims to importance and consideration, however, he was almost invariably kind and thoughtful to his inferiors in social position. When very young, he always seemed to take just the right way with servants and those under his command, and they always loved him, though he demanded a great deal of them.

At one time, when he and his brother were managing and overseeing the Pomeranian estates, Bismarck severely reproved a certain young landowner for his neglect and shiftlessness. The young man in excuse said that he had not a particle of taste for agriculture, and was tired of farming.

"I have struggled with my dislike a long time," concluded the unwilling farmer.

"Not yet long enough!" answered Bismarck, dryly.

This reply brought the young man to his senses. He continued the struggle, overcame his distaste for the work, became a capital farmer, and to-day remembers thankfully Bismarck's "Not yet long enough!"

This saying, by the way, has been connected with the name of Bismarck since olden times, by a peasant proverb, which begins, "'Not yet long enough,' says Bismarck," and goes on, connecting other sayings with the names of different influential families.

FLIES' FEET.

We frequently call flies a nuisance, set traps for them, poison them, and do our best to annihilate them as worthless and intolerable creatures; and yet the life of a fly is one of busy usefulness for the service and good of man. He is a scavenger of untiring activity, and with so keen and quick a vision that no particle of offensive matter can escape him.

It is his business to pounce upon every such speck, and remove it at once. With every such particle he carries away a miasma that would poison the air we breathe.

Some of these particles are too small to be visible, but as they are infinite in number, if left to accumulate, they would soon be a greater plague than an army of flies. At times the buzzing insects may seem a torment hard to be borne, but their services should not be forgotten.

If the foot of a fly is put under the glass of a good microscope, it may be seen how simple is the contrivance that seems able to defy the laws of gravitation. The foot is made up of two pads, covered with fine short hairs, with a pair of curved hooks above them. Behind each pad is a tiny bag filled with clear liquid gum, the hairs also being hollow, and filled with the same sticky fluid.

As the fly glides rapidly over a smooth surface, every step presses out a supply of gum, strong enough to give him a sure footing, and to sustain him in safety if he halts. So strong is the cement that that upon one of his six feet is quite sufficient to sustain the weight of his whole body. But if he stands still the gum may dry up and harden quickly, and so securely fasten the traveller's foot as to make a sudden step snap the leg itself.

When it is remembered that each pad is furnished with at least a thousand hairs or tubes of cement it is wonderful how many escape unharmed.

"DIVINELY RANCID."

There are many kinds of fashionable foolishness, some of which are best corrected by a lesson in kind. A writer in the Boston *Post* reports such a lesson, which might well be tried in many families. The younger members of the family of one of his friends had fallen into the way of using many senseless phrases. With them everything was "awfully sweet," "awfully jolly," or "awfully" something else.

One evening this gentleman came home with a budget of news. An acquaintance had failed in business. He spoke of the incident as "deliciously sad." He had ridden up town in the car with a noted wit, whom he described as "horribly entertaining," and, to cap the climax, he spoke of the butter which had been set before him at a country hotel as "divinely rancid."

The young people stared, and the oldest daughter said, "Why, papa, I should think you were out of your head."

"Not in the least, my dear," he said, pleasantly. "I'm merely trying to follow the fashion. I worked out 'divinely rancid' with a good deal of labor. It seems to me rather more effective than 'awfully sweet.' I mean to keep up with the rest of you hereafter. And now," he continued, "let me help you to a piece of this exquisitely tough beef."

Adverbs, he says, are not so fashionable as they were in his family.

NOT POMPOUS.

The Washington *Post* credits Secretary Blaine with telling a story illustrative of President Lincoln's somewhat free manner of receiving dignified officials.

At the beginning of a session of Congress Mr. Blaine had been appointed by the Speaker of the House of Representatives a member of the joint committee to wait upon the President, and inform him that Congress had duly assembled. Senator Foot, of Vermont, one of the most dignified of men, was chairman of the committee.

On being ushered into the presence of the President, Mr. Foot involuntarily struck an attitude, and proceeded to say, in his stateliest manner:

"Mr. President, we have been appointed a committee on the part of the two Houses of Congress to apprise you that they have met and organized, and are ready to receive any communication which it may be your pleasure to make to them."

As he concluded, Mr. Lincoln stepped up to him, and taking him familiarly by one button of his coat, said:

"Now look here, Foot, if it is a matter of life and death with you, I can send my message in to-day; but if it isn't, I should like to keep it till to-morrow to slick it up a little."

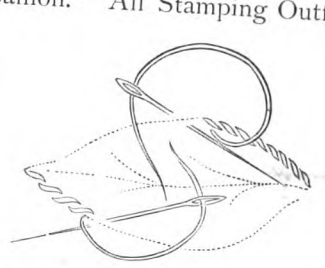
Use "Brown's Camphorated Saponaceous Dentifrice" for the teeth. Its superiority is everywhere acknowledged. Price, 25 cents. [*Adv.*

HARVARD ADMISSION EXAMINATIONS.

In June, 1891, examinations for admission to Harvard College, the Lawrence Scientific School, the Harvard Law School, etc., will be held in various parts of New England, at New York City, Albany, Philadelphia, Cincinnati, Cleveland, Chicago, St. Louis, Minneapolis, Denver, San Francisco, some city in Europe, and at any other school or city, not too near the above, where ten or more candidates present themselves after having made application before April 1st. For information regarding any department of the University, address, FRANK BOLLES, SECRETARY, CAMBRIDGE, MASS.

The New India Silks

We have just received our first invoices of new and elegant designs in Rich Printed and Jacquard India Silks, and have opened them for immediate sale.



A noticeable feature of the assortment is the large number of Black Grounds, figured in flowered patterns of most beautiful colorings; and of Light Grounds, with designs of bud, vine, or spray, in choicest and most delicate half tones.

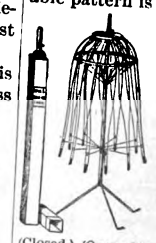
The newest fabric, Drap de Nocta, is unexcelled for durability and gracefulness in drapery. Samples sent on request.

James McCreery & Co.,
Broadway and 11th Street,
New York.

THE KENSINGTON
ART EMBROIDERY

and Stamping Outfits were invented by "The Youth's Companion." All Stamping Outfits

offered to the public outside of "The Companion" are made either in imitation, or from ideas taken from "The Companion's."



Every young lady ought to learn this beautiful art. Many a home has been made more beautiful and many a dollar has been earned with the Stamping Outfit. Its price complete is only $1.00, and 10c. for postage.

THE YOUTH'S COMPANION, Boston, Mass.

A Perfect Costume Carefully Made.

The woman who avails herself of the inventions of the day will tell you that a HALL'S BAZAR FORM is to the trimming and draping of a new costume what a reliable pattern is to the cutting and fitting of it. Both render her independent of the services of friends and dressmakers, and effect a remarkable saving in the cost of her wardrobe.

(Closed.) (Opened.)
SKIRT FORM.
(Wood Standard.)

Before commencing your **Easter Gown,** send money order for either Complete Form, $6.50; Skirt Form (Iron Standard), to which bust can be added, $3.50; or Skirt Form (Wood Standard), $3.00.

When sending for Form or Illustrated Circular, please mention "Companion."

HALL'S BAZAR FORM CO., 833 Broadway, NEW YORK.

THE OLD PLANTATION HOME.

O mammy, yo' wor black, I know,
But beautiful to me,
'Twas first in dear ole Mississip
Yo' blessed face I see;
I recollec' de cabin-room,
De hay-bed on de floor,
And de sugar-cane I used to love
An' always cry for more.

I recollec' de chimley place,
De crackle ob de flame,
De short-cake on de bakin'-board;
An' when de Sunday came,
De little church across de field,
De preacher, Uncle Jim,
I used to cuddle down and sleep
Until de closin' hymn.

I knows dem ole plantation days
Wor misery to some,
But in my heart no other place
Will eber seem like home.
De banjo's tinkle on de step,
De ole corn-fiddle's squeak,
De moonlight on de cabin walls,
De shadows 'long de creek,

De coon-hunts when de nights wor still,
An' all de corn asleep,
An' 'long de ridges ob de hills,
De misty spirits creep,
De paddle of de ole canoe
Along de lonesome shore,
De cane-brake in de moonlight, whar
De bayou made its floor,

I 'members like 'twor yisterday;
And when de cotton come,
De snow dat makes de darkies jump,
An' Yankee spindles hum,
My hands wor never weary den,
For I loved de cotton row,
De pods dey laugh an' nod at me,
Before I lay them low.

Yes, white folks owned us, but de lor!
Dey's alleys good to me,
And mammy, all de chillen loved
To sit upon her knee.
I played wid my young massa, too,
And missy, fair an' sweet,
I teached de double shuffle to,
An' ebery step complete.

Dem days is passed, ole massa's dead,
An' missy's gone to sleep,
Dey killed young master in de wah,
Dars nothin' lef' to keep,
Or I would take my banjo now,
In spite ob age and pain,
An' walk to Mississip to see
De dear ole home again;

And though de rooms wor empty all,
And though de hearts wor still,
I'd think I'd har dar voices thar,
Dar steps upon de sill,
And maybe in de vanished light,
De Lord might gib me grace
To touch young missy's hand again,
An' look on massa's face.

I lives down in an alley now,
What peoples calls de slum,
De white folks neber speaks to me,
Like what dey did at home;
It's nigger here, an' nigger dar,
An' 'pear's like I'se alone;
I used to lub ole massa's folks,
Dey seemed jest like my own.

Ah well, I'se waitin', waitin', now,
It can't be many years,
I'se ripened mighty slowly, though,
An' shed a many tears;
But up in dat bright country, whar
I hopes dey'll let us come,
Dey'll mebby gib me quarters like
Dat ole plantation home.

A PICTURE-GALLERY.

Americans are now known in Europe as persistent and extravagant collectors of pictures. Too many of our people, having more money and ambition than artistic knowledge, pay enormous prices for comparatively worthless paintings. Others show admirable taste and judgment in buying the works of old and modern masters. Some of the collections thus made are intended only to give pleasure to the owner and his guests; in other cases the pictures are regarded as a safe investment, as the work of a favorite artist increases rapidly in money value.

Our young readers probably look upon a picture-gallery as a treasure likely to belong to them only in the far future. It is a luxury which appertains to rich men and to adults only. How should a lad at school bring Meissoniers or Millets to hang upon his wall?

Yet he, too, has a picture-gallery. Every year he adds to it scenes and faces which will remain his, imperishable, forever.

Every one of us has such a secret gallery. We cannot close it; we cannot rid ourselves of it. We cannot help hanging landscapes and faces on the wall; and once hung, we cannot give them away, nor cover them, nor destroy them.

Sometimes these pictures delight and comfort us. But, whether for good or ill, we must keep them; we must carry them with us through the gates of death into the unknown life beyond.

There, upon that hidden wall, hangs, perhaps, the face of the friend you wronged, or the boy whom you saved from a drunkard's grave, or the mother whom you tended so fondly in her old age.

There is a picture of the home you make happy by your work and unselfishness, or some scenes of foul vice into which you have skulked, as you thought, unseen. Secret as you were, there hangs the picture, never to fade. No human eye has looked upon it, but you see it and God sees it.

What picture is this day painting for you in that cabinet?

STANDARD TIME.

No timepiece is perfect, and there are no means on earth of keeping perfect time. The stars, however, furnish the necessary means. At the observatory in Cambridge, there are two principal clocks, employed in keeping the standard time: the standard mean time clock, which telegraphs its signals over the surrounding country, and the normal sidereal clock, which is the main standard of the observatory, to which everything is referred. This sidereal clock, as its name implies, keeps sidereal or star time, which gains about three minutes and fifty-eight seconds per day over mean solar time, with which we are all familiar.

The clock is of the finest workmanship, and is kept in a brick vault, underneath the observatory, where the temperature is as nearly constant as possible.

Every effort is made to protect it from any influence which might effect its "rate," or, in other words, the amount of its gain or loss per day. This is necessary in order that the "rate" may be depended upon to give the correct time during spells of cloudy weather, when no observations can be made.

On every clear evening the error of this clock is carefully determined by observing certain bright stars with an instrument known as the meridian circle.

This instrument consists of a telescope mounted on trunnions like a cannon, and supported by a pier of solid masonry. It is so arranged that it can be directed toward any point on the meridian, but cannot be pointed away from the meridian line. On looking into the eyepiece of this telescope, one sees a series of fine parallel lines, running north and south across the field of view, the middle line marking the meridian.

When a time observation is to be made, the observer first selects a suitable star from a printed star-list, which gives the exact time at which each of the principal stars crosses the meridian. He then sets the telescope at the proper point on the meridian to intercept the star, and putting his eye to the eyepiece, waits for the star to appear.

As the star crosses each of the lines before mentioned, he presses an electric key which he holds in his hand. The signals thus given are recorded electrically on a registering instrument called a chronograph, on which are also being recorded the seconds of the sidereal clock. The chronograph consists of a cylinder made to revolve by clockwork, at the rate of about once a minute.

A paper, wrapped around this cylinder, receives the record traced by a pen, which is connected with an electro magnet in such a manner that any signal, made either by the operator or the clock, causes the pen to make a mark on the paper.

By examining this paper the observer is able to tell, within a tenth of a second, the time which the normal clock indicated when the star crossed the meridian.

Comparing this with the time taken from the star-list shows the error of the clock. A comparison is then made between the sidereal and mean time clocks, which, after allowing for the difference between mean and sidereal time, shows the error of the mean time clock.

If the clock is slow, a slight weight is placed on the top of the pendulum bob, which causes the clock to gain slightly. If, on the other hand, the clock is found to be fast, a corresponding weight is removed, making the clock lose slowly. In this way the standard signals are kept within a few tenths of a second of the correct time. W. P. G.

TWICE SAVED.

"I was sitting before a glowing grate fire, enjoying the lavish hospitality of one of the prominent men of the West," writes a correspondent of *The Companion*, "when something turned my thoughts upon old times and God's providence. 'Believe in God's care and protection!' he exclaimed. 'Well, I think I do. But for His intervention, my daughter there would not be here to-day. I am sure of it. Three times over I have seen it, and I don't know how many times I may have known nothing about it. Let me show you something.' He left the room, and returned a moment later with a soft, brown curl fondled tenderly in his hand.

"You know that wife and I were pioneers," he began. "When we settled here, there was not a house within ten miles of us. When she was born,"—he moved his head toward his daughter, but did not take his eyes from the curl,—"we were all alone in a little one-room log-cabin.

"One by one other settlers were gathering, but it was slow at first. She was three years old, and as pretty a little thing as ever lived in a wild country, though you might not think it now."

He smiled as his eyes turned proudly to his beautiful daughter, who responded with a merry laugh.

"I was cornering some logs one night for an addition to our house, for we were beginning to feel rich. It was hard wood, and I put all my strength into the axe, while Mabel jumped for the chips as they flew. Sometimes she would catch them before they touched the ground.

"She was all ready as I swung the axe, when her foot slipped and she fell,"—he paused for a moment and shuddered,—"with her little head right over the notch. The axe was coming down with fearful force. I could not stop it. It fell. I heard it strike, but I could not see anything. I staggered, and fell senseless to the ground.

"The next I knew, Mabel was pulling at my hand. I sprang up and caught her in my arms, looking for the place where the blow fell. There was not a sign. I turned to the axe. It was deeply imbedded in the log, and at the farther end of the blade lay this little curl. My friend, can I see anything but God's hand in that?

"But let me tell you another. In my joy and thankfulness, I promised Mabel that she should have a real wax doll the first time I went where one could be found. In about three weeks I had an errand to the nearest store, eighteen miles away.

"I started long before daylight, but it was dark two hours before I reached home again. To make matters worse, one of the fiercest blizzards that ever blew in this country came tearing down upon me. The night was as black as Egypt. I let the horse go as he would, while I tried to keep a rubber blanket over the saddle-bags.

"Some two miles from home I distinctly heard a cry. I stopped and listened. Just as I was starting once more, I heard it again. There were plenty of Indians about, and it occurred to me that they might have seen me go away in the morning, and be waiting to trap me; but I called to see if any one was really in trouble. I surely heard a faint reply. It sounded like a child's voice.

"I thought of how Mabel's life had been saved, and said to myself, 'If it is Indians' treachery I cannot help it; if there is a chance that a child is lost in this terrible storm, I am going to save it.'

"Well, I got off my horse, and leading him, followed the cry till, sure enough, I found a child, almost dead, lying on the ground. I rolled the little thing up in the rubber blanket, and started on again. The child sobbed and moaned for a while, and then fell asleep.

"The horse knew the way, and in time I came in sight of my own cabin. The light in the window burned brightly. There were voices inside. Something had happened. Dismounting as quickly as possible, I left the horse to do what he would, and hurried to the door.

"As I opened it, two neighbors were bending over my wife. She saw me, and with a cry sprang toward me, and fell fainting on the floor. Handing my precious bundle to one of the neighbors, I lifted my wife in my arms, to learn that Mabel had disappeared. She had been waiting impatiently for her doll, and they feared she had gone down the road and —

"Well, I sprang for that rubber blanket, and on unrolling it, sure enough there was little Mabel, sound asleep."

For the Companion.

NIGHT ON THE MISSISSIPPI.

A liquid plain the mighty river lies,
'Twixt shadowy banks uprising sheer and steep,
Another heaven, in whose azure deep
The glassed stars shine as in their native skies.
No ripples kiss the sedge: the tall flags rise
Unvext by waves. Yon white sails scarcely creep.
Is it a dream, or doth the great flood sleep
In perfect rest, lulled by the wind's low sighs?
Father of Waters, rolling to the sea
In such majestic silence, not in vain
Let me behold thee! Teach, oh teach to me,
And all who strive in weariness and pain,
To guide our lives that they may flow, like thee,
Serene and strong to the eternal main.

CHARLES T. DAZEY.

"HOME, SWEET HOME."

When the Cherokee Indians were removed from their homes in Georgia to their possessions west of the Mississippi River, John Howard Payne, author of "Home, Sweet Home," was spending a few weeks with his life-long friend, John Ross, chief of the Cherokees. Several prominent Cherokees were in prison, and that portion of Georgia in which the tribe was located was scoured by armed squads of the Georgia militia.

While Ross and Payne were seated before the fire in the little hut to which they had fled after the chief had been forcibly ejected from his house, the door was suddenly burst open and eight militiamen entered.

Ross and Payne were arrested and taken away, on horseback. Rain was falling, and the journey lasted all night. Toward midnight, Payne's escort, to keep himself awake, began to sing "Home, Sweet Home."

"Little did I ever expect to hear that song under such circumstances," Payne remarked, gloomily.

"I reckon not," said his escort, "but it's a good song to make a feller think of the home he's left behind him."

"Yes," said Payne. "Do you know who wrote that song?"

"No; do you?" the soldier answered.

"Yes," said Payne, "I wrote it."

"A lot you did!" returned the soldier, sarcastically. "You can tell that to some fellers, but not to me. Look here, if you made that song—and I know you didn't—you can say every word of it. Now start in and reel it off, or I'll bounce you from your horse and lead you instead of him."

Payne answered the threat by repeating the words of the song in a slow, subdued tone, and then sung it, making the old woods ring with the tender melody and the pathos of the words.

As the last notes died away, the soldier said, kindly, "If ye didn't write it, ye can sing it; and gracious! I believe ye did write it!"

He added that the man who could write such a song, and sing it as Payne had done, shouldn't go to prison if he could help it.

When the party reached Milledgeville, the prisoners, much to their surprise, were discharged, after a brief preliminary examination; and Ross always insisted that they had been saved from insult and imprisonment by the power of "Home, Sweet Home," as sung by Payne on that midnight journey.

EFFACING HERSELF.

Mrs. Houseworthy is famous for liking to do for others in peculiar and impulsive ways. She would rather sit on the floor than let any one else have even the faintest ungratified wish for a chair in a parlor or at a concert, and she has been known to do it more than once, to the great distress of her family and friends.

She likes to give up her own bedroom to a visitor, even if there are two or three pleasant unused rooms in the house.

"Why, I would rather travel twenty-five miles than not give up my room!" she declared on one of these occasions, when remonstrated with.

Newly made friends suffer under her persistent attempts at self-effacement, but old friends accept them as part of her odd, though sweet and generous character. Her husband long ago got used to her ways, and recalls with amusement now an example of her overdone unselfishness which annoyed him a good deal at the time.

It was the day the Houseworthy's were married, a quarter of a century ago. Mr. Houseworthy, in gallant fashion, had ordered a carriage and pair sent to the house of his bride to take her to the church, and it was arranged that he was to come from his own home a few streets distant, to proceed with her to the church.

Now there were guests staying at the bride's home, and there was no carriage to take them to the church, so the generous bride said:

"Take ours! take ours! Mr. Houseworthy will get another when he comes!"

So the bridegroom, arriving a moment later, saw his carriage and pair whisking round the corner, and had to trudge away two or three streets in his pumps to get another.

But no other carriage was to be found, and the wedding was delayed ten minutes for the bridal pair to reach the church on foot. Mr. Houseworthy said "I will!" that day with more emphasis than seemed necessary, and he meant it; but he did not really enjoy his walk to the church.

JUST THE THING.

It is difficult for us all to realize that "one man's meat is another man's poison." A dear old lady, whose parents belonged to the Society of Friends, is accustomed to tell a whimsical story of her own childish grief over her lack of finery, and the effort she afterward made to save her little daughter from like privations.

"When I was a child," she says, "it was my great cross that I could not wear bright colors. I longed for blue ribbons and red roses, and one summer, when I was to have a new hat, bought from the milliner in town, it seemed to me my heart would break if it were not like those worn by 'the other girls.' Would not some kind angel interfere, and persuade my mother to order a pink flower, or a glowing ribbon?

"Nothing of the sort happened. In spite of my protests, a white chip hat was selected, and trimmed with a modest white ribbon. I wore it all summer with rebellion in my heart.

"I grew up in due time, and married the minister of a religious body which did not enjoin plain clothing, or sober colors, and when my little girl was born, I resolved that she should have all the childish delights which I had been denied.

"Her little hats were trimmed with warm, soft colors, and when I thought her old enough to choose one for herself, I took her with me to the milliner's. Perhaps I had an idea that I was atoning to my own childhood for its joys denied.

"'Now, dear,' I said, 'you shall have any hat you like, if it is suitable for a little girl. Look round and see what you prefer.'

"The dear little thing was highly delighted, and went gravely about the store, with the important air of a middle-aged shopper. Finally, after examining the entire display several times over, she stopped before a stand in one of the windows.

"'I will have this,' said she, decisively. 'I like it best of all.'

"It was a white chip hat, trimmed with white ribbon, and it was almost exactly like the one I had detested, so many years before."

HUNGRY.

Mr. Goss, in his "Recollections of a Private," quotes the remarks of a Confederate about two famous leaders under whom he had fought. This man said of Stonewall Jackson: "If you-uns had some good General like him, I reckon you-uns could lick we-uns." When asked whether he had ever seen General Lee, he replied: "Yes, I was a sort of orderly for 'Uncle Robert' for a while. He's a mighty calm-like man when a fight is going on." This story is told of General John B. Magruder:

"Our General Magruder thinks a powerful heap of what he eats and wears. He allers has a right smart of truck.

"There was a Texas feller one time who had straggled from his brigade, and he were a pert one, he were, stranger. He were hungry enough to eat a General, buttons and all—that Texas feller were. He saw Magruder's table all spread, with a heap of good fixin's on it, and I'll be hanged if he didn't walk in, pert as you please, grabbed a knife and fork, and opened fire all along the line on them fixin's.

"Magruder heard somebody in his tent, and hurried in and asked that Texas chap what brought him thar. The Texan 'lowed he were hungry. Then the General, stiff and grand-like, said, 'Do you know, sir, at whose table you are eatin'?'

"The Texas chap, he kept drivin' in the pickets on them chick'ns, and he said to the Gen'ral, said he, 'No, old hoss, and I aint no ways partic'lar, neither, since I've come solderin'.'"

"What did Magruder do?" asked a Yankee listener.

"Do? Why, he saw them chicken fixin's were spiled, and he jest put his arm under his coat-tail, pulled his hat over his eyes—and walked out. And that Texas hoss didn't leave anything on that thar table 'cept the plates, not even his compliments.

"Who were he? Well, no matter. He hadn't no manners, he hadn't. He were powerful hungry, stranger, that chap were."

USEFUL WITNESSES.

The government of Palestine, as we are reminded by the author of "Forty Days in the Holy Land," is a corrupt and oppressive one. The people are obliged to pay ten per cent. taxes on all their crops, which, moreover, cannot be housed until the tax-gatherer comes to value them.

A true and amusing story best illustrates the state of justice there. An English resident bought some land, and became involved, in consequence, in a very harassing dispute. He sought the pasha for justice, and that official only said, looking at him in a curious manner:

"Come and plead your cause to-morrow, but remember, you must bring eighty witnesses."

"But there are not eighty dwellers on the soil!" was the Englishman's reply.

"Never mind, sir," said the pasha. "You must bring eighty witnesses."

Perplexed and baffled, the suitor went downstairs to the great man's secretary, and demanded an explanation.

"Of course," said the secretary, "the eighty witnesses mean eighty pieces of gold, but I must give you this hint. Only take sixty witnesses upstairs, and leave the other twenty with me, saying that they were too old and weak to mount beyond my landing."

The Englishman did as he was advised, and having thus secured the good offices of the pasha and his secretary, gained his cause forthwith.

WISE FATHER.

What we wish and what we want are sometimes very different things, although in every-day speech the two words are often used interchangeably. Here, for instance, is a story—taken from the Chicago *Herald*—of a boy who wished for a half-holiday, but, as his father knew, was not really in want of it.

When I was about eleven years old, I one day rebelled against going to school. I preferred the hook and line and the babbling brook, and I said to father—a farmer—at the dinner-table, "Can't I stay out of school this afternoon?"

"Oh yes," he answered, promptly, to my no small surprise.

I ate my dinner with keen anticipations of a jolly afternoon; but as we rose from the table, father said, "Come with me. I need a little help in picking up the fallow ground."

When the trees of the forest were felled, they were cut into logs, rolled together and burned, after which it was necessary to pick up the charred sticks, and make smaller heaps for another fire. When father said, "Come with me," I knew what he meant, and I went.

At night I was black as a negro and sour as a lemon, and the next morning I said, "Father, I think I would rather go to school to-day."

"All right," he answered; "go ahead," and after that I was careful not to ask for a holiday without some very good reason.

SEA-SICK.

The following is a story told by an old sailor to Samuel Adams Drake, and should be appreciated equally by those who love and those who loathe "the thing they call the sea."

Most allus makes more or less folks unwell, the motion does. We had two gents aboard of us last trip. One of 'em was a lawyer. My grief, wasn't he done up, though!

'Tother wasn't a bit. There he sot, smokin' as calm as a kitten. He was a high-up jedge, goin' down to hold court.

"Can I do anything for you?" says he.

"Yes," gasped the sea-sick one. "I wish your honor would overrule this motion."

DAISY'S CALENDAR.—II.

Now turn one leaf of your calendar; see,
Here's a grand little month called F-e-b;
With holiday rites it marks the morn
When America's best-beloved was born;
'Tis the shortest and fleetest of all the year,
And the last of Winter—so never fear.
He may whistle and howl and grumble and growl,
But he'll soon be going,
Daisy, my dear.
It stands for hearts and arrows and bows,
For lace as light as the feathery snows,
For sweet little rhymes and gay little times,
And smiles wherever the postman goes;
For February, with Spring so near;
That's what it stands for,
Daisy, my dear.

HOW ARTIE WENT INTO THE STOCK BUSINESS.

There wasn't much chance to go into business of any kind, one would think, when the "hoppers" had eaten every green leaf in the gardens and fields, so that people hardly had enough to live on.

Most boys would have waited for better times. But I've noticed that when a boy or girl really sets out to do something *whether or no*, a chance can generally be made if it can't be found.

Now Artie was ten years old, and helped papa every day at the barn, and often brought coal and water for mamma. He felt himself quite a man, and had made up his mind to earn something, whether or no.

So he kept watch of all the corners, and by and by, when cold weather came on, he engaged to make fires in the school-house for three months.

It was pretty hard some mornings. He had to get up before daylight, so as to be ready with a good warm school-room at nine o'clock.

He had to walk a mile and a quarter from home, and sometimes he had to fight a cold wind all the way.

He had to split the kindlings with a battered old hatchet, and sometimes his fingers ached dreadfully.

And he had to do these things regularly for sixty-five mornings.

Now how much do you suppose he earned by all this hard work? Just one dollar!

It doesn't seem much, does it? But it was a big dollar to Artie.

It was a great deal too big to spend for a sled or a pair of skates, or even a new book.

He kept it some time, while he looked about for a good investment.

Finally he heard that Mr. Brown had a little calf to sell He went to see him, and found the price of the calf was just one dollar.

"But what can I feed it?" said Artie. "We haven't any milk to spare. Could it eat hay?"

"Well, not yet," said Mr. Brown. "But I've heard that calves could be raised on hay tea."

"That might do," said Artie, "but I wonder if mamma would lend me her teapot. You see it's a real pretty one with flowers on it, and mamma thinks the world of it."

"Dear me!" said Mr. Brown, laughing. "You couldn't make half enough in a teapot. You take all you can stuff into a big kettle, and steep it with a lot of water, and give the calf all it will drink three times a day. I never tried it, but I've heard it was nearly as good as milk."

Well, Artie bought the calf, and three times a day he brought the hay and the water, and borrowed his mamma's two-gallon kettle to make tea for his calf. And the way that calf did grow was surprising. You would have thought it lived on cream.

Maybe it was partly because the wild prairie hay was so sweet and fine, and partly because the spring water was so pure and clear. But I am sure it was mostly because Artie was so faithful in his feeding.

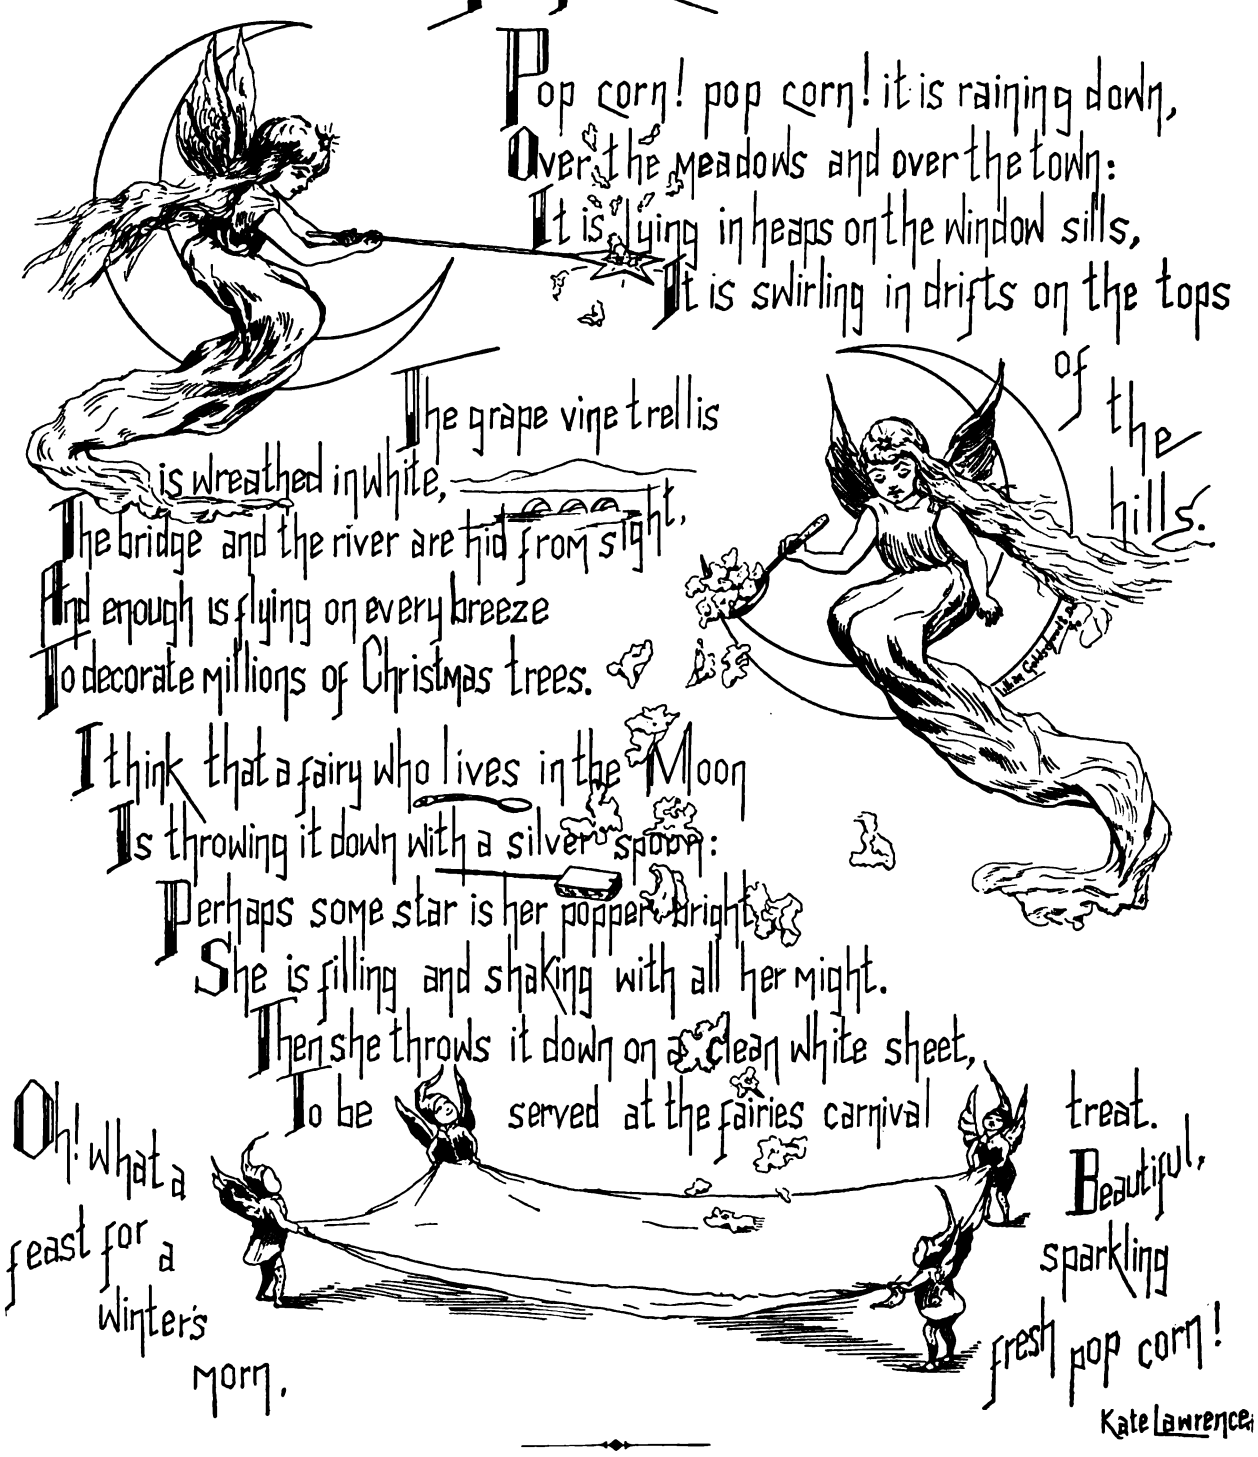
He never forgot it on account of planning a new kite, or delayed it in order to finish a game of marbles.

And as soon as the calf was big enough to nip the tender spring grass, Artie lariated it, as we should say, on the greenest spots to be found.

So it happened that a year from the next fall it had grown to be the fattest and sleekest steer in the neighborhood.

And his father traded him a young cow and calf for it, and sold it to the butcher.

And that was the end of Artie's calf, but only the beginning of Artie's stock business.



All this was about fifteen years ago, and now Artie has a beautiful home in Colorado, and stock enough to bring him a good income.

He has always succeeded, because he has always worked hard and been careful, not stopping for drought or wind or hail or grasshoppers, but going right on with his business, *whether or no*.

In fair weather, Master Maurice lived the greater part of the day on a gravel heap between the house and the barn, where he can see all that goes on at either place. "Maurice," asked his mother one morning when he came to where she was sitting on the porch, "has Sarah killed a chicken for dinner?" "Yes'm. She's tilled one; but she hasn't dot it pared yet."

Four-year-old Harold, having been out playing with boys a little older than himself, came into the house, and was being undressed by his grandma, when he held out his arms and said: "Grammy, aint I strong; see the ruscle I've got on me" (meaning muscle, of course).

Pop Corn.

OMITTED RHYMES.

Three Presidents' birthdays, my boy,
In February always come.
Now, till this lesson you have learned,
Be still as if your tongue were dumb.
And then repeat,—don't tarry, son,—
"First— * * * * * * *
* * * * * * *

CHEATING AT EXAMINATIONS.

The plan now pursued in our public schools of monthly examinations subjects many thousands of boys and girls to a temptation that is hard for them to resist.

The young people are required to write the answer to a certain number of questions in each of the studies pursued by their class, and by those answers their standing for the month is determined. Each scholar receives at the same moment a copy of the paper, and all are allowed the same time to prepare their answers, during which time the law of the school requires that there shall be "no communication" with any person, and no reference to any book.

Let us suppose that arithmetic is the subject, which in all our primary and grammar schools is the one that gives most trouble. A paper containing ten examples is distributed, and the work begins.

For some minutes the whole class is completely absorbed, the silence broken only by the scratching of forty or fifty pencils on forty or fifty paper blocks.

The boys are sitting each at his own desk, but very close together. They know one another's modes of working and degrees of skill, and being neighbors, they are also very good friends, as boys should be.

Now Johnny A—— is well aware that Harry B——, who sits in front of him, is much more likely than himself to have his sums right, and when he hears the aforesaid Harry lift his paper or tear off a sheet of paper, he can hardly help raising his eyes.

One glance shows him that he has put a decimal point in the wrong place; or he may, if the light is good and Harry somewhat deliberate, catch sight of the answer, and discover that it is different from his own.

Now occurs John's terrible temptation. He is extremely desirous of not failing below his record, and perhaps fearful of losing the trip to Boston which an indulgent parent has promised him if he brings home a good report-card.

This John is a little boy, and *for a little boy* he has a good conscience and an average sense of honor; but the moral strength of a child is proportioned to the rest of his powers, and though his conscience tells him that he ought not to use the information accidentally obtained, there is a struggle within him for the mastery between conscience and ambition.

There are boys who would disdain to avail themselves of the chance, and to all such we would bow low in sincere respect; but truth compels the admission that conscience, honor and pride, all pulling one way, frequently yield to the overmastering force of ambition.

In many schools, too, as teachers well know, a considerable number of the scholars have little or no scruple about getting or imparting surreptitious information to their neighbors. A false sense of good fellowship obscures the plain duty, neither to help nor to receive help of any kind whatever.

We are here supposing the case of boys, as if girls were too good ever to be tempted by what is so obviously wrong, and, in fact, girls *are*, as a whole, more conscientious in matters of this kind than boys.

But there are girls, too, who never pass a fair examination, but receive improper assistance, and gain a rank beyond their merits every month in the school year.

There are teachers who have such an ascendancy over their pupils, and possess such a happy genius for strengthening their moral sense, that a large class can be trusted to keep both eyes and ears closed to all improper aid; but probably it would be best, even for children so exceptionally placed, not to be tried much beyond the average moral strength of their years.

HOW TO MAKE A GLOVE-MENDER.

The materials required for this useful and pretty article can be obtained for a small amount at almost any fancy goods store, as follows:

One celluloid or ivory ring, about two inches in diameter; one plait or braid of assorted thread, one glove-mender, one pair small embroidery scissors, three yards of number one ribbon, one half yard of number twelve ribbon, the same color; and a paper of glove-needles.

On the celluloid ring, either braid, or tie with a loop knot, about twelve strands of the assorted thread. Then tie the scissors to the ring by one yard and a half of the narrow ribbon, and with the remainder fasten the glove-mender in the same manner.

Next tie the wide ribbon on the ring in a neat bow, in one of which weave about four of the needles, and the mender is complete.

Not only is it useful for mending gloves, but for sewing on buttons, and it saves many a bust for the proper shade with which to take the proverbial "stitch in time."

Worms.—In children bad breath and hard, swelled stomach are symptoms of worms. Give "Brown's Vermifuge Comfits." A sure remedy. 25 cents a box. [Adv.

EVERYBODY'S HAND-BOOK of ELECTRICITY, by Gilbert Hyatt Sweet. Shows how to make Electric Bells, Batteries, Dynamos, Motors, Railways, Wireless Telegraphs, Burglar Alarms, Telephones, &c., &c. Sent postpaid. 50 cents. BURKE PUB. CO., Boston, Mass.

109 5th Ave., New York.
SEND FOR CATALOGUE.

SEEDS FREE and Mist Flower and New Mexican Fire Plant, as well as many Novelties, for 10 cents. Send 10 cents and we will send Cat. and Seeds. Address
SOUTHERN SEED CO., Atlanta, Ga.

This excellent variety is distinguished from all others by its large stiff stalks, as shown in the engraving, standing up like a tree without support of any kind. It bears large, handsome fruit, of fine quality, perfectly smooth, and of fine flavor; it is extremely early and entirely free from rot; the leaves are very curly and set close to the stalk, thus shading the fruit, making the plant very ornamental as well as useful.

FINCH'S EVERGREEN CUCUMBER
A very handsome variety of superior quality, true to name, of a dark green color, growing from 10 to 12 inches in length, and immensely productive.
SURE HEAD CABBAGE
IS ALL HEAD and WILL TURN TO HEAD. Very uniform in size, firm and fine in texture, excellent in quality, and a sure header. Grown by Finch, Box C, Clyde, N. Y., over a land which weighed 6815 pounds.
For 2 cts. and 3 cents for postage we will send a Packet each of Tomato, Cucumber and Cabbage, with Finch's Catalogue, for only 25 cents in Silver or Stamps.
FIVE CINNAMON VINES FREE
This rapid growing Vine, with its beautiful, heart shaped leaves, glossy green peculiar foliage, and delicate cinnamon fragrance, is unsurpassed for covering Arbors, Screens or Trellises in a short time. Will grow from 10 to 20 feet in a single season, and for covering Arbor, Screen or Trellis is without a rival. Price, 10 cts. each; 3 for 25 cts.; 7 for 50 cts.; by mail, postpaid. Sending for 24 cents for the above Tree Tomato Collection, the bulbs will produce a Tomato Vine 20 feet high, loaded with fruit, and a Luscious relish for that Dollar. Addressfully
FRANK FINCH, Box C, CLYDE, N. Y.
☞ Please mention reading NIXES by this editor and will receive extra a large Packet of FINCH'S Perfection Lettuce, the finest variety ever grown.

WONDERFUL NEW CARNATION MARQUERITE
Offer No. 1. The most rare and beautiful class of Carnations that has ever been offered. Crimson Scarlet Striped and Flaked, Pure White, Golden Yellow and Scarlet Striped and Flaked, Pink and Crimson, Rose and Salmon, Purple and Maroon, Solid Colors, ranging from the Brightest Scarlet to the most delicate Pink imaginable. Many of the flowers are over three inches in diameter, and borne on perfectly flexible, Woody Stems, and are delightfully fragrant. It is undoubtedly the most Valuable and Handsome Carnation ever introduced. It is the full blooming habit of the Marguerite Carnation, the color of flower and habit of plant of the Tree Carnation, and the delightful fragrance of the Clove Carnation. It never flags, no matter how hot the weather, but flowers through the entire spring and summer. If plants are taken up in the house in the fall they will continue to flower all winter. We will mail, postpaid, one of our beautifully illustrated catalogues, which tells the full story of this grand novelty to any addresses, receipt of 10 cts. If you can afford to buy our choicest catalogue of Seeds, Plants and Bulbs, send 25 cts. and we will mail you a COLORED PLATE OF DIADEM ROSES. 25th Every person who sends us a list of 10 names and addresses of persons interested in flowers will receive a present.
HENRY A. DREER, 714 & 716 Market St., Philadelphia, Pa.

Offer No. 2. Carnation Marguerite, Mixed Colors, 10 cts. per dozen; 50 cts. per 100; $3.00 per 1000.
L. L. MAY & CO., Seedsmen & Florists, St Paul, Minn.

WE WANT A NAME FOR THIS NEW TOMATO

UNTIL a suitable name is suggested, we shall call this Tomato No. 400. Read the terms of competition below.

The cut shows a fruit one half natural size.

The No. "400" is the largest and heaviest Tomato known. In fact it is so solid as to be almost seedless. Color, rich, dark crimson. The average weight of this Tomato is nearly 2 lbs. each.

We will pay $250.00 for the best name suggested for this grand new Tomato.
Purchasers are entitled to send in a name for each and every packet they buy. The names can be sent in any time before October 1st, 1891, and will be submitted to a committee of three, who shall award the prize. Full directions and conditions for entering the competition will be given in every packet of seed.
Price of New Tomato No. "400," 25 cts. per packet, 5 packets for $1.00.
☞ With every order for a single packet or more, we will send without charge a copy of our magnificent New Catalogue of "EVERYTHING FOR THE GARDEN" for 1891, the value alone of which is 25 cents, on condition that you say in what paper you saw this advertisement.

PETER HENDERSON & CO. 35 & 37 CORTLANDT ST. NEW YORK

ANECDOTES OF CARLYLE.

The following amusing anecdotes appear in an able work, entitled, "Glances at Great and Little Men." "I never knew Carlyle," says the author, "except by sight. To tell the truth, I did not greatly covet his acquaintance in those last days of his, when alone I could have known him. I was even not without a certain dread of this roaring apostle of taciturnity. Once, however, finding myself sitting opposite to him in a Chelsea omnibus, I ventured to address him. I tried the weather,—the recognized conversational aperient,—but in this case it failed of its usual effect. He gave no answer, but sat there, leaning on his staff in brooding silence and with introspective eyes, until he reached his destination. When he had got out, I, affecting not to know him, asked the conductor who he was. The latter had touched his hat to him.

"'Oh, yessir, I know him well enough. 'E orfen rides in my 'bus. 'E's wot you call a littery gent—writes books wot nobody can understand.'

"The conductor paused, as if mentally summing up from his superior standpoint—the footboard—poor Carlyle's characteristics, and then added, with a touch, half of pity, half of contempt in the voice:

"'E's a bit off his chump, like many of those gents; but he aint a bad sort if you take him the right way.'

"Apparently I had not taken Carlyle the right way, but the conductor did not explain what the right way was. However, he went on to tell me a little anecdote.

"'One night, just as the omnibus was about to start, a poor woman came up and asked the fare to Hoxton.

"'"Sixpence," I answered.

"'"Oh, please, couldn't you take me for thruppence? It's all I've got, and I want so very bad to get there."

"'"Couldn't be done," I said.

"'Then Carlyle, who was in the omnibus, spoke: "Jump in, woman," he said. "It shall cost you nothing."

"'And he didn't even take her thruppence,' added the conductor, with genuine admiration for a disinterestedness so far beyond his ideal.

"Still, even this may have furnished, in his eyes, another proof that the great writer was a little 'off his chump.' The phrase itself tickled me, as did also the mental attitude that prompted the use of it. If the educated ridicule the ignorant, the ignorant have often a genuine contempt for the educated.

"The late Bishop of Ely was once talking to a laborer, and unfortunately let fall a remark which plainly showed that he had no idea how turnips should be sown. Hodge looked at him round-eyed, in an amazement too big for utterance. But when the bishop had turned aside, he said:

"'E a bishop, indeed! Whoy, 'e aint fit to 'old a plow!'"

CHEMICAL FURY.

The fury of the chemical world is the element fluorine. It exists peacefully in company with calcium in fluor-spar, and also in a few other compounds.

Although this element was known and named, it long resisted the efforts of chemists to isolate it,—that is, prepare it in a pure state, unmixed chemically with other substances. For, the instant the compound containing it was torn apart, the free fluorine attacked and combined with whatever substance composed the vessel containing it.

But it has now been isolated by M. Henri Moissan. Fluorine is a rabid gas that nothing can resist. It combines with all the metals, explosively with some; or, if they are already combined with some other non-metallic element, it tears them from it, and takes them to itself.

In uniting with sodium, potassium, calcium, magnesium, and aluminium, the metals become heated, even to redness, by the fervor of its embrace. Iron-filings, slightly warmed, burst into brilliant scintillations when exposed to it. Manganese does the same. Even the noble metals, which at a melting-heat proudly resist the fascinations of oxygen, succumb to this chemical siren at moderate temperatures.

Glass is devoured at once; and water ceases to be water by contact with this gas, which, combining with its hydrogen, at the same moment forms the acrid, glass-dissolving hydrofluoric acid, and liberates ozone. Even hydrofluoric acid eats into and destroys every known substance except platinum and lead.

HEBREWS' FILIAL RESPECT.

"Thou shalt rise up before the hoary head," is a text of their ancient Scriptures which the Hebrews seem never to forget. So, at least, concludes a correspondent of the New York *World*, who has noticed the manners of that people during their vacation life.

There is nothing in the world of pleasure and recreation to compare with the beautiful devotion that is paid the old Hebrew people by their children and grandchildren at the various summer resorts. A rude remark is never made in their hearing, nor a disrespectful word uttered to aged mother or father.

The gentle yielding of easy-chairs, the offering of choice things to eat and drink, the last consideration of self where there is a drive or sail for a limited number, and the graceful anticipation of creature comforts, are attributes of the children to which the filial respect of the youthful Christian is not approachable.

"DID THEY?"

There is nothing much more distressing than an unfinished story. A number of people in a London drawing-room were conversing about capital punishment, when a lady remarked:

"How strange it must seem to be sentenced to death!"

"Not so very, very strange, I assure you. I was myself once condemned to death in Africa," said a returned African explorer.

"Indeed!" exclaimed the lady. "And were you—did they—"

"Did they what, madam?"

"Why, did they execute you, you know?"

THE NORTH STAR.

When twilight's purple veil is furled
Beyond the dim and misty world,
And slowly o'er the darkened world
The stars come forth in bright array,—
When all the sky is clear and cold,
Upon old Ocean's troubled breast,
Weary of his march through space,
The sailor sees the north star rest;
The sailor on the mountain sea,
The pilgrim of the trackless plain,
Turns northward and take heart again;
For there, above unseasoned heights,
The changeless star unchanged unites
The North Star lifts her crown of youth.

Self-centred in the boundless blue,
Calm dweller of the vast unknown,
Thou seemest from the throne
Serenely from her distant throne
She gazes down the voiceless deep
Where, through the silent ages fleet
And mighty constellations sweep
Around her like an endless fleet;
Yet, though they circle round her throne
The glory of their dancing spears,
The Morning Stars beneath her sing
And while the systems sink and rise
And glances to each other nod
The North Star watches with unwilling eyes
As steadfast as the love of God.

JAMES G. CLARK.

SIDNEY COOPER'S PENCILS.

Some of the earliest sketches of the veteran artist Sidney Cooper, R. A., were made with pencils, given to him by a stranger (whom in later years he met as a fellow-member of the Royal Academy), and sharpened by no less a person than the head of the English Church. The young artist was more interested, at the time, in the important fact that he had free new sketching materials, than in the identity of his two friends. Years later, however, by a pleasing coincidence he and the giver of the pencils discovered each other.

Cooper passed his boyhood in Canterbury. He very early showed a taste for art, and nothing delighted him more than to sketch the cathedral. On a certain day, when he was on the central tower of a slate, when a gentleman who was sketching the cathedral noticed his work, and gave him a bundle of pencils and some drawing paper.

"Years later," writes Mr. Cooper in "My Life," "in the Academy I met the same gentleman, Lord Stanfield, Roberts, Cattermole, one of the Landseers, Frank Stone, Patrick Nugent and others, and when I was introduced it was made that each of us should tell evidence of his early life. I related the incident of the pencils. As I finished, Cattermole jumped up and cried out:

"Why, Sidney, are you the chap? Then know that for years I have wanted really am the very man who gave you the pencils in the courtyard of Canterbury Cathedral, and you are verily the man who win the boy then.'"

But though he now had pencils, he had no knife, and he was obliged to borrow a sharpen them for him. "One day a very serious-looking man sauntered by, with his hands clasped behind his back, and I said to myself, 'That is a prize.' In those days the boys hated all the parsons priests, and I could see that this man was a parson.

"When he had got a few yards away, I gained courage, and ran after him, calling out, 'Sir!'

He turned round and said, 'What, my boy?'

"Please, sir, have you a knife?'

"'Yes, my little man,' said he, 'what do you want?'

"I told him, and he cut all my pencils—twelve—and returning to the coping where I was established, he looked in on my drawing. 'Very good, my boy,' he said, and went on.

"Immediately a door opened near me, and out came a little man with powdered hair, and attired in knee breeches, and had a blue velvet coat with metal buttons; and poking his little nose through the railing, asked me what that gentleman had said to me.

"'Nothing,' I answered.

"'Then what did you say to him?'

"'I asked him to cut my pencils.'

"'And did he?'

"'Yes, he cut them all.'

"'Do you know who that was?'

"'No.'

"That was the Archbishop of Canterbury.'"

AFTER NATURE.

Emerson tells us to "hitch our wagon to a star," or, in other words, follow the course of nature, and nature will help us on. So Mechanic Ali probably thought when he endeavored to imitate natural aspects in building his canal connecting the Nile with the sea at Alexandria.

A French engineer, in the course of conversation, ventured to criticise the Viceroy's plan while the work was still going on.

"Your Highness," he said, "will pardon me for suggesting that your canal will be very crooked."

"Do rivers in your country run in a straight line?" promptly inquired the pasha.

"Certainly not," answered the surprised French man.

"Did not Allah make them?"

"Assuredly, your Highness." By this time the engineer began to think his questioner's wits might be disturbed.

"Well," answered Mehemet Ali, triumphantly, "do you think you or I know better than Allah how water ought to run? Allah made the river crooked, if I had not done so, it would soon be a dry ditch."

The Frenchman was silent, but not convinced, and the canal is certainly a very crooked one.

DANGEROUS.

It is hinted that nowadays, when the French authorities hear of an impending duel, they distress themselves only over the violation of the law, not having much reason to apprehend any loss of human life.

A French satirist professes to have overheard the following fierce conversation:

"You will write me this with the sword?"

"Yes, well, but you are the better swordsman. We will fight with pistols then. You shall mount a velocipede, I will mount the platform of a railway train, and thus planted we will charge upon each other sword in hand!"

Itching Piles.

CURIOUS ADVERTISEMENTS.

An American traveller in Germany finds little to interest him in the newspapers except the advertisements, many of which are extremely curious, and unlike anything of the kind in our own newspapers. A gentleman has translated a few specimens for the New York *Times*:

WANTED, a reliable young lady, or a widow without children, who has had experience as a sales woman in a first-class retail store. The advertiser, who has lately lost his wife, wants above all a capable and honest person to whom an active retail trade can be intrusted, and who can give security. An offer of marriage may be expected when ability to care for the business has been demonstrated.

I ANNOUNCE to the relatives and friends of the deceased that Carl N., to whom I was engaged to be married, was relieved by death of his severe sufferings on July 16th in Hamburg. His deeply sorrowing bride,
HELENA H.

THE welcome arrival of a strong, well-developed boy is announced with joy by Wilhelm J. ——, butcher, No. — Street, and wife.

IT has seemed good to our dear Saviour in His unfathomable wisdom to take to Himself in His home in heaven our faithful and thoughtful and most tenderly loved husband and grandfather, William F., in the seventy-ninth year of his age, whereof, bowed down with grief, we herewith inform all relatives, friends and acquaintances, with the request that our dear one who has gone to sleep may be always kept in kindly and loving remembrance, and in the name of all those whom he left behind. The sorrowing widow,
SOPHIE F.

HIS Royal Highness Prince William of Würtemburg has again been most graciously moved to cause a subscription of 40 marks to be sent to us. For this renewed and munificent assistance to our cause we desire in the most obedient and respectful manner to express our most heartfelt gratitude.
THE COMMITTEE FOR COUNTRY EXCURSIONS FOR POOR, SICK SCHOOL-CHILDREN.

OFFICIAL NOTICE.

STUTTGART, JULY 23.

PUBLIC praise is hereby given to Hans Jeorg, a student in the Polytechnic School in Stuttgart, for his noble, determined, and courageous conduct in saving a person from drowning. THE ROYAL CITY COMMISSION.

HOW SHE CALC'LATED.

A mathematical brain, or as the country people say, "a good head for figgers," is a convenient thing to possess. But there is one old lady in a Massachusetts town who evidently does not set a high value on her reputation in this respect, though she no doubt considers herself a good "calc'later," notwithstanding.

She keeps a small crockery shop, the only one in the place. Her stock is limited, both as to quality and quantity, but her customers never find fault. "Aunt Judy," they say, "is *so* obliging!"

One day a stranger in the town was attracted by a placard above some glass tumblers in her tiny show-window. "Eight cents apiece, a dollar a dozen."

"That strikes me as rather queer," he said to himself, and walked into the shop.

Aunt Judy regarded him affably over her spectacles as she sat rocking behind the counter, and rose at once.

"Is there anything you'd like, sir?" she asked.

"Why," said the gentleman, "I thought I'd like to ask about those tumblers out there in the window. How does it happen that they're more expensive to buy by the dozen than singly? When I was a school-boy, twelve times eight was ninety-six," he added, in a jocose tone.

"So it was in my day," said Aunt Judy, with some severity of tone; "but I keep those tumblers, young man, to *accommodate*, and the disappointin' a customer who might come in for an extry tumbler, havin' broke one, after I'd sold the whole dozen to one person, is more expense than four cents to me, sir!" and she seated herself in her rocking-chair with the air of a person who had made a telling point.

TOO FAMILIAR.

One may not, according to the etiquette of loyalty, speak too familiarly of kings and queens. As a subject was once reminded who wished to give his sovereign a pair of stockings, "The Queen of Spain has no legs." She must not be supposed to walk, talk, or eat like ordinary mortals, and if one cannot escape the inference that she really is like the rest of humanity, surely nothing need be said of it.

When Queen Victoria visited Salisbury Cathedral, thirty years ago, there was, of course, a flutter of curiosity and loyalty throughout the town. Even the humblest houses had hung out some sign of rejoicing, and at the White Hart Inn, where the queen intended to lunch, the landlady was fluttering about in her best silk, while the servants were gay with white waistcoats and flowers in their button-holes.

But that this show of devotion was not merely skin-deep may be guessed from an occurrence of the late afternoon, when the queen had departed.

In the coffee-room of the inn were two young men, who were complaining to the waiter because they were not given eels for dinner, although the dish had been promised them. The waiter apologized profusely, and remarked, in the way of excuse:

"Her Majesty has been here to-day."

"Did Her Majesty eat the eels?" was the too familiar query, and at this the waiter's loyal soul revolted.

"It's no business of yours or mine, sir, what Her Majesty eats," was his dignified reply.

WISE EXPENSE.

The old Latin proverb, "*Difficilia quæ pulchra*," has often been set as a "copy" for high-school boys and girls. The idea in it is that "the best things are hard to get," and certainly a good personal education usually implies a sacrificing parent as well as a studious child.

An Englishman visiting Sweden, and noticing the care for educating children who were gathered up from the streets and highways and placed in school, inquired if it was not costly.

"Yes," was the answer, "it is costly, but not dear. We Swedes are not rich enough to allow a child to grow up in ignorance, misery and crime, to become a scourge to society as well as a disgrace to himself."

It was an English judge who first said, "A boy is better unborn than untaught."

A Good Reputation. "*Brown's Bronchial Troches*" are world-renowned as a superior remedy for Coughs, Hoarseness, Sore Throat and Bronchial affections. Containing nothing injurious, they may be used at all times with perfect safety, and are especially adapted for children and invalids. Sold only in boxes. [*Adv.*

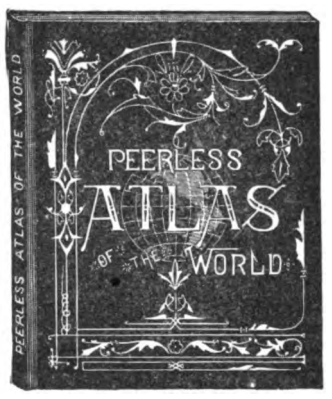
A SPECIAL OFFER.

THE PEERLESS ATLAS OF THE WORLD.

NEW, GREATLY IMPROVED and ENLARGED! NEW MAPS and HANDSOME ILLUSTRATIONS!
In handsome board cover with rich gold ornamental title. The first Atlas publishing the
CENSUS OF 1890.
PRESENTED TO READERS OF THIS PAPER WHO SUBSCRIBE TO
THE AMERICAN AGRICULTURIST.

Recognized throughout the world as the **STANDARD RURAL MAGAZINE,** and the authority on all matters pertaining to Rural Life. It is published monthly, each number consisting of not less than 48 pages, with colored cover, and a year's numbers make a large volume of **576 pages, and over 1,000 original illustrations. It is a complete compendium of Rural and Household Affairs, and the only Illustrated Rural Magazine in the World.**

As an inducement for you to give this magazine a trial, we make the following special offer: The subscription price of the *American Agriculturist* is $1.50 per annum, but on receipt of this amount, mentioning that you saw this offer in *The Youth's Companion*, we will send the *American Agriculturist* for one year, and in addition will **present to every subscriber** (providing 25 cents additional is sent for postage) a copy of



THE PEERLESS ATLAS OF THE WORLD,

Price of which is $1.50, thus giving $3.00 in value for $1.75.

It Gives the Population of Each State and Territory in 1890, the Population of Every County in the United States in 1890, and the Population of the Important American Cities in 1890.

PROFUSELY ILLUSTRATED. The new edition for 1890-91 has been enlarged to make room for many fine pictures, showing State capitol buildings, principal buildings and main Scenery of the Far West, beside which the famous Alps of the European continent dwindle almost to insignificance. These pictures enable the reader to gain a better and more correct knowledge of the subjects illustrated than may be obtained in any other way.

The "Peerless Atlas" Meets the Wants of the People.

Only a year ago the first copies of the Peerless Atlas were issued, and yet the demand for it is probably greater than for any other atlas published. It could not be otherwise, containing, as it does, larger and better maps of the principal American States than are given in atlases costing $10.00 to $15.00 each.

The edition for 1890-91 contains a number of

New Maps Never Before Published,

Making it the most desirable of any. In both maps and statistical information it has been brought down to the latest date.

It is Equal to Any $10.00 Atlas

As a reference book, giving concise and correct information about the world, all arranged so that any subject may be found at once, making it of untold value to all who aim to keep up with the progressive spirit of the times. The intelligent person who reads of the Stanley expedition in Africa, or of the recent important events concerning Heligoland, or who reads dispatches concerning the insurrection in the Argentine Republic, or the wars between the Central American States, and notes the important news telegraphed daily from all parts of the earth, must have an accurate and comprehensive atlas of the world to properly understand their geographical location.

In this age of intelligence, when knowledge is so easily attained, there is no excuse for ignorance. You can keep up with the times, at very little expense, by having at hand a copy of the latest edition of the "Peerless Atlas of the World," the only atlas of equal value ever offered at so low a price.

The Peerless Atlas gives the County Seat of each county.
By the reference index, the counties and county seats may be readily found in the maps, without loss of time.
The maps are handsomely colored, most of them in 6 colors.
It contains Colored County Maps of all the States and Territories.
All Countries on the face of the earth are shown.
Has the latest Railroad Maps, and Rivers and Lakes are accurately located.
All the Large Cities of the World are shown on the maps.
It gives a Classified List of all Nations of the Earth, with Form of Government, Geographical Location, Size and Population.
Population of Each State in the Union for the past 50 years.
A Condensed History of Each State in the Union.
Number of Miles of Railroad in Each State.
The Peculiarities of Soil and Climate, together with the Chief Productions, Principal Industries and Wealth of Each State.
The Educational and Religious Interests of Each State.
The Popular and Electoral Votes for President in 1880, 1884 and 1888, by States.
List of all the Presidents of the United States.
The Agricultural Productions of the United States.
The Mineral Products of the United States.
The Homestead Laws and Civil Service Rules.
And Much Other Information that Should be in Every Home, Store, Office and Counting-Room.

The *American Agriculturist* alone is fully worth the subscription price asked for it, **$1.50 per year,** a year's volume being nearly equal to that of the $4.00 magazines, but we want to introduce it into **50,000 new homes,** and adopt this method, being confident that after a year's perusal the new readers we secure in this way will become permanent subscribers.

Money refunded in every case if you are not fully satisfied. Remit by postal note, post-office money or express order or by registered letter. Postage stamps accepted for fractional amounts of a dollar. Address, mentioning this paper,

THE AMERICAN AGRICULTURIST, 52 LAFAYETTE PLACE, N. Y. CITY.

TO CURE A COLD IN EASIEST WAY APPLY POND'S EXTRACT TO PART AFFECTED

A COLD IS INFLAMMATION.

POND'S EXTRACT REDUCES INFLAMMATION.

Specific Directions.

IF A COLD IN THE HEAD, apply Pond's Extract (diluted one-half) by a nasal douche, or snuff it, or vaporize it over a lamp and inhale the fumes through the nose.

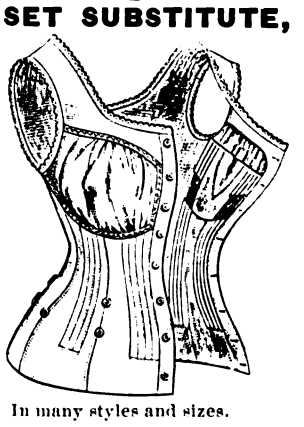
IF HOARSE, gargle with Pond's Extract several times daily.

IF THE THROAT IS SORE and NECK STIFF, rub the neck thoroughly with Pond's Extract, and, on retiring, wrap the neck in a woolen bandage saturated with Pond's Extract, and protected by an outer wrapping.

IF THE LUNGS ARE SORE, take a teaspoonful of Pond's Extract four or five times daily.

IF THE LIMBS ACHE and are sore, rub them vigorously with Pond's Extract.

FOR CHILBLAINS, bathe with Pond's Extract and bandage with cloth saturated with Pond's Extract. Itching quickly stopped.



BUT do not purchase some cheap substitute and expect it to do what Pond's Extract will. Be sure you have genuine article. Made only by Pond's Extract Co., New York and London.

EQUIPOISE WAIST FOR LADIES, MISSES AND CHILDREN.

Stylish, Comfortable, Hygienic.

THE CORSET SUBSTITUTE,

made upon true hygienic principle, with full, graceful figure; advantage of the fashionably modelled corset. A perfect support from the shoulders, distributing the clothing-strain and weight.

THREE GARMENTS IN ONE.

Corset, waist, and cover. Genuine whalebone. Bone pockets, allowing the removal of bones without ripping. In many styles and sizes.

Illustrated Catalogue mailed free to any address by the Mfrs.,
GEO. FROST & CO., 31 Bedford St., Boston, Mass.

EAGLE PRINTING OUTFIT 15c.
Contains three alphabets of rubber type, type holder, bottle indelible ink, ink pad and tweezers; put up in a neat box with full instructions for use. Satisfaction assured. EAGLE STAMP WORKS, New Haven, Conn.

Digitized by Google

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

CURE FOR CONSUMPTION.

It is supposed that two hundred thousand persons die yearly of consumption in the United States. The number in all the world must rise into the millions. The waste by war is slight in the comparison.

The great plagues formerly filled nations with terror; but they are now well-nigh conquered, and are known mainly as matters of history. Small-pox was a frightful disease, even within the present century, but is now powerless to gain a foothold anywhere in Christendom.

Typhoid is still one of the most common fevers, but it is known to be a filth disease, and has already been limited in its range. Fuller and more intelligent attention to hygienic conditions, private and public, may yet drive it almost completely out of civilized lands.

It has remained for medical science to devise some means for arresting the ravages of consumption. New ground for encouragement was found when the disease was shown to be due to the work of microbes, and at last Professor Koch, the German scientist, believes that he has discovered the great desideratum—a fluid which kills the parasites by destroying the food on which they live.

The publication of this discovery has caused profound excitement throughout the medical world,—an excitement greatly increased by Professor Koch's very high reputation as a man of science,—and physicians are hastening to Berlin from every quarter, to learn more fully the facts in the case.

If Professor Koch's belief proves well founded, he will have become one of the world's greatest benefactors. We must not be too sanguine, however, but await the result of more protracted experiments.

The facts thus far established seem to be that, soon after the injection of the fluid, the cough and expectoration gradually lessen, and in the most favorable cases wholly disappear; the expectorations lose their purulent character; the night sweats cease; the patient's appetite improves, and in a few weeks his weight begins to increase.

Consumption in its first stage seems to be cured, and even patients with small lung cavities seem to be *nearly* cured; but no improvement is visible in the case of those who have many large cavities, and even in the most favorable cases, time enough has not elapsed to warrant the assertion that permanent cures have been effected.

Professor Koch, however, is a man of marked scientific caution, and his belief that consumption, in its first stages, can be cured may well fill us with hope; and even if this shall prove to be the full extent of his discovery, it will furnish ample ground for hoping that the disease may in time be substantially extirpated.

SHEPHERDS ON STILTS.

The *Landes*, the great savanna of France, which stretches from Bordeaux to Bayonne, is a region similar to the Bad Lands of our own country. Many vain attempts were made to induce trees to grow upon it. At last, one M. Brémontier conceived the idea of planting, with the pine seeds, the seeds of the common broom, whose hardy tuft should protect the tiny sapling until it could stand by itself.

The result surpassed hope; pine forests have sprung up and endured throughout the *Landes;* they have broken forever the power of the wind-storms, and their pitch and timber are even a source of some riches to the department.

"There is one striking specialty of this district," writes Mr. Edwin Asa Dix. "This is the shepherd on stilts, the *Xicanque*, immortalized by Rosa Bonheur, and mentioned by many travellers.

"He is peculiar to this region. Perched on these wooden supports, at a perilous height above the ground, he stalks gravely over the landscape, enabled to behold an horizon of triple range, and to outstride the fleetest of his vagrant flock. When so inclined, he is quite able, it is said, to execute a *pas seul*, or even a jig, with every appropriate flourish of his timber limbs, and with surprising grace and abandon.

"His stilts are strapped to the thighs, not the knees, for greater freedom, and he mounts from his cabin roof in the early morning, and lives in the air throughout the day. A third stilt forms his seat, and makes of his silhouette a ludicrous and majestic tripod.

"This genius's chief amusement is startlingly domestic; it is knitting stockings, and engaged in this peaceful art, he sits with dignity and whiles away the hours. How he manœuvres when he accidentally drops a needle, I have not been able to learn.

"A dignitary of Bordeaux arranged a *fête* and procession in the *Landes* on one occasion. Triumphal arches were erected, hung with flowers and garlands, and the feature of the parade was a sedate platoon of these heron-like shepherds, dressed in skins, decked with white hoods and mantles, preceded by a band of music, and stalking by fours imposingly down the line of march."

SYRIAN PETS.

The author of the "Inner Life of Syria" gives an interesting account of the success with which wild beasts have been tamed in that country. The writer, being a lady, and having some singular pets of her own, was the better prepared to appreciate what the natives had accomplished in that direction. At one time she visited the wife of a Hungarian officer.

She was living quite contentedly in a mud hut, and her only companions were a hyena and a lynx, which slept on her bed like two lapdogs. The hyena received me at the gate, and though I was not prepared for it, I innocently did the right thing, as she afterward informed me.

The animal came and sniffed at my hands, and then jumped up and put its fore-paws on my shoulders, and smelt my face.

"Oh," I thought, "if it takes a bit out of my cheek, what shall I do?"

But I stood as still as a statue, and tried not to breathe, looking it steadily in the eyes all the while. At last it made up its mind to befriend me, jumped down, and ran before me like a dog into the house, where I found the lynx on the divan.

Pet No. 2 sprang at me, mewed, and lashed his tail till his mistress came in. She told me that when people began to scream or to drive the hyena away, it took a pleasure in worrying and frightening them.

I went afterward to the husband's reception-room. He had gone out for a short while. The hyena had got in, and I found my husband, the Russian Consul and a French gentleman all sitting on the divan, with their legs well tucked up under them, and looking absurdly uncomfortable at the frightful beast, as the Count called it. I had a good laugh at them, as the hyena and I were already on friendly terms.

CONSIDERATE.

In a certain school the teacher always went to her pupils when they needed help, instead of having them come to her. This habit led, one day, to a rather amusing incident.

Little Tommy Page was being punished by "standing in the floor," while he got his spelling-lesson. Finding a hard word, he raised his hand, and the teacher at once came to his assistance. A moment later this was repeated, and soon his calls for the teacher became frequent.

But, by and by, Tommy's legs began to get tired, and he longed for a seat. A little later, he walked boldly up to the teacher's platform, and calmly seated himself on its edge.

When asked by the surprised teacher what his strange conduct meant, he replied:

"Well, seems to me you're walking too much, and I thought I'd get nearer. I don't want to get you all tired out, same as I am."

GENTLE HINT.

Fred's mamma had trained him by "example and precept" to be courteous, and he seldom forgot the lesson, even under very trying circumstances.

One afternoon a maiden aunt, who was something of a trial to Fred, came to the house while his mamma was away, and insisted on his rehearsing all the new verses and songs he had learned at Kindergarten since her last visit.

He went through his répertoire patiently until he was quite tired, and still his aunt demanded another and another.

At last Fred said, politely, but with considerable firmness, "I'll do just this one more, Aunt Lucretia, and then," looking anxiously at the clock, "I am afraid you'll have to go, if you don't want to lose your train!"

NOT GOSLINGS.

An elderly lady went to an English market one day to buy a Christmas goose. At the booth where she called, two live geese were exposed for sale, both in custody of a cherry-cheeked country lass. The little maid would not sell one goose without the other.

Remembering that a friend had expressed a wish for a Christmas fowl, the customer was easily prevailed on to take both. But as she was concluding the bargain, it occurred to her to ask the maid why she had refused to sell the geese separately.

"If you please, ma'am," was the naïve answer, "mother said as how the geese had lived together fifteen years, and it would be cruel to part them."

IMPOSSIBLE.

The Boston *Transcript* has a story of a little girl who was reciting a lesson in conjugation.

"The verb to love, indicative mood, present tense," called the teacher.

"I love, thou lovest, he or she loves," said the little girl.

"He, she or it loves," prompted the school-mistress.

"*It* can't love anything," pleaded the pupil, and the teacher, suddenly struck with a new idea, simply replied: "Go on."

A YOUNG woman visited a museum of natural history, and for the first time in her life saw a human skeleton.

"Dear me!" she exclaimed. "How mortifying it is to think that one will ever look like that! It makes me ashamed to be seen!"

The Human Hair.—How many persons abuse this delicate and beautiful ornament, by burning it with *alcoholic washes*, and plastering it with grease, which has no affinity for the skin, and is not absorbed. Burnett's Cocoaine, a compound of Cocoa-nut Oil, etc., is unrivalled as a dressing for the hair—is readily absorbed, and is peculiarly adapted to its various conditions, preventing its falling off and promoting its healthy growth. KENT HAMPDEN.

IN SEVEN CHAPTERS.—CHAPTER VII.

At Home Again.

"I'll take heart, Sarah," Mr. Hampden had said, after Kent started on his search. "I will go down street, and talk this matter over openly with my friends."

The resolute energy of the boy had given him strength. He set out hopefully, as he had said; but he found that his friends shunned the subject. There was no direct charge against him, no open enmity shown; but a mildew of suspicion, a dead blight, seemed to be at work upon his reputation and his life.

He went about his daily business, carrying himself, perhaps, with more reserve and pride than was his wont.

He met Colonel Congdon and Mr. Jarret. They both greeted him warmly, pausing to look after him as he walked away. He was a tall, erect man, and the dark, curling hair, the picturesque, wide-rimmed hat then in vogue, the frogged surtout, with its high, rolling collar, and the delicate cambric ruffles at his breast and wrists set off well the noble, finely cut face.

Jarret, who was a slovenly little man, laughed. "Our friend," he said, "walks as if he owned the earth to its centre."

"He walks like an honest man who fears nobody," said the Colonel, curtly.

Two days later Mr. Hampden met, by appointment, several of the leading men of the town, and told them that he was resolved to have an investigation of the charges against him.

"There are no charges, my dear fellow," said Jarret, quickly. "There is nothing to investigate."

"I can bear this no longer!" exclaimed Mr. Hampden. "I am being smothered under suspicion and doubts which no man dares to put into words. If there is anything to fight, let me fight it!"

"I fear you are making a misstep," said Congdon, gravely. "The money is lost. You propose—what neither the law nor honor requires—to beggar yourself to replace it. What more can you do?"

"I must give some shape to this formless suspicion. I will force my fellow-citizens to pronounce me innocent or guilty!" returned Hampden, vehemently. "This is the way I shall do it: I have been nominated for Mayor. It is an honorable office. I have put forth a call for a public meeting to-morrow to decide whether I am the candidate or not. If my name has been withdrawn, I shall force those who have withdrawn it to state upon what charge they have done so, and to produce the proofs of that charge."

"Better let sleeping dogs lie!" muttered Jarret, whose jaws were working convulsively.

Even Colonel Congdon urged Mr. Hampden to give up this new project; but the placards calling the meeting had already been posted.

On the next morning, while Kent and his friends were on their way home after their raid upon Wetzel's cave, nearly all the men and boys in Wheeling were making an effort to get into the town-hall, which was packed to overflowing.

Wild rumors were afloat.

"The officers of the bank are going to prove that Hampden has the stolen money now in his possession," said one.

"Hampden gambled the money away in Cumberland," said another.

"He can prove his innocence!" still another insisted.

While these and many other reports circulated in the crowd, Mr. Jarret went about whispering his opinion.

"I am Ralph's most intimate friend, and I warned him it was madness to force this exposure! 'Never stir up muddy water,' say I. He has not been put on trial. He took the money away, and can give no account of it. The bank did not prosecute him. Any other man would think he had got off easily in such a case, without forcing the town to elect him to its most honorable office. If Ralph's past history were only known!" Jarret sighed. "But there's the rub; it's all mystery!"

So he went from one to another, sometimes convincing his hearer that he was trying to shield his friend, who was a scoundrel, sometimes followed by suspicious and contemptuous looks.

The meeting was called to order by Judge Morris. Colonel Congdon was made chairman.

"Mr. Hampden," he said, "who has been your friend and my friend for many years, has something to say upon a subject which is of interest to us all."

Nero completes the Evidence.

The audience greeted the suspected man with a hearty round of applause. He was under a cloud, but the people liked him.

"Rafe Hampden is a good fellow, thief or not!" said a river pilot at the door; and the men about him laughed and cheered.

"I thank you," Hampden said, gravely, as the people applauded him. "You encourage me to believe you will be just to me.

"Recently you nominated me for an office which is given in this town as an expression of the trust and confidence of the people. Since that nomination I have fallen under grave suspicion, which has never yet been formulated or taken tangible shape. I call upon you to give it shape!

"If the nomination is to be withdrawn from me, I call upon you to state why it is withdrawn. Put me on trial before my fellow-citizens; let them hear the story of the lost package, and of my offers to refund the money.

"I have lived among you for many years an honest, clean life. I will not be trampled out of sight now, unaccused, undefended!"

An impressive silence followed his words. It was broken by Mr. Jarret's shrill, rasping voice.

"Mr. Hampden," he said, "I warned you as a friend not to open up this subject publicly. Now that you have done it, I warn you that you must go to the bottom of it. There is a mystery over your past life. Explain it! Prove that your youth was honest and honorable!"

Mr. Hampden leaned over the rail of the platform where he stood, his eyes fixed upon his accuser; but he answered not a word. The silence grew painful; there was a shuffling of feet and a faint clap to encourage him; but he stood dumb, with defeat written on his face.

While he had been speaking, Judge Morris, Colonel Congdon, and two or three others had been called from the room. They soon returned, followed by several new-comers.

Colonel Congdon stepped forward to his place on the platform.

"We will go to the bottom of this affair," he said, "as I understand Mr. Jarret desires. But we must go over some things which have but just now come to light. Henry Doty, come forward, and tell us what you know of this matter, beginning at the beginning."

Doty, a quiet, diffident country boy, stepped out, and with much hesitation, told of the thefts committed on the society to which his cousin Joe belonged, and of the resolve of the boys to find and punish the thief.

"About two months ago," he said, gaining courage, "Kent Hampden came out to the farm to spend the day with me."

Mr. Jarret nudged his neighbor. "Pay attention," he said. "I heard this hinted before. Kent took the traps and powder. 'Like father, like son,' I fear!"

"I took him out among the hills," continued young Doty, "to show him some hiding-places of game that he did not know. At last we came to Wetzel's cave. We found there—the thief! He was in the midst of his booty, and did not try to deny that he had stolen it."

There was a stir in the audience, as the boys and their fathers all knew that Kent had been charged with these thefts.

"His name! His name!" shouted a dozen voices.

"Be patient!" said Congdon. "You shall hear it."

"We both knew him," said Doty, flushing painfully. "I was for thrashing him and exposing him to the town, but Kent was sorry for him. He begged hard; he said the fellow had never stolen a penny's worth before, and that the shame would kill his father. He promised, if we would keep his secret, he would be a different boy for the rest of his life."

"What did you do?"

"Kent agreed to let him off. He even made a friend of him afterward, to try to keep him straight. I told Kent 'twas no use," said Doty, hotly, "and it wasn't! We found him in the cave this very morning with fresh plunder."

"This is very interesting," said Jarret, "but what has it to do with the lost money?"

"You shall hear," said Colonel Congdon. "Mr. Hampden, when you received the money from the officers of the bank, did you carry the package as it was given to you?"

"No, the wrappings were clumsy. My wife removed them, and substituted a lighter covering."

"Describe it," suggested Judge Morris.

"It was a Chinese silk paper, soft and tough, in color gray, flecked with red. I have never seen any like it. It was brought from China by a sailor."

"Is that it?" said the Judge, holding out a small roll.

Mr. Hampden seized it, trembling from head to foot. "It is the paper! But the money—the money?"

"Ah, if we knew!" said the Colonel. "Officers, guard the door; a man is trying to escape. Let no one pass out! Constable Jourdan, will you tell us where you found this paper?"

The constable came to the front of the platform with a lumbering bow, and said:

"I was called on this morning by young Hampden. He said he had dropped, two months ago, a notebook in a hole they call Wetzel's cave. Yesterday it was brought to him, with a bit of this here paper stuck to it. I was given to understand that it was of importance. So I went to the cave with him, and there we found this roll, with a quantity of other stuff. I arrested the boy that had them."

"Who was he?"

"Josiah Jarret."

"It's a lie!" Jarret, who had tried to escape from the room, now rushed forward to the platform. "My boy steal!" he exclaimed. "Colonel Congdon, it is a trumped-up lie!"

Mr. Hampden interfered. "Take care, Congdon! I don't want a boy's reputation ruined to save mine! The package was changed on the road. How could Si Jarret be concerned in that?"

"The package," said Congdon, "was changed, I believe, in your own house. You left it on the table while you went upstairs. This boy was in the next room alone. It needed but a minute to slip out the bundle of notes from the case, and substitute the bundle of paper which was ready in his hand."

Jarret sprang forward, his hair disheveled, his eyes contracted, his teeth exposed. He appeared, indeed, like an animal driven into a corner, and fighting for his life.

"Prove it! Prove it!" he exclaimed. "What is this trumpery bit of paper? There may be reams of it in town."

Judge Morris came forward reluctantly.

"Yes, yes," he said. "I'll tell what I know, Congdon. I want to see justice done. I marked the money—yes, every note of it, for my own satisfaction. Jarret had made me uneasy about the money, and I marked it with a little red cross in one corner. I told nobody, not even Jarret."

He sat down perspiring, and grumbling to himself.

A queer dwarfish figure stepped into his place. Some of the audience who knew him began to laugh, and some to protest angrily, expecting some ill-timed antics from the corn-doctor. But Nero was grave and earnest, and went straight to the point.

"I am a travelling merchant," he said. "My name is Fife. Last Tuesday I went into the bank to have my small notes changed for larger. Mr. Jarret made the exchange. He gave me eleven one-hundred-dollar bills."

"Show those bills to Judge Morris," said the Colonel.

"That is my mark," muttered the Judge, after he had examined them.

"I heard the story of the lost money," said Nero, "and as soon as I saw the mark on my bills, I suspected I had some of it with me. I turned back with it."

Jarret by this time had controlled himself. He

Digitized by Google

stood forward, coolly enough, though his mouth worked convulsively, and betrayed the fury and terror in his soul.

"It is all a clever scheme devised by Hampden to hide his crime!" he called out. "It is a pity he could find no better tools than his own son and a crazy mountebank! Take their evidence away, and what does this fine story amount to?"

"Mr. Jarret," said Colonel Congdon, "it is too late!" He spoke with a faltering voice, for he had known the man for many years. "The notes have been identified with which you paid two tradesmen; and your son, since his arrest, has confessed that at your instigation he changed the package. Judge Morris, may I suggest that, as a magistrate, it is for you to order this man's arrest."

"Yes, yes, I suppose so!" said the Judge. "Officer, take Mr. Jarret into custody."

As the constables dragged him out of the hall, the Judge said, "Well, thank heaven, we can shake hands with Ralph Hampden!"

A loud cheer broke from every man before him. But Hampden was not there to hear it. As soon as his innocence was proved, he had left the hall by a door near the platform, unseen by the crowd.

The people, disappointed of their hero, grew impatient as a thin, dark man, in the long black coat of a minister, rapped on the rail of the platform to command attention.

"My friends, I am not going to give you a sermon, I want to tell you a story."

He paused until the confusion died down into silence.

"It is a short story, an interesting story, and I can vouch that it is a true one.

"More than thirty years ago, there lived in Maryland an obstinate, wrong-headed, wicked old planter, whose name was Stoughton. He adopted a nephew—an orphan boy. Soon afterward he married a widow with one child. This widow had wealth, but she was a meek little woman, whom he could drive and bully as he chose.

"He drove and bullied her into her grave. Her child, a crippled daughter, remained in his house. Although the larger part of his property had belonged to her mother, her step-father had got possession of it. He treated the girl brutally, and when he died, left every dollar to his adopted son.

"The boy, a hot-headed, generous fellow, went to Annapolis, transferred the whole estate to the poor cripple, and to stop all action on her part, disappeared. He ran away, gentlemen; went to seek his fortune, without a penny or a friend.

"The woman tried in vain for years to find him. She died a few months ago, leaving the whole property, which has largely increased in value, to him. I am one of the executors of her will, and have been searching for him for a long time in vain.

"I have found him, here. He dropped the name of his uncle, and kept only his own. It is Ralph Hampden. You have the mystery of his life, now!"

Mr. Hampden, meanwhile, was at home. He was too much excited to sit down, or be quiet for a moment. He caught Carey to his breast, thanking God that the stain was gone from her name, and then set her down nervously, and went to the table where Kent was eating his supper.

"Take care, my son! Tom told me you had scarcely eaten for two days. You ought to eat a very light meal. Carey, cut your brother another piece of meat! You ought to be proud to wait on him; he has saved us all from ruin. He has given me more than life—more than life!"

Then he stopped to scold his wife, who was crying softly by the fire.

"What are you crying for, Sarah? Because you have such a son? Because God has brought us up out of the depths—the depths?"

Then he went to the window and looked up to the clear heavens, his heart throbbing, and his eyes wet with hot tears.

The next minute the silence was broken by the sound of drums and cornets, and tremendous cheering. Then Tom Congdon burst in.

"They're coming, Kent! The town's coming! They've put your father in nomination again for Mayor, and there won't be a single vote against him when election day comes. Mr. Kaimes told his story, Mrs. Hampden, of when Mr. Hampden was a boy in Maryland, and you would have thought the roof would come off with the shouting! They nominated him then by a rising vote, and—oh, I beg your pardon, sir! I did not know you were here!"

Tom rushed out to the door again.

Mrs. Hampden stood up, trembling. "Your story, Ralph? When you were a boy?"

"I am thankful that you are to hear it at last, Sarah. But I am glad you trusted me—you and Kent."

Kent looked after them as they passed into the hall.

"I am glad I trusted him and God," he thought. In all his after life, he never forgot the lesson of that hour.

The noise grew more deafening without. Drums beat, trumpets brayed, and the advancing mass of people shouted.

Kent saw the little peddler at the door, and dragged him in.

"Father, this is our friend to whom we owe so much!" All Nero's swagger had disappeared.

"I knew you as a boy in Maryland, sir," he said. "I kept track of you all these years; but Nero Fife can hold his tongue! If a man has a mind to do a noble, generous deed, Nero Fife is not the one to balk him! The boys saved my life, sir. More than that, they treated me like a man, not like a clown, as most folks do!"

The tears stood in the little man's eyes.

Colonel Congdon entered hastily. "They are calling for you, Hampden! You must show yourself. Don't ask for my place in Congress, old fellow! They'll give you anything you want, to-night."

The Colonel stood inside, laughing, as he heard Tom and Nero join madly in the thunder of welcome.

A shrill shout of "Kent! Kent!" followed.

"The Wild Beast Slayers are calling you, Kent," Colonel Congdon said. "I told them just now that you would represent this part of Virginia in West Point."

Kent came quickly up to him. His lips moved, but he could say nothing.

"Yes, yes, I understand! You deserve it. Go out to your friends, my boy."

Carey had the woman's part of the triumph. She looked through the window of the dark, quiet parlor at the tumult and rejoicing outside, half-frightened and half-indignant. Had these people only found out just now what manner of man her father was? *She* had known it always!

For her, she was most glad that they could keep the dear old home now, and the garden and her trees, into which she climbed every day to look out into the wide world, and think what she would do there, some time.

REBECCA HARDING DAVIS.

SNOW-WORK.

Come see the north wind's masonry!
Out of an unseen quarry, evermore
Furnished with tiles, the fierce artificer
Curves his white bastions with projected roof
Round every windward stake or tree or door.

THE MANGOLDS' VALENTINE.

"There's nothing against the Mangolds as I know of," the jolly storekeeper at the Rock Prairie settlement remarked, "but it's plain they don't amount to much."

"That's so," spoke up one of the settlers who were warming themselves by the fire at the stove on an early February evening. "They make the two little fellows do all the work. I've never seen the father anywheres."

"Neither have I," said the storekeeper. "They come here in September; the first we see of 'em was noticing the white-topped camper's-wagon standing on the section of government land near the cabin that the Blagg boys left when they found the land wasn't first-class. The two boys have been here for a few things, and always paid for what little they got; but they wouldn't talk much. I guess they're pretty hard up, and I've thought I'd go over and see 'em, but I never got to it."

The other men agreed with this history of the family, and remarked that they, too, had thought of going to see the family, but had never carried out their purpose.

One had passed the cabin about a month before; he had seen a woman through the window, but nothing more was known of them. They were evidently the one family of delinquents in a prosperous community of settlers.

"Nice, open winter," remarked Squire Gillett, as they all rose to go.

"Yes," said the storekeeper. "Plows'll be going next week, though the nights are kind of chilly yet."

"If the Mangolds expect to hold government land, they must get some plowing done right off."

"Correct. Too bad the old man puts it all on those two boys."

Buttoning up their heavy coats, the settlers mounted their ponies, and rode homeward together.

"There's the two boys now," remarked Squire Gillett, when they had ridden two miles or more across the brown prairie. Looking off to the west, they saw two small boys mounted on large, rawboned work-horses, their outlines distinct against the sunset sky.

The two boys were jogging along slowly and in silence. Their slender forms seemed oddly in contrast with the size of the horses they were riding. They shivered in the raw evening air. Heavy clouds were coming up in great black masses from the northeast.

"We must hurry, Joe," said one of the boys, "or we'll get wet."

"I suppose so, for our coats aren't quite waterproof," said the other.

"Say, Clive," Joe went on, after a moment's silence, "don't you think it's been a pretty lonesome winter?"

Joe nodded three or four times, rather ruefully.

"I shall be glad enough when spring comes," he continued, "for then papa can get out of doors and see folks."

"He's pretty sick, don't you think?"

"Yes, Joe, but mamma says he's feeling better, and if we're brave, strong boys, he'll get well again."

"But the plowing? Can we do it all?"

"Do it? We've got to do it, and there are only a few days left before the time will be up, and if we don't have it done we shall lose the claim. It's too bad the harness broke this afternoon, but if the storekeeper has some straps, we'll be all right."

The horses had started into a gallop, and the boys bobbed awkwardly in their seats. Over the swells, down the grassy slopes they went, and then, with a still faster pace, whirled down another declivity, and crashed through the dead sunflower stalks and tumbleweeds that covered the bottom of the slough.

They had gone but a few yards here when the horses suddenly stopped, and sent the young riders sliding forward to the animals' shoulders and manes.

The object which had stopped them was a large and dilapidated "prairie schooner," which stood at the side of the trail. The horses that had been attached to it browsed upon the dead weeds.

A camp-fire had been started beside the wagon, and near it, his hands holding his head and his elbows on his knees, was a flannel-shirted and unkempt man.

He did not look up until the boys called to him, and then he raised a worn, anxious, hopeless face.

"Anything the matter?" Joe asked.

"Yes, something's the matter. It's the little one." He motioned toward the wagon.

"Sick?" asked Joe.

"Yes, and maybe dying. I've come for days from the West, calculating to take the child home to the old folks in Missouri, but the little codger couldn't stand the journey."

The boys slipped to the ground, and by the light of the fire, approached the back part of the wagon. They drew aside the cover, and let the firelight into the interior.

A child, hardly more than a baby, was moaning on the bed of straw within.

"Can't we help you?" asked Joe, anxiously.

"I don't know. I've tried to find a doctor, but I don't seem to make out. Maybe the folks are afraid of me. Anyhow, they don't seem to want me around, and now I've clean lost my way."

"I'll tell you what we'll do," said Joe. "We'll take you home. Papa can doctor people."

"But the harness, Joe?" said Clive.

"That's so; I forgot it. Well, I'll tell you: You drive home with the man, and I'll go to the store. I aint afraid."

In a few minutes the emigrant was on the road toward the Mangold cabin with Clive, while Joe, his courage just a little weakened by the appearance of the still darkening sky, was riding rapidly in the other direction.

"My goodness, who's this!" exclaimed the storekeeper, as he was putting up the blinds of the lonely prairie store for the night. He could hardly believe his eyes when the young rider presented himself.

"And you've come all this way alone?" he said, when he had heard Joe's story. "Well, my boy, you must be a good one. Look here! I'm going home with you."

He put on his overcoat, and wrapped a shawl about the slender boy's shoulders.

"Come," he said, picking up a bundle which Joe thought was certainly too large to contain nothing more than the piece of harness, "let's go."

Together they mounted the horse, and through the falling rain the two rode on mile after mile, the steady swish of the horse's feet through the dead grasses being the only sound to break the stillness of the night.

At last the faint light in the cabin of the Mangolds shone across the plain, and a few moments afterward the storekeeper and the boy had entered the house.

"I tell you what," said the storekeeper the next evening, when a group of settlers had again gathered about his fire, "it wasn't a pleasant sight. There was the baby moaning and suffering, while the little woman was trying to comfort it. Over in the other corner was Mangold himself."

"The old man, eh?" said the Squire.

"He's sick, boys, pretty sick. He's been a kind of doctor in the East, but was ordered out here for his health. He hasn't been able to go about any since he came, and his brave little wife and the two boys have looked after everything."

"That's it, eh?"

"Yes. And besides that, out of all of us they were the ones to take care of the camper. The poor fellow was about discouraged, and it was a godsend to him that the boys came across him, for the baby'd surely died right there in the ravine.

"More'n that, boys, I found out that the plowing that has to be done on the claim to hold it from the government aint near finished. Those children have been trying to do it, and they've got only a few acres plowed. The time expires on the fifteenth of the month,—that's day after to-morrow,—and the claim's likely to be jumped by some outsider."

"I know two fellows who've got their eyes on it," said the Squire. "They've been wanting it for some time, and are going to make a break whenever they can. They're sharp, and I think they've got wind somehow that the railroad's going to strike through that quarter section."

"It'll be tough on the Mangolds to lose their claim," slowly droned out a lank herder, who was occupying the top of a sugar-barrel, "but then they don't amount to much in the settlement, and the Hay boys being hustlers—"

He got no farther. The look that the storekeeper gave him quite upset him, and he relapsed into silence.

Then a very important conference was held between the storekeeper and the other settlers; and after it the party separated with smiling faces and a satisfied air.

The rain had cleared the atmosphere, and next morning the sky gleamed in such blue splendor as only prairie skies can know. The air was full of the softness and warmth of an early spring morning in Southern Kansas.

At an early hour there were seen here and there wagons wending their way along the prairie. In each wagon there was a plow or a harrow, and in some of them were heaps of corn and other provisions.

Clive and Joe looked out of the Mangold cabin, and noticed that the horses' heads were all facing them.

"Let's hurry and hitch up," said Joe, "and get to plowing. All the folks are coming by here, and we ought to be at work."

They ran out and began harnessing the horses to the plow, the stranger emigrant looking on dolefully.

"Hold on there, boys! Unhitch those horses!"

It was the storekeeper, with a grin on his face.

"All you have to do to-day," he went on, "is to boss. We'll do the work. Now, say, where do you want your forty acres plowed?"

Joe, bewildered, looked around upon the gathering teams, and pointed to a tract around which the boys had made several straggling furrows.

"All right. Now, fellows, hurry up!" shouted the storekeeper.

There was a great rattling of chains and much laughter, as team after team went with its plow to the corner of the field, presently to send a long chocolate ribbon of sod rolling after as it took its way around the great square piece of prairie.

"Twenty-four of them," said Mrs. Mangold, counting, with extended finger, her worn face lighting up with pleasure. The strange visitation, and the pile of provisions brought by the settlers, had almost overwhelmed her.

Following the plows were harrows; and the land rapidly took on the appearance of a field long tilled. The sun was half-way across the sky, when all stopped at a signal from the storekeeper.

"Boys," he said, when the men had gathered around, "now let's eat dinner, and then we'll finish. But while we're finishing how would it do for some one to go to the village and bring out a certificate of entry on the claim? That'll make it all sure. By that time he will be able to prove that the required plowing is done, you see."

The proposition was received with a shout of approval.

"I'll go," said the lank herder, who had been completely converted to the Mangolds' side.

As he had the fastest pony in the neighborhood, he was allowed to take the trip.

Just before the sun reached the horizon, the square of prairie sod had been blotted out.

As the party gathered around the cabin in the twilight, the herder rode up, his horse white with foam. He held a large official envelope in his hand.

"February the Fourteenth," read the storekeeper, aloud, beginning the certificate. "Boys," he said with a laugh, looking up, "this is St. Valentine's Day."

"That's so," said several of the settlers.

"Tell you what let's do," proposed Squire Gillett; "let's give the certificate to the woman for a valentine!"

Gathering together, with the Squire at their head, they knocked at the door of the cabin. Mrs. Mangold opened it, and the pale face of her husband was seen behind her shoulder.

Squire Gillett made a very handsome little speech, and presented her with the certificate as a valentine, accompanying his formal words with some hearty praise of the brave boys.

"And the little fellow," he asked, "how is he?"

"Much better," said Mrs. Mangold. "His father will leave him here, and come back in the summer to get him. It will be safer for him to travel then."

Then she faltered a little. "I—I—cannot thank you enough, gentlemen, for this—valentine," she said, "but you know how grateful we must feel."

"Tut—tut—tut," called out the storekeeper. "No thanking. We ought to be ashamed of ourselves that we didn't help you before, oughtn't we, boys?"

"Of course we had," they all said.

"And before we go, let's give three cheers for the little woman."

The cheers went up, heartily.

"Now three for the boys," said the Squire.

"Hurrah! Hurrah! Hurrah!"

"And three for the baby," added the lank herder.

The cheers went up again.

As the wagons rattled away in the darkness,

Digitized by Google

there was great happiness in the Mangold cabin. There was happiness among the departing visitors, too; and the start they had given the stranded family enabled its members to become as prosperous and as hearty as the rest of the community.

A PRAIRIE CATAMARAN.

The Winter Recreations of a Settler in the Far Northwest.

In Three Parts.—Part I.

It is the first winter on his claim, with its bitter cold winds, its loneliness, its isolation, its nothing-to-do, which tries the soul of the settler in the Northwest. If he pulls through the first winter, and gets in a second crop from his land, he will be quite likely to remain longer. At any rate, I judge so from my own experience.

It was all very well in the autumn. I had enough to do on the land and about my cabin and cow-house, banking up and preparing fuel for winter. That I enjoyed.

But when snow came, and the freezing wind began its ceaseless sawings across the wide, open, bleak prairie, time dragged. Generally the weather was too cold to remain long out-of-doors; so I sat at my little double-pane window and looked across the country, to my nearest neighbor's cabin.

When the sun shone brightly, I could just see it, on a swell of the prairie, perhaps seven miles away. It was a little house, about twelve by fifteen feet square, of fresh new boards, built during the autumn. I did not know who occupied it. On a still morning I could see smoke rising; and when the air was very clear on a dark evening, I could see a faint light there.

Something about that smoke and that light led me to think that a family lived in it. I used to sit and wonder what they were doing or saying, and whether they had ever watched my cabin or seen my smoke.

I did not burn my own little kerosene lamp very much, for I had but two gallons of oil for the winter; but when the evening was clear and there was no moon, I sometimes set the lamp in my window for half an hour, turned up high, with a new tin plate behind it, in the hope that the people in the far-away cabin would notice the light.

A Lonely Life.

I was not homesick; at least, I never owned to myself that I was, for I had made up my mind not to be. Yet I often felt that if I had known how much I should miss my friends and acquaintances, as well as the stir and bustle of life in my native city, I might never have emigrated. I had thought, as hundreds of other young men do, that to "homestead" a claim, make a big farm of it, and grow wealthy in a new country, would be a very creditable undertaking.

I left home with many sanguine projects. I expected to hunt and fish a great deal, and for this reason brought a Winchester, a shot-gun and fishing-tackle.

The fact is, however, that Assiniboia is not an abundant game or fish country, and another fact is that the settler who intends to make a good farm will have little time to hunt.

To make a farm implies steady labor and close attention. During spring, summer and fall, I rarely feel that I can spare a day for hunting; yet it is pleasant to have a good gun near at hand, and on one or two occasions I have been glad I had one.

I bought a dog—a large, brindled mongrel—in Winnipeg. The old fellow was company, and became, I fancied, greatly attached to me; but he could not endure the utter loneliness, and the nothing-to-do of our life there after snow came. Perhaps he tired, as I did, of potatoes, corn-cake and fried pork.

He would sit and look at me, wistfully, for hours, and then would go to the door and howl. I was evidently not company enough for him, and one day he deserted me to follow three Indians and a dog-team that he saw passing at a distance.

I saw the dog when he departed, and called after him. Once or twice he stopped and looked back, but the recollection of our dull life evidently was too distasteful for him. He hurried away, and I never saw him again. I could not greatly blame him for deserting me.

Thenceforward during that winter, until February, I had only my mule and cow for company. Once I saw a small herd of deer crossing the prairie, and wolves occasionally came around the cabin at night.

Thinking of My Neighbors.

A hundred times I had thought of paying my neighbors a visit, and I sometimes wondered that they did not come to call on me. A trip of seven or eight miles, over three feet of snow, with the bitter wind always blowing, and the chance of a blizzard, is not to be lightly undertaken, however, by the inexperienced settler.

Occasionally I saw a thin line of smoke, twelve or fifteen miles distant to the westward, which I presumed came from the cabin of another neighbor; and on my way to my claim, the previous spring, I had passed three cabins, twenty miles to the eastward.

Ten miles is considered no great distance for a neighbor, in Northern Assiniboia, and five miles has sometimes been held to be too near.

In February a foot or two, more or less, of snow fell. The prospectus of a railroad land agent would lead to the belief that very little snow falls in Assiniboia. Perhaps these agents never spent a winter here.

A little later there was rain, not enough to melt the snow, but enough to harden and encrust the surface of it. The whole great, open country then shone under the sun like glass. It was a wonderful sight.

One morning, while I was feeding my mule in the shed, a box got loose on the snow-crust, and the wind carried it away. I saw it slide off, and chased it a long distance; for with a settler on these prairies, the loss of as much lumber as there is even in a soda-cracker box is felt to be heavy.

I could not catch it. Apparently it had started for the American boundary. Perhaps it set out to look up my dog.

Great inventions, it is said, are born of trifling accidents. The departure of my box set me thinking; and as I went slowly back to my cabin, I hit on the idea of a sled or raft, with a sail, for coasting over the prairie on the snow-crust. It was the thought of a moment, and in no sense the result of study. No doubt I needed something of that sort for employment. At any rate I entered upon the scheme with enthusiasm.

At first I made a kind of hand-sled, but soon learned that a sled with fixed runners could not be sailed and steered. I had never seen an ice-boat,

but gradually the plan of one was outlined in my mind. I concluded that my sled should consist of two fixed parallel runners forward, and a swivel runner aft, with which to steer it.

Sled-building Under Difficulties.

In the way of lumber and tools my resources were very limited. For the frame of my raft, I was obliged to take two sticks of joist out of my house, and another from my cow-shed. I possessed an axe, a wood-saw, a jackknife, a hammer and nails. These, with a few bits of plank and board, were all the outfit I had for carpentry.

But I must not forget my pork-barrel, from which I took sheet-iron hoops for shoes to the runners, nor a large packing-box in which my supplies had been hauled from Regina. This box I utilized as a kind of sleigh-body in which to sit, tucked up in a blanket, while sailing.

I worked two days upon the apparatus, and when it was done, the triangular frame of joist was set upon runners, each two feet long by two inches in width and six in height.

The two forward runners were made fast to the frame, but the third, which served as a rudder at the rearward angle, was attached to a swivel-post, and could be turned to right or left by means of a horizontal handle which I made fast to the top of the post at a height of two feet.

A pole which I had wrought for a flagstaff served as the mast. I tied together a few odds and ends of line, and for a sail made use of one of the cotton bed-sheets which I had brought from home. After a few trial trips, I sewed three sheets together for this purpose, for I found that my sled needed a large sail in order to make good time.

I knew little of the art of sailing a boat, but after some experiments, I caught the knack of navigating my raft. I learned how near I could run to the wind, and other details of management.

On the second day after finishing my craft the wind blew in long, steady gusts.

"Now for my nearest neighbor!" I thought. As soon as I had breakfasted, and fed and watered my animals, I banked up my cabin fire and made sail.

The sled slid away rapidly. A gust came on; I went sidewise, turned around, and capsized with great promptness.

Nothing was broken, and I had learned to keep my weight on the rudder runner.

The country about me is not a dead level, but consists of wide swells and depressions.

I flew onward like a bird. I knew I was going at a great pace, but I was so fully employed, handling my rudder and hauling my line, that I did not take an observation for some time.

I had an idea that it would take over an hour to reach my neighbor's house, and to be frank, my eyes were somewhat watery from the sharp air. Half the time, too, I was down in the depressions, out of sight of the house. It was somewhat like being out in a dory in a heavy sea.

When I looked for the house, at first I could not discover it. Then I saw it out to my right, and found that I had already run down abreast of it; but I was about a mile to the eastward of the house, and too far past to reach it by a direct tack.

So I zigzagged back to the northeast for two miles, and after two more upsets, gained a point where I could stand down toward it. Then I let the sled take the course again, with the intention of lowering sail when I had come within fifty yards of the house, and tacking and gliding gracefully into the yard.

It was now about nine o'clock in the forenoon, and as usual at this hour, there came several sweeping gusts. My catamaran shot along like an arrow. It was really great sport, and very exhilarating.

"Won't those folks stare!" I said to myself.

In point of fact, I made them stare much more than I had intended. As I was about to let go and tack, I ran suddenly into a little narrow path, trodden deep in the snow. The path led straight to the house, and my rudder runner dropped into it.

An Astonished Boy.

The jolt almost threw me overboard. For the instant I forgot to lower sail, but jerked and twisted at the handle to turn aside. At the same moment I had a glimpse of a boy, standing on a snow-drift near the house, with eyes wide open, and mouth, too. He turned and jumped toward the house door just as I struck into the deep little path, and I heard him shout:

"Marm, marm, the Old Boy's a-comin' in a sail-boat!"

I was close behind him. My sled dashed on, scattered a little pile of stove-wood, carried away a clothes-line where a row of red and yellow garments were fluttering, and ran straight into the house.

I did not carry the house away, but I struck it hard enough to injure my sled, and my mast and sail went almost over it!

I heard voices pitched at a high key within. Then the door was pulled open, and two tidy women, with frightened but resolute faces, looked out. One of them was quite young.

"Good-morning!" said I. "Don't be afraid. I'm your nearest neighbor!"

"Oh, you are, are you?" replied the older woman, dryly, with a glance at her clothes-line, in which I was badly wound up. "My Tom here thought you might be somebody else."

"So I heard him say. But I am really your next neighbor," I insisted. "My name is Jadwin. Haven't you seen my light sometimes off in that direction?"

"Yes, we've seen a light there, and can just see a house in the daytime," replied the woman, a little more cordially. The younger one laughed outright at the efforts I was making to disentangle myself from the snarl in which I was involved.

"I came to call on you," I continued, gathering up the clothes which had fallen off the line, "but I did not mean to tumble into your house in this style. It was an accident. If I have done any damage, I will try and repair it."

"That is all right," the woman replied. "Don't trouble yourself about the clothes-line. If you came down to call on us, please walk in. Our name is McCausland. We settled here in September. My husband is a carpenter, and he is at work at Regina. Emma and Tom and I are living out the homestead law here."

The McCauslands.

She led the way within. I noticed when she came out that she held something—some household utensil, I supposed—concealed by her dress. As she went before me into the house, I perceived that it was a rifle. She set it aside as if it had been a broom, without remark.

The cabin, like mine, had but one room, but there was a large cooking-stove, and the walls of the room were papered with illustrated newspapers from the United States. I found that, while the husband was from Ontario, his wife was from Vermont.

We conversed for a time about our prairie life, and I explained my catamaran, the damage to which I had by this time succeeded in repairing. Then I took leave of my new friends, and set off to make fresh acquaintances.

My course from the McCausland cabin was almost due west. I could just make the next claim without tacking, as the wind was blowing, and in the course of an hour approached in plain sight of an odd sort of hut, which appeared to be built of stones and roofed with turf.

A blithe smoke was rising from a stone chimney. I came down toward it at a famous rate of speed, for it was built on a descending slope; but mindful of my recent mishap, I decided not to run very close.

But before I had come within five hundred yards of the cabin, a puff of white smoke came out from it, a gun cracked, and a bullet skipped on the snow ahead of me! Upon that I let go my sail in haste, and as soon as I could bring my catamaran to a standstill, jumped off and waved my hat in token of peaceful intent; but though I continued my demonstrations for some little time, the occupant of the cabin did not reply or show himself.

I decided that I had better cut my visit short, and stood away for home.

The return trip proved less enjoyable than the outbound run. A great deal of tacking was necessary to gain a mile, and growing weary of it, I finally disembarked and walked home, dragging my sled behind me.

Quite late that evening, as I was eating my supper, I heard a slight noise outside, and caught a glimpse of a man's face at my window. It startled me, and I called out sharply and ran to the door, gun in hand.

My odd visitor was making off at full speed, apparently on skates. I did not fire at him.

Several inches of snow fell during the night, but next day, as I was attending to my morning tasks, a man, in fur cap and course, blue homespun clothes, made his appearance on the prairie, walking, or rather gliding, on a pair of snow-skates, fully six feet in length.

Approaching, he began an earnest discourse, evidently seeking to explain something. Over and over again he repeated the words, "*Ek thenkja bauth madar*," and made a sign as of firing a gun.

At last I gathered from him that he was the person who had fired on me the previous day. I afterward learned that he was one of the Icelanders who have settled in the British Northwest, and his speech to me signified that he had "thought me a bad man."

He had watched my return to my cabin, and in the evening had come on his skates, to make sure that I was really a settler there, and now, like the kindly-hearted fellow he was, he wished to apologize and make all right.

I readily forgave him. I could understand very little of his strange Northern tongue, but by signs I learned that he had a family of five in his little cabin, and like all of the rest of us, was enduring privations, but hoped for great things for the future.

PALMER F. JADWIN.

(To be continued.)

For the Companion.

THE VEDDAHS.

Should the reader enter the island of Ceylon on its eastern coast, and proceed toward the interior, he would traverse a primeval jungle inhabited by elephants, leopards, bears, buffaloes and innumerable smaller animals, and with a teeming insect and reptile life.

In this forbidding wilderness he does not look for human habitations. Yet, as he works his way through the matted solitude, his curiosity will be aroused, and possibly his fear awakened, when he descries a clump among the lower branches of the trees, too large for an eyrie and too small for a windfall. He peers, and wonders if any tropical wild creature can build so methodically.

The wail of a child proceeds from the perch, and echoes in the still jungle. He doubts his own senses, but he need not; it is a human voice, and the voice of a babe.

He scarcely dares to approach, lest he be greeted by a volley of bullets or a shower of arrows. Curiosity in a measure overcomes his fear, and he advances. Then the mother of the jungle babe rises from her couch, and supporting herself against the natural pillars of her nest-like home, utters a few guttural sounds, and grimaces a peremptory halt.

Her black hair hangs in unkempt masses about her dark brown back and shoulders. Her appearance is wholly repulsive, and the intruder, taking her unmistakable natural language to mean hostility, retreats into the forest.

Before another mile has been traversed, he may see a curl of smoke issuing from among a mass of vine-clad rocks; and if he can summon courage to enter the cavernous abode, he may there, too, find similar wild human creatures. Perhaps men, women and children are huddled together beneath the dank shelter of overhanging bowlders—the children naked as the monkeys that scamper overhead, and the men and women dressed well-nigh as sparingly.

These strange beings are descendants of the aborigines of the island, and are called Veddahs. The dominant native people now on the island are the Sinhalese.

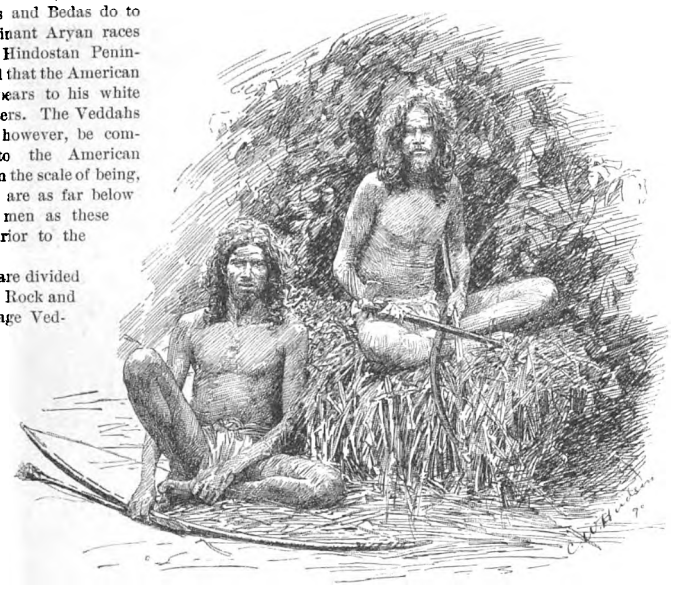
Wijaho, a dissolute Indian prince, was the first to make conquests in Ceylon. This roving prince established himself on the island about five hundred years before Christ. He found the island occupied by a race called Yakkos, and is said to have married Kuweni, the daughter of one of their chiefs. By her assistance, and through a treacherous massacre, the whole island came under Wijaho's rule.

But the deceitful Kuweni did not long enjoy the fruits of her treachery. Wijaho thought it necessary to have a more noble consort, whom he had no difficulty in finding in a southern province of India.

Upon the arrival of the new and royal bride, Kuweni was put away, after she had borne a son and a daughter. The cruelly rejected spouse wandered to Lankapura, a city of the Yakkos, and while searching the streets for a house in which to live she was recognized by the inhabitants, and killed because of her treachery.

The Sinhalese still hold to the tradition that the Veddahs are descended from the children of Kuweni, who retreated to the jungles. But whether descended from Wijaho's deserted spouse or from the Yakkos in general, it seems to be true that the Veddahs of to-day have been degraded outcasts for two thousand years.

Every succeeding generation finds them a diminishing remnant. Encroaching civilization contracts the narrow boundary of their forest domain, and hastens the time of their extinction.



At the time of the Dutch occupation of Ceylon, these remarkable aborigines were scattered along

Digitized by Google

the east coast to the extreme north of the island, and were at that time required to pay tribute in elephants to their conquerors. Now they are confined to a belt of territory along the southeast coast, ninety miles long and half as wide.

The Veddahs occupy the same relation to the Sinhalese that the primitive tribes of India, the Koolies, Bheels, Puttooas, Khoonds and Bedas do to the dominant Aryan races on the Hindostan Peninsula, and that the American Indian bears to his white supplanters. The Veddahs cannot, however, be compared to the American Indian in the scale of being, for they are as far below the red men as these are inferior to the whites.

They are divided into the Rock and the Village Veddahs. The Veddahs of the Rock take up their abode in the remote jungle, avoiding all contact with civilized life, seeking shelter among rocks or on stages erected among the branches of the trees.

A Group of Veddahs.

They eat fruit, roots and native grains, when obtainable, but depend chiefly upon the chase for their food, in the choice of which they are almost omnivorous, nothing being too repuisive for their appetites. They devour bats, crows, owls and kites with indiscriminate relish.

For some unknown reason they do not touch the flesh of the elephant, the buffalo or the bear; yet these animals are abundant in the forests which they inhabit.

The flesh of the deer and other animals they dry on elevated platforms, and then store it away in hollow trees, sealing the apertures with clay. They always cook their meat with fire and not with water. They prefer roasted monkey and the iguana lizard above all other delicacies.

The Rock Veddahs are divided into clans or communities, and agree among themselves in partitioning off the hunting-grounds by such landmarks as streams, hills, rocks and trees. Each party has a head man whose chief duty it is to apportion the honey, wax, ivory, dried flesh and other things taken during the season.

Their surplus products are exchanged with traders for such articles as in their rude life they can make use of. They bring their barterable commodities to the boundary-line of their territory, and there leave them, at the same time leaving certain signs, agreed upon in advance, to indicate what articles they want in return.

The most enterprising native traders on the island are called Moors, who bring hatchets, arrow-heads, cloth and salt to this jungle exchange, where the Veddahs have left their goods. Money is useless to them.

The traders read the hieroglyphic orders of barter, and the exchange is consummated; but the crafty and unscrupulous Moormen often take heartless advantage of the ignorant Veddahs.

The Veddah language is limited to a few words, and these are said to be a dialect of the Sinhalese language; but so low are these poor wretches that it has been doubted if they possess any language at all. One gentleman, who resided for a time where he had opportunities to study them, declares that they communicate chiefly by signs, grimaces and guttural sounds.

They have no idea of time or distance—no name for hours, days, or years. They have no doctors, no knowledge of medicine save to apply bark and leaves to wounds. They have no games, no amusement, no music, no education. They are unable to count beyond five on their own fingers. They have no caste, no knowledge of God or a future state; no temples, no idols, no prayers, no charms; no instinct for worship except a slight tendency to devil-worship, by which they hope to avert storms and lightning.

So rude, indeed, are the Veddahs that they do not bury their dead, but cover them over with leaves and brushwood in the jungle.

Although so low and degraded, they are gentle in disposition, and seldom commit grave crimes. In case of theft, the delinquent is required to make restitution, but is not punished.

Murder is almost unknown, and when discovered, is compromised with goods. The Veddahs are said to be fond of their children, and their widows are supported by the community.

The Village Veddahs are a shade superior to the tribes of the jungle, and are so called because they sometimes frequent the neighborhood of villages and build rude huts of mud and grass.

Both classes of Veddahs use rudely made bows, six feet long; their arrows are tipped with the pinions of the pea-fowl, and have long iron heads. Unlike most other savages, they are unskilful marksmen.

The number of Veddahs on the island cannot be correctly ascertained. Some have placed it at eight thousand, but more recent authorities do not estimate them much above two thousand.

In appearance they are unsightly, with prominent teeth and projecting mouths. They have a thin beard, and a matted, tangled mass of black hair. Several attempts have been made by the government and by missionaries to educate and reclaim them, but with only slight success.

JUDGMENT.

Be quick to praise; be slow to scorn:
For what the Future holds, who knows?
To-day, the vine has but a thorn,—
To-morrow brings the rose!

FRANK DEMPSTER SHERMAN.

RUSSIA.

A series of notable events which have been taking place in the Russian Empire have drawn the attention of the world in an unusual degree to that country.

The rule of the Czar, always despotic and severe, seems to have been increasing in stringency, and as a consequence, the condition of the Empire is undoubtedly restive and agitated.

Foremost among the recent acts of the Czar has been the revival of the old restrictive laws against the Jews, and the addition of new restrictions on that portion of the Russian population.

A certain part of Russia is set apart where the Jews are compelled to live, and all Jews who have resided in any town or village for less than eight years are forced, under the new regulations, to remove into this designated district.

No Jew can become an officer, either of the army or of the civil service. He is not admitted to the universities. He is confined to certain mercantile occupations, and by the new law is forbidden to hold or own real estate, or to have it mortgaged to him.

It is stated that the new restrictions, added to the old ones, will deprive two millions of the four millions of Russian Jews of the means of earning their living.

These startling facts have aroused indignation throughout the civilized world, and in some instances great public meetings have been held to protest against the persecution by law of such an immense number of human beings.

Another act of the Russian Government has been to curtail the ancient liberties of Finland, which is under the rule of the Czar as a conquered nation.

The Finns are a sturdy, honest race, and have hitherto enjoyed a large degree of political freedom. But the Czar and his counsellors have, of late, shown a disposition to reduce them also to the same iron rule which holds the rest of the Russian dominions as in a vice.

The condition of the Russian peasantry is described by Stepniak, a Russian exile now on a visit to this country, and a writer of note upon Russian subjects, as being deplorable.

He states that the mortality of the peasantry in some Russian provinces reaches the annual rate of sixty-two in a thousand, which is three times the rate in some American cities; and that the cause of this large death-rate is want of food.

The peasantry, according to this authority, have to pay one-half of their incomes in satisfying the demands of the government. As a result they have had to mortgage their little plots of land in order barely to exist.

There seems, in view of these facts, to be no reason for astonishment that the state of the Empire is one of unrest and discontent, or that we continue to hear of plots and violent attempts of revolutionists against the Czar's life and authority. The murder of a prominent Russian General in Paris, formerly connected with the police, and the killing in Moscow of a lady of rank, who is supposed to have betrayed the secrets of the Nihilists, are evidences of the continued existence of a formidable conspiracy against the government.

In December five Nihilists, several of them young women, were tried at St. Petersburg for engaging in a plot against the Czar, and all but one were sentenced to death. Meanwhile the Czar has to surround himself constantly with every precaution, to defend him from the deadly assault of assassins.

It is well for us not to accept implicitly all the statements that are made concerning the tyranny and cruelty of the rulers of Russia. Yet we cannot shut our eyes to the fact that they are guilty of many acts of oppression which revolt the civilized world, and the natural result is to create, in Russia itself, widespread discontent and resistance.

For the Companion.

UNCONQUERED.

High o'er the city's roofs a storm-blown gull,
Driven landward from the sea,
Battles against the winds without a lull,
Yet inland farther, ever back
Helpless is tossed with flying rack;
But, messenger of constancy to me,
I joy to see him facing ocean still,
As beaten souls through storm and night
May changeless face the hidden light
By heaven-sent power and strength of steadfast will.

M. A. DE WOLFE HOWE, JR.

THE INDIAN CAMPAIGN.

The campaign against the hostile Indians in South Dakota, which began with the movement of United States troops to the Pine Ridge agency last autumn, practically came to an end during the second week in January.

At that time a notable council and "dog feast" was held, at which speeches were made by representatives of the army and the Indian service and by hitherto hostile chiefs, and there was a general submission and surrendering of arms on the part of the Indians hemmed in by General Miles's troops.

Properly speaking, there has been no war with the Sioux, though there has been a campaign against a disaffected element among that tribe.

The United States Government found that certain chiefs, led by the chief and medicine-man Sitting Bull, had stirred up a fanatical disaffection among the Indians, and that parties were committing robberies and evidently preparing for a general war.

Acting through General Miles, commanding the military department, the government adopted a plan, which it pursued to the end, to forestall such a war.

This plan was to surround the country occupied by the half-hostile Indians, and taking them before they were prepared for war, gradually to draw them in to the agencies and disarm them, without bringing on a fight with them.

The seat of the apparent preparations for an uprising was in the rough and almost impregnable natural stronghold of the Bad Lands. The Indians, after being invested by troops called from all parts of the Western country, were drifting toward this almost impassable country. Sitting Bull, it is supposed, was about to start with his followers to join the armed band, when orders were given to a detachment of Indian policemen in the government employ to go to this chief's house at Standing Rock, and arrest him.

The arrest was made as ordered; but some of Sitting Bull's followers attacked the Indian police, and in the fight which followed Sitting Bull was shot and killed. A considerable number of his followers were arrested, and removed from Standing Rock.

This event increased the number of the hostiles; and a state of actual hostilities was presently precipitated by another unfortunate event.

A band of some hundreds of Indians, under a chief named Big Foot, had been arrested by a judicious movement, had broken away, and had been recaptured. They were being disarmed at a place called Wounded Knee, when some among them made a desperate attack upon the soldiers of the Seventh Cavalry.

In the fight which followed, the military lost about thirty officers and men, and nearly all the Indians of Big Foot's band, including many women and children, were killed or wounded.

After this fight more than three thousand Indians whom General Miles, pursuing his original peaceful plan, had collected at Pine Ridge Agency, broke away and joined the hostiles, and several sharp skirmishes followed.

However, the work went on of closing in upon the Indians, and at the same time endeavoring to induce them to come in peaceably. The hostiles found that they were caught in a trap, and gradually flocked to Pine Ridge Agency and gave themselves up, expressing confidence in the intention of the government to treat them fairly.

The result appears to have been due to two causes: The Indians' expectation of some sort of supernatural aid in a campaign against the whites, which their "medicine men" urged them to make next spring; and their dissatisfaction with the way in which they have been treated and fed at their agencies.

They charge that they have been cheated and starved by the government's agents, and that the government has not kept its promises to them. Many white men believe that this charge is true, and that the superstitious delusion that they were under would have been harmless but for the unjust way in which they were treated at the agencies.

It is estimated that there were at one time about three thousand warriors among the hostiles, and General Miles had under his command about ten thousand soldiers, scattered about at different points.

RUINED.

The corridors of the station-house were lined with benches, on which sat a few burly policemen in their blue and gilt uniform. In the inner rooms were congregated old bloated drunkards, hardened women charged with crime, a terrified young girl, and one or two children.

A small man, with a keen, steady eye, also in uniform, answered the inquiries of visitors.

"Yes, we see strange things here," he said. "But one gets hardened, looking constantly at the black side of human nature.

"I've seen sights here, though, that would wring any man's heart. There was a woman one night sat on that bench yonder that was brought in for petty larceny.

"She was a pretty, gay little body, who had tried to keep her place in fashionable life with little money, but when she was pushed hard, stole a velvet dress.

"She wouldn't give her name, and cried pitifully, begging to be let go. But when one of the officers brought in her old father, she grew still as death.

"'I will never disgrace you again,' she said, and turned her face to the wall.

"When they went to take her out to the prison van, she was dead. The action of her heart was weak, the doctors said, and shame and misery bore on it too hard.

"There was no use prosecuting a dead woman. Her father took her away, and the matter was kept out of the papers.

"But a thing happened one night that seemed to me more terrible than that.

"About midnight two or three carriages drove up, and a party of ladies and gentlemen came in, wrapped in their furs and opera cloaks. They had been at the theatre, and had come down out of curiosity because one of their companions had promised them 'a glimpse of real tragedy, more dramatic than anything they would find on the stage.'

"So in their gay dresses and diamonds, some laughing, some ready to cry, but all pleased with the new excitement, they peered in at the poor wretches.

"Among the prisoners was an old hag, who was near to death with long faithfulness to vice and drink. She held out her filthy hand, begging.

"One of the ladies came up close, and looked at her long and curiously. I heard her name, and knew it. She belonged to a good family in the city, and was famous for her beauty and recklessness. She had been married but a year, and was already divorced. But there was about her an odd, affectionate sincerity which, people said, endeared her even to those who blamed her.

"She stood still, looking at this bleared old woman, her face growing white. Then she dropped a gold coin in the outstretched hand.

"'I wonder,' she said, 'who will give me a gold piece when I sit where you do now!'

"Her friends dragged her away, laughing. I smelled champagne on her breath, as she passed me. But it was a terrible thing, for I knew she had foreseen what would happen to her. It would have been better if she had looked on her own dead body.

"Only we policemen know how many fast, champagne-drinking fashionable women end here at last."

The policeman's story was true in every detail.

We tell it to show how short and steep is the road downward for the woman who, whether thoughtlessly or deliberately, enters upon it.

To conceal such dangers from young girls is as false kindness as to send innocent children to walk over the hot, thin crust of a crater without warning that death lies below.

GOOD IN THE WORLD.

If Sir Thomas More could write to his wife, as he did, on the eve of his execution, "I pray thee, dear wife, be merry in God," the most doleful among us can surely charge ourselves to be cheerful under our lesser misfortunes.

"Serve God and be cheerful," was the motto of good Bishop Hacket, and another voice worth hearing has told us that—

"Cheerfulness is a hymn of praise to God."

There is excellent common sense, also, in keeping up a good heart. The Reverend F. Arnold, author of "Three-Cornered Essays," reminds us that, when Chatterton committed suicide, people were just beginning to inquire about him, and would presently have come to his rescue.

A certain Englishman destroyed himself through fear of coming to want, and all the time a large legacy was lying ready for him. The man who persistently believes in better days is the one who sees them, for he patiently "holds on a little longer."

Perhaps he does so because he has by nature a sunny disposition, and possibly because he loves his kind, and prefers not to inflict on them the sad sight of a woful countenance. He subscribes to that healthful, hearty verse which tells us,

"If the world's a wilderness,
Go, build houses in it."

He is clever enough to have learned that there are bits of brightness to be found everywhere, even if they only flash back from wave-wet pebbles on the beach. Though it may not be bright enough to give us warmth, God's sunshine smiles at us from many such insignificant bits of creation.

Lord Melbourne once told a melancholy friend,

Digitized by Google

who was walking with him late at night through the London streets, that he might at least have amused himself by seeing the lights flash from the backs of the lobsters in the fishmongers' shops.

There are few of us who cannot take the humorous suggestion to heart, and adapt it to the varying needs of our days.

A RIDICULOUS DUEL.

Nearly all the world now recognizes the folly and wickedness of duelling, and yet the practice survives in two of the most advanced and enlightened countries of the world, France and Germany.

In France, though it is against the law, public men, legislators, ministers of state go out to fight duels, or pretended duels, though few receive any but slight injuries in them; while in Germany, though civilians seldom engage in "affairs of honor," there is a regular and recognized duelling code in use among officers of the army, prescribed by the Emperor himself.

The epoch when duelling was most frequent and bloody was probably the early part of the present century, or the last days of the last century. It was a period of military expeditions, and all sorts of swashbuckling in Europe, and the swashbuckling spirit overflowed into our own country.

The duelling hero of that epoch, in France, was the Marquis Merle de Sainte-Marie, whose duels were almost incessant; and one of his affairs of honor was so silly that it helped to set in motion the current of ridicule which has made duelling so much less honorable than it once was.

One day another famous duellist, Pierrot d'Issac, came to see his friend, the Marquis Merle de Sainte-Marie. It should be explained that in French *pierrot* means sparrow, and *merle* means blackbird.

"Marquis," he said, "I am a Bonapartist, and you are a Royalist. Moreover, I am the Sparrow, and you are the Blackbird. Doesn't it strike you that there is one bird of us too many?"

"It does, precisely," said the Marquis. "My choice is pistols; and as is appropriate for birds of our species, let us fight in the trees."

"Agreed," said d'Issac.

As if it were not a sufficiently ridiculous thing that one man should challenge another, because his name was Sparrow, and the other Blackbird, the duel was actually fought from trees. The seconds stood on the ground below.

The pistols were fired at the signal. There was a rustling among the leaves of one of the chestnut-trees. It was Pierrot d'Issac, who, wounded severely in one leg, came tumbling to the ground "like a ripe chestnut," Sainte-Marie's seconds said.

Fortunately he caught on one of the lower branches, and was helped to the ground by his seconds. At this point Merle de Sainte-Marie began to chirp triumphantly; imitating the song of a blackbird. D'Issac waited until he was recovered from his wound, and then challenged Sainte-Marie for the chirp.

This time there was nothing amusing about the duel. It was fought with swords, and Sainte-Marie was badly wounded. The sparrow had avenged himself upon the blackbird.

FROM RUFF TO NECKTIE.

The necktie, now become a purely ornamental detail of dress, was originally useful. It was intended to protect the throat. Its history may be traced from the time of the Stuarts in England, when immense ruffs, which served as neckcloths and collars, were worn.

Later neckcloths or cravats were adopted, and no doubt were a welcome change from the stiff, uncomfortable ruff. They were of Brussels or Flanders lace, tied in a knot under the chin, the ends being allowed to hang square.

Still later they were worn much longer, the ends being passed through the button-holes of the waistcoat.

The lace neckcloth was succeeded by small cambric bands, but was reintroduced in Queen Anne's reign, and did not go out of use entirely until about 1735. Then a broad silk ribbon, tied in a large bow in front, was worn, and this in turn was followed by white cambric stocks buckled in the back, and by muslin cravats, which were tied in front in an immense bow.

In the early part of this century the stiff linen collar had begun to be worn, and the cravat was passed twice around the collar, and tied in a fanciful bow in front.

About 1820 cravats were made very wide in the centre, and tapered off toward the ends. Thirty years ago stocks and cravats began to disappear, and scarfs began to take their place. From these scarfs, gradually growing smaller, was developed the modern neat necktie.

SKETCHING A POEM.

Few strangers have been admitted into a poet's study while he was at work composing a poem, for poets agree with Browning:

"A peep through my window, if folks prefer,
But, please you, no foot over threshold of mine."

Mr. Gosse, however, has, in his "Robert Browning, Personalia," given us a glimpse of that poet while putting together the frame of a poem.

Mr. Browning, while at Cambridge, proposed to Mr. Gosse, one June afternoon, a temporary retreat from society. They retired to a sequestered part of the beautiful Fellows' Garden of Trinity, where, seated in a garden-chair under the shadow of a tree, Browning talked of his early life and aspirations, and of Italian memories.

In the midst of these reminiscences, he unconsciously betrayed his method of composing poems. He had told a story, narrated to him by a Tuscan nobleman, who had shown him two miniature-pictures, the work of a young artist, for which he had expected to receive the prize in some local contest. Being unjustly defrauded, the artist broke his ivories, burned his brushes, and indignantly swore he would abandon the thankless art forever.

Suddenly Mr. Browning reflected for a moment, and then said, "There's stuff for a poem in that!"

Immediately, with great vivacity, he began to sketch the form it should take, what features should be suppressed, and what should be substituted.

Finally he suggested the moral, in which the spirited defiance was shown to be an act of tame renunciation, the poverty of the artist's spirit being proved by his eagerness to snatch a benefit simply material.

Browning said that he had never before reflected on this incident as one proper to be versified, but in five minutes he had left it, needing nothing but the mere outward crust of the versification.

"It will be a matter of some curiosity," Mr. Gosse adds, "to see whether the poem so started and sketched was actually brought to completion."

RAIN AND EXPLOSIONS.

Under the direction of the Forestry Division of the Department of Agriculture, experiments to produce rainfall by the explosion of dynamite are to be made. The theory that rain may be produced by explosives is based largely on the fact that nearly all the great battles of this century have been followed quite shortly by rain.

During the siege of Valenciennes in 1793, the weather, which had been hot and dry, became violently rainy after the cannonading commenced.

At the battle of Dresden in 1813, the weather, which had been serene and very warm, suddenly changed. Vast clouds filled the sky, and soon a torrent of rain fell.

At Waterloo, according to one authority, the weather during the morning of June 17, 1815, had been oppressively warm. The atmosphere was close, and a dark, heavy cloud hung over the combatants. Brigade guns began firing. The concussion seemed to rebound through the still atmosphere, and to communicate like an electric spark with the heavily charged clouds above. A violent thunder-clap burst forth, which was followed by a great downpour of rain.

One of the builders of the Central Pacific Railroad states that he was compelled to do a great deal of blasting through a part of the country where rain had never been known to fall in considerable quantities, and where it has never rained since. But during the period of the blasting, nearly a year, it rained every day.

Humboldt states that the eruption of a South American volcano in a dry season sometimes changes it to a rainy season.

It is believed also, that in very warm, calm weather the burning of woods and long grass produces rain. Extensive fires in Nova Scotia are generally followed by floods of rain.

Whether rain can be artificially produced without expense too great to make the enterprise worth while, and without dependence on a favorable condition of the atmosphere, are questions which the experimenters have yet to decide.

FATHER'S KISS.

For father and son to kiss each other is not so common in this country as to mean nothing; but it is always a pleasant sight to witness, and only those who have a false notion of what constitutes manliness can see anything "babyish" in it. This incident is reported by the Hartford *Post*:

A father was seeing his son off on the cars for some distant point. There was a moment of quiet conversation between the two, perhaps a few words of such advice as a father should give a son, and then the train came thundering into the station.

As the latter, a tall fellow well along in his "teens," stepped on the platform, he extended his hand and his lips to his father. There was a gentle kiss of farewell, and the two separated. There was no gush, no nonsense, no affectation; just the expression of fatherly tenderness that had followed that son since he lay in the cradle.

Is there any danger of that boy straying from the path affectionately pointed out by his father?

Or is there any danger of that father ever having to excuse that son because he is "sowing wild oats?" We think not. The gentle power of a mother's kiss has been sung by poets, but is there not also a wealth of tenderness and a lasting memory for good in the kiss of a father?

PRIVATE INTERVIEW.

One may sometimes be made to see the uselessness of a foolish habit by being made the victim of similar behavior on the part of another. Here is an example of being paid "in one's own coin:"

A landlord in a country village was busily employed at his desk, when a farmer came to the door, and asked to see him.

The man was asked his errand, but he persisted that he must see the hotel-keeper alone. The latter stepped outside, when the farmer motioned him to follow, and walked around to the rear of the hotel.

When they were well around the corner, the farmer stated that he wished to buy a cow, and had heard that the landlord had one to sell.

"Come on," said the other, and led the way through a garden, a patch of potatoes, and after climbing a fence, through a muddy barn-yard and into the hotel barn.

When they were inside, the landlord put his mouth near the other's ear and whispered,

"Say, neighbor, I've sold my cow!"

TENDER-HEARTED.

Judge Q——, who once presided over a criminal court Down East, was famous as one of the most compassionate men who ever sat upon the bench. His softness of heart, however, did not prevent him from doing his duty as a judge.

A man who had been convicted of stealing a small amount was brought into court for sentence. He looked very sad and hopeless, and the court was much moved by his contrite appearance.

"Have you ever been sentenced to imprisonment?" the Judge asked.

"Never, never!" exclaimed the prisoner, bursting into tears.

"Don't cry, *don't* cry," said Judge Q——, consolingly; "you're going to be, now!"

RETURNING THE FAVOR.

A story told of Mr. Whittier by a Boston lady illustrates his gentleness and courtesy:

A few years ago he called upon this lady one evening when the streets were very slippery. When he rose to take his leave, she feared that he might slip and fall upon the steep sidewalk. Accordingly she made a pretence of needing fresh air and of desiring to post a letter, and went with him to Beacon Street, where she slipped her letter into the mail-box, and bade him good-night.

But as she started toward home, he turned also, saying, "Wait! I will see thee home, Elizabeth."

And he did not leave her until she was at her own door.

The Throat.—"*Brown's Bronchial Troches*" relieve all Throat troubles, and are not injurious. Sold everywhere, and only in boxes. Price, 25 cents. [Adv.

"I will never buy a cheap extract again," said a Mrs. Brown, when she found her child's life in danger from eating an ice cream flavored with an extract recommended for its cheapness. Buy Burnett's, and be sure.

HEYWOOD TRADE MARK SHOE

For Boys

This shoe was first made by us for use in families of a few of our personal friends who failed to find in the stores neat and stylish shoes for the boys, which would stand hard wear.

A boy's shoe should be made to stand rough usage; this can be done, and at the same time its style may be preserved, but it costs a little extra.
Isn't it worth something?
Ask your retailer for a pair of the Heywood Shoes for Boys—if he doesn't keep them, we will send them to you—Button or Lace—Sizes 13 to 1½, $2.75; 2 to 5½, $3. Three widths.
Send a 2-cent stamp for our circular, telling you how to secure a pair for yourself FREE.
HEYWOOD BOOT & SHOE CO.,
WORCESTER, MASS.
REFERENCE—Any National Bank. [133]

MUSIC 30c to $1 Pieces at 10c Send 10c for trial Order. Vocal or Inst'l, Cat'l FREE. Windsor Music Co., 215 Wabash-av. Chicago

The Storm Slipper

is so high in front that it reaches almost to the top of the boot, and prevents any moisture from leaking in through the button-holes, and it also protects the boot from the dripping dress.
AT ALL SHOE STORES. ASK TO SEE IT.

"From the Forest to the Foot."

We have recently published a handsomely ILLUSTRATED SOUVENIR, describing in an interesting manner the process of making a Rubber Shoe, from the time the raw rubber leaves the forest until the finished "rubber" covers the foot. Ask your nearest shoe-dealer for a copy, and if he has none write us direct and we will see that you get it.
BOSTON RUBBER SHOE CO., BOSTON, MASS.

A Waterproof Coat.

This durable Coat can be worn on many occasions, and for many purposes: Hunting, Farming, Fishing, Tramping, Boating, Gardening, Playing. It is made of strong Brown Duck, with four outside pockets, two inside pockets, and a collar. For wear in sunshine or in rain.
When ordering, send Chest measure. Sizes, 32 to 44 inches.
Any COMPANION subscriber can have one of these Coats by sending us ONE new subscriber and 10 cts. additional. Price, $1. Postage and packing, 30 cts., when sent as a premium or purchased.
THE YOUTH'S COMPANION, Boston.

JEREMY.

A BALLAD OF THE MAINE COAST.

"Why will you take the boat, Jeremy?
Why, my boy, will you go?
The wind is high and the tide is low,
The rocks are bare as a whale's bleached bones,
And out in the bay there the sand-bar moans—
Jeremy!
You're the last son of your mother,
The sea has left me no other.

"Last night, the air was still, Jeremy,
But the ocean could not rest;
The old moon held the new moon on her breast,
Rocking it there like an ailing child.
At dawn, to the eastward, the fog was piled,
Jeremy,
And the sun was red as an oven,
And the water with wind-streaks cloven."

"I must take the boat," said Jeremy,
"Mother, whatever befall me.
They are many—I hear them—who call me.
My father the captain, my brothers seven,
Are under the sea and their souls in heaven.
Jeremy!'
They call me—the souther's a-brewing—
They bid me be up and doing.

"There's a wreck in the offing," said Jeremy,
"I cannot see, but I know it;
They have put forth a boat with two men to row it,
They drift on the waves, and my brothers beneath—
I must go, let me go, if it be to my death,
My father calls me to wrestle
For the life of the crew of that vessel!"

Away in his boat went Jeremy,
His mother stood wringing her hands:
The waves ran up in a crowd on the sands,
The storm descended and smote the sea,
And the shouts of the wind were as evil set free.
"Jeremy!"
But her cry was blown back in her throat,
And her son went down with his boat.

IN TRAINING.

"That," said a Sophomore in one of our colleges to a visitor, "is John Black." He pointed to a wiry, muscular young fellow, who in boating costume was making his way to the riverside. "He is going to take a pull on the stream for an hour. He is completely in the hands of his trainer now."

"And what does his trainer do for him?" asked the ignorant visitor.

"He regulates his whole day. John gets out of bed at a certain minute every morning; he exercises with Indian clubs; is rubbed down; runs a couple of miles on the course; takes a cold bath; is rubbed down again, and so on until night. Every mouthful he eats is prescribed by the trainer. The day is strictly divided into hours for exercise, for rest, for bathing, and for work. The life he leads is as hard as the life of a galley-slave."

"Why does he do it?"

"He is to run against the college champion. He must put himself in training if he wants to win the prize."

"What is the prize?"

"A gold medal."

The visitor was also a young man. He did not want to run or jump or row for a prize, but he had a great ambition to live a high, noble, helpful life.

It occurred to him now, that he had not been working so hard to that end as this other boy was working for a gold medal. When his companion left him, he walked on alone, thinking of it, and he made a resolution which may seem fantastic to some of the readers of this article.

He would put his soul in training. Every morning he would give an hour to his Bible, and seek to bring his thoughts and motives into comparison with the thoughts and motives of Christ.

He would then exercise his judgment as this athlete did his body, to make it stronger. For instance, in the circle of his family and friends, his thoughts were likely to be harsh and censorious, for he was naturally a severe judge. But he would compel himself to find some good feature in each character, to think of it, and look at his friends through its kindly light.

His charity, like the athlete's muscles, would be thus strengthened by use.

The runner gave part of the day to climbing a steep mountain in the neighborhood; he thus gained power and health by the muscular exercise and by breathing purer air than that of the town.

He, too, would try to leave behind the gossip, the trivialities, the coarseness on the dead level of his daily life, and climb to the height of some noble thought, or of some great truth of science.

Moreover, as the daily bath was necessary for the body of the athlete, so must it be for his soul. He would, by self-examination, seek to cleanse it of all the impurities that might originate within, or be gathered by contact with the world from without.

Why, he thought, if this boy puts his body in such severe training to gain a coveted honor in his college life, shall I not train my soul to win a life that is gentle and true and merciful, and that takes hold of the "life that is to come."

THACKERAY'S TWO SIDES.

Mr. G. P. A. Healy, the portrait-painter, contributes to the New Haven *Register* some reminiscences of the famous men who have sat for him, or with whom he has in other ways been acquainted. Thackeray, he says, was never a sitter of his, but he met him on several occasions. Two of these meetings gave him an insight into two of Thackeray's characteristics—his weakness for titles and the society of high-born people, and his real kindness of heart, which he was given to concealing with a kind of false modesty.

One day in Paris I met Thackeray in the street.

"What, you here, Healy?" he said. "I thought you were in America." I replied that I was painting at Number 15 of that very street, and that, if he had a moment to spare on the following Thursday, I should be happy to show him my work.

At the time appointed he called, and was, for him, most amiable. In the course of the conversation he said, "So we are to meet this evening." I looked unintelligent, and he added, "Why, yes, Thursday evening. Didn't you say we were to meet at Lord Holland's?"

"No," answered I; "I am not invited."

"Ah! Really? Good afternoon!" he said, and almost instantly left the place, evidently quite disgusted at having lost his time with one whom Lord Holland had not seen fit to recognize.

Some years later I called on Thackeray in Boston. He received me with a sarcastic smile, assuring me that he felt exceedingly honored that I should condescend to think of a poor man of letters like himself. I answered with great seriousness:

"Mr. Thackeray, you quite mistake the motive of my visit. It is not the man of letters I have come to see; it is the man who cheered the last days of a poor young fellow named Cook."

Instantly his manner changed. "What! Did you know Cook?" and he spoke as feelingly as if sarcasm had not become with him a second nature.

Cook, a young American painter whom I knew in Paris, very poor and friendless, fell ill, and there was nothing left for him but to go to the hospital. There I found him, not only ill, but in terror of the doctors, who, according to his story, made use of him for all sorts of surgical experiments.

"If you can't get me out of this place, I shall die of fear!" he exclaimed one day, when I called.

I immediately started a subscription among the artists, who are never deaf to such appeals, and Cook was taken to the country. He had a cheerful room in a farm-house, and could be carried into the garden, where he enjoyed every ray of sunshine. A more grateful and happy creature I never saw.

The poor fellow's most constant visitor was Thackeray, who watched with him night after night, and cared for this young stranger as if he had been one of his own blood, and I am very sure that, in order to give the dying man one bright hour, the celebrated author would have refused even a duke's invitation.

KITCHEN ETYMOLOGY.

The study of the origins of words brings to light many odd and unexpected relationships. The word "kitchen," for example, bears little superficial resemblance to the word "cook," yet the two are from the same root, the Latin *coquere*, to cook. Other derivatives from the same source are "cake" and "biscuit" (the latter a thing twice cooked), "concoct," to cook together, and "precocious," which means, literally, cooked or ripened before the time.

The word "loaf," from the Anglo-Saxon *hlaf*, is own cousin, as we may say, to two such unexpected words as "lady" and "lord;" a lady is a loaf-kneader, and a lord is a loaf-keeper.

To "sup," or take "supper," is now to eat the last meal of the day; but the original meaning of the term was to drink, a meaning still retained by the closely allied "sip." From the same root we get the words "sop" and "soup."

How curiously terms take on a new significance is exemplified by the word "custard." In these days a custard is a mixture of milk and eggs, sweetened, and then baked or boiled. It may be cooked with or without pastry, but is sharply distinguished from it. Yet the word "custard" is from the same root as "crust," and originally meant a crust or a pasty.

The connection of the word "salary" with "salt" is a matter of general knowledge, but it is probably not so commonly known that "salad," "sauce," "souse" and "sausage" have the same saline origin, the idea of salting or seasoning having been foremost in them all.

When the ordinary reader looks in Skeat's "Etymological Dictionary" for the word "sage," he is most likely surprised to read, "Sage, a plant; see salvation." What possible connection can there be between this familiar condiment, and a condition of safety? But the answer is easy. This odorous herb was supposed to have healing virtue, and, therefore, was named "sage," a term derived from the Latin *salvus*, safe.

If we go to the same dictionary for the word "steak," we read, "Steak; see Stick." A steak was a slice of meat stuck on a wooden peg, and roasted before the fire. We have changed the custom, but retained the word. It is worth noting, also, that "etiquette," "stake," "stocking," "stoker" and "ticket," have come from the same root.

A "chop" is nothing but a "chap" or a "chip;" a "luncheon" is a "lump," a piece broken off; a "stew" is something cooked on a "stove;" and a "pudding"—from "pad," a bag—was originally an intestine filled with meat, in other words, a sausage.

"OUR FLAG."

One dreary morning late in the autumn of 1864, a number of Union prisoners were piloted up the Savannah River, past the historic Fort Pulaski, past the blockade of sunken vessels, and up within the Confederate lines.

Then down the river came a Confederate steamer, and as it turned a curve and came in sight of the Union vessels, there was heard, as if from somewhere within the steamer's depths, a muffled shout, "Hurrah! hurrah! hurrah!"

This meeting at Savannah was for an exchange of prisoners between the Union and Confederate forces. Two steamers were lashed together, gang-planks thrown across, and the exchange begun. Man for man, a steady double line, one line of Union prisoners and the other of Confederates, walked across the gang-planks for days.

"What was that hurrahing for, as the steamer turned the bend?" one of the prisoners was asked, as he came to the United States vessel.

He smiled grimly and said, "Why, you see, some of us happened to be where we could see down the river, and we caught sight of the old flag, the Stars and Stripes. We told the rest of them, and then they gave the three cheers you heard. They weren't much for strength, but they were the best we could give.

"You, who haven't been where you couldn't see the flag if you wanted to," the prisoner went on, "haven't any idea what it meant to us. In the first place it meant freedom—and freedom's a big word to us who've been penned up so long. Then it meant home—and I guess our boys like that word, too! Ask that boy sitting on the stairs; it meant life to him, and a good many more like him."

The boy on the stairway seemed quite willing to speak, but it was necessary to bend down and listen closely in order to hear his words.

"I was one of them that couldn't see the flag," he whispered, "but I could see them that could see it, and I cheered with the rest. I couldn't make much noise, but I did some loud shouting inside just the same!"

For the Companion.

A VALENTINE.

How shall I my Darling know
From another one?—
By her wealth of golden hair,
Gleaming in the sun?

By the eyes that are so blue—
Eyes to match the sky—
Or the flush the breezes left
As they wandered by,

Touching with their kiss her cheek,
Making it the hue
Of wild roses in the hedge,
Where the sun breaks through?

Nay, but there are other girls
Who have golden hair—
Some of them, the gossips say,
Weave with it a snare.

Eyes and skies of tenderest blue
Sometimes can betray—
So I must my darling know
In some other way.

Fairest cheeks that pinkly vie
With the rose at morn—
They may match the rose too well;
They may hint a thorn.

But if I explore her heart—
Find it true and strong—
Then I shall my Darling know—
I shall not be wrong:

Hair and eyes and wild-rose cheek
Fitly shall combine
To enshrine the spirit's grace
Of my Valentine.

LOUISE CHANDLER MOULTON.

ORIGINAL VALENTINES.

A queer but kind-hearted and rather sentimental elderly lady, Miss Lavinia Stripe, writes a correspondent, kept a small millinery and notion store in the village where I lived as a boy. Her store was a little box of a place, not more than ten by twelve feet in size, but it was always scrupulously neat, and bright with the gay ribbons and feathers and flowers that made most of her stock in trade.

During the second week of February, Miss Lavinia's shop windows always hung full of valentines, and in each window was a little card on which was printed: "ORIGINAL VALENTINES;" for while part of her valentines were of the usual paper-lace and card-board and tinsel variety, she kept also a goodly supply of fanciful and clever creations which were the work of her own fingers. The verses on these original valentines were also of "her own get up."

Miss Lavinia long ago closed up her little shop, and bade a final farewell to earth, but there are many men and women who remember her for her kindness and gentleness, and for whom each recurring Fourteenth of February calls to mind the little shop and the "original valentines."

I remember how I, a bashful, awkward boy of thirteen summers, slipped slyly into Miss Lavinia's shop one February evening, and laid down a silver dime, saying as I did so:

"I want to get a valentine."

"Yes," said Miss Lavinia, brightly, "and it's for a little girl?"

"Yes, ma'am," with renewed blushes.

"And you want a very pretty one, don't you?"

"Yes, ma'am," with downcast eyes.

"Light or dark complected little girl?"

"Light, ma'am. With blue eyes."

"Then here is the very one for you. I have just finished it."

The "light-complected" little girl has it still. I saw it only yesterday. It is made of two pink and blue hearts ingeniously woven together, while a golden spear runs through both. On the back is this original verse by Miss Lavinia:

"Oh, little maid with eyes of blue,
May you love me as I love you,
May our two hearts through life entwine,
And so I send you this valentine."

Miss Lavinia also composed valentine verses "to order," charging but ten cents for something like this, with an appropriate name in the line:

"Oh, the name of Mary is pleasant to hear,
And the name of Lucy is sweet to the ear,
And the name of Grace with true lustre doth shine,
But Betty's the one for my valentine."

Little Miss Stripe's verses were in demand, and caused many heart-flutterings and blushes of pleasure; and simple little rhymes as they were, they played an important part in the adjustment of certain affairs whereby sundry of the young people of the village were made happy for life.

RUNNING FROM A GRIZZLY.

Big Bill, a Swede by parentage, born in the United States, and a carpenter by trade, having taken to skin-hunting, had located his camp in the Big Horn range. He was six feet three inches in height, with broad shoulders and long arms. He was a first-rate shot, and used his Sharps rifle to bring down every animal clothed in a merchantable skin.

One morning Sir Samuel Baker, whose camp was only a mile away, strolled over to Bill's camp, and found him arranging skins, which were neatly folded and perfectly dry, without any other curing than exposure to the keen, dry air of the ten-thousand-feet altitude. Bill, in reply to Sir Samuel's question as to his success in hunting on the previous day, said, "I guess I was mostly occupied in running away from the biggest grizzly ever cubbed."

"There," he continued, pointing out the spot, "do you see that low, rocky cliff on the tiptop of the hill just above us? That was the place, just beneath, on that terrace-like projection with a few spruce-trees upon it. There's a steep way down that cliff, and when I got down upon that terrace, there were a lot of big rocks lying about.

"All of a sudden one of 'em stood up on end within ten yards of me, and sat up looking at me with the most innocent face I ever saw. That was the biggest bear I ever came across; he was as big as the largest bull I ever saw in the ranch.

"There he was, sitting up on end like a dog, and almost laughing. There was no laugh in me. I don't think I ever ran so fast in all my life."

"But why didn't you shoot him?" asked Sir Samuel.

"Shoot him?" replied Big Bill. "Oh yes, that's very likely when he wasn't farther than ten yards off, and I would have had a poor start, and no place to run to!

"No, I knew better than that, with a single-barrel Sharps. If I had had your double-barrel, with a big, solid bullet, I shouldn't have run away. But I go hunting for skins with my little Sharps, and I don't want a grizzly to go hunting for my skin, not if I know it.

"I've left him for you, and if you go there this morning, there's some snow about, and you'll likely come across his tracks. If you do, you'll be astonished, I can tell you."

HONEST GHOST.

A ghost story, of the only authentic sort, comes from England, and is related by Wilbert Beale, in his "Light of Other Days." A young man, Mr. A., one night left London to take a trip into the north of England, and had for a companion in the railway carriage but one man, a stranger.

Mr. A. addressed some remark to his fellow-traveller in starting, but the man took no notice of it, and began to read a newspaper with great diligence. Presently Mr. A. went to sleep, and on awaking, after an hour's nap, found the carriage empty. No station had been passed, and yet his fellow-passenger had vanished.

He was puzzled, and believed himself to have been the victim of an apparition or a dream.

Twelve months passed, and again the two travellers met, under precisely the same circumstances. Mr. A. resolved that this time the mystery should be solved. But he had had a hard day's work, and in spite of himself, fell fast asleep. When he awoke, it was to find that his companion had mysteriously vanished.

He now began to suspect that this second illusion might forebode some disaster, and joined his friends with a heavy heart. His sister, noticing his depression, urged him to accompany her to some neighborhood merry-making. He consented, but on entering the hall, started violently.

"There! there it is again!" he exclaimed, with a terrified look.

"What do you mean?" whispered his sister, in alarm.

"The phantom!" he gasped, pointing to an advancing figure. "I have seen it twice, in my journeys up here, and each time it vanished into air."

"How absurd!" said she, relieved. "That is the owner of Harold Park. The railway runs through his estate, and he has a private station, at which the train stops whenever it is signalled. He is deaf and dumb."

WEIGHING THE BABY.

It is hard to be wakened suddenly from a dream of bliss. The Chicago *Tribune* relates a sad experience of this sort by a young gentleman of that city in connection with his first baby. He was very proud and happy, as he had a right to be, of course.

"It's a bouncer!" he exclaimed. "Where are the scales?"

The domestic hunted up an old-fashioned steelyard that had come down from a former generation. It was the only weighing-machine in the house. The baby, wrapped in the fleecy folds of some light fabric, was suspended from the proper hook, and the proud young father assumed charge of the exercises.

"I'll try it at eight pounds," he said, sliding the weight along the beam to that figure.

"It won't do. She weighs ever so much more than that!"

He slid the weight along several notches further.

"My stars!" he said. "She weighs more than ten pounds! Eleven—twelve—thirteen—fourteen! Is it possible!"

He set the baby and steelyard down, and rested himself a moment.

"Biggest baby I ever saw!" he panted, resuming the weighing process. "Fifteen and a half—sixteen! This thing won't weigh her. See! Sixteen is the last notch, and she jerks it up like a feather.

"Go and get a big pair of scales at some neighbor's. I'll bet a hundred dollars she weighs over twenty pounds. Millie," he shouted, rushing into the next room, "she's the biggest baby in the country! Weighs over sixteen pounds!"

"What did you weigh her on?" inquired the young mother.

"On the old steelyard in the kitchen."

"The figures on that are only ounces," she replied, quietly. "Bring me the baby, John."

CANDID.

Old Captain Joe, as he was locally called, was a characteristic type of the New England skipper, and on all that part of the Maine coast where his life was passed he was as well-known as the morning sun. The stories told of him are endless, but the one which most pleases the old men of his own village is the following:

On one occasion Captain Joe was running into the harbor with a schooner very heavily loaded, and with rigging so stiffened with ice as to be almost unmanageable. A sudden squall struck her, and she was driven upon a dangerous ledge near the mouth of the bay. Here she hung in danger of foundering or of breaking in two, until the rising tide allowed of her being kedged off.

This took place in plain sight of the village folk, some of whom even took a boat and went to the assistance of Captain Joe, and the whole village knew what had happened.

The getting of the schooner afloat and up to the wharf was so long a job, that it was many hours before Captain Joe got ashore. As he made his way toward his home he met an old crony, a sea-captain like himself.

"Well, Cap'n," his friend said, "you had rather a hard brush of it this morning."

"Well, yes," Captain Joe answered, "it was rather higher than was comfortable. Some say the schooner run ashore on Thompson's reef, and some say she didn't; but for my part," he concluded, with an air of the most perfect candor, "I shall always allow that she *teched*."

POWERFUL EMOTION.

An old colored man who used to tell stories to a group of children on an Arkansas plantation before the war, had one story which the children were very fond of hearing which ended, "An' when dis innocent and accuse man got 'quitted in de co't, fo' de judge an' fo' de juhy, dey all in de co't-room sobered aloud!"

The idea that many people "sobered aloud" always had a thrilling effect upon his young hearers, although they had very little idea how it was done. Years afterwards one of them asked old Uncle Jeff what he meant by it.

"Dat's de way 'twuz tole to me, chile," said he, "'way back in Allybammy."

"But how could people 'sober aloud?'" persisted his inquisitor. "Don't you suppose they all sobbed in the court-room?"

"Go 'long, chile," said Uncle Jeff, with offended dignity; "what kind o' sorrowful soberness does that 'spress? I tell you what it was, and no 'stakin' it, dey all in de co't-room sobered aloud!"

For the Companion.

MARGERY'S VALENTINE.

There's a ding-a-ling-ling of the doorbell,
Then a patter of feet on the floor,
And Margery cries, "Oh! goody,
There's a valentine left at the door."

She looks and exclaims, "'Tis a beauty!
But, oh! it's the funniest joke,
For here's dear little baby cousin
With 'Valentine' pinned on her cloak."

Yes, the darling is standing there, bundled
In fur from her head to her toes,
One cheek is as red as an apple
And one is as pink as a rose.

She toddles along to the parlor,
Then holds up her face for a kiss—
"Was a valentine ever," cries Margie,
"So perfectly lovely as this!"

ANNA M. PRATT.

his head right under the orange dish. Off tumbled the yellow balls, and what a scurrying to catch the precious things.

The "Swifts" were upset and there was danger of breaking up the party, but fortunately Mamma Small came to the rescue and helped Bob to the end of his skein, where was tied his "valentine." Mamma Small opened it, and read for him aloud:

"'I will do lame Sally Bonny's chores in the mornings!'"

"Oh dear—if 'taint too cold!" cried Bob, rubbing his bumped spot and looking rueful, for he disliked to get up early.

"'If 'taint too cold!' No! no! you've got to, anyway, cold or hot, so there!" shouted Tom Parsons.

Then it was Tom's turn. He was deft of hand, and soon came to Valentine number two.

"I will learn to sew and knit and be handy, so to help mother. She has to work so hard for me!"

"Girl-boy! girl-boy!" shouted Bob.

"I don't care, I will—see if I don't!" declared Tom, stoutly.

Now Nettie took an end. Her skein was snarly, but her patience held out, and at the end was the promise:

"I will try to keep a soft tung!"

"Good! good!" cried grandpa, pounding his cane on the hearth.

Nan White next whirled the Swifts and got:

"I will not quarrel at home and abroad, and keep my hands clean."

So the Swifts spun round, amid dancing and shouting, bringing to Sukey Allen's hand the valentine:

"I will wate upon gramma and grampa without grumbling."

To Tim Akers:

"I will lead blind Johnny Rich to church every pleasant Sunday."

To Milly Flint:

"I'm a-goin' to turn over a new leaf and be so good that nobody will know me no more."

"Stick down the corner, Milly!" cried grandpa, shaking off his glasses with laughter.

Then came the last skein, and fly-away Jack Mills began it. His ball was one-sided and "wobbly," the children said, but the promise was straight enough:

"I won't kick back if another boy tries to crow over me!"

How they all shouted! Grandma clapped her hands softly, and grandpa drummed his cane harder than ever, making old Dan bark till the room rang.

With each "valentine" was given a present—a silk muffler to Tim, a work-basket with thimble, scissors and needles to Tom, perfumed soap and a nail-brush to Nan, and so on.

I will not say that there were not some failures, for a year is a long time, but I do know that the children's hearts grew warmer, larger and more kindly in this loving, helpful service to others.

WHY is a postman's bag on the Fourteenth of February like a confectioner's shop? There are many sweet things in it.

WHY is it dangerous to go out on St. Valentine's Day? Because Cupid's arrows are flying about in all directions.

Enigmas, Charades, Puzzles, etc.

1.

ANAGRAM.

The first and third lines of each stanza rhyme; also the second and fourth. The omitted words are all formed from the fourteen letters omitted in the last line.

Please listen, fair maids, if you wish to * * * * * * *
The myst'ry of love, as it rules in my heart.
Though long I may live, and though far I may travel,
I love best the one whom I loved at the * * * * *.

There once was a time when she saved me from * * * *,
An evil suggestion the Tempter had * * * *,
And me he deceived; but 'twas hard to take two in.
She showed me the wrong, helped me turn and repent.

What wonder I loved her? What wonder I kissed her?
She kept me from falling. She helped me to * * * *.
O, boys and young men! Are you blessed with a * * * * * *?
Take counsel of her, if she's gentle and wise.

"If You'll Exchange Your Heart for Mine
I'll Take You for My Valentine."

For the Companion.

NETTIE SMALL'S PARTY.

"Stop! Stop! Wait a minute! I'm going to have a valentine party!" shouted Nettie Small, to attract the attention of the girls and boys swinging their book-bags, talking and laughing on their way to school.

"Oh, oh! How nice!" from the girls.

"Hurrah! What fun!" from the boys.

"It's going to be real cute! Mamma says we might try to make somebody happy on that day and all the year; and she's going to help us. She says that each one of us must write on a little piece of paper what he would be willing to do, real truly, you know, and send it to my house before the party, and—well, I'm not going to tell you any more about it."

But I'm afraid that the idea was not a pleasing one generally, for on St. Valentine's Eve only four boys and three girls appeared at the party. But they made more noise and fun than a regiment, Aunt Patty said.

Mamma Small had prepared the party room, and a little later the door was thrown open.

In the centre stood Grandma Small's great "Swifts" filled with eight skeins of yarn, the ends of which were held in grandma's hand, and on one side was a table with such tempting dishes of oranges, cakes and goodies as to make the hungry boys cast very longing glances toward it.

First the yarn must be wound, and Bob Murch, being the oldest, was invited to select one from the many threads held in Grandma Small's hand. Then he began to wind—backward, of course.

What awkward work he made of it! The girls laughed at him! The boys called him old Poky! He dropped the ball, and it rolled around all the table-legs. Bob crawled after it, and bumped

TO EMELINE.

For little blue-eyed Emeline
Is made this little rhyme of mine;
I write my love in every line
To greet my pretty valentine.

O may her day be always fine,
And may the sweetest posies twine,
And may the light of Heaven shine
About my pretty valentine.

And may her loving heart incline
To like this little rhyme of mine,
And send me soon some word or sign
That she will be my valentine.

For the Companion.

A VALENTINE BEE.

"I'm going to write a valentine to papa," said Clara, who was twelve years old.

"*I'm* going to write a valentine to papa," said Johnnie, who was nearly eleven, and taller than Clara, and determined not to be outdone by her, especially where papa was concerned.

"So'm I," put in eight-year-old Bess.

"Me too," said six-year-old Bertie, who could print nicely.

"I'm a-doin' to write 'im a whole lot o' balentimes," said Boy Blue, who was hardly four, and didn't even know his letters.

"Why, of course, let's all write valentines to papa," said mamma, brightly. "Grandma will, I know, for he's her own boy. We'll paste 'em all together with hers at the beginning, and Boy Blue's at the end. Won't that make a grand combination valentine? And I know 'twill please papa."

"We'll have a sort of a valentine bee," said grandma, "like the paring bees I've told you about. Now, let's all sit around the big table and go to work. Boy Blue shall have my gold pencil to write his."

"And we'll write on this legal-fold note-paper," said mamma. "Write just on one side, and we'll paste them end to end, and here's a great long envelope to send them in. Now let's be busy, and get them done before the postman comes."

Papa was away on business. It seemed to the little folks that he had been gone a long time, but, anyhow, they could send him a great big valentine, and the pens and pencils and paint-brushes were very busy indeed for the next hour.

If I could show you all the verses and pictures that went into that valentine, I know you'd laugh.

Each sheet of mamma's paper, when unfolded, was a foot long; so that when grandma and mamma and Clara and Johnnie and Bessie and Bert and Boy Blue had all written and printed and drawn and painted their valentines, and mamma had joined them together end to end, the grand combination valentine was seven feet long.

"More'n a foot longer than papa," said Bertie, as they gathered around to admire their work.

"Now we must put it into the envelope," said mamma, "for it's nearly time for the postman."

"I guess he's coming now," said Clara; "I hear some one."

The next minute there was a rush to the door, and the valentine was left spread on the table.

Nobody cared whether the postman came or not, for there was papa himself, and I can't begin to tell you how pleased he was with his grand combination valentine.

BABY'S Auntie was drawing pictures to keep her quiet, and carefully made a horse. After a long look the little one said, "I like dat squirrel pretty well."

Forget not the old friends for those that are newer.
Above all, ne'er forget the one named in these lines.
Other loves may be true, but her love is * * * * *.
Indeed, she's the truest of * * * * * * * * * *.
LILIAN PAYSON.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

THRUSH.

Thrush, so familiar to many mothers, is an inflammatory disease of the mouth, caused by a microscopic vegetable parasite, which has been discovered and described only within the last fifty years. The disease is characterized by a white exudation from minute spots of inflamed mucous membrane on the tongue, mouth and lips. The spots are often so abundant that they unite and form curd-like patches, which sometimes cover the entire mouth in front of the palate, and resemble a diphtheretic membrane.

The affected parts are hot and tender; the stomach and bowels are disturbed, and there is more or less fever. In rare cases, the thrush extends from the mouth down to the stomach, and in still rarer cases, to the bowels.

The disease occurs mostly in infants and in the aged. In the aged it is difficult of cure. It also occurs as secondary to acute and chronic diseases, in which case, especially in the latter, it often proves fatal.

Thrush is caused directly by vegetable parasites, the germs of which float in the air; but these germs find the conditions of their development and growth only where the vitality has already been lowered. Hence, the chief prevalence of the disease is among the children of the poor, whose surroundings are bad, and whose food is insufficiently nourishing; but all children of unhealthy mothers are liable to it. So are delicate young women, whose blood is deficient in red corpuscles.

An acid condition of the system is favorable to the development of the disease. For this reason infants are peculiarly exposed to it, since the secretions of their mouths are acid, instead of alkaline, during the early weeks of their lives.

The disease is contagious, as has been proved by inoculating healthy children with the white exudation. Children, therefore, should be guarded from exposure to it. The danger of exposure is increased by the fact that the treatment of the disease requires the mouth to be washed out at every meal.

Thrush may be so mild as to require only the local application, every few hours, of a little powdered borax mixed with an equal amount of sugar, and a careful regulation of the diet, preceded by a mild dose to remove any irritating matter.

The food of the mother, besides being nourishing and abundant, should be alkaline, instead of acid, in its tendency. If the child is brought up by hand, lime-water should be added to the milk in the proportion of one to three.

In most cases it is wisest to call the family physician.

FAITHFUL.

Lovers of dogs and of stories concerning their fidelity will be glad to know that a monument has recently been erected on Helvellyn, a mountain of Cumberland, England, to the memory of that traveller and his dog who inspired the well-known poems by Scott and Wordsworth.

The traditional school-boy, who is expected to know everything, is certainly familiar with Scott's lines, beginning:

"I climbed the dark brow of the mighty Helvellyn."

Those by Wordsworth are entitled "Fidelity."

In 1805, Charles Gough, the young man in question, was returning to Wythburn, where he lodged, from a fishing excursion in Patterdale. He probably took a false step, during a blinding hail-storm or dense fog, and was killed by falling from the high crags to a ridge of rock below.

This was on April 18th, and on July 20th his bones were found, watched over by his starving dog, a little yellow, rough-haired terrier. She had given birth to puppies, which were found dead beside the corpse.

It is believed that the dog had sustained her own life by means of dead sheep, which are sometimes left on these hills, and it is highly probable that she had to range far and wide to find them, during her three months' watch. The state of her master's body proved beyond a doubt that she did not touch it to satisfy her hunger.

She was taken away, when the traveller's remains were removed, and died, a few years afterward, at Kendal.

The suggestion that the monument should be erected came from Miss Frances Power Cobbe, the unfailing friend and defender of animals.

NOT COMFORTED.

A lady was walking in a country road, and passed a district school-house just as the scholars were dismissed. There were big boys and little boys, black children and white children, tall girls and short girls. The teacher herself came out last, closed and locked the door with a snap, and walked away up the hill.

Only one child was left, a little girl of eight or nine, done up in a purple hood and a knitted "comforter." She lingered on the steps, looking sadly up and down the path and into the doorways, evidently trying to find something.

The lady approached, and asked what was troubling her. It was her mitten that was lost, the child said, with perfect faith in the lady's sympathy; she had only one left, and they were new, and her mother would scold her so! It was a new mitten, the poor little thing repeated, pitifully—red, with open work on the wrist.

The lady joined in the search, but quite in vain. Then she tried a little philosophy on the youthful mind.

She told the little girl not to care; to tell her mother bravely, and not mind the scolding. There were many things in life to be borne with courage, she herself had lost many things—friends and possessions and hopes—but she had learned to be very brave about it.

"Yes," said the child, to whom the argument brought no comfort, "yes, but did you ever lose your mitten?"

DOSING A CAT.

There are emergencies, and they are not infrequent, in which a measure of common-sense, or mother-wit, is of more service than much learning. And so it happens that one may sometimes receive aid from a quite unexpected quarter.

A New York gentleman, according to the *Sun*, had an Angora cat upon which he set a great value. Unhappily she was in somewhat frail health, but could not be persuaded to take medicine. It was put into her milk and mixed with her meat, but all such experiments were unsuccessful.

Attempts to force it into her mouth and down her throat proved equally unavailing. She would not take the disagreeable dose.

At last a young Irish girl, just from the old country, was received into the kitchen, and heard of the cat difficulty.

"Sure!" said she, "give me the medicine and some lard, and I'll warrant she'll be 'ating all I give her."

She mixed the powder and the grease, and smeared the cat's sides with the compound. Pussy at once began licking herself clean, and of course swallowed the medicine.

The master of the house expressed his pleasure and gratitude.

"Faith!" said the girl. "In Ireland everybody knows how to give medicine to a cat."

KNOWLEDGE IS POWER.

An illustration of the truth of this proverb is found in Mr. J. G. Bertram's book, "The Harvest of the Sea." It seems that a monopoly of the extensive fisheries of Scotland and England once came into the hands of a man who kept his agents at the principal stations, and required them to furnish him all facts that came to their knowledge.

At one of his stations in the far North, the fishing had been unsuccessful for the greater part of the season, and there was no prospect of improvement, when he looked into the matter. Upon examining his agent's letters from that place for some years back, he found, by a comparison of dates, that at a certain place herrings were likely to be found. He accordingly instructed his agent to send his boats to that spot.

The fishermen laughed at the idea of a man's sitting some hundreds of miles away and telling *them* where to get fish; but as his orders were positive, they had to obey, and the consequence was that they returned the next morning loaded with herrings.

WHAT TWO MEN SAID.

"Why is it," writes a woman to the Chicago *Tribune*, "that you never hear of the prattle in which men indulge on the street and about the shops?" She thinks their talk is quite as inane as that of the women.

Here is a dialogue which I remember,—I heard it from two men,—though I confess it isn't worth remembering:

"Hello, old man."
"Hello, yourself."
"How's things?"
"Kinder so-so. How's't with you?"
"So-so. Anything new?"
"Same old story."

Then they looked each other in the face for a quarter of a minute and one of them asked, "Where did you get that tie?" and the other said, "Where did you get that hat?"

Then they actually shook hands and separated. They were men. Did you ever hear more meaningless twaddle than that between two women?

WITTILY ACKNOWLEDGED.

A laughable little story is told of a woman on the witness-stand in a French court. She was asked her age, and answered that she was thirty years old.

"But," said the magistrate, "did you not tell me you were thirty when you appeared before me two years ago?"

"I think it very likely," she replied, smilingly acknowledging her falsehood, and not at all abashed. "I am not one of those women who say one thing to-day and another thing to-morrow."

CAREFUL.

A wise parent thinks twice before answering a bright boy's question.

"Papa," said Johnny, who has recently joined a debating society, "is it correct to say, 'The noes has it,' or 'The noes have it?'"

"It depends, my son, on whether you are talking about a vote or about a cold in the head."

For the teeth use "Brown's Camphorated Saponaceous Dentifrice." This preparation gives the best results obtainable. Soap destroys the animal and vegetable parasites on the teeth, and camphor hardens the gums. Price, 25 cents a bottle. Sold by druggists. [*Adv.*

Seeds that will Grow,

That's what we all want—Seeds that will grow—Seeds that are *fresh, pure and true* to name—and that's the kind I strive to give. Some of these I grew myself, others I imported from the finest flower specialists of Germany, England and France. Many seeds are cheaper than these, but none are better. Try them yourself and see. Here's a charming collection I am selling extensively: *Price per Pkt.*

China and Japan Pinks, all colors,	10
Giant Mignonette,	5
Pansy, large flowering,	10
Nasturtiums, finest colors,	5
Escholtzia (State Flower of California)	5
Chrysanthemum, glorious colors,	10
Portulaca Grandiflora,	5
Asters, all kinds, a grand array,	10
ALSO FOUR SPLENDID NOVELTIES:	
Blanche Ferry Sweet Pea,	10
Little Gem Sweet Alyssum,	10
El Dorado Marigold,	10

and one more striking novelty of my own selection given as a **Special Prize,** in all **12 Packets**—costing $1.00 at retail—sent with *Catalogue* for **Only 30cts.** Be sure to get my Catalogue; it's a lovely book and will please you. Show your friends this and send their order with yours; for every such extra order I will send you a rare novelty. I shall be delighted with your order; **you will be delighted with the Seeds.** L. MYRICK, (Box C) Northboro, Mass.

Send **10c.** for **Catalogue** and get **8 Pkts of Seeds Free.**

MY NEW STRAIN OF FAIRY PANSY IS NO doubt the acme of perfection. Nothing that we can say can give to the reader an adequate idea of their beauty and splendor. Their **everblooming quality,** giant size, velvety texture, marvelous combination of colors running through almost every imaginable shade, is found in no other strain in America. Package post paid, **25c.** My Catalogue contains colored plate of same painted from nature. Send **10c.** for same, or **25c.** for pkg. of **Fairy Pansy,** and receive Catalogue *free.*

Burpee's Farm Annual

Every Live Farmer and Gardener should have it.

10c. for Elegant Colored Plate of Cornish Indian Game Fowls, made from life by Lee. The only one in America. Showing their grand shape and beautiful color. P. A. Webster, Cazenovia, N. Y.

The Latest and Grandest Novelty Out.

NELLIE LEWIS CARNATION.

Flowers very large and full, and of a color never before seen in Carnations — an EXQUISITE SHADE OF PINK.

For decorative purposes and corsage bouquets, they are unsurpassed. A bowl filled with them, used at a dinner a short time ago, lighted up the entire table. Don't fail to place your order at once, as we control the entire stock and have only a limited number of plants.

Price, 50 cents each; Three, $1.25; Six, $2.25; Dozen, $4.00.

VICK'S SEEDS Never Disappoint, is the verdict of the millions who have planted them.

Vick's Floral Guide for 1891 contains over 100 large pages, hundreds of illustrations, colored plates, Best Novelties, all worthy of cultivation; $1000 and $200 cash prizes. Price 10 cents, which deduct from first order and it **costs nothing.**

JAMES VICK, SEEDSMAN, Rochester, N. Y.

HARDY "PERPETUAL" ROSES.

We offer extra-sized, large, blooming, 3-year-old plants,

THAT WILL BLOOM THE SAME SEASON PLANTED, in order to meet a demand for plants ready for immediate flowering; not little plants that require time to grow, but good strong plants that will bloom this summer, and

AT VERY LOW PRICES. Plants that will delight every one in every way; so cheap as to be within the reach of all and so choice as to meet the strictest scrutiny of the most critical rosarian. Our collection contains only the finest and newest sorts in cultivation, among which are the following gems: **ALFRED COLOMB,** a grand rose, very large and extremely fragrant, carmine crimson. **ULRICH BRUNER,** an elegant flower, finer in every way than "Gen. Jacqueminot," bright cherry, exquisite. **GLORIE DE PARIS,** the most lovely shade of carmine, very large and fragrant. **JEAN LIABAUD,** fiery crimson, shaded with black, rich and velvety. This variety approaches **a black rose** most nearly of any. **MAGNA CHARTA,** immense flowers, the largest rose grown, rich dark pink, superb. **MARIE BAUMANN,** crimson vermilion, exquisitely shaded and richly perfumed; no collection is complete without it. Single plants of the above-named sorts will be furnished for **50 cts. each, or the 6 for $2.50, or**

12 plants, in 12 best sorts (including the above), for **$4.00.**
25 plants, in 12 best sorts (including the above), for **$7.00.**
100 plants, in 25 best sorts (including the above), for **$25.00.**

WE OFFER ALSO SOME EXQUISITE NOVELTIES and ODDITIES in NEW JAPANESE FORMS

of this charming flower. They form a most unique group, and will be found invaluable on account of the rich decorative effects produced. The foliage is particularly attractive, very dark glossy green, shining as if varnished, studded with large single beautiful flowers, 4 inches across, in the wildest profusion; they flower from early summer until autumn, and are succeeded by large bright-colored crimson seed pods, so showy that it is difficult to say whether the plants are more effective in flower or fruit. **RUGOSA RUBRA,** deep rose, borne in large clusters. **RUGOSA ALBA,** the famous white variety.

Md. GEORGES BRUANT, very rare; long, slender, white-pointed buds, very fragrant. Price, **$1.00** each, the **3** sorts for **$2.50; $9.00** per dozen.

PERSIAN YELLOW, the finest bright yellow, hardy rose, foliage faintly scented like the sweetbrier. **Price, 75 cents each, 3 for $2.00; $6.00 per dozen. Md. PLANTIER,** "the snow-white rose," the finest white for bedding in masses or for cemetery-planting. A perfect snowball when in bloom. **Price, 50 cents each, 6 for $2.50; $4.00 per dozen.** By freight or express at above prices.

BY MAIL, ON ACCOUNT OF THEIR LARGE SIZE, 3 CENTS EACH MUST BE ADDED FOR POSTAGE AND PACKING; SAFE ARRIVAL GUARANTEED to any P. O. in U. S. or Canada. Go best and cheapest by mail except in large quantities and in near vicinity.

ORDER AT ONCE. Can be planted as soon as frost is out of ground; full instructions for cultivation sent with each order, also a copy of our large **Illustrated Catalogue** of

ALL THE BEST NEW SEEDS AND PLANTS. It is very complete, handsomely illustrated, artistic, of particular interest to all lovers of choice flowers. Sent free to all readers of THE COMPANION inclosing stamps to pay postage. Address, mentioning THE COMPANION,

F. R. PIERSON, FLORIST AND SEEDSMAN **Tarrytown, N. Y. P. O. Box Y.**

PICKERING'S POOL.

Straight out of the North, with a leap from its fountain-lake, hurries the Nepigon River—a tide of clear, green water, wild for forty miles, till it sweeps swiftly round the Red Rock pool, and broadens out to smoothness on the Lake Superior level.

The great speckled trout of this cold river have made it celebrated wherever fishermen congregate.

To have fished this stream is to have taken a degree in angling—it is to have learned that five-pounder, six-pounder, or even seven-pounder speckled trout really do exist; it is to have almost survived churlish doubt of the truthful men who say that ten-pounders have been netted in Lake Nepigon.

But the river itself is even more satisfactory than its wonderful trout. One broods in reverie upon the sparkle of its waters; yearns to know what was to be seen far up the misty, unvisited reaches that he paddled past in the early morning; hears the clash of Nepigon's cascades when he sees a jointed rod; watches his flies of fancy whirled away in bubbles on the edge of its torrents; or in thought goes hurtling along with its incessant and furious forces to the peace of the mighty Lake, into which they are received.

The river pours on as if it had a duty to reach the end, as if angry to be obstructed, and as if striving against barriers with a fierce determination to push through or gather force to sweep the very earth away.

Think of it as a deep, wide rush of green ice-water, now flanking high, brown precipices as if it had crowded them out of the way, then sliding smoothly over long slopes, to race, crashing, through a bowlder-strewn cañon, and again thrusting forth, in the wider places of its bed, eddies that march straight back along the main current with a tumult of crests that mingle, clashing, with the parent flood, and are swept down by it.

Of all these eddies, that of Pickering's Pool is wildest. The savage rapids here completely encircle a great basin of smooth, though swelling water, out of the billowing surface of which trout are ever flashing up and falling back with a splash that you cannot hear above the roar.

Fancy a cyclone raging round a space of quiet air; conceive yourself on the outside of the whirl, and able to see clearly through it to the undisturbed ground within; imagine flocks of fowls there, unconcernedly pecking their food—and you may somewhat realize the sensation of one who watches fish lazily rising out of the inner space of Pickering's Pool, to take gauzy midges that hover over its heaving, but uncreased depths.

One may find himself wondering how the trout got there and how they are to get away; for the imagination balks a little at the thought that even fishes can safely descend the torrent that is hurled into the Pool, or stem the huge swoop of its discharging cascade.

Gazing steadily at the great Pool, one perceives that the smooth billows of its rapid-encircled space have a motion which thrusts foam-patches and branches gradually outward to the raging circumference. These objects are grasped by the mighty currents, and often whirled round and round.

One fancies that the body of a man drowned in that Pool could never find rest, but being preserved from decay by the iciness of the water, would gyrate for days around the swift circle, then be tossed into the smooth centre, and thence be slowly forced out and up, to go flinging round the wild river endlessly.

With such fancies thronging the mind, there is a certain wild joy in angling from the big bowlders that are strewn along the western shore of the Pool in such a way as to suggest that they have been cast up by the rapid, and may be torn away again at any moment by its forces.

Along the edge of the outer bowlders the eddy runs very swiftly; a few yards further out, its waves tear resistlessly up stream, and the angler who there casts a fly has a sensation of being in danger, which is as strong as though he were casting from the very edge of a sheer precipice, with nothing to grasp to save himself from falling.

He has not, of course, the peculiar breathlessness of feeling that one experiences at a great height, but he has a not less intense feeling of being fascinated and almost dominated by an impulse to test the threats of the torrent, and learn whither the waves would whirl him in their grasp.

One looks from his bowlder and estimates the possibility of swimming out; one calculates whether he could, by striking for the middle of the main current, reach water that would carry him beyond possibility of being thrust aside into the central smoothness; and, gazing down the river at the spray that pants up from the cascade below, one wonders if its breakers would dash him to pieces or carry him intact to the short, quiet reach below.

It is all horribly fascinating, this danger of Pickering's Pool; yet many anglers cast from the bowlders every summer, and I have heard but one story of a man slipping from his footing and being carried away.

Louis Polette, my guide of 1887, gazing out over the Pool, gave me the tale in the peculiar dialect of a French half-breed who had learned his English from Highland Scotchmen in the employ of the Hudson Bay Company. I will not attempt to render more than a few of the peculiarities of his diction. The story is the main thing.

"Yes, sir," said Louis Polette, "there was one gentleman who got into that water. I think I see him now; I and my brother Antoine were the guides he had—he and his son—that year.

"Five year ago that was, just about this time of the season. The flies was very bad,—same that they are this time now.

"That old gentleman kept all the time calling to his son, 'Take care, Charley! mind your steps, my boy; this is the worst-looking place ever *I* saw. If a man were to step off here, that would be the end of him, for sure.'

"All the time he kept calling that way to his son, and all the time his son kept calling back, 'I'm all right, father; better mind your own eye!'

"The old gentleman, he couldn't mind his own eye close enough, because he was bothering all the time about his son—his son who already had a big beard himself.

"Well, after that had been going on a long time, the old gentleman he hooked a fish. You see that big bowlder up there near the head of the Pool? Yes, sir, on that rock the old gentleman was when he hooked the fish, and then he forgot all about his son.

"Well, the young man went ashore, and sat down to watch the old gentleman play that fish. Pretty soon, by and by, when the fish ran away out toward the smooth place, the old gentleman sat down on the bowlder, to be more safe to play the fish, I s'pose; and then he looked round.

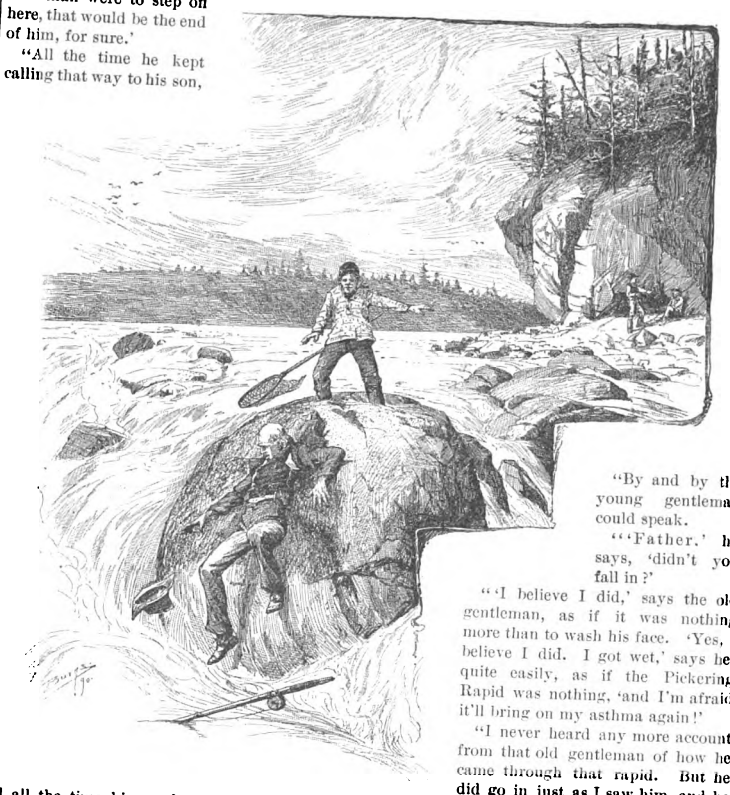
"I was close by him then with the landing net, and he looked around to where his son was when he looked around before.

"My gracious! I never saw such a look as came to that old gentleman's face—so wild! He dropped his rod, he tried to spring up; with that he slip; and just as he slip, he see his son, and in that moment he look all glad—and the next moment he was into the water!

"He never made any cry—not one word. The water caught him right off, all the same as if he was pulled by a horse; and he went under. When he came up he was away up there where the eddy runs against the rapid so hard. There the water made him like as if he was standing straight up and half-way out. It whirled him around that way twice, and those two times he waved his hands to his son as if he was saying, 'Go back! Go back!'

"The young gentleman, when he saw his father fall in, rose up like he was crazy, with a loud shout, and ran for the place where the old gentleman fell in. While he was running, the old gentleman whirled around that way; and just as he motioned that way the second time, the young gentleman tried to jump from one bowlder to another. He fell between, struck his head and fell down as if he was dead, the blood running from his forehead.

"So then I ran to the young gentleman; for what was the use of watching the old gentleman some more?



"I did not see the old gentleman but one time more, now, and then I don't just exactly know if it was him or not, but just a black thing come up in the very middle of the big rapid, and seem to swim a bit. Then I turned to the young man, and I don't see his father any more that time.

"By and by the young man came to himself. He stared at me and he cried, 'My father!' He tried to get up, and then he fell down again.

"Well, what do you think? I and my brother Antoine took him up to carry him to camp, away down the rapid, more than two mile—same place where we come from this morning. Well, what you think again? Maybe you won't believe this, but I don't tell lies, me! We were about a mile down from here, way down below the foot of the rapid that goes out of this pool here; and then we heard somebody come tearing through the woods from down the river.

"What you think some more? Yes, sir, that was the old gentleman!

"When he saw his son's head all bloody, he gave a cry, and we put the young gentleman down; and the old gentleman took out his little bottle and gave him something out of that to bring back his strength.

"By and by the young gentleman could speak.

"'Father,' he says, 'didn't you fall in?'

"'I believe I did,' says the old gentleman, as if it was nothing more than to wash his face. 'Yes, I believe I did. I got wet,' says he, quite easily, as if the Pickering Rapid was nothing, 'and I'm afraid it'll bring on my asthma again!'

"I never heard any more account from that old gentleman of how he came through that rapid. But he did go in just as I saw him, and he did come through, for there he was, and I saw him myself.

"If ever anybody else went through that rapid and took it so easy, I would like to know what was his name.

"The young man, he was all right next day, except that his forehead was cut, and they went along fishing for two weeks more, just as if nothing hadn't happened. They were from Montreal, those gentlemen were, and I don't hardly ever come across any men that take things so easy and say so mighty little about it as those two gentlemen from Montreal."

E. W. THOMSON.

For the Companion.

ART IN INDUSTRY.

What is art?

We do not need to look in the books for a definition. Art, nowadays, is visible all about us, in almost everything we use. It is to be seen not alone in pictures on the walls, in the form and ornamentation of public buildings and private houses, and in articles worn for personal adornment. It is in the humblest things we use—in the form and ornaments of the lamp at which we sit to read, in the legs and cover of the table, in the pitcher from which we pour a drink of water and the tumbler from which we drink it, in the handle of a boy's jackknife, in the pattern of a girl's calico gown.

It is impossible to escape the application of art to industry; the farmer sees it in the design painted on his lumber-wagon, and his wife sees it in the castings upon her kitchen stove and in the back and legs of her kitchen chairs.

The making of a lumber-wagon or a kitchen stove, even supposing there were no attempt to make either one of those useful articles a thing pleasant to look at, would be an "art," according to the dictionary definition; but nowadays, when we speak of the employment of art in industry, we mean something else; we mean the attempt not only to render beautiful to the eye objects which are made wholly to be beautiful or pleasing, like a painted picture or a bit of sculpture, but also to render those beautiful in some degree which are made to be useful first of all.

We are no longer content that a heating-stove shall be a square, ugly iron box; there must at least be an attempt to render it pleasing to the eye, and to make its shape conform to the sound principles of art—which is only another term for the fundamental notions of beauty that we derive from Nature's own forms.

We have learned that even a farmer's spade, or a school-boy's lead-pencil, may be made an object of art as well as of utility; and the thing has been carried so far that it is becoming hard to tell where what are called the "fine arts" leave off and what are called the "useful arts" begin.

The two things, indeed, go together in every real industrial epoch, and it is the glory of industry that it stimulates and occupies the fine arts.

Mechanical work goes with all art; for the painter of pictures uses his hand and paints with a brush, and so does the house-painter; but the work of the painter of pictures—or at least of good pictures—is much greater, more important, than that of the house-painter, because there goes with it a high degree of education; and a high degree of education means long years of study and a patient, progressive application of what is learned.

Here is where our American people, and especially American young men and boys and American young women and girls, appear to be different from the young people of certain other countries; and this difference is interesting, and worth looking into.

In the industries now established in the United States, in which beautiful objects are made,—such as wall-hangings, furniture, silver-ware, table-cloths, glass-ware, articles of brass and wrought iron, stone-carvings and the like,—very excellent wages are often paid to skilled workmen.

Skillful stone-carvers—not sculptors, but the men who actually cut the figures and decorations on the façades or interiors of buildings, with mallet and chisel—often receive from four to six dollars a day in New York and Boston. Modellers for jewellers and makers of designs for wall-paper often receive more than that. In Boston and New York good stone-carvers receive higher pay than reporters on newspapers, clerks in business houses or male school-teachers of the lower grades.

But who are these skilled stone-carvers and wood-carvers, makers of designs for wall-paper, modellers in clay, brass finishers, and so on? They are, with some exceptions, Europeans. They have learned how to do their work in other countries, and come here to exercise their crafts.

Formerly these more artistic trades could not be learned in the United States. This is no longer the case. The industries have been established in this country to such an extent that nearly all of them may be learned by the process of apprenticeship; and in the technical schools scattered through the country almost every branch of industrial art is taught.

But when, one day last summer, I asked a large employer of skilled stone-carvers how many of his men were American-born, he answered, "Not one in ten is American-born." I found that this was practically about the proportion which prevails in other fields of industrial art.

When I asked this same gentleman whether this proportion would not presently change, he answered that it was not likely. "We cannot," he said, "get American boys to serve the long apprenticeship necessary to acquire this skill. The aim of our boys is to be done with their apprenticeship as soon as possible, so that they can earn three or four dollars a day. They are supposed to spend four years in learning their trade; but when they have learned it, and leave their apprenticeship to become journeymen, they cannot obtain more than four dollars a day, and are workmen merely—not artists.

"To become really artists in stone-carving, and to be able to earn, as such men do, four to six dollars a day and sometimes even more, they must, in addition to their four years of apprenticeship, spend at least two years in patient study of the artistic side of their work.

"But American boys have not the patience to do that—nor really the humility of understanding that is necessary to follow such an art. They want to earn, but they do not want to learn."

Is this true of American boys and young men? I very much doubt if it will be found so, when American youth come fully to understand the matter. In the meantime, there is too much truth in it. As a people, we are enterprising rather than thorough.

American boys, for instance, do not readily understand how men can have the patience exhibited by some of the European workmen now engaged in this country in making the finer grades of wrought-iron work.

I saw a worker in this trade patiently hammering at a curious convoluted iron ornament for a gate. I asked his foreman how long the man had been at work upon the same piece of iron. "Five days," he said. "And how much is he paid a day?" "Five dollars."

In a stone-working establishment I saw a young man, wearing a striped apron, standing before a board, engaged in deliberately throwing bits of damp clay at a large accumulation of clay upon the board. As I watched him, the clay began to take the form of the capital of a column.

Now and then he moulded it with his fingers or with a little flat stick, giving it the leaf-forms and other shapes lent to architectural decoration.

I found that this man did this work over and

Digitized by Google

over, day after day, varying it from time to time to suit the architect's plans, and moulding other things besides the capitals of columns; and I found that his wages were thirty-six dollars a week.

He was a Belgian, and had learned his art by study in Brussels and Paris, when he was between the ages of fifteen and twenty-five. His apprenticeship had been long, but he had now, with short hours of daily labor, and in a light, unexhausting toil, an assured income larger than that of many professional men and graduates of colleges.

I know of a young American in New York City who apprenticed himself to learn the mechanical part of wall-paper making and printing with designs. He worked faithfully, laboriously, all day, in the humble way necessary for an apprentice; and for a certain regular number of evenings each week he studied drawing, and other branches of art associated with wall-paper designing, at the Cooper Institute.

For six years he kept up his mechanical work during the day and his evening art studies; and at the end of that time he had so completely mastered both branches of the work that he was offered and accepted a yearly salary of five thousand dollars to design wall-paper.

Learn a Trade.

Not every man could command five thousand dollars a year, after even six years of the most patient work and study. This man may have possessed exceptional talent. But his case shows what a field there is for young men who have ingenuity, taste and patience in the industrial branches of art. He might have failed as an artist, in spite of his natural talent, if he had not been content to "learn a trade" that afforded scope for his gifts.

Sometimes, too, it is hard to tell where art leaves off and business begins. Very often, now as in the past, the man of business employs the artist, supplying him with work fitted to his skill, and relieving him of the necessity of finding patrons, and of anxiety as to his daily bread.

The artist may say, indeed, that the man of business relieves him of a part of the credit due his work as well, and prevents him from having the entire freedom which art should enjoy in order to produce its best results; but the independent artist is not always free. Unless he is a person of commanding genius, he must often do work of the sort which people want, rather than of the sort which he wants to do.

Many of the beautiful vases, friezes, plaques, medallions, and other objects of art designed by the English sculptor, Flaxman, go under the name of "Wedgwood ware," because Flaxman was employed by an intelligent manufacturer named Josiah Wedgwood. The name of the man of business has surpassed in importance, in the commercial world, that of the sculptor whose genius gave him fame; and yet it is said that Flaxman almost surely would have starved if Wedgwood had not employed him.

It is probable that a great part of Flaxman's work would have been lost to the world but for Wedgwood's employment of him through the most important period of his life, and the manufacturer's name is worthy to go into history with the artist's.

As industry is organized at the present time, the manufacturer of beautiful and useful objects generally employs both artists and mechanics.

The Artist and the Mechanic.

Who is the artist and who is the mechanic?

An artist is simply a workman who *knows what he is doing*, and does it as well as he possibly can. The workman of whom this may be truly said is always an artist, and generally obtains an artist's pay.

The mechanic, properly speaking, is the man who does things in a mechanical way. Two men may do the same kind of work with exactly the same tools; but one may be an artist, and the other is called an artificer or mechanic. But one has learned to the uttermost not only the principles and the meaning of what he does, but the very best way of using the tools, to produce mechanical results; whereas the other, perhaps, has gone no deeper than the surface of it, and does it more or less automatically, as he has been taught.

When a young man — it may also be said a young woman, since there is no sex in art, and women nowadays rival men in the originality and skill of their work—has learned enough of any craft or handiwork to make him a good workman, and able to earn a good workman's pay, there is always something more to be learned. This something more will make him an artist, and enable him to command an artist's compensation, which is very often twice as much—sometimes three times as much—as the workman's pay.

No one, moreover, can be a real artist unless he is skilful with his hands as well as trained in intelligence—that is, unless he is a good workman; and the good workman, intelligent, skilled and well-read in his craft, is already an artist. Shakespeare was well-advised when he contrasted "the wise and fool, the artist and *unread*."

American Youth Not Thorough.

A bureau drawer may seem to be a simple, "mechanical" thing to make. In many cases it is, though there is room for art in even the simplest bureau drawer. But in late years a great demand for fine and beautiful furniture has arisen, and richly carved and ornamented articles have been manufactured in this country.

One of the firms engaged in this manufacture in an Eastern city had need, a year or two ago, of a number of "escutcheons," or metal plates used in covering key-holes, for bureau drawers. There was a demand for new things of this sort. The "new things" might well enough have been old escutcheons pretty closely copied; but it was necessary to draw them and adapt them to the new use, and no one could be found in this country who was capable of doing that work. The decorations of these drawers were provided from abroad, and at great cost.

The manufacturers of all kinds of brass and other metal ornaments to be used on wood have had the utmost difficulty in obtaining good designs for this kind of work, and artists in almost every case have had to be brought from Europe.

I asked a manufacturer of certain articles of this kind, "Have you ever attempted to train American youths to design these things?" "Yes," he answered, "but they would not study enough."

This answer had become an old story to me.

It is not to be supposed that a people so ingenious, sagacious, and industrious as the Americans will continue so impatient to earn money that they will not take the steps necessary to earn it most surely and easily. There are signs already that American boys and girls are coming to realize how excellent an opening for their endeavors there is on the artistic side of our growing industries.

J. E. CHAMBERLIN.

For the Companion.

BIRTHDAY OF TWO GREAT MEN.

A Wide Contrast.

The Twelfth of February is a day that deserves to be held in remembrance, not only in the United States and Great Britain, but in other lands. The custom of observing the birthday of Abraham Lincoln is on the increase in this country from year to year, and it does not seem rash to predict that in half a century or less the Twelfth of February will be as universally observed by loyal Americans as the Twenty-second of the same month now is observed.

The Twelfth was the birthday of a man whose impress upon the thought of the world was as deep and enduring and ineffaceable as that which Lincoln made upon the history and tendency of the American Republic. On the identical day that Abraham Lincoln was born in a rude hut in the wilds of Kentucky,—February Twelfth, 1809,—there was born in Shrewsbury, England, not far from the border of Wales, a boy who was to win great fame, and to be known to the world as Charles Darwin.

There was a wide contrast between the beginnings of these two men. Lincoln's latest biographers say that he was born "in the midst of the most unpromising circumstances that ever witnessed the advent of a hero into this world." Darwin's advent, on the other hand, was made in the home of a prosperous, well-to-do and cultivated physician.

One was the son of a poor farmer, and apparently destined to no higher lot than a life of hardship and toil in the backwoods or on the frontier.

The other entered upon life with a most favorable environment, and with some fair chance of achieving distinction in a career of honor and large usefulness.

It is worth while to compare briefly the early years of these two boys.

Lincoln's Boyhood.

Of Lincoln's boyhood the records are scanty. He was born in a cabin on the Big South Fork of Nolin Creek, in what was then Hardin and is now La Rue County, Kentucky, three miles from Hodgensville. Almost the only incident narrated concerning his childhood is told by himself in the little story that one day he had gone fishing, and was coming home with a fish in his hand, when he met a soldier. He had been taught, he says, that he must be good to soldiers, and accordingly he handed his fish to this one.

If the solitary fish was the sole result of his day's fishing, the sacrifice made by the lad in parting with it was not small. It is a gratification to know that the impulse that dominated the boy was a noble and generous one.

This soldier had undoubtedly been mustered into the service of the country during the War of 1812—15; but Lincoln in later life could recall nothing else whatever in connection with that war.

Darwin's Youthful Traits.

Very different was the childhood of Charles Darwin. With the amplest opportunities for learning, he cared little for study. It is to be inferred from what he himself says that scarcely any perceptible benefit was derived from the years which he spent in study at home, at Edinburgh and at Cambridge.

He tells us that he was considered, when he first went to school, "a very ordinary boy, rather below the common standard in intellect." Some of his childish characteristics are interesting, though not commendable. As a little boy he was "much given to inventing deliberate falsehoods, and this was always done for the sake of causing excitement." This declaration appears very strange, in view of the fact that his after life was characterized by uprightness, stainless honor, and scrupulous candor and truthfulness.

The naturalist instinct appears to have cropped out at an early period. The boy Darwin was fond of collecting birds' eggs, and it is pleasant to note that he never robbed a nest of all it contained, except on one occasion, when he did so from a spirit of bravado.

At an early period in his life Darwin was sent to school about a mile from his father's house, The Mount, and in going to and fro the boy would frequently run in order to be on time. He says of this habit, "I prayed earnestly to God to help me [in running], and I well remember that I attributed my success to my prayers and not to my quick running, and marvelled how generally I was aided."

Darwin early developed a passion for making collections—it mattered little of what. He collected shells, seals, franks, coins, minerals — anything that pleased or impressed his fancy. In his youth he was fond of poetry; and it is with a pathetic note that he regrets the complete loss of this taste later in life, when he seems to have suffered a sort of spiritual paralysis in this respect at least.

He was given to taking long, solitary walks, during which he became absorbed in meditation; so much so that on one occasion he fell off the coping of a high wall.

At one period in his youth he had a passion for collecting beetles, in connection with which he narrates an amusing incident. He had torn the bark from a fence-post and discovered two valuable beetles, one of which he seized in each hand, when to his surprise and delight he saw a third, of a still rarer species.

In his excitement he thrust one of the beetles he was holding into his mouth, where it immediately threw out an acrid fluid, causing the young enthusiast to eject it in all haste. The result was that he lost not only this beetle, but the third one on which he had set his heart.

True to Duty.

What has been told in reference to the early life of Darwin gives nothing more than a hint, if even so much as that, of the great work which this rather unpromising boy was to accomplish in the world.

In the case of Lincoln the outlook was even less hopeful. Greater credit is plainly due to the Kentucky boy than to the lad of Shropshire. Indeed, I think it can safely be asserted that Abraham Lincoln moulded circumstances to his will, while circumstances of an exceptionally favorable character made Charles Darwin what he was.

In no respect was Darwin more fortunate than in his entire freedom from anxiety about material affairs. His father left him a competency, and he was by means of it enabled to devote himself to researches and experiments requiring infinite patience and a great deal of time, without the necessity of the slightest effort to earn a living.

When well advanced in life, Darwin averred: "I am sure that I have never turned one inch out of my course to gain fame;" and he further said: "Whenever I have found out that I have blundered, or that my work has been imperfect, and when I have been contemptuously criticised, and even when I have been overpraised, so that I have felt mortified, it has been my greatest comfort to say hundreds of times to myself that 'I have worked as hard and as well as I could, and no man can do more than this.'"

Happy indeed is he who can say as much! With all sincerity Darwin's words might have been uttered by Abraham Lincoln. He did not turn aside from the plain path of duty in order to gain fame, and truly he worked as hard and as well as he could—harder and better could no man have worked.

ARCHIE EMERSON PALMER.

For the Companion.

ZOURI'S VALENTINE.

It was the Thirteenth of February. The sun had come out and made things look very bright and happy, and in the Southern country its light was so warm and pleasant that three little girls had come out among the grass and trees to write their valentines. These girls were Seth Granberry's three little States, as they were called.

The two Granberry brothers, Seth and Josiah, were farmers, and their large farms joined. The brothers were twins.

They were married on the same day. There had been a sort of agreement between them, that whenever a baby girl came to the household of either, she should be given the name of a State in the Union.

So it came about that, when some years had gone by, there were six little States, three in each family. The boys did not count in this Union, for it would not do to call a boy Texas or Mississippi.

Then came the time when Seth and Josiah ceased to be twins in spirit, for they had a serious quarrel about the planting of a division stake, and the ownership of three or four feet of land. Seth, the more self-willed of the two, had planted the stake where he pleased, and Joe had submitted; but from that day the brothers had not spoken to each other, and the six little States, who loved each other, had been separated.

Seth's Zouri—whose real name was Missouri—had just declared that she should send a valentine to Uncle Joe.

"I met him down at the branch the other day," she said, "and he talked to me real nice. I felt sorry for him, because he said that Tennessee could never go without crutches any more."

Lous'any and Georgia said they were quite sure that Zouri would be whipped if she did not keep away from Uncle Joe's folks and stop sending valentines there. But Zouri was the youngest of the three, and not old enough to be very cautious; besides, she had a little curly red head and her father's own wilful spirit.

The Letter.

She went on, painfully writing the words of her valentine:

"Deer Unker Joe, I luv you I wish you wud cum over an set on the uther side of the chimly like you use to. Pa won't let enybody set there now. Im sorry Tenny has to go on cruches. frum your loving valentine."

"'Taint right, Zouri," Lous'any said. "Pa'll punish you for it."

"Besides, who'll take it over to Uncle Joe?' asked Georgia.

"I will," said Zouri, as she shook back her red curls and picked up her sunbonnet from the grass. "'Taint any use to bother me about it, 'cause I'm going to send it, and I don't care."

Zouri was so young—scarcely eight years old—and so much accustomed to being petted, that such opposition as this hurt her feelings deeply. But it did not shake her resolution.

She had written the valentine that she had meant from the beginning to write. She left Georgia and Louisiana now, and ran, pattering her bare feet over the grass, to the fence that separated the yard from the roadway.

"She's gone to the fields where pa is," Georgia said, as she watched Zouri disappear down the roadway.

"Yes, and what's more," Louisiana answered, "she'll make pa say she can up and do anything she wants to."

They were right in guessing that Zouri had gone to find her father. She knew that he was some where in the fields, looking about his farm and planning the spring sowing.

Every few moments her voice rang out in a loud call: "Poppy, where are you?"

At last, from a distance, she heard the answer: "Halloo! Zouri, is that you? I'm down in the potato field!"

When she reached him he placed her on the highest rail of the fence while he stood beside her and listened. There had always been a strong bond of sympathy between him and this little girl; perhaps because she was "a chip of the old block."

"What's the matter with Poppy's little gal?" he asked.

"It's Lous'any and Georgia; they've been bothering me."

Zouri's cheeks were flushed and her eyes bright, and it seemed as if her hair took on a more defiant curl than usual.

Seth looked at her for a moment. Then he took her sunbonnet from her hand and placed it on her head.

"What have they been bothering you about, honey?"

Zouri quietly took the sunbonnet off as she answered: "Because I said I was going to do something you didn't want me to. But I just have to do it, Poppy! It would make me feel so bad if I didn't."

Seth's face looked grave. It was a puzzle to him, sometimes, to know how to deal with Zouri.

"Well, honey," he said, soberly, "did you come 'way out here to get me to let you do a thing after I had told you you couldn't?"

"No, Poppy," she said, "I just come to get you to make Georgia and Lous'any let me alone and stop being mean to me."

"Zouri, is it anything bad you want to do?"

"No, it aint!"

"What is it, honey?"

"I can't tell, yet; it's a secret."

"Will you tell Poppy sometime?"

"Yes, if you aint mean to me like Lous'any and Georgia."

He was silent. She slipped from the fence and took his hand, and they started together across the fields toward home.

"Zouri, put on your sunbonnet; you'll catch cold."

Zouri obeyed. "Poppy," she said, "what did you and Uncle Joe get angry about? Did he treat you mean when you wanted to do anything?"

Seth started. Joe had been in his mind more than once that day, because it was the anniversary of the planting of the stake, and Seth had stood for half an hour by the side of the stake, recalling the circumstances connected with it.

"No, Zouri; Joe wasn't exackly mean to me. I reckon he was better'n I was, when it comes to that."

"Then *I* aint going to be mad with him," she answered, and the sunbonnet came off again. "Anyhow, Tennessee's got to go on crutches all her life, an' I'm sorry." For once, Zouri was almost crying.

"Is that a fact, Zouri? Little Tenny on crutches—all her life, too! What if it was you, Zouri?"

There was no answer, and they walked home the rest of the way in silence.

Zouri and Uncle Joe.

St. Valentine's Day was clear and beautiful. There was peace between Seth's little States.

Soon after dinner, without a word to any one, Zouri put on a clean dress, and hanging her sunbonnet on her arm, started away on her mission.

Seth had been watching her all day. He saw her start from home, but he said nothing.

She reached the point where the road crossed the head of the old mill-pond. She knew that Uncle Joe's was not far beyond. But Zouri had never been very brave about crossing the pond; there was only a narrow plank-way across, and it seemed so near the water, and so many fishes and noisy frogs and other queer creatures lived right under this plank, and the water looked so quiet and dark.

When Zouri reached this point in her journey, she stopped a moment a little frightened and was almost ready to turn back and go home. But she did not do this. She began to sing, and as she sang she ran lightly across the plank.

Zouri was on Uncle Joe's farm now, and hoped to find him in some field not far away. As she went along the roadway, looking to the right and left, she saw, on a little rise of land, the figure of a man. He was standing between her and the sinking sun, and a warm, soft light shone over his face.

"Uncle Joe! *Oh* Uncle Joe!" she called.

"Land sakes! If that aint Seth's little Zouri," he muttered, as he started toward her.

"No, don't come yet," she called again. "I aint ready."

He stopped, and stood waiting.

"What on the earth's brought Zouri over here? I'll bet Seth don't know it! That child's just the apple of Seth's eye. Well, if she can get around him, there's something in her."

"Uncle Joe, are you listening?"

"Yes, honey—talk on."

"Well, I've put it in that old hollow tree down here. When I'm gone, you go and get it. Good-by, Uncle Joe!"

"Good-by, Zouri! Can't you wait a bit?"

He watched her sunny little figure, the clean, fresh dress, the dangling sunbonnet, and the soft, dancing curls as she flew along toward home again.

"Well, I reckon I'll have to see what it is," he said.

He walked slowly to the edge of the field, vaulted over the rail-fence, and crossed the road to where the old hollow tree stood. He stooped and put his hand within, and then drew it out with a shame-faced air.

"Just one of Zouri's jokes, I reckon. She'll think I'm an old fool to come down here at all."

Then he leaned against the tree with one hand resting on its trunk. "Just four years ago yesterday since Seth and I stopped speaking, and this is the first time one of his family's been on my land, to my knowing. Not another one of 'em would dare to come but Zouri."

Digitized by Google

He shuffled around again to the hollow. "I reckon I'll try once more," he said.

This time he dropped upon his knees, put his arm far into the opening and felt carefully around. He found it, all crumpled and not very clean. Then he slowly opened and read it—the little scrawl that had cost Zouri so much to write.

It was like a message from Seth, and all the old-time love for his brother came into Joe's heart as he read Zouri's valentine.

"I'm sorry Tenny has to go on cruches." Here was the great sorrow of Joe's life, for Tenny was to him what Zouri was to Seth, and all her young strength had gone, and left her a patient, suffering little cripple.

So he stood there and wept over Zouri's tender words. "God bless her for sending it," he murmured.

As he stood there he heard her calling from far down the road:

"Uncle Joe! *Oh* Uncle Joe!"

He turned and saw Zouri running toward him, somewhat pale and frightened. He stooped and held open his arms, and she rushed into them. Then he kissed her silently.

"I was afraid to cross the plank at the pond," she said.

"Never mind, Zouri," he said, "I'll take you over the pond."

He held her gently in his arms and carried her as easily as if she had been a baby.

"Did you get it, Uncle Joe?" she whispered.

"Yes, honey, it was the best little letter that ever I had. How'd you happen to send it, Zouri?"

"'Cause I wanted to, after you told me about Tenny; and I aint angry with you any more, Uncle Joe! I told Poppy so, too."

"I'm very glad, Zouri. We'll be good friends now, won't we, honey?"

The day was drawing to a beautiful close. All along by the side of the water and in the woods and fields the sounds of night could be heard, as the shadows of twilight grew longer, and the last rosy light of the day melted into darkness.

Zouri slipped from Uncle Joe's arms to the ground after they had safely passed the pond, but she held his hand, and he saw that he must take her home, or at least within sight of the house.

"Zouri," he asked, "did your father know you were going to bring me that valentine?"

"No; I wouldn't tell him what it was. He knew I was going to do something he didn't want me to; but Georgia and Lous'any knew, and they told me I'd be whipped for it. But I won't!"

They were drawing near home now. The lighted candles and lamps shone with a cheerful light in the darkness.

"I'll leave you at the big gate, Zouri. You won't be afraid, then, I reckon."

Zouri did not answer, and Joe felt a pain at his heart as the thought came that, after all, the child did not care whether he went further or not.

"Here he comes!" she cried, suddenly. "He's hunting for me, I reckon. Now he'll make you come in and sit on the other side of the chimly!"

Yes, there was Seth coming along the road to meet them. Joe pressed Zouri's hand tightly in his, and was silent.

Seth called out in the darkness: "Zouri, is that you?"

"Yes, Poppy, I and Uncle Joe. He brought me home."

Seth stopped an instant, and then came nearer.

"Is it you, Joe?"

"Yes, Seth; me an' Zouri." Joe felt the need of companionship just then.

"Shake hands with Uncle Joe, Poppy! He's comin' in to sit in that chair across the chimly from you. I asked him to!"

Seth held out his hand, and said: "Come on, Joe, that chair's been empty these four years. I reckon you'd better come in and use it to-night. Zouri's got better sense than her father."

"I told him 'bout Tenny, Uncle Joe, an' he's sorry, too," said Zouri.

Seth laid one hand on Joe's shoulder, while with the other he led little Zouri toward the house. Both arm-chairs were filled that evening, and a little curly-headed girl sat first on the knees that occupied one chair, and then on those which occupied the other, until at last she fell asleep in Uncle Joe's arms, and was carried to bed with his kiss and blessing resting on her forehead.

"There aint many like her, Seth," he said. "You ought to be mighty thankful you've got Zouri. I'd lay down and die this minute if I could see my Tenny strong and hearty like her."

Then there was a pause.

"Did you suspect what she was up to, Seth?"

"I wasn't rightly certain but it had something to do with you or Tenny. But Zouri's queer, and when she sets out to do a thing, there's no stopping her. So I generally keep still and wait till she's done it before I say much."

"Did you ever know anybody else like that, Seth?"

Then there was a laugh—a laugh brought back from the past years of love and brotherly kindness, and it was full of promise for the years to come.

In a few days there was a reunion at Seth's home of the six little States.

They were all there, Missouri heading the list. Next to her was little Tennessee, with her crutches; then Lous'any, Georgia, Florida and Virginia.

I do not know if other States have been added to this Union since, but I do know that Zouri's Valentine brought back a peace that has been abiding.

HELEN F. KENDRICK.

"I WONDER how many of you know the meaning of mercy," said a teacher in a Chinese mission school, and a dozen brown hands were held up.

"Very good. Now you, Chang, may give us an illustration of its meaning," and Chang said, "Melican lady give Chinese boy glishes to wash. One plate fall on floor and blake in thlousand pieces. Melican lady cly loud, 'Oh, mercy!'"

A TEACHER asked her class in natural history whether there was more than one species of kangaroo. "Yes, ma'am," said one of the boys; "there are two—the kangaroo and the kangarooster."—*Chicago Tribune.*

Itching Piles.

Burnett's Kalliston is a sure relief. A sample will be mailed on receipt of ten cents by Jos. Burnett & Co., 27 Central Street, Boston, Mass. [*Adv.*

EUROPEAN BICYCLE TOURS.

We conduct parties of young (and old) riders over the Continent of Europe. The best way to see the Old World. Magnificent roads. Two trips this Summer. France, Switzerland, Germany, Holland and England. Strictly first-class. Seven years' experience. Best references. Greatest care exercised. Tour No. 1 costs $450, No. 2, $350—round trip. Party limited. If you think of going, write F. A. Elwell, PORTLAND, ME.

LADIES, we want a reliable woman in every County, to establish a Corset Parlor for the sale of DR. NICHOLS' CELEBRATED SPIRAL SPRING CLASPS AND CORSETS. Wages, $40 to $75 per month and expenses. We furnish complete stock on consignment. $3 Sample Corset free, conditionally (see terms). Send 18 cents postage for sample and terms. Nichols & Co., 25 E. 14th St., New York.

PLUSHES

Direct from the Mills. Every Lady uses Plushes. Before buying elsewhere, send for our prices and samples. Enclose 10 cents towards paying for the samples and postage, and we will send you 90 good-sized samples, no two colors same shade.

CONTREXEVILLE MFG. CO., Manville, R. I.

Silks for this Summer.

You will need an India Silk this year for Summer Dress. Buy one now.

The variety is almost endless; and we have qualities from 50 cents to $1.25 per yard.

Send for samples. If you wish figured patterns, write whether you wish them in White, Colored or Black grounds.

Drap de Nocta and Jesso Faconné are two new and favorite weaves.

James McCreery & Co.,

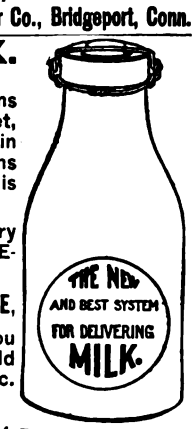
Broadway and 11th Street,
New York.

EDWARDS' ORANGE SPOONS.

Patented Apr. 22, 1890.

Sterling Silver inlaid at points most exposed to wear, then plated entire. More durable than light Sterling Silver, and not half the cost. A set of six, any pattern, $3.50. Hand-engraved, $4.00; with Gold Bowl, $1.00 extra. If you cannot obtain them of your jeweller send to us for catalogue. Accept no substitute.

The Holmes & Edwards Silver Co., Bridgeport, Conn.



ABOUT MILK.

Dipping milk out of cans peddled about the street, subject to dust and rain and drip from the reins and hands of the driver, is unhealthy and dirty.

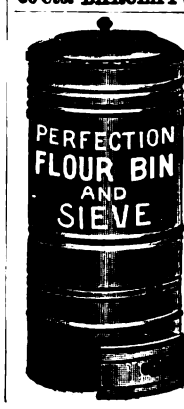
DONALD KENNEDY



Of Roxbury, Mass., says:

My Medical Discovery seldom takes hold of two people alike! Why? Because no two people have the same weak spot. Beginning at the stomach, it goes searching through the body for any hidden humor. Nine times out of ten, inward humor makes the weak spot. Perhaps it's only a little sediment left on a nerve or in a gland; the Medical Discovery slides it right along, and you find quick happiness from the first bottle. Perhaps it's a big sediment or open sore, well settled somewhere, ready to fight. The Medical Discovery begins the fight, and you think it pretty hard, but soon you thank me for making something that has reached your weak spot. Write me if you want to know more about it.

ESTABLISHED IN 1801

BARRY'S TRICOPHEROUS FOR THE Hair & Skin.

An elegant dressing exquisitely perfumed, removes all impurities from the scalp, prevents baldness and gray hair, and causes the hair to grow Thick, Soft and Beautiful. Infallible for curing eruptions, diseases of the skin, glands and muscles, and quickly healing cuts, burns, bruises, sprains, &c. All Druggists or by Mail, 50 Cts. BARCLAY & CO., 44 Stone St. New York.

EVERY HOUSEKEEPER NEEDS THE PERFECTION

A HOUSEHOLD NECESSITY.

No Home Complete Without It. Simple To Use. Never Wears Out. Made of tin. Most useful, convenient and only perfect article of its kind ever invented. Combines sack or barrel, sifter pan and scoop. **Will Pay For Itself** in a short time by saving waste, time and labor. Keeps out dust, vermin, etc. Preserves flour from mould and mustiness. Enough for baking sifted in one minute. It pleases everybody. Satisfaction guaranteed. Sent by express on receipt of price. To hold 25 lbs., $2.50, 50 lbs., $3.00, 100 lbs., $4.00. **Agents Wanted. Write for Circulars.**

SHERMAN, TANGENBERG & CO., 489 & 491 Carroll Avenue, Chicago, Ill.

Children always Enjoy It.

SCOTT'S EMULSION

of pure Cod Liver Oil with Hypophosphites of Lime and Soda is almost as palatable as milk. Children enjoy it rather than otherwise. A MARVELLOUS FLESH PRODUCER it is indeed, and the little lads and lassies who take cold easily, may be fortified against a cough that might prove serious, by taking Scott's Emulsion after their meals during the winter season.

Beware of substitutions and imitations.

HUMORS of the BLOOD & SKIN Cured by Cuticura

HUMORS OF THE BLOOD, SKIN AND Scalp, whether itching, burning, bleeding, scaly, crusted, pimply, blotchy, or copper-colored, with loss of hair, either simple, scrofulous, hereditary or contagious, are speedily, permanently, economically, and infallibly cured by the CUTICURA REMEDIES, consisting of CUTICURA, the great Skin Cure, CUTICURA SOAP, an exquisite Skin Purifier and Beautifier, and CUTICURA RESOLVENT, the new Blood and Skin Purifier and greatest of Humor Remedies, when the best physicians and all other remedies fail. CUTICURA REMEDIES are the only infallible blood and skin purifiers, and daily effect more great cures of blood and skin diseases than all other remedies combined.

Sold everywhere. Price, CUTICURA, 50c.; SOAP, 25c.; RESOLVENT, $1. Prepared by Potter Drug and Chemical Corporation, Boston, Mass.

Send for "How to Cure Blood and Skin Diseases."

Pimples, blackheads, chapped and oily skin prevented by CUTICURA SOAP.

Backache, kidney pains, weakness, and rheumatism relieved in one minute by the celebrated CUTICURA ANTI-PAIN PLASTER. 25 cents.

SYRUP OF FIGS

ONE ENJOYS both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers, and cures habitual constipation. Syrup of Figs is the only remedy of its kind ever produced, pleasing to the taste and acceptable to the stomach, prompt in its action and truly beneficial in its effects. Prepared only from the most healthy and agreeable substances, its many excellent qualities commend it to all, and have made it the most popular remedy known. Syrup of Figs is for sale in 50c. and $1 bottles by all leading druggists. Any reliable druggist who may not have it on hand will procure it promptly for any one who wishes to try it. Do not accept any substitute.

MESSAGES FROM THE SEA.

The practice of throwing overboard from ships letters enclosed in sealed bottles, is centuries old. Hollow copper spheres and oaken barrels have also been used as sea letter-carriers in attempts to trace the direction of ocean currents, or to send word from persons at sea to friends on land. Barnacles readily attach themselves to these drifting letter-holders, and sink them. Only a few of the many messages that have been thrown into the sea have been recovered.

Columbus encountered a hurricane near the Azores, in 1493. Fearing that his ship would not outlive the storm, he wrote on parchment a description of his discoveries, enclosed it in a cask and cast it into the sea. The precious document has never been found. Clement Wragge, the meteorologist, threw overboard one hundred and fifty bottle messengers during the passage from Australia to England, in 1878. Only six of them have been heard from. One was picked up in Mobile Bay, having travelled five thousand five hundred miles in two years.

Sometimes a sea-messenger long escapes notice on a little-frequented beach. One sent from an American ship, in 1837, was picked up twenty-one years later on the west coast of Ireland. Another, sent adrift in 1826 from the English ship, *Blonde*, was picked up sixteen years afterward on the coast of France.

In 1849 a whaleship found a sealed bottle floating at sea. It contained documents from Sir J. Franklin, dated June 30, 1845, which was but a few weeks after that illustrious navigator set sail toward the North Pole, never to return.

A remarkable message from the sea was that sent from the East Indiaman, *Kent*, by Major M'Gregor. It read:

"The ship *Kent*, Indiaman, is on fire. Elizabeth, Joanna, and myself commit our spirits into the hands of our blessed Redeemer. His grace enables us to be quite composed in the awful prospect of entering eternity. D. W. N. M'GREGOR, March 1, 1825, Bay of Biscay."

This message was picked up on the shore of Barbadoes, September 30, 1826. But those on board the *Kent* had escaped the fate which they had awaited with such fortitude. Before the *Kent* sank, a passing vessel rescued its crew and passengers.

CAME BACK IN A SAUCER.

It is usually the owner who tries to find his lost jewels. A lost jewel that tried to find its owner would have a story worthy of the Arabian Nights; and it is pretty nearly that kind of story that Mr. H. L. Constine, of New Orleans, told a reporter of the Seattle *Press*.

"When I was in Atlanta, Ga., some time ago," said Mr. Constine, "I was invited by a friend to visit a peach cannery in which he was employed. After I had completed my tour of the cannery I missed a valuable charm that I had been wearing on my watch-chain. I was sorry to lose it, for it was a gift from a dead sister. I offered a liberal reward, but to no purpose.

"I returned home, and gave up all hope of recovering the charm. About two months ago I came to the Pacific coast on business.

"I arrived in Seattle about two weeks ago, since which time I have been visiting friends who live near Yesler Avenue. Yesterday noon I was down town and stepped into a restaurant for lunch.

"After eating a hearty lunch I called for some peaches and cream. I started to eat the peaches, and was in the act of cutting one of them with a spoon, when the spoon struck some hard substance. I worked the substance out and held it up to the light. It was my missing charm.

"The story is a strange one," concluded Mr. Constine, "and I should hardly be willing to believe it myself if told to me by a stranger, but nevertheless every word of it is strictly true. The only way I can account for the mysterious disappearance and recovery of the jewel is that it became disengaged from the chain when I was watching the performance of a new coring and paring machine, in which I was much interested, and fell among the peaches without my noticing it."

A BLESSING IN THE BELLS.

George Herbert tells us to

"— Think when the bells do chime
'Tis angels' musick."

Many a time their metallic voices have carried to the most discouraged, and even the most hardened, souls suggestions of better things and happier days. The *Young Churchman* says:

A touching incident occurred on Blackwell's Island when the bell of the new chapel was hung. It was rung for the first time to test its sound, which is peculiarly resonant and sweet. After a few minutes' trial, the archdeacon, who had ordered the bell to be rung, sent word to stop the ringing, fearing that it might annoy the inmates of the almshouse. At this moment, a lady who had been visiting in the dormitories came out to ask as a favor that the ringing might be continued.

She said that many of the poor old inmates had burst into tears when they first heard the sound of the bell; and they declared that it recalled to them the blessed Sunday bells of childhood in the home far away. The sweetness of that tolling bell seemed to send a benison through those dreary wards, and to bring back memories full of Christian comfort and aspiration to the inmates.

WASHINGTON'S DEATH.

Mr. George Ticknor, who wrote "The History of Spanish Literature," and "The Life of Prescott," remembered distinctly the death of Washington. He says in his diary:

There never was a more striking or spontaneous tribute paid to man than was paid in Boston, when the news came of Washington's death.

It was on December 14, 1799, a little before noon, and Mr. Ticknor says: "I often heard persons say, at the time, that one could know how far the news had spread, by the closing of the shops. Each man, when he heard that Washington was dead, shut his store, as a matter of course, without consultation, and in two hours all business was stopped.

"My father came home, and could not speak, he was so overcome. My mother was alarmed to see him in such a state, till he recovered enough to tell her the sad news. For some time every one, even the children, wore crape on the arm. No boy could go into the street without it. I wore it, though only eight years old."

To relieve cramp and pain in the stomach use "*Brown's Household Panacea.*" It is purely vegetable, and is excellent for both internal and external use. [*Adv.*

THE YOUTH'S COMPANION

Copyright, 1891, by Perry Mason & Company.

64th Volume.
Number 8.—Sixteen Pages.

BOSTON, THURSDAY, FEBRUARY 19, 1891.

$1.75 a Year.
Single Copies, Five Cents.

For the Companion.

MRS. RAYNE'S MONEY.

"There's very, very little worth living for," said Margaret Lee, looking disconsolately down the street, as she set out from her mother's house for her daily work.

"That hot, humdrum store; those people, always the same—looking out for themselves, never caring how much trouble they give or how torturing they are with their whims! I always expected to earn my own living, but I didn't expect to earn it this way. I'm tired of it; I'm tired of everything!"

"You were pretty nearly late this morning," said Janet Randall, the girl who stood at the section in the great store next to Margaret's. Janet and Margaret were fast friends, and were talking together in a moment's lull.

"Yes, it was so delightful outside, and so close and stuffy in here!" said Margaret, with a half-groan.

"I saw Mr. Ives look rather sharply at you as you took your place."

"Oh, I dare say," said Margaret. "Let him look!"

"But you might lose your situation. You wouldn't like that."

"Well, I don't know that I should care much. It's one form of slavery here. The worst that could happen would be an exchange for another."

"There comes your terror," said Janet, gliding back to her own place.

The "terror" was a lady who had of late much frequented her counter, looking over laces, giving a great deal of trouble, and seldom making a purchase. The saleswomen were allowed a small percentage upon sales—a fact which rendered such customers a severe trial to their patience.

"I wish to match these pieces," said the lady, showing some samples.

Box after box was ransacked, and after half an hour's search, two of the samples were matched.

"I am quite sure we haven't anything nearer than this," said Margaret, referring to the third. "See; it is so nearly like it that the difference could scarcely be seen."

"We have not looked in those boxes," said the lady, glancing toward a row on a high shelf.

"Those are of an entirely different style, madam."

But the lady insisted, and Margaret opened the boxes, one by one, for her leisurely inspection.

Impatient customers, tired of waiting, went away. From time to time Margaret caught sympathizing glances from Janet, but these were not all. She knew that she was being keenly observed by Helen Winter, a girl who stood near her on the other side. Helen had a cousin for whom she wished to obtain a situation in the store, and Margaret knew well that information of any failure in patience on her part would promptly find its way to her employers.

Margaret showed no sign of annoyance.

"It seems to me you keep a very poor assortment," said the lady, at last, turning away.

Next came a party of customers who, it might be hoped, would be less hard to please—a bevy of laughing high-school girls, who, satchels in hand, had come in to take a peep at finery for the approaching graduation exercises.

They looked at laces, ruching and fans, with long discussions over every article, ending in most cases with a decision to refer the matter to mother or sister. They were not very profitable customers, but it was pleasant to serve them.

As the sound of their merry voices died away, a feeling of longing for the good things which were a part of their happy, prosperous lives took possession of Margaret. She had looked forward to these things once, before the cruel fortune came which had bound her to this tiresome counter. Again the burden pressed heavily on her heart.

As one of the relays of clerks was in the lunch-room, Mr. Ives, the superintendent, entered.

"He has his speech-making face on," whispered Janet to Margaret.

"And he's turning his attention toward us," said Margaret.

"Young ladies," said Mr. Ives, presently, "I am sorry to be obliged to inform you that a customer has lost some money in the store. Mrs. Rayne visited several of the counters this morning —"

"Oh yes, she did!" came in an undertoned groan from one or two victims.

"And has reported at the office the loss of a hundred-dollar bill."

There was a small sensation, while many eyes turned upon Margaret.

"Those of you with whom Mrs. Rayne dealt will please make very careful search for the money among your goods."

Margaret opened the Boxes one by one.

"Too bad!" exclaimed Janet, as the man left the room. "That bothering woman kept you fooling over her trashy bits all the morning, Margaret, and now you'll have to spend the best part of the afternoon looking for her bill. And after all, she has probably lost it somewhere else, or not lost it at all."

"Yes," said Margaret, "I shall have to go to the bottom of every box, and shake out every piece in the stock, for she wouldn't be satisfied until I had shown her the very last inch this morning. But I do hope some of us will find it!"

Margaret used every chance moment of leisure to search for the missing bill. A heavy shower brought a check upon the rush into the great store, and with patient hands and keen eyes she turned over her laces.

At closing-time the girls gathered in little knots, discussing, with anxious looks, the affair of the lost note. Margaret said little, but listened to the others with a face which showed that the graver concern had for the time shut out all minor worries.

"It's a shame, I declare," said Janet, taking Margaret's hand in her own, "for these rich people to come and make trouble for us poor girls about their money!"

"When they've so much of it that they don't know how to take care of it!" chimed in another.

"If I were so careless as to lose it, I should want to keep still about it."

Mr. Ives came about with a sober, inquiring look as the tired girls busied themselves in putting things in order after the day's work.

Margaret began to pack the choicest of her laces, to be stored in the vault in which the most valuable articles were put away at night, her eyes still keeping up their search, although she had given up all hope of finding the bill.

The safe was at the back part of the store, and she made several journeys to it before the things under her care were all put away.

"What's that?"

Just as she was stepping out, after depositing her last armful, something on the floor caught her eye, so vaguely in the gathering shadows that she was not sure that it was more than a passing fancy. Yet how could she be mistaken in that dim flash of dingy green?

With a heart beating in sudden hope, she quickly ran back into the vault, and with a little cry of joy snatched up something, and again turned toward the massive door.

Creak—bang! Just as she reached it, it closed in her face. Without dreaming what this might mean, she pushed on the door with her hand, calling out: "I am here! Open, please!"

But another creaking sound had mingled itself with her words. Mr. Ives, who had seen her come out, had then turned his head to speak to some one else, failed to see her rush in again, and had turned the knob which set the combination.

Janet Randall sprang quickly toward him.

"Margaret Lee is in the vault!" she said, excitedly.

"No; I saw Miss Lee come out before I closed it."

"She ran back. Hear her! Open it at once, please!"

"But I cannot. The combination is set, and I do not know it," he said, gazing at Janet in growing uneasiness.

"Where is Mrs. Adams?" cried Janet to the girls who were gathering near. "She hasn't gone home, has she? Bring her—quick! Margaret is shut up in the safe!"

A chorus of dismay rose, while a number of the girls hurried to seek Mrs. Adams, who was the only employee who knew the combination.

"Margaret!" cried Janet, going close to the door.

"Yes, Janet, here I am!"

"O Margaret, you're not frightened, are you?"

"No," Margaret replied; "but why don't they open the door?"

"They will, in a minute. You see, the combination's sprung, and they're bringing Mrs. Adams to open it."

"I hope she'll hurry."

"She's coming now. We'll have you out at once."

Mrs. Adams, intercepted just as she was going out, was brought back in hot haste. She uttered a little scream when she was told what was the matter.

"Why, I can't remember the combination! Where's Mr. Barrow? Where's Mr. Price?"

Quietly and firmly equal to the every-day demands upon her, Mrs. Adams failed completely in the moment of this emergency. With another cry of distress, she sank down in a hysterical condition.

"Why, the girl will smother—she will die in there!" she exclaimed.

"Where is Mr Price?" Janet asked, in desperation.

"Mr. Price has gone to a lawn festival over in Elm Park," said Mr. Ives.

"Telephone to him, and tell him it is life or death whether he gets here immediately."

"Margaret!" again called Janet.

"Yes?"

"Have patience a little longer, dear. There is a delay in opening, but everything is being done to get you out. Courage, Margaret! Speak to me!"

"Janet," Margaret called, "tell Mr. Ives—"

"Yes, here I am."

"I—I—I've found—"

The voice seemed to die away.

"Go on, Margaret," screamed Janet. But no answer came, save an occasional gasping murmur, and Janet crouched upon the floor in speechless agony.

There seemed no hope. Mrs. Adams was more hysterical than ever, and could recall nothing of the combination. The telephone rang, but Mr. Price could not be reached.

After the closing of the door, Margaret had turned and glanced about her, half-expecting to see some rays of light. But the absolute blackness frightened and oppressed her.

"How dark!" she said. "I never really knew before what real darkness is."

She heard Janet's call faintly through the thick door, and after exchanging the first few words with her, waited with such patience as she could summon.

The confusion of excited voices outside very soon conveyed to her a thought that her danger of suffocation might be greater than she had in the first few moments imagined.

A slow terror crept to her heart, as the sounds seemed to take on increased agitation, and one or two screams reached her strained ears. Her heart-beats came slower, and her breath already seemed difficult to draw.

Janet called again, and each one of her reassuring words seemed to tell anew of the fate which might be closing about her.

She guessed too well what the delay must mean. She knew that Mr. Barrow, the senior partner, was out of town; that his junior lived in the suburbs, and could not be reached before—what?

With strong shudderings she strove to draw a free breath, but already the suffocating air seemed to refuse any relief to her gasping lungs. In a paroxysm of despair she flung herself upon the floor.

Life! life! life! How precious and beautiful a thing it was! How sweet had been the light of the sun, and the freshness of the air! The modest home with which she had been discontented, the routine of work which had wearied her—how their details seemed to stand out in vivid brightness! How delightful would be the hum of the busy store, how kindly the most unsympathizing face in it would seem to smile upon her!

And her mother! With a cry of anguish, Margaret sprang up, and tried in vain to call out. She scarcely heard the sounds without, though

Digitized by Google

she had a dim sense that Janet was calling her However, with the thought of home came a determination not to give up while there might be hope. She remembered having heard that bad air sinks to the floor, and again forced herself upon her feet.

But her limbs tottered, and with trembling hands she felt for a small step-ladder which she knew was in the vault. She brought it close to the door, and so leaned upon it that if her senses failed it would keep her from falling.

In doing this, she noticed that she still held in her hand the bill which she had found. She crumpled the bit of paper in fierce anger. Had she, indeed, given her life for it?

Then a fearful thought came; when those without should at last reach her, might there not be some who would believe she had concealed the money with the intention of keeping it?

The dreadful suggestion spurred her to one last effort. If she could tell them how she had found it, no one could think that she had stolen it—

But an iron hand seemed closing upon her throat as she again strove to speak. Her voice sounded to herself hollow and indistinct, as with her last conscious breath, she tried to send it through the iron door.

Two minutes later Mr. Barrow, who was supposed to be at his summer cottage among the mountains, entered the store, and looked in surprise upon the scene of confusion.

"The combination. Open the vault, quick!"

Mr. Ives had gone to find experts to force open the vault, but through the clamor of joy and fear the girls soon contrived to let Mr. Barrow know what was wanted.

He knew the combination, and at a few turns of his hand the heavy door swung open, and Margaret fell forward into the arms waiting to receive her.

In less than half an hour she opened her eyes to gaze into the kindly ones which smiled and cried over her.

"I received a telegram calling me back on important business," Mr. Barrow explained. "I did not guess how important it might prove to be."

"It must have been sent straight from Providence," whispered Janet.

Margaret was taken home in a carriage by Janet and Helen Winter. As the carriage was about to drive away, Janet held out to Mr. Ives the hundred-dollar bill, which she had taken from Margaret's hand.

"No," he said; "let her return it to its owner."

Mrs. Rayne came to see her, and cried and laughed as Margaret told how the bill was found.

"You poor dear child! To think what a result my carelessness might have had! It caught on some of your laces, and then dropped into the vault. Now I shall positively never take it back. I'm sure you earned it, going into that dreadful place for it."

Margaret's face whitened at the thought of accepting the money.

"I shall feel that you have not forgiven me if you refuse to keep it," said Mrs. Rayne. "Put it in the bank for a nest-egg. I think you will have more to add to it, for I have told Mr. Barrow that, of all the saleswomen I have ever met, you are the most patient, attentive and ladylike. I fancy he knows when he has an employee worth paying well."

"I think I found something more than the money," said Margaret.

AN ERMINE BY FLASH-LIGHT.

A subscriber has recently sent us a photograph of a very large and beautiful ermine, in its white winter pelage, taken under somewhat peculiar circumstances.

Our correspondent's family consists of two daughters, young ladies, sixteen and eighteen years of age, who last summer became much interested in photography. Their home is in one of the extreme Northern States of the country, where they have a farm, and what is more to the point of our story, a large hennery.

One morning about the middle of December it was discovered that three fine "Plymouth Rock" chickens lay on the floor beneath their roost, dead—the brain of each having been very cleverly and cleanly removed through a small hole near the base of the skull.

Immediately on observing this peculiarity in the marauder's manner of attack, our friend fancied that a weasel had levied upon him; but after noting the distance which the animal had been obliged to leap, laterally, to reach the roost, he came to the conclusion that it could hardly have been a common weasel, and must have been the weasel's larger and less frequently seen congener, the stoat, or ermine.

He understood the habits of this little epicure among the *mustelidæ* sufficiently well to know that it would, in all probability, return for the brains of three more chickens the following night, and continue the process indefinitely, unless its career were summarily cut short.

The hennery building is a large one, not easily closed to the entry of so small and insidious a robber, and he could think of no better way of procedure than to post himself, with a bull's-eye lantern and small shot-gun, just within a doorway, leading from a passage into the hennery, at about a level with the chicken-roost.

Sitting quietly here, he thought, at the first sounds of commotion from the chickens, he might be able to turn the lantern light upon the roost, and shoot the ferocious little disturber.

But he had no sooner broached this plan at the breakfast table, than his daughters proposed an amendment.

"Let us watch with you!" they exclaimed, "with our camera and flash-light, and get a picture of the rascal! We will flash the light and get a photograph, and you may do the shooting. We will see whether you can shoot quicker than we can take a picture!"

As they were quite enthusiastic, the plan was adopted. During the day the camera was prepared for instantaneous photography, also the little alcohol lamp along with the rubber bulb for puffing a pinch of magnesia powder into the flame, to produce the kind of light necessary for securing a picture. The camera was focussed as accurately as possible, in advance, and all made ready for quick work.

The party began the vigil at nine in the evening, well wrapped up in blankets and robes, for the mercury was almost down to zero.

They had long to wait. It was after one o'clock in the morning that the ermine was heard, effecting an entrance at a small crevice beneath the eaves of the building.

A minute or two later, they heard it leap down upon the roost. A sudden outcry from one of the fowls succeeded, immediately. One of the girls then flashed the light; when they all plainly saw the white, slim creature on the back of one of the speckled chickens, in the very act of turning its neck to bite into the brain.

A perfect picture was secured. And, meantime, *paterfamilias* blazed away with his gun, and riddled both the ermine and the chicken with shot. But he was too late to get his part of the performance into the photograph.

CLIMB.

The easy path in the lowland hath little of grand or new,
But a toilsome ascent leads on to a wide and glorious view;
Peopled and warm is the valley, lonely and chill the height,
But the peak that is nearer the storm-cloud is nearer the stars of light.

—*Frances Ridley Havergal.*

For the Companion.

THE BRIGAND OF SAN DIEGO.

San Diego is one of the great new cities of Southern California. It lies within only a few minutes' ride of Mexico. There is a pretty little Mexican town on the line between Mexico and California called Tia Juana—pronounced *Te Wanna*. In the centre of one of the streets stands a great gray stone monument, set there by the government to mark the line between the United States and Mexico.

To the south, several hundred miles distant, stretches the long Sea of Cortez, as the conquerors of ancient Mexico once called the Gulf of California. Beyond the Sea of Cortez is the long and rock-bound reach of the west coast of Mexico.

Then come Guatemala and a group of little Central American Republics; then Colombia, Peru, and so on, till at last Patagonia points away like a huge giant s finger straight toward the South Pole.

But I must bear in mind that I set out in this story to tell you about "The Brigand of San Diego," and the South Pole is a long way from the subject in hand.

I have spoken of San Diego as one of the great new cities, and great it is, but altogether new it certainly is not, for it was founded by a Spanish missionary, known as Father Junipero, more than one hundred years ago.

These old Spanish missionaries were great men in their day; brave, patient, and very self-sacrificing in their attempts to settle the wild countries and civilize the Indians.

This Father Junipero walked all the way from the City of Mexico to San Diego, although he was more than fifty years old; and finally, after he had spent nearly a quarter of a century in founding missions up and down the coast of California, he walked all the way back to the City of Mexico, where he died.

When it is added that he was a lame man, that he was more than threescore and ten years of age, and that he travelled all the distance on this last journey on foot and alone, with neither arms nor provisions, trusting himself entirely to Providence, one can hardly fail to remember his name, and speak it with respect.

This new city, with its most salubrious clime, is set all over and about with golden oranges, red pomegranates, great heavy bunches of green and golden bananas, and silver-laden olive orchards. The leaf of the olive is of the same soft gray as the breast of the dove, as if the dove and the olive branch had in some sort kept companionship ever since the days of the Deluge.

San Diego is nearly ten miles broad, with its base resting against the warm, still waters of the Pacific Ocean. The most populous part of the city is to the south, toward Mexico, where seven or eight railroads run together.

Then comes the middle part of San Diego City. This is called "the old town," and here it was that Father Junipero planted some palm-trees that stand to this day—so tall that they almost seem to be dusting the stars with their splendid plumes.

Here also you see a great many old *adobe* houses in ruins, old forts, churches, fortresses, barracks, built by the Mexicans nearly a century ago, when Spain possessed California, and her gaudy flag floated from Oregon to the Isthmus of Darien.

The first old mission is a little farther on up the coast, and the new college, known as the San Diego College of Letters, is still further on up the warm and salubrious sea-bank. San Francisco lies several hundred miles on up the coast beyond Los Angeles. Then comes Oregon, then Washington, one of the newest States, and then Canada, then Alaska, and at last the North Pole, which is almost as far as the South Pole from my subject, the Brigand of San Diego.

He was a little Aztec Indian, brown as a berry, slim and slender, very silent, very polite, and not at all strong.

It was said that he had Spanish blood in his veins, but it did not show through his tawny skin. It is to be conceded, however, that he had all the politeness and serene dignity of the proudest Spanish Don in the land.

He was a student at the San Diego College of Letters, where there were several hundred other boys of all grades and ages, from almost all parts of the earth.

A good many boys came here from Boston and other Eastern cities to escape the rigors of winter. I remember one boy in particular from Philadelphia. He was a small boy with a big nose, very bright and very brave. He was not a friend of the little Aztec Indian, the Brigand of San Diego.

The name of this boy from Philadelphia was Peterson; the Boston boys called him Bill Peterson. His name, perhaps, was William P. Peterson; William Penn Peterson, most likely. But this is merely detail, and can make but little difference in the main facts of the case.

As I said before, these college grounds are on the outer edge of the city. The ocean shuts out the world on the west, but the huge chaparral hills roll in on the east, and out of these hills the jack-rabbits come down in perfect avalanches at night, and devour almost everything that grows.

Wolves howl from these hills of chaparral at night by hundreds, but they do little or no harm in comparison with the innumerable rabbits. For these big fellows, on their long, bent legs, and with ears like those of a donkey, can cut down with their teeth a young orchard almost in a single night.

The new college of course had new grounds, new bananas, oranges, olives, all things, indeed, that wealth and good taste could contribute in this warm, sweet soil. But the rabbits! You could not build a fence so high that they would not leap over it.

"They are a sort of Jumbo grasshopper," said a smart boy from Boston.

The head-gardener of the college campus and environment grew desperate.

"Look here, sir," he said to the president, "these big-eared fellows are lazy and audacious things. Why can't they live up in the chaparral, as they did before we came here to plant trees and try to make the world beautiful? Now, either these jack-rabbits must go, or we must go."

"Very well," answered the president. "Offer a reward for their ears, and let the boys destroy them."

"How much reward can I offer?"

"Five cents apiece, I think, would do," answered the head of the college, as he passed on up the great stone steps to his study.

The gardener got the boys together that evening, and said, "I will give you five cents apiece for the ears of these dreadful rabbits."

"That makes ten cents for each rabbit, for each rabbit has two ears!" shouted the smart boy from Boston.

Before the dumfounded gardener could protest, the boys had broken into shouts of enthusiasm, and were running away in squads and in couples to borrow, beg or buy firearms for their work.

The smart boy from Boston, however, with an eye to big profits and a long job, went straight to the express office, and sent all the way to the East for a costly and first-class shot-gun.

The little brown Aztec Indian did nothing of that sort; he kept by himself, kept his own counsel, and so far as any of the boys could find out, paid no attention to the proffered reward for scalps.

Bill Peterson borrowed his older brother's gun, and brought in two rabbits the next day. The Boston boy, with an eye wide open to future profits to himself, went with Peterson to the head-gardener, and holding up first one dead jack-rabbit by the ear, and then the other, coolly and deliberately counted off four ears.

The gardener grudgingly counted out two dimes, and then, with a grunt of satisfaction, carried away the two big rabbits by their long hind legs.

As the week wore by, several other dead rabbits were reported, and despite the grumbling of the head-gardener, the tumultuous and merry students had quite a revenue, and their hopes for the future were high—especially when that artillery should arrive from Boston!

Meantime, the little brown Aztec boy had done nothing at all. However, when Friday afternoon came, he earnestly begged, and finally obtained, leave to go down to his home at Tia Juana. He wanted very much to see his Mexican mother, and his six little brown Mexican brothers, and his sixty, more or less, little Mexican cousins.

But lo! On Saturday morning, bright and early, back came the little Brigand, as he was soon to be called by the boys, and at his heels came toddling and tumbling not only his six half-naked little brown brothers, but dozens of his cousins.

Each carried a bundle on his back. These bundles were long, finely-woven birds' nets, and these nets were made of the fibre of the misnamed Century plant, the agave.

This queer-looking line of barefooted, bareheaded, diminutive beings, headed by the silent little Brigand, hastily dispersed itself along the outer edge of the grounds next to the chaparral abode of the jack-rabbits, and then, while grave professors leaned from their windows, and a hundred curious white boys looked on, these little brown fellows fastened all their long bird nets together, and stretched two wide wings out and up the hill.

Very quiet but very quick they were, and when all the nets had been unwound and stretched out in a great letter V far up the hill, it was seen that each brown boy had a long, heavy manzanita-wood club in his hand.

Suddenly and silently as they came, they all disappeared up and over the hills beyond, and in the dense black chaparral.

Where had they gone, and what did all this silent mystery mean? One, two, three hours! What had become of this strange little army of silent brown boys?

Another hour passed. Not a boy, not a sign, not a sound! What did it all mean?

Suddenly, down came a rabbit, jumping high in the air, his huge ears flapping forward and back, as if they had wilted in the hot sun.

Then another rabbit, then another! Then ten, twenty, forty, fifty, five hundred, a thousand! All jumping over each other, and upon each other, and against the nets, with their long legs thrust through the meshes, and wriggling and struggling till the net shook as in a gale.

Then came the long lines of half-naked brown boys tumbling down after them out of the brush, and striking right and left, and up and down with their clubs.

In less than ten minutes from the time they came out of the brush, the little fellows had laid down their clubs, and were dragging the game together.

The grave professors shook their hats and handkerchiefs, and shouted with delight from their windows overhead, and all the white boys danced about wild with excitement.

That is, all but one or two. The boy from Boston said savagely to the little Aztec, as he stood directing the counting of the ears, "You're a Brigand! You're the black Brigand of San Diego City, and I can whip you!"

The Brigand said nothing, but kept on with his work.

In a little time the president and gardener came forward, and roughly estimated that about one thousand of the pests had been destroyed. Then the kindly president went to the bank and brought out one hundred silver dollars, which he handed to the little Brigand of San Diego in a big cotton handkerchief.

The poor, timid little fellow's lips quivered. He had never seen so much money in all his life. He held his head down in silence for a long time, and seemed to be thinking hard. His half-naked little brothers and cousins grouped about, and seemed to be waiting for a share of the money.

The boy's schoolmates also crowded around, just as boys will, but they did not want any of the silver, and I am sure that all, save only one or two, were very glad because of his good luck.

Finally, lifting up his head, and looking about the crowd of his school-fellows he said, "Now, look here, I want every one of you to take a dollar apiece, and I will take what is left." He laid the handkerchief that held the silver dollars down on the grass, and spread it wide open.

Hastily but orderly, his school-mates began to take up the silver, his own little brown fellows timidly holding back.

Then one of the white boys who had hastily helped himself, saw that the bottom was almost reached; and with the remark that he was half-ashamed of himself for taking it, he quietly put his dollar back. Then all the others, fine, impulsive fellows who had hardly thought what they were about at first, did the same, and the little brown boys came forward.

They kept coming and kept taking, till there was nothing but the handkerchief left.

One of the professors then took a piece of gold from his pocket, and gave it to the little "Brigand." The boy was so glad that tears came into his eyes, and he turned to go.

"See here!"

It was the smart boy from Boston who had been looking on all this time, and who now came forward with his hand held out.

"See here!" he said. "I've got a forty-dollar shot-gun to give away, and I want you to have it; yes, I do. There's my hand on it. Take my hand, and you shall have the gun just as soon as it gets here."

The two shook hands, and the boys all shouted

Digitized by Google

with delight; and on the very next Saturday one of these two boys went out hunting quail with a fine shot-gun on his shoulder.

It was the Brigand of San Diego—the silent little hero of the great rabbit drive.

A PRAIRIE CATAMARAN.

The Winter Recreations of a Settler in the Far Northwest.

In Three Parts.—Part II.

Wolf-Hunting on the Snow-Crust.

Spring was a long time coming in Northern Assiniboia, but it did not happen that there was snow-crust, favorable for using my newly made catamaran, again that winter.

The following summer was passed in yeoman toil. I even broke up the catamaran for the lumber which it contained, for lumber is scarce on these prairies.

That year steady work set me well on my way as a farmer. It broke the hard outer shell of rude nature, so to speak, and gave me a better hold on life.

My nearest neighbors were no longer strangers who felt it necessary to fire on me when I called upon them. I was on friendly terms with the McCauslands. Tom and Emma often rode over to see me, and I visited them frequently.

With three families of the simple Icelanders also, I was on good terms; they are somewhat slow-witted people, but kindly and honest. They will prove desirable citizens of the new Province. It is necessary for the stability of government that there should be a class of citizens who do not change their views too often. The Icelanders will furnish that element.

Better still, an old school-mate from my native city, Sidney Smart, came out to pass the next winter at my place, with a view to homesteading the following spring a claim about a mile distant from my own. A cousin of the McCauslands from Kingston, Ontario, Miss Anderson by name, joined them, and even after snow fell Sidney and I succeeded in keeping a road open to their house. We even talked of having a singing-school!

The lonesome times had gone by. It is the first winter on his claim that tests the settler's courage.

I had procured a load of lumber, and in February Sidney and I built another catamaran, on the same plan as the first, but larger and better rigged. Sidney entered into the project with enthusiasm, and for four days in February we had much amusement, making trips to our neighbors, and on several occasions taking out the young ladies for a "sail" over the prairie.

This was pleasant, of course, in its way, but scarcely worth description. But as it happened, we had an experience, about a fortnight later, of a novel and adventurous character.

A Long Run.

One morning in early March we woke to find the wind quite strong from the north, and the snow frozen hard. There had been several days of cloudy weather, and during one night rain had fallen an hour or two; but on the night before the thermometer had dropped several degrees below zero, and now the snow-crust was like ice.

"Now for a run!" exclaimed my companion, rubbing his hands, after a glance out of the window at dawn.

We did our chores, and breakfasted as expeditiously as possible. Ever since I had rigged the catamaran I had projected a trip to the "timber" about the small lakes and along the river to the northwest. I wished to explore the country in that direction, and also fancied that game might be found there.

The river is the South Saskatchewan—a stream as large as the Kansas or the Platte. Along its course through the northern part of Assiniboia there are clumps of willow, cottonwood, wild rose, wild plum and thorn brush upon the banks, although the adjacent country is for the most part bare prairie.

Still farther north there are considerable forests. About the small lakes there is usually a little brushwood, and here and there a tree. Deer are seen in these localities, and they probably winter here, as do flocks of ptarmigan.

We took our guns, with an eye to this game, and to be prepared for storms or other emergencies we also took food enough for several days, with blankets and other outfit for camping.

Sidney had brought with him a hound which he had kept for several years, more as a pet than as a hunting dog. Thus far we had found no use for the animal, but this morning we concluded to give him a trial. The dog was at first afraid to ride with us on the raft. After some hard running after us, however, we coaxed him into lying cozily down with us in the old packing-box which served as a sleigh-body on the catamaran.

Although a good runner, the hound could not keep pace with us, for we made fully fifteen miles an hour. We were steering westward at nearly right angles to the wind, which blew from the north. This was about as close to the wind as we could run with our snow-raft.

It was very exhilarating. For about twenty miles our course was over bare prairie land. Then we came to the first of a series of six or seven small lakes, three of which were bordered with brush and a little wood.

Skirting the willows along the southerly side of the first of these, we turned the hound loose to beat about, and shortened sail so as barely to maintain headway when gusts came.

Almost immediately a flock of white ptarmigan rose here, and Sidney shot two of them with his first cartridge. We picked them up, and meanwhile the hound ran ahead. A few moments after we heard him challenge, and then saw a red doe dash out on the further side of the brush, and cross the lake on the icy snow.

"This begins to be interesting!" Sidney exclaimed. "What do you mean by saying this is not a good game country?"

The deer escaped us. We saw it dash through the brush on the farther shore, and then make for the second of the lakes. The hound followed, to our vexation.

Eager for the Hunt.

"He will chase that deer all day, and perhaps run away so far that we shall lose him altogether!" grumbled Sidney.

Standing off a little from the brush and gaining the higher ground, we glided on for a mile or two, and skirted the lake. There were ptarmigan in the willows, but they flew too quickly for us, and we continued on at full speed, over rolling prairie, toward the third lake.

When we were well out on the intervening open tract, I observed two black specks on the snow far to the north and a little in our rear. Both were in motion, and like ourselves going toward the third lake.

They were the hound and deer. Slackening sail, so as to still the whirr of our runners, we could hear the hound. The lake was not far from a mile in length, irregular in contour, with patches of brush on the shores, and in one place a clump of timber.

We sat and watched the chase. The deer broke the snow-crust a little, but ran well, heading for the timber, which it reached in a few minutes. The hound was close behind, and a moment later the deer emerged from the timber clump upon the frozen snow of the lake. With her were now three other deer which had been in the brush.

It was a pretty sight to see them bound down the lake, with heads thrown back. We were about a mile from where they broke cover. They came straight down the lake at full spring, with the hound yelping behind them.

We had passed the foot of the lake, but seeing how the deer were heading, Sidney jumped off and ran back with my Winchester. He gained the cover of the willows, then worked through the brush and lay in ambush.

The deer came down rapidly, and as they approached, Sidney fired and shot one. The other three turned sharply off to the west, ran through the brush on that side, up the slope, and out upon the prairie, not more than a hundred yards from the catamaran.

I fired a buck-shot cartridge, but did not stop any of them. The leader was a fine young buck, but I saw that he broke through the crust at almost every bound, now that they were off the lake. The hound was at his heels.

It was too tempting a chance to let pass. Hauling my sail, I started after them, leaving Sidney to overtake me if he could.

A Wolf Chase.

For some moments the wind was slack. I merely crept along. Then another gust fell, and in a moment I was close up with the hound. Taking a hitch with my line, I tried to get aim for another shot, but the sail and dog were in the way.

Then the gust died off, and I fell behind for some distance. Sidney was shouting to me to wait; but I considered that he had just had his good fortune, and when the next gust fell, I made way again.

It was very exciting. In less than three-quarters of a mile, the catamaran overtook the hound and buck once more.

We were now well out on the prairie; and the wind, filling the big sail, swept me on at a rate of quite twenty miles an hour.

As the raft glided up, the dog jumped aside, and I ran fairly abreast of the buck—so near that I could almost have touched him with the barrels of my gun!

Frightened by the sudden looming up of the sail beside him, the animal veered away; but I let go the sail, and shot him without difficulty

The other two deer were smaller, and did not break the crust so frequently. The hound kept on after them, but I now stopped for Sidney, whom I could see toiling on after me.

In about ten minutes he came up, a little out of temper, but he smiled when he saw my buck. He had left his deer to be picked up later. We did the same with the buck, and bore away again, in the direction the hound and deer had taken.

After crossing a swell of the prairie, we sighted the belt of brush and scattered timber which marks the course of the river, about a mile ahead, and were scarcely two minutes running down to it.

Before we had much more than covered half the distance, however, we saw the smaller of the two deer burst from the brush, and run directly toward us for a little way, then away to northward; and a moment after, the hound came out to meet us and howled.

"What's the matter now, I wonder!" Sidney exclaimed, as we dropped the sail, and slid into the edge of the bushes. "They've met something that's sent them all to right about."

Fancying that I knew what it was, I took my double gun, left the catamaran and pushed through the brushwood to the frozen channel. The hound followed me, whining, and Sidney came on a little behind.

After a glance along the nearer bank, I crossed over on the icy snow. The channel was here about three hundred yards in width, and on the farther bank there was a thick fringe of timber. Just as I entered this, I came upon the body of the other deer, torn and partly eaten.

There was no animal in sight, but the hound, coming up behind me, whined as if frightened.

A few steps farther on, I caught sight of three wolves, one almost white, sneaking in the cover of some thick brushwood, near the prairie side of the timber belt. They stood close together, watching me askant, with their heads held low. They had left the deer, as I came across the river, but were not disposed to go far.

Chasing Wolves.

Turning, I beckoned to Sidney, who was a little way behind, to come softly up. I thought we might both get a shot. But just as I was pointing them out to my companion, the wolves turned and ran along the outer border of the timber fringe, for a little way, then climbed the low bluff on that side, and struck off across the open prairie to the west of the river.

I did not believe that they would go far, and crawling to the crest of the bluff, I peeped over it.

In a little depression of the prairie, at a distance of perhaps a thousand yards, the wily brutes were crouched flat on the snow-crust, so low that I could but barely discern their shaggy coats moving in the wind. I slid back down to the brush, where Sidney stood.

"If only we can get our catamaran across, we will have some sport, racing them," I said to him. There was neither brush nor timber in sight to the west of the river.

Sidney thought that we could fetch our craft across at a point a little below; and after some difficulty, we did so, and pushed it up the slope of the bluff.

The wolves were still lying there, but as soon as we made our appearance on the bluff, they took to their heels. We now saw that a fourth wolf had joined them.

Making sail, and heading as hard to northwestward as possible, so as to keep them from getting to windward of us, we glided along after them. On gaining the top of the next swell of the prairie, we saw that the wolves had stopped in the depression beyond it. But a strong gust now filled our sail, and we burst over the crest of the swell upon them at such a speed that the brutes took to flight again, running at the top of their speed to get away from us.

After a momentary lull, another gust swooped down on us, and we flew after them at a great pace. But for our desire to keep as far to windward as possible, we should have run them down on that first heat.

The slippery crust bothered them a little; at first, too, they did not appear to realize that we could overtake them. As they ran, they kept looking back. I wondered that they did not separate, but they did not, for a time.

After two miles or more, there came a little lull and we slowed up, hardly keeping pace with them for a time. But soon another wild gust came, and then we flew again. The wolves were scratching away at a long, keen gallop, but we glided up to them.

They were big timber wolves, brindled-gray and shaggy; long-legged, gaunt old rangers. One, which seemed to be the biggest of the four as they ran, was almost white. They were savage creatures.

As we *whirred* up to them, my comrade looked a little uneasy. "We shall run them down, sure!" he muttered. "Do you suppose they'll attack us?"

I had a notion that they might fight, if hard pushed, and taking a turn of my sheet round a cleat on our box, seized my gun. Sidney had the carbine.

In half a minute more we were right upon them! With a howl of terror, they jumped aside and ran in different directions, snapping their teeth, and snarling in a manner to make one shudder.

We opened fire instantly. I almost scorched the old white one with my first barrel, and sent him rolling over and over. Another one, on my side, had cut back, or else we had run past him. I let him have my second barrel at a distance of about ten yards.

Sidney was firing with the carbine at the other two. They had run up to windward of us. He fired three shots, and missed every time; but with his fourth, he killed one of them. Then we both shot at the other, but he fairly ran out of our reach to windward.

We could not follow him on that course, and he escaped us.

We then pulled the three together, and looked them over. It had been an exciting minute's work. We stood over our game, and gave three cheers.

Skinning the three wolves, there in that biting wind, was a less enjoyable part of the adventure. We had fearfully cold fingers before their hides were off, for the temperature was at zero, even under the afternoon sun.

By this time it was almost three o'clock. Hastily rolling up the wolf pelts, we tacked back to the river, recrossed it and stood away for home. The deer that the wolves had pulled down was in such condition that we did not attempt to secure it, but we picked up the two others.

The wind subsided when the sun set, and for the last ten miles home we were obliged to drag our catamaran and game over the snow-crust.

It was just nine o'clock when we reached my cabin. We had been out thirteen hours. I considered it a fine bit of hunting—the best I had ever done, at any rate.

We had not stopped to take a mouthful of food, and it is needless to say that we were in a condition to enjoy a venison steak.

Giving the Ladies a Sail.

For the Companion.

CHINESE SQUEEZES.

The Chinese squeeze is not exactly the "hug" of affection, nor the close grasp of hands joined in friendship. It is a commercial term, and refers to a pressure exerted upon money, in any form, by the fingers of every man through whose hands it may pass and to whom it does not belong—a pressure which causes a portion of the money to remain in his possession.

It is the x in the algebraic formula of every purchase you make, the value of which you can never discover. The problem is something like this: "If my cook buys ten pounds of beef, and charges me twelve cents a pound for it, how much does it cost him, and what is the amount of his squeeze?"

Or perhaps it takes another form, somewhat like the following: "If I go to a store and buy ten yards of silk, which I bring home under my coat, when my butler discovers the fact of the purchase and goes to the store, how large a squeeze does he extort from the merchant?"

Again, perhaps it takes another form, and reads as follows: "I sent five dollars the other day to a Chinese woman who is very poor. How much did the servant who carried my gift actually hand to her, and how much did he keep as a squeeze?"

The sufferers by this system call it stealing, while those who practise it regard it as a sort of commission.

The Chinese, in their dealings with one another, all suffer from it and all practise it. The system is as old as the Empire, and is said to have had its origin in an ancient custom under which household servants were paid no regular wages, but received food, one suit of clothes a year, and in addition a sum of money raised in this manner:

From the price paid for every article, of whatever sort, used in the family, the gatekeeper or porter retained one piece of "cash" in every fifty. At the end of each year the sum was distributed among the servants in proportion to their positions in the service of the family.

Whether this explanation is correct or not, it certainly is a fact that, in paying out or receiving cash, one gets or gives only forty-nine pieces for every nominal fifty unless there is an agreement to the contrary.

The servants in China are the best in the world. They are quiet, prompt, faithful and affectionate. They seldom complain of late hours or hard work.

As a class they are exceedingly honest. Table linen and silver-ware, and even money may be left in their charge, with assurance that every piece will be faithfully accounted for. In fifteen years, with a large establishment of servants, I never had occasion to charge one of them with theft, or with even the loss through carelessness of any article.

It is commonly and truly remarked that ladies who have lived in China are spoiled for housekeeping at home, with all its difficulties, by the excellent service to which they have become accustomed.

But, honest and faithful as the servants are in every other respect, Chinese servants will squeeze, and, curiously enough, much of their very diligence and promptness, much of their good-nature and patience under hard work and late hours, is due to this very practice. They are amiable under late

Digitized by Google

hours and extra service. Why? Because they "charge it in the bill."

The cook remembers the daily reckoning of accounts at nine o'clock in the morning, and in the extra cash which he puts on the price of each article purchased, you pay him for extra labor caused. The other servants share with him in the proceeds of the squeeze.

While Chinese servants never complain because

Chinese Servants.

of much company and consequent hard work, they have been known to leave situations because the family lived too plainly, and had too small a grocer's bill.

All sorts of expedients and devices have been resorted to by foreign housekeepers in China to put an end to this system, and all have failed.

If one does his own marketing, he discovers presently that his servants have followed him up, and quietly levied a squeeze upon every person with whom he has dealt. He also discovers that, allowing nothing for time spent in marketing, his servants can buy more cheaply than he can, even when their squeeze is added to the actual market price. So he has lost not only time but money by his effort at reform.

If one takes pains to inform himself as to the proper prices of all articles used, the servant cheats him in the weight or measure, charging for five pounds when he has actually bought four.

At last, perhaps, the master provides himself with Chinese scales and measures, and weighs and measures every article. He is happy until he discovers that his scales weigh only fourteen ounces for a pound, and that consequently his servant has had a squeeze of twelve and one-half per cent.

Determined not to be beaten, the employer procures a pair of scales that have been tested and found to be full weight. These he keeps under lock and key, and thinks that at last he has circumvented the squeezer.

Not at all. He has weighed his pound of mutton, found it full weight, and has paid only the market price. But after all this is done, and the master's back is turned, the cook cuts off a quarter of a pound from the joint, carries it to the butcher, and is paid for it.

If the master remarks upon the small quantity that appears upon the table, he is gravely informed that "In a dry climate, like that of Peking, mutton shrinks much more in roasting than it does in the master's honorable country!"

A friend of mine, who made the experiment of paying his servant a regular commission of ten per cent. on purchases, in lieu of the squeeze, found that his expenses were increased by more than that proportion. The servant took the commission, and continued his squeeze as before. The Chinaman had reasoned that since his master was able to pay him an open commission of ten per cent., he could safely be bled secretly a little more than before.

The dismissal of a servant found guilty of this practice rarely serves any good purpose. Indeed, it may be found at a later period that his successor is even worse, and is not only making his own profit, but also paying a pension to the one whom he has supplanted.

In one of the Legations in Peking, years ago, the Minister determined to suppress the practice, and dismissed the porter, or gatekeeper, who is always a prominent actor in the system.

Long afterward it was discovered that the other servants, headed by the new gatekeeper, had regularly paid the discharged servant his usual wages up to the day of his death, and then had buried him with much ceremony.

In many of the larger establishments the servants are formed into what may be termed a "coöperative establishment." Under this system each servant deposits his squeezes in a bank, where an account is kept, and at certain fixed periods the sum total is divided.

Large Chinese houses are invariably built in a square and surrounded by a high wall, having, as a rule, but one gate, which is always kept closed, and a gatekeeper is in attendance day and night.

It is easy for this man to know all the purchases made in the "compound," as it is called. If a merchant declines to pay the squeeze demanded, he is refused admission.

The illustration shows a group of Chinese servants, with the head, or, as he might well be termed, "the President of the Jolly Squeezers," in the chair.

With all the expressions of jollity, frankness and honesty found on their faces, they are shrewd students of human nature, and each one could tell, if he would, all the foibles and weaknesses of his master, and especially just how far he can be safely bled, and just at what point the squeezing process must stop.

A foreigner, no matter what his official rank, does not hesitate to enter a market or a store and inquire the price of any article on which he believes his servants are levying too large a squeeze.

But even a small Chinese mandarin would consider it beneath his dignity to make such an inquiry. Hence all Chinese officials are, in these matters, hopelessly at the mercy of their servants. The worst victim to squeezes in China is the most powerful of all the Chinese, His Imperial Majesty, the Emperor.

Probably not more than twenty-five per cent. of the money collected in his name ever reaches his treasury. For every article purchased for his use he pays four times the proper value.

The Chinese say, regarding the milk brought into the city each morning for his use, that each mandarin through whose hands it passes takes out a cupful, and puts in a cup of water, with the result that when it reaches His Majesty not even the color of milk remains.

CHESTER HOLCOMBE.

THE MOUNTAIN PINE.

There, changeless all the seasons through,
That green cathedral lifts its spires,
The first to catch the morning dew,
The last to hold the sunset fires.

ANOTHER CHILD MONARCH.

In consequence of the death of King William of Holland, there are now three European monarchs who are under fifteen years of age. They are Alfonso XIII., King of Spain, who was born, after his father's death, in 1886, became King at his birth, and is now in his fifth year; Alexander I., King of Servia, who is in his fifteenth year, and succeeded to the Servian throne on his father's abdication in 1889; and the little Queen Wilhelmina of Holland, who is in her eleventh year.

But neither of these child monarchs has reached the age necessary for actually taking in hand the reins of government. In each instance, during the minority of the sovereign, the royal power is really exercised by a regency, which performs every public act in the name of the infant ruler.

In the cases of Spain and Holland, the regency is confided to the mothers of the young sovereigns; to Queen Maria Christina, an Austrian princess, in Spain, and to Queen Emma, a German princess, in Holland.

The regency in Servia, on the other hand, is exercised by three Servian statesmen, instead of by Queen Natalie, the King's mother, from whom her husband was divorced a short time before his abdication. The regents are M. Ristich, and Generals Belimarkovich and Protich.

Of the little Queen Wilhelmina, the latest accession to the list of child royalties, it is interesting to know that she is fair and pretty, unusually intelligent, quick in her studies, and fond especially of out-of-door pastimes.

She lives, with her devoted mother Queen Emma, at the Castle of Loo, which has been for generations the abode of the Dutch rulers, and is situated at a short distance from the Hague, the capital of the Kingdom. There she is surrounded by many beautiful works of art, and the carefully tended gardens, where are grown the tulips which her father was fond of growing and made famous the world over.

The life of the little Queen is tranquil and happy. When she rises, at seven o'clock in the morning, she goes to her mother's bedside and says her prayers. From nine to twelve o'clock the Queen is busy with her studies and her music, and at noon she heartily enjoys her simple lunch of eggs, milk and fruit.

After lunch, no matter what the weather, she goes out of doors, visiting her cozy pigeon-house with its one hundred and fifty cooing inmates, or taking a jaunt on her fat little Shetland pony. She dines with her mother at six, and like any other girl of her age, at eight is sent promptly to bed.

The Queen always dresses in white, with kid shoes and white silk stockings. It is not surprising to learn that she is ardently fond of her collection of beautiful dolls, of which she has several dozen, and which are attired in such gorgeous court dresses that they would be sure to arouse the envy of any girl of her age who saw them.

Her nursery, too, presents a marvellous collection of toys, of all varieties, and from every quarter of the globe, which serve to pass away pleasantly many of her leisure hours.

While it is true that, when she comes of age, the young Queen of Holland will have very little royal power, since the real ruling in that Kingdom is done, as in England, by ministers and Parliament, still her bringing up and the formation of her character are important matters to her subjects as well as herself.

For the sovereign, even in a constitutional monarchy, has a good deal of influence, if but little actual authority; and the destinies of Holland, peculiarly as the Kingdom is situated with reference to the politics of Europe, may be seriously affected in the future by its ruler's traits and disposition.

Happily for it, the little Queen appears to be endowed with good sense and good temper, and her mother, Queen Emma, who devotes herself wholly to her daughter's training, has won the confidence and affection of the Dutch by the excellence of her personal qualities.

OUR ONLY TIME.

We should waste no moments in weak regret,
If the day were but one;
If what we remember and what we forget
Went out with the sun;
We should be from our clamorous selves set free
To work or to pray,
And to be what the Father would have us be,
If we had but a day.

—*Mary Lore Dickinson.*

CUTTING OFF DEBATE.

During the current session of Congress, the Republican Senators wished to pass an act relating to the conduct of elections for members of the House of Representatives; but although they had a party majority in the Senate, they were unable to bring the bill to a vote, and were compelled to abandon the plan.

As all our readers should know, debate in the Senate is wholly unrestricted. Any member may speak as long as he pleases; he may offer amendments without number, and may discuss each of them at full length, his own endurance being the only limit placed upon his oratory.

This feature of Senate procedure, the perfect freedom of debate, puts it into the power of a minority to prevent a measure from coming to a final vote.

In the case of the Elections Bill, the Democrats were resolved that no vote should be taken upon its passage, and after one attempt by the Republicans to tire them out by a night session, that plan was abandoned, and another one was tried.

A new rule was proposed, the effect of which would be to enable the majority, in certain cases and after a prescribed mode, to bring a debate to a close, and to secure a vote upon the pending measure. If all the Republicans had been in favor of the change in the rules, this plan might have succeeded.

But several of the Republican Senators from Western States and one from the East united with the Democrats to lay aside the proposition to amend the rules, and thus the plan by which the Elections Bill was to have been passed came to naught.

Almost every deliberative assembly in the world, except the Senate of the United States, has found itself forced to adopt some form of what, in this country, is called "the previous question." In France it is termed "la clôture;" in the British House of Commons it is known as "closure."

The object is either to enable an assembly to cut short the speeches of prosy members, or to allow the majority to control the minority.

It is plain common sense that when a majority is in favor of passing a certain measure, and a minority opposed to it, if the rules make it possible for the minority to defeat the measure altogether, and make it impossible for the majority to accomplish its will against the resolution of the minority—in that case it is the minority and not the majority that governs.

This condition did not arise in the Senate on the Elections Bill; for the Democrats and a few Republican senators who opposed the bill and the amendment of the rules made a majority.

But even when the rules do enable the minority to put a veto upon any measure, it does not follow, as a matter of course, that those rules should be changed. There are great advantages in allowing perfect freedom of debate; and those advantages have been deemed of such importance that the Senate has, for more than a hundred years, resisted all attempts to limit discussion.

At the same time, it must be said that heretofore, except in rare cases, the minority in the Senate has resisted the passage of measures urged by the majority only long enough to make the protest emphatic. Then they have yielded, and suffered the bills to pass.

No one can tell whether we have just been seeing a single outbreak of a new kind of opposition—what the physicians call a "sporadic" case; or whether hereafter this method of preventing legislation which the minority opposes is to become frequent and chronic.

It is greatly to be hoped that the old traditions will be adhered to, and that the present rules will continue to be possible. Of course the object of having a Congress is that it may make needed laws; and the question what laws are needed is properly to be decided by the majority, and not by the minority.

This seems like a party question, but it is not. It happens to-day that the Republicans are thwarted in their attempt to pass what the Democratic Senators regard as partisan legislation, but it may happen within five years that the positions of the two parties will be reversed. Should systematic obstruction become a practice in the Senate, either the rules will be changed, or the usefulness of Congress will be destroyed.

FICKLE.

Little Fanny Dean, the poor orphan whom Mrs. Burt was educating in her boarding-school, was very happy when Daisy Mott made a friend of her, chose her as a comrade in her daily walks, and declared that she would take her home on a visit during the holidays.

Fanny usually spent her vacation alone in the school with the matron. Daisy was quite sincere in her feeling for the child. She raved about Fanny's beauty and cleverness and goodness for six weeks.

But when vacation came she did not take her home, and declared that "that stupid Dean child tired her to death."

The teacher of music thought he had found a pupil in Daisy who would do him credit. She practised several hours a day. She talked and thought and dreamed of Gounod and Wagner. This lasted a month. Then she gave up music altogether. "The everlasting tinkle of the piano bored her," she said.

Daisy did not marry early in life. She had innumerable friendships with both women and men. She was always so zealous, eager and fervent for a few weeks that the object of her affection thought her the most charming of women.

Then she as suddenly grew cool and rude, in haste to be rid of the person whose claims wearied and irritated her.

She married at last a man who had patience to humor her caprices. Since then she has been by turns a devoted and neglectful wife. She has been a leader of fashion, an organizer of charitable work, a religious fanatic and an unbeliever, energetic and vehement in all pursuits and phases.

She has always some protégée whose claims for aid she urges upon all of her friends.

It may be a poor girl, whom she wishes to send abroad to study music, or a widow who needs a situation, or a poor laborer to whom she intends to give a turkey for Christmas.

But she changes the object of her sympathy so rapidly, indeed, that the widow in a short time is turned impatiently away from her door, the musician never reaches Europe, and the poor man's children would go dinnerless to bed on Christmas for all the help she gives them.

Yet Daisy is neither a pretender nor false, as her acquaintances declare her to be. She is sincere in her pity and love and good intentions—while they last.

They do not last long, because when she was young she learned to be impatient, to love excitement, to fly from emotion to emotion in order to keep her mind at fever-heat.

There are women who indulge their brains with new sensations precisely as the drunkard humors his palate with stimulants. The effect upon the character is very much the same.

WASHINGTON.

Ninety-one years have rolled away since the death of George Washington. During that long period many brilliant reputations have shone upon us for a while, only to fade away and lapse into oblivion. His name retains all its interest for us, and probably more people have been particularly occupied of late with his career, its relics and its records than ever before.

At the great sale of Washington mementos, held a few weeks ago in Philadelphia, the prices paid even for trifling objects once possessed by the great man and his family were extraordinary.

A legal document relating to the execution of his will, which his hand had never touched, brought fifty dollars, and an autograph letter eighty-five.

A list of his slaves, written and signed by his own hand, brought four hundred and forty dollars. Two of his memorandum books closely written brought eight hundred dollars. His family Bible was sold for seven hundred and sixty dollars, and books from his library, containing his signature or that of his wife, commanded prices varying from sixty dollars to one hundred and fifty dollars each.

Pieces of piano music, which had been played by Miss Custis, brought considerable sums, and a dinner invitation was sold for eighteen dollars.

The sale attracted universal attention, and every one lamented that the whole collection had not been bought by Congress and deposited at Mount Vernon, where it could have been seen by every pilgrim to that sacred shrine.

There is a special reason for this vivid survival of his celebrity, apart from his services to his country, and his singularly varied and interesting career.

From his boyhood to the last week of his life, he was a profuse writer. As soon as he could write well enough, he kept a book into which he copied anything that pleased or impressed him in his reading, and carefully entered his early cipherings and surveys in a book that is preserved to the present day.

During his first journey in the wilderness of Virginia, when he was but sixteen, he kept a pretty full journal of its events, though the task could not have been easy on such a tramp.

In a similar way, but in greater detail, he recorded his early marches and campaigns, one of which was published both in England and America.

From the day when he took command of the Revolutionary Army at Cambridge, his own letters and orders, his reports to Congress and other official documents are the imperishable record of his public actions, as well as the most correct exhibition of his character.

His own writings must ever remain the truest record of his life. Nothing can refute or supersede them. His confidential letters to his brother, to his secretary, to his steward and to his servants, as well as the more formal epistles addressed to

Digitized by Google

the President of Congress, all tell the same story and exhibit the same man, one who was intent on discharging every trust, and fulfilling every duty with punctuality and completeness.

A VOICE FROM THE TOMB.

The recent anniversary of Robert Browning's death was marked by a strange ceremony.

On the seventh of April, 1886, Mr. Browning, at the house of a friend, repeated a part of one of his poems into a phonograph, and the wax cylinder containing the precious message had ever since been locked up in a safe. On the 2nd anniversary, however, it was produced, and placed upon the machine.

There it accurately delivered the voices of those present at the meeting of April seventh, and while the little group assembled breathlessly about the phonograph, Robert Browning's familiar and cheery voice suddenly exclaimed:

"Ready?"

Immediately afterward it began to repeat, "How They Brought the Good News from Ghent to Aix."

"I sprang to the stirrup, and Joris, and he
I galloped, Dirck galloped, we galloped all three."

The poem went on in a spirited manner down to the words:

"Speed!" echoed the —" when the voice said, hurriedly, "I forget it! Er—Joris?"

Some one prompted, and Browning went on:

"Behind shot the posters, the lights sank lower;"

and again the poet halted. "I—I am exceedingly sorry that I can't remember my own verses," it continued; "but one thing that I shall remember all my life is the astonishing sensation produced upon me by your wonderful invention."

Then there was a pause, and some one reminded the present audience that Browning left the tube and returned, on being asked to authenticate his words. Presently came, in a loud voice:

"Robert Browning!"

The murmur of applauding voices followed, with the clapping of hands.

WASHINGTON'S MOTHER.

In the little old house in Charles Street, Fredericksburg, Virginia, Washington's mother, who was in her day a famous cook and housewife, was at times fond of giving a "small dance and dinner party."

There, "on the waxed floor of the front room lighted by numerous candles," the belles and beaux of other days "did dance right merrily." In a diary now worn and yellow by age, one knight-eyed belle tells:

"My petticoat was of flowered Peach satin, with long-waisted Coat of White. A lace Kerchief was gathered round my Shoulders, and my Arms were bare to the Elbow. A string of Milk White Pearls did tie around my throat. My hair I had high, and pleasing Powdered. And Silver Buckles were upon my Shoes."

Old Mr. L——, one of the neighbors, happening to drop in one morning while Mrs. Washington was busy in her dairy, was requested to come there if he cared to speak with her. He entered, found Mrs. Washington with skirts turned up and sleeves rolled, busy with the fresh made butter which she was moulding in a wooden tray. "For you know, Mr. L——," she said, briskly, "my tongue and my hands may be employed at the same time without loss."

THRIFT IN FRANCE.

Whenever a new public loan is offered in France, the world is astonished at the eagerness with which it is taken, and the huge sums subscribed by multitudes of small capitalists.

Few of us have an idea of the vastness of the money savings of the French people. If the Eiffel Tower were built of pure silver, it would require something more than two thousand million francs' worth of that metal.

Two stages more would need to be added to the tower to represent the savings of the French people now deposited in the *Caisse d'Epargne*, or savings-bank. A comparison like this appeals to the imagination. It is one made by M. de Foville, the Minister of Finance.

The depositors in French private and postal savings-banks combined now number six and a half millions, and the sums deposited are more than two thousand eight hundred millions francs, or five hundred and sixty million dollars.

Thrift in France, as everywhere else, has one great foe—the public house. The annual outlay for intoxicating drink and tobacco amounts to almost a thousand millions francs.

M. de Foville concludes his summary with these words: "Prosperity, for which so many persons seek utopian remedies, will never disappear, restoured, until driven out of the world by thrift."

NOT THAT END.

That a poor workman quarrels with his tools has passed into a proverb. It is not often that the lesson of the saying is so pointedly enforced as it was in a New York art school.

The gentleman at the head of this school never failed to ratiate the insolency or lay the blame in the wrong place whenever it showed itself among his pupils.

One of the students, who had considerable talent but very little application, found frequent refuge in this excuse, and the teacher was at last at the end of his patience.

"I couldn't get the point of my pencil right," the student said one day, by excuse for a faulty line.

"Mr. Black," the teacher replied with emphasis, "you have been in this school two years. You have the natural ability to do the best work, whereas you really do the worst. If in two years you have not been able to discover that the trouble is not at the pointed end of your pencil, I think you may as well give the whole thing up."

"What do you mean?" the student stammered, taken aback.

"You know what I mean. The difficulty is not at that end of the pencil, but at the other. It is not the point but the pointer that needs correcting."

GEOGRAPHICAL NAMES.

There has lately been established, by order of President Harrison, a "Board on Geographic Names" of the United States, made up of several officers of departments and bureaus of the government. It is charged with the duty of deciding all unsettled questions concerning geographic names which arise in the departments.

The decisions of the board on all disputed points connected with the spelling of the names of places, rivers, mountains, and the like, will be followed by the departments of the government, and eventually, no doubt, by the publishers of maps and text-books.

The way in which this new board works may be illustrated by a single case.

Most of the geographies spell the name of the great arm of the Pacific Ocean which washes the west coasts *Behring* or *Behring's* sea. Maps also have been known, however, since the time of the navigator, Vitus Jonassen Behring, who, while in the Russian naval service, first explored this sea in 1728, as the eighteenth century.

Behring Bay discovered his Danish name into Iran Behring. But the Danish people of to-day always spelled the name of the sea Bering, the *h* having been introduced as a hint to the name, and to spell it Behring was simply to misspell it. Danish map-makers, The board, to which the matter was referred, has corrected the error, and hereafter all government documents issued from the Department will be Bering sea, not Behring sea.

Among the other disputed points of spelling the following may be noted:

It is Chile, not Chili; Fiji Islands, not Feejee; Yosemite, not Yo-Semite; New York, not Yorktown; Hudson River, New York, not Hudson Bay, Canada, not Hudson's Bay; Canada, not Hudson Bay, Canada; Kowloon, China, not Hong Kong; Puerto Rico, not Porto Rico; Mount Rainier, Washington, not Mount Tacoma.

The principles adopted by the board require the adoption in general of the spelling and pronunciation which is established by local usage. The purpose is to make no changes wherever possible.

The decisions respecting foreign names are in accordance with the English official system of geographical naming and spelling. In these foreign names, the vowels are pronounced as in the Italian language, and the consonants as in the English. For instance, in Java, Bantam is to be pronounced Bahn-tahm', Banjermassin as in *father*; in Fiji and Bielefeld as in English *e* in *feet*; as in like or in cow, so that we have Loo-choo, not Liu-Kiu. The hard *c* is rejected for *k*, and we have Korea, not Corea.

WHY SHE WROTE IT.

Some of the most stimulating hymns have been "songs of the night." The whispered shades of gossips forget the hymn, "I love to steal awhile away," which has been the comfort of thousands of tired men and women.

Phebe Brown, the pastor, a wife and mother living in a country, used to steal away at dusk to a neighboring grove, where she could meditate and pray.

The village gossips put their own coarse construction upon her evening walks. One of them, a woman whose home adjoined the grove, said to her, with a tone and manner more irritating than the words:

"Mrs. Brown, why do you come up at evening so near our house, and then go back without coming in?"

That evening Mrs. Brown, grieved in spirit, set down by the fireside, nursing her babe and weeping. Then she laid the infant in its cradle, and gave expression to her feelings in the hymn which has become entitled, "My Apology for my Twilight Ramblings, addressed to a Lady."

Several years after she prepared it as a hymn, suppressing four stanzas and altering a few expressions.

PIKE'S PEAK.

An exchange prints a story of a young lady who went to Colorado for her health, and while sojourning at Manitou, left late one afternoon with a party bound on the hotel piazza.

The gentleman remarked upon the grandeur of Pikes' Peak, which towered majestically before them. The young lady expressed her appreciation of the scene in a single word.

"I suppose," said the gentleman after the conversation had proceeded a little way, "you have ascended the peak to gather interest to say from the fact that you can see Pike's Peak."

Naturally, the young lady answered the lady promptly: "and I may add that we can safely assume is probably increased by the fact that we can see it."

The coincidence was extraordinary, and the story has strong marks of truth. If the young lady had been a little quicker would almost certainly have gone on to say that the acquaintance thus happily begun soon ripened into love, and that she in turn gave place to sentiments of a tenderer nature, and that the young woman soon became, like the mountain itself, Pike's Peak.

SOVEREIGN, BUT A LADY.

The person of fine, large nature thinks of being courteous first and of his own claims to deference afterward. He can even afford to sacrifice his dignity of manner for the sake of being gentle and gracious, knowing that true dignity is a quality of spirit rather than of manner.

On a certain occasion the Queen visited Cambridge University, and the ceremonies which mark the regular Master of Trinity kept his hat on during the proceedings. Just as Her Majesty was about to leave, Lord Palmerston approached and said:

"Your Majesty has perhaps wondered that I should appear so far wanting in respect as to keep on my hat in your presence, but—if perhaps has escaped your Majesty's notice—that Lord Rosse in Ireland, Lord Forester in Shropshire, and the Master of Trinity, have a right to keep their hats on in the presence of their sovereign."

"I am glad to be informed of it," was the Queen's freezing rejoinder.

"I DON'T know what is the matter with me," said a sick woman, "and I don't believe that anything but a *post mortem* will ever show." "Yes," replied the doctor, "acquired the sympathetic visitor. "You are too weak ever to stand that!"

"Brown's Chamberared Magnesia Dentifrice" cleanses and preserves the teeth, and daily it prevents trouble from bad teeth or soft gums. 1.60c.

EMBROIDERIES.

Wonderful bargains in Remnants at the Lace House. Ladies' Jersey Jackets while, for children's dresses, elegant Cashmere Embroideries, 27 inches wide, 25c. per yard, and making up in pattern. These are not an ordinary offering for a few words from a poet, but we are selling agents, and the goods are right. Send for samples. Prompt attention to every request. Money refunded if not satisfactory.

3 & 5 Winter Street, Boston, Mass.

A child can manage the "Pittsburgh" Lamp; all it wants is filling and wiping once a day and trimming once a week.

So much for one year's improvement in lamps!

We have a primer to send.

Pittsburgh, Pa. PITTSBURGH BRASS CO.

OVERMAN VEHICLES

We manufacture over fifty varieties of light spring vehicles of the latest styles and finest workmanship, at moderate prices.

We carry from three to five hundred finished vehicles in our Repository on Fourth Street, which is one of the finest and most commodious in the West.

Catalogue and complete price list mailed to any address free upon application.

Visitors always welcome.

$1.87 MOOAR'S "COMMON SENSE"

FLORENCE, BOON CO., KY.

MOOAR BROS., SIRS:—

Shoes have come to hand, and far exceed my expectations. They are superior to any I ever bought for the money. Will take pleasure in showing and recommending them to my friends.

Respectfully, F. E. KERTH.

We wish every lady in the U. S. could see the many unsolicited testimonials like above that we have received.

We have just completed our arrangements for the manufacture of this Shoe, and have added the following new features, which will make this Shoe of much greater value than before:

It will have the inside Rubber Sole, so that no dampness can penetrate through the sole to the foot. It will be made from fine selected skins of Castilian, which is the most durable stock made. It will be hand-sewed and hand-welted, like the English and Hygienic Boots, and will be glove-fitting from the first to the last day of wearing. It will be as neat in appearance as much gain that was ever offered to the people of this country.

We are so sure that this "Common Sense" Boot will give satisfaction that we will guarantee every pair, and will refund the money to any one who buys a pair and is not satisfied.

$1.87 is the lowest price that has ever been named for a guaranteed Ladies' Boot.

Sizes, 2-1-2 to 8. Widths, C, D, E, EE.

PREPAID for $1.87. THINK OF IT.

MOOAR BROS., 1307 Tremont St., Boston, Mass.

The Storm Slipper.

(Trade Mark—Registered.)

An Instant Success.

That "nothing succeeds like success" is illustrated by the instant success of our now famous "Storm Slipper."

That it is a more practical and sensible "rubber" than any style or cut that has ever been offered, has been demonstrated beyond question by the great demand for the "Storm Slipper" from every part of the country since we first advertised it three months ago.

That you will recognize at sight the strong points of the "Storm Slipper"—the actual protection it gives—from the soggy skirt both over the instep and behind, might go without saying.

FOR SALE BY ALL LEADING SHOEDEALERS. ASK TO SEE IT.

"From the Forest to the Foot."

We have recently published a handsomely ILLUSTRATED SOUVENIR, describing in an interesting manner the process of making a Rubber Shoe, from the time the raw rubber leaves the forest until the finished "rubber" covers the foot. ASK your nearest shoedealer for a copy, and if he has none write us direct and we will see that you get it.

BOSTON RUBBER SHOE COMPANY, BOSTON, MASS.

SUGGESTIONS.

GEOMETRICAL.

Can you find a point equally distant from any three given points?

Can you draw a circle that will just touch the angles of any triangle?

Draw a circle inside any triangle so that it shall touch each side once.

Draw an equilateral triangle so that each side shall touch a given circle once.

For the Companion.

AN ORIENTAL LEGEND.

A king grown old in glory and renown
Of goodly deeds, a wholesome reign to crown,
Feeling the years turn white upon his head,
Thought of his end, and to himself he said:
"Three sons I have, strong types of sturdy youth,
Bred in all honor, manliness and truth;
Honest and brave are they, I know it well,
But traits there are in all that none may tell.
I'll test them, therefore, for I fain would know
Which one shall rule the best when I shall go."

Thereon he sent a slave to call his sons
Into his presence. Strong and manly ones
They surely were, to glad a father's sight,
And mind him of his springtime's virile might.
To whom the king: "My sons, the time draws near
When I, thy sire, shall be no longer here,
And I would know which of you I may trust
To wield the sceptre when my hands are dust;
And to that end I make thee this request,
Which of my three sons loves his father best?"

Then spake the eldest: "Sire, my love for thee
Is deeper, broader, greater than the sea,
Vast as it is, that weds thy kingdom's shore.
Such is my love for thee, my sire, and more."
The second then: "My father and my king,
There is not any yet created thing
In the whole universe, below, above,
To mark the scope and measure of my love."
The youngest simply said, "I cannot tell
Thee more than this, I love my father well."

The king dismissed them with a tender word,
And sate and pondered well that he had heard;
Then called his minister and to him spake:
"My lord, a pilgrimage I fain would make
To far-famed Mecca. That I may atone
For sins unpardoned, I will go alone,
Barefooted and bareheaded; and if I
By Allah shall be called upon to die
While on this pilgrimage, 'tis my command,
That my three sons together rule the land."

A year went by, and yellow were the leaves,
The ripened grain was gathered into sheaves,
And all made ready for the harvest sport,
When through the kingdom—city, camp, and court,
Seaport and hamlet—the sad news was sped,
That the wise ruler and just king was dead.
Loved as a monarch tender, brave and true,
His people mourned him deeply as his due.
His sons were told the words the king had said,
And reigned together in their father's stead.

The calendar had marked another year,
And on the drooping stalk the full-grown ear,
Through golden husk and silken tassel showed,
When wearily along the dusty road
A beggar slowly moved towards the town,
Which reached at last, outside the gate sate down
And rested. Suddenly his thoughts were bent
Upon a man near by with garments rent,
Who sighed, and wept, and beat upon his breast,
And ever made this moan, "I loved him best."

"Friend," said the beggar, "tell, if I may know,
What is the cause and secret of thy woe;
Allah hath certain cure for every ill;
Thine may He soften!" For a moment still
The other sate; then, with fresh tears, he said:
"Great is my loss. I mourn the king that's dead.
Ah! never more shall men see such a one;
My father he: I was his oldest son,"
And then he beat once more upon his breast,
And rent his clothes, and cried, "I loved him best."

The beggar sighed. "Such love must Allah prize.
Thy brothers? Mourn they also in this wise?"
"Not so," the mourner said. "To me in age
The nearest, quickly did his grief assuage;
With horse and hounds his hours are spent in sport,
To the great shame and sorrow of the court.
The youngest bears the pains and cares of state,
Works out our father's plans. To low and great,
Meteth out justice with impartial hand,
And is beloved and honored in the land."

The beggar left the son on grief intent,
And straightway to the court his footsteps bent,
Cast off his beggar's clothes before the throne,
And, clad in purple, proudly claimed his own,
Cried, in a voice that made the arches ring,
"Hear ye, my people! As I am your king,
My power, my crown, my sceptre, and my throne
Go to my youngest son, and him alone!
Son of my soul, I fold thee to my breast,
Who doth his father's work loves him the best."

ROSS DEFORRIS.

For the Companion.

OLD MRS. HEMINGWAY.

A story once told by a famous Methodist minister of a member of his flock in Kentucky will be new to many readers.

Brother Jones was a large, florid, pompous man, so wrapped in self-conceit and arrogance as to be almost intolerable to other members of the church. One elder after another had remonstrated with him upon his monstrous vanity, and reminded him that such pride was unbecoming to a Christian; but he was deaf to hints or rebukes.

At last, after a solemn consultation, it was resolved that the minister should preach a sermon aimed at Brother Jones, and at him only. No word of it was to be applicable to any other man or woman. The rebuke was to be so severe that it was hoped he would be cured of conceit for the rest of his life.

The day came. The church was even more than ordinarily full of people. Many of them had come from curiosity; others hoped to see the vain man, who had often treated them in a supercilious manner, chagrined and mortified. Some of the more tender-hearted of the congregation stayed at home, not wishing to witness his humiliation.

The sermon began. Brother Jones, with a complacent expression of face, disposed himself to listen. The man's infirmity was sketched with bold, severe strokes. He smiled with lofty superiority. As the denunciation grew more scathing, his smile deepened with a touch of complacent pity. At the conclusion of the services he swaggered down the aisle. One of the elders joined him.

"What did you think of the sermon, Brother Jones?" he ventured to ask.

"A great effort, sir! But personal. The pastor aimed his shots too directly. Poor old Mrs. Hemingway! I felt sorry for her. But really that woman's conceit is e-normous, sir!"

We are all ready to give over the rebukes intended for ourselves to some Mrs. Hemingway.

It is not uncommon in insane asylums for a patient to believe that all of his companions are mad, while he alone is sane.

Another singular peculiarity of human nature is that we are most keen in detecting in others the very faults which are worst in ourselves.

If we would learn our own defects we must compare ourselves, not with our acquaintances, but with the One perfect model given to the world for all time.

MANNA.

The manna of commerce comes chiefly from Sicily. It is a sweet substance, obtained from a small tree which is known as the manna ash. This tree can be grown as far north as England, but in that country it yields no manna, and is cultivated for ornament only. The manna is formed from the sap. The trees are ready to be tapped at the age of eight years, when the stems have a diameter of about three inches. The tapping is done by making cuts through the bark to the wood, the incisions being one or two inches long, and about an inch apart.

The first cut is made at the lower part of the trunk. The next day another cut is made just above the first, and so on, day after day, during the dry season. The next year the untouched part of the stem is operated upon in the same way, and the practice is continued in successive years till the tree is exhausted.

The finest manna is that which is incrusted around pieces of stick or straws placed in the incisions. Flake manna is that which has hardened on the trunk. The inferior quality is from the lower incision. After its removal from the tree, the manna is dried on shelves.

There are other plants that yield a similar product. The tamarisk of Arabia exudes from its branches a substance that becomes solid in the cool of the morning. This is known as tamarisk-honey. The exudation is assisted by the puncture of a small insect. It is said that this honey is described by native writers as a dew which falls upon the leaves of the tamarisk and other trees.

The Persians gather a kind of manna from a leguminous plant by shaking its branches, or by picking the leaves and gently beating them over a cloth when dry. Throughout Persia and Afghanistan naturally produced manna is harvested from different trees and shrubs. It is eaten by the people as a sweetmeat, and is exported to India.

In Australia a sweet substance is obtained by the natives from the sandalwood. It is a favorite article of food with them and with the colonists. The manna gathered from the leaves of the eucalyptus is rather a product of insects. The exudation of the sap is due to their puncturing of the leaves, and the same is supposed to be the origin of the manna which is collected from the twigs of certain species of oak.

The notion of the Arabs that the manna was a dew deposited upon the leaves of shrubs reminds us that we have the phenomenon of honey-dew on leaves of the elm in this country. It is to be observed on hot and dry days in August. The upper surface of the leaves becomes varnished with a soluble sweet gum, much resorted to by insects in the morning. It hardens in the hot sun. This appears to be a true natural exudation of sap from the leaves, caused by excessive heat. There is no indication of the leaves being punctured; the visits of the insects are a result, not a cause.

NAPIER.

Sir Charles Napier was famous, even as a boy, for a surprising recklessness of courage, which was brought into full play during the soldier's after career. The three Napier brothers were, at school, the natural leaders of their mates, and their daily departure for home was an event which the villagers assembled to witness.

There were pigs in the Irish town of Celbridge, where the Napiers lived—tall, gaunt animals with wide, flapping ears, and long legs that could gallop over the ground. Mounted on the backs of these lean and agile hogs, the Napier boys were wont to career homeward, with scholars and pig-owners following, in hot pursuit.

One day, when Charles had become a young soldier, he was out shooting with his brother George. Charles fired at a snipe, and the bird dropped, though at a distance, across a deep ditch. In jumping this ditch, the boy fell, and fractured his leg so badly that the bone protruded from the flesh, above his boot.

His gun had fallen at some distance, and he crawled up to recover it, and then succeeded in reaching the snipe. When his brother came running up, deadly pale at sight of the wounded leg, the fallen sportsman cheerfully cried:

"Yes, George, I've broken my leg, but I've got the snipe."

Thus it was through life. Sir Charles Napier was wounded more than once, in the most sickening manner, and was in his later years a prey to ill-health, but he always "got his snipe."

After this accident, it was imperatively necessary that the young soldier should take a long rest, and his General advised an extended leave of absence. To this Napier would not listen, and as soon as his leg was fairly healed, he mounted his little cob and rode away to duty, accomplishing more than a hundred miles in one day. It is easy to imagine that he pushed forward mile after mile, intent upon proving that, despite what Generals or Doctors might say, he was ready for any fatigue or duty.

This was the true soldier's spirit, which not only served him on the battle-field, but enabled him to meet with patience the trials of life.

WASHINGTON'S LETTER.

When Washington returned to Philadelphia after his trip to the East, in 1789, he stopped at Uxbridge, Mass., and was entertained at the home of Samuel Taft. The old homestead, with the great oak before the door, remains yet in possession of the family, preserved in commemoration of the distinguished visitor. Washington was so well pleased with his reception and entertainment at Uxbridge that he wrote the following letter to Mr. Taft, which is carefully preserved in the family:

"*Hartford, Nov. 8, 1789.*

"SIR: Being informed that you have given my name to one of your sons, and called another after Mrs. Washington's family (Dandridge); and being moreover very much pleased with the modest and innocent looks of your two daughters, Patty and Polly, I do for these reasons send each of these girls a piece of chintz; and to Patty, who bears the name of Mrs. Washington, and who waited more upon us than Polly did, I send five guineas, with which she may buy herself any little ornaments she may want, or she may dispose of them in any other manner more agreeable to herself.

"As I do not give these things with a view to have it talked of, or even to its being known, the less there is said about the matter the better you will please me; but that I may be sure the chintz and money have got safe to hand, let Patty, who I dare say is equal to it, write me a line informing me thereof, directed 'To the President of the United States, at New York.' I wish you and your family well, and am your humble servant,

"G. WASHINGTON."

For the Companion.

ON A GRAVE IN CHRISTCHURCH, HANTS.

Turning from Shelley's sculptured face aside,
And pacing thoughtfully the silent aisles
Of the grey church that overlooks the smiles
Of the glad Avon hastening its tide
To join the seaward-winding Stour, I spied
Close at my feet a slab among the tiles
That paved the minster, where the sculptor's files
Had graven only "*Died of Grief*," beside
The name of her who slept below.
Sad soul!
A century has fled since kindly death
Cut short that life which nothing knew but grief,
And still your fate stirs pity. Yet the whole
Wide world is full of graves like yours, for breath
Of sorrow kills as oft as frost the leaf.

OSCAR FAY ADAMS.

TOO SUSPICIOUS.

Among the passengers on a railway train was a young mother, with a pretty baby not more than four or five months old. Sitting in the seat behind her was a stout, rather severe-looking old gentleman. The brakeman announced that the train would wait ten minutes for lunch at one of the stations, and the mother, noticing that the old gentleman did not offer to rise, and that nearly all the other passengers were about leaving the car, turned and said politely:

"I beg your pardon, sir, but would you be willing to watch my baby while I go out and get something for my lunch-basket? I don't think she will wake while I am gone."

The gentleman glanced over the top of his magazine at the sleeping child, and said rather gruffly, "Very well, madam."

When the young mother had been gone five minutes, the old gentleman pulled out his watch, and kept on looking first at the watch and then at the sleeping child every thirty seconds for the next three minutes.

Then he raised his window, and looked up and down the station platform, after which he stepped to the door, his face red with annoyance.

"All aboard!" shouted the conductor.

Hastening down the aisle the angry passenger seized the sleeping child, ran swiftly back to the door, and jumped from the car. A policeman chanced to be standing close at hand.

"Here! here!" shouted the old gentleman; "a young woman dressed in black deserted this baby ten minutes ago. She can't have gone far. Take it—quick!"

He thrust the screaming child into the policeman's arms, and jumped back upon the moving train.

"I was a little too smart for her," he said, as he resumed his seat, panting with indignation. "I don't know what ought to be done with these unfeeling persons who try to palm off their own flesh and blood on—mercy on us, what does this mean?"

Well might he ask, for there, coming hurriedly in at the car door of the vestibule train, was baby's mother.

"I am very much obliged to you," she said, as she hurried forward. "I saw a friend in the other car and—why, where's my baby? Who has my baby? Where *is* she? My baby!"

"Pray be calm, madam," said the old gentleman, as he rose to his feet, and began pulling vigorously at the bell-rope.

"How can I be calm when I don't know where my baby is? Where is she? Tell me instantly!"

"In just a moment, madam," as the train slackened its speed. "The policeman will take care of it and—"

"The policeman? What policeman? What do you mean? Oh, I shall go crazy!"

The conductor now hurried into the car, inquiring sharply who had rung the bell.

"It was just a little mistake," explained the old gentleman, in great confusion; "I—I—well, I didn't think this lady intended returning to the car, and I—I—well, I beg a thousand pardons, madam, but I gave the child into the charge of the depot policeman. That's all."

"All!" cried the terrified and indignant mother, while a number of sympathetic ladies gathered around her.

The conductor consented to run back to the station, and the baby was rescued just as it was being transferred to the patrol wagon. The old gentleman kept judiciously out of sight for the remainder of his journey.

BY ONE FOOT.

An Englishman, who had taken a long tramp over the Lesghian Mountains, arrived, near the end of the day, at the door of a small hut. Just then a group of red deer followed one another round the bowlder of a neighboring crag, and the Englishman, being something of a sportsman, determined to "have a try" for one of them. So, though tired, he took a guide from the hut, and started in pursuit, he said.

Our first difficulty was in crossing a sheet of frozen snow, which hung like a sloping roof over the edge of a deep abyss; but the guide swooped hollows for our feet with the butt of his rifle, and we got safely over. The going was then easy enough until we came to a small chasm, which had to be jumped. Here the guide gave out. He declared that it would be impossible to overtake the deer, and returned to the hut.

For nearly an hour I followed the track of the deer, never seeming to get any nearer, though expecting, every time I peered over a ridge, to find the herd in range just on the other side.

But the human frame will not go on moving forever, and my limbs kept reminding me, by certain aches and stumbles, that they had almost reached the limit of their endurance. So I gave in unwillingly and turned back.

My eyes were getting heavy, my feet were like lead. There was no game ahead to allure me on, no guide by my side to advise or direct my steps. I began to regret my persistent pursuit of the red deer. Still, in spite of my fatigue, all went well until I began to cross the roof-like sheet of snow between myself and the hut.

Here the light seemed worse than it had been in coming, and the footholds were hard to distinguish. When half-way across I very nearly concluded my travels, not only for that night, but forever.

One of my feet slipped out of the hole in which I had placed it, and brought me on my face on the snow. Instinctively I fell inward, driving my rifle-barrels with all my strength into the snow, and there, for the worst minute of my life, I hung, one foot still in one of the steps, and the other leg hanging loose on the smooth surface.

I dared not lift myself lest any extra pressure should break my remaining foothold, or loosen the grip of my rifle, and so send me down the slope, over the edge of which I should infallibly shoot into eternity.

However, some good angel buoyed me up; and when, in fear and trembling, I slowly made the effort, I did with difficulty regain an upright position. In a few minutes more I was off that treacherous slope, and experienced a feeling of relief which compensated me for all my fatigue.

"ODD TOM."

Old Tom Weit had a habit of doing queer and unexpected things, and thus came to be known throughout the region in which he lived as "Odd Tom." Sometimes his oddity appeared in some peculiarity of dress, as when he wore his coat wrong side out, because, as he said, he had "got tired of the looks of the right side." One day Tom went to his next neighbor, Zebah Green, to hire his horse for the day.

"What d'ye want 'im for?" was Zebah's inquiry.

"Oh, jest to go down to the village to do some marketin'," was the answer. "P'raps I might go on afterwards as fur as Job Stone's, 'n' look at his oxen."

"Wal, I don't want ye to have 'im," replied Zebah, referring to the horse; "but ye may, jest ter 'commodate ye, if ye won't go no fu'ther'n jest to the village—ye know *that's* 'most ten mile."

"Why, of course not," said Tom, "not onless you're willin'."

"Wal, then, take 'im, but don't ye drive 'im no fu'ther'n the village, or I'll never let ye have 'im agin."

So Tom harnessed the old horse, and started for market. As he passed Zebah's house on his way, he heard, faintly wafted from his neighbor, who stood in the barn door, "Be sure ye don't go no fu'ther'n jest to the village!"

Toward night Tom was seen, laden with bundles, coming slowly up the road from the village—on foot. Out rushed Zebah, open-mouthed.

"What ye done with old Bill?" he cried.

"Wal," answered Tom, with the utmost coolness, "ye seemed so all-fired scairt for fear I'd drive him further'n jest *to* the village that I didn't dare to drive him home agin, 'n' so I left him there, under the store shed."

CABBIES' WAYS.

London cabmen have many temptations to impose upon their "fares," and it is hardly to be wondered at that they sometimes catch a tartar in the attempt. The author of "The Philosopher in Slippers" says that a large part of their undue gains is derived from timid women, who find it difficult to withstand their bluster. Still, even a woman may rebel, upon occasion.

A lady who once gave a cabman an extra sixpence, after paying his proper fare, found that he was not disposed to be grateful.

"Well, mum," said he, ungraciously, "I'll take the money, but I don't thank you for it."

"You haven't it, yet," said she, alertly withdrawing the sixpence, and he never did have it.

A clergyman in London was one night driven home, and paid the cabman what he supposed to be two shillings. He had taken the coins from his waistcoat pocket, but as soon as they had passed from his hands, he noticed their peculiar glitter, and said: "Stop, cabman! I've given you two sovereigns by mistake."

"Then your honor's seen the last of them," said the cabman, whipping his horse and driving briskly away.

Then the gentleman felt again in his pocket, and found that he had given the man two bright new farthings, which he had that day received, and was keeping for his children.

There is something irresistible in a cabman's cajolery, and the man who indulges in it is far more likely to fill his purse than is the bully.

"What's your fare?" asked a gentleman of one such believer in blarney.

"Anything your honor pleases," was the answer.

"You rascal! That means, I suppose, your legal fare, and anything you can get over that."

"No, your honor. I just leave it to you."

"Well, then, here's a sixpence for you."

"Ah, but your honor's a gentleman!" pleaded the man, with such an accent that he carried off double his proper fare.

SHE COULD LEARN.

It is hard for a certain class of people to understand that the successes of art are not the result of clever dexterity alone. The idea of anything like unusual and original power is entirely beyond their comprehension, and they imagine that works of genius are produced by rule, as a cook makes a cake or a pudding.

A person of this kind recently called upon one of the best known of American portrait-painters, and insisted upon seeing him upon important business, although at the time he was engaged with a sitter. When he appeared, the woman said:

"I want you to give me lessons."

"I am sorry," he said, looking at her in some surprise, "but I have not the time."

"Oh, I won't take up any time to speak of," the caller said. "I can learn real quick, and you'll only have to tell me how to do it."

"But I never take pupils," the artist said, with unmistakable decision. "I could not think of taking you."

The stranger regarded him with a look which was hardly less than venomous.

"Oh," she said, jeeringly, "I see how it is! You don't dare to give away your secret for fear it would spoil your business!"

PATRIOTIC.

The attractions of foreign lands never displace his own country in the affections of the right-minded traveller. "Home is best," and we must always feel a certain respect for patriotic enthusiasm. This respect rises to admiration for the sentiment of the young American of whom the Albany *Argus* writes:

A young lady of Seattle, who has been forwarding very interesting accounts of her travels in Europe to her friends at home, sent her last letter from Paris.

She was enthusiastic over the French capital, and after saying everything else that she could in its favor, rapturously declared, "To my mind it is the Seattle of Europe!"

WORTH WHILE.

The discussion of the question, whether or not William Tell ever existed, has led one of his admirers among historical students to make this memorable remark:

"Very well! if I can be assured of having as glorious a fame as William Tell has, I shall be perfectly willing never to have existed!"

For the Companion.

JOHNNY SPEAKS HIS PIECE.

"He went to the war with a General's hat
And feathers and sword—I should like to do that.
He fought and he fought till the enemy ran—
That's how I shall do it when I am a man.

"The people all shouted the hero to see—
I hope they'll hurrah when they come to see me.
They made him a President, too. If I can
I'm going to be President when I'm a man.

"But perhaps I had better be thinking of how
I may be a little like Washington now,
For they say that his being a hero began
A very long time before he was a man.

"He learned very early to tell what was true,
An excellent thing for a hero to do.
For every small boy it would be a good plan
To learn the same lesson before he's a man.

"How many more things it would tire me to tell
We all must be learning and learning them well
Before we can fancy, in pride and in joy,
We are like the great Hero when he was a boy."

SYDNEY DAYRE.

"1773. The Boston Indians seized the tea,
And turned it overboard into the sea."

"Only they were just make b'lieve Indians," said Dick.

"Yes," said Aunt Sue. "Now we'll begin with the Revolutionary War. I'll take the first year, and we'll go right round. Then we'll read our own. Begin—now."

At least twenty minutes went by before they were all ready. Aunt Sue began:

"1775. Was fought the Battle of Bunker Hill;
The Battle of Lexington as well."

Joe snickered.

"Ho! well and hill isn't poetry," said he.

"That's poetical license," said Aunt Sue, looking at him severely. "Now, Martie?"

"Mine isn't very good," said Martie, blushing. "Don't you boys laugh, now.

"1776. Brave Washington crossed the Delaware,
When snow and sleet were in the air."

"Good," cried Aunt Sue. "Next, Dick."

And Dick, with a grimace, read:

"1777. The British got licked at Princeton; and then
Took Ticonderoga back again."

"Whipped—not licked," said Aunt Sue. "But that's pretty good. Now, Joe?"

"1778. Old Clinton he skipped out of Philadelphia, one night,
Washington took after him, and then there was a fight,"

read Joe.

"That's real nice," said Martie. "Now, let's go round again."

So they all fell to work. It wasn't so hard and didn't take so long, this time; but Joe was ready first.

Aunt Sue's was:

"1779. Stony Point captured by General Wayne;
The Red-coats at Paulus Hook beaten again."

"Read yours, Martie."

And Martie read:

"1780. 'Twas after the Battle of Sander's Creek
That Benedict Arnold was proved a sneak."

"Why, that's splendid," cried Aunt Sue. "Now, Dick."

"Mine's horrid," said Dick; "you see, now.

"1781. New London was burned up by Arnold, they say;
Cornwallis surrendered one October day."

"It isn't horrid either," said Aunt Sue. "Joe?"

Joe's eyes twinkled, as he read:

"1782. They all went right to having peace,
And so I think it's time to stop."

"That's poetical license, Aunt Sue."

Aunt Sue laughed heartily.

"I should think it was," said she. "Why couldn't you say 'time to cease' just as well?"

"Anyhow it's fun," said Martie. "I'm going to write 'em all down in a bunch, and see if they won't look like real poetry. I know they're just as good."

Aunt Sue laughed, and put away her pencil.

"The next part," said she, "will be composed of molasses and popped-corn, down in the kitchen. Who'll get there first?"

Joe did, because he started first.

A. C. S.

EDNA noticed that papa did not kiss the new baby, so she put her arm around his neck, and said, coaxingly, "Kiss it, papa. It won't *bite*."

Enigmas, Charades, Puzzles, etc.

1.

DOUBLE CHARADE.

My *first* and *second* might well remind you
Of Cinderella, so famed in story.
My *third* is the Latin word for "born."
These *three* name a Roman who gained much glory.

My *fourth* is the work which is done on Monday.
My *fifth* is three-fourths of a note or a tone.
These *two* name a hero much like that old Roman.
For his country each fought, till its foes were o'erthrown.

2.

ANAGRAMMATICAL CHRONOSTICON.

Of *Wright G. Anogosene* it has been said: "His *boaminti* was wholly unselfish, and although without the genius of *Caius Stajure* or *Poanabon Polentare*, he has a far purer fame. He clearly and unchallengeably stands out as the purest great man in universal history, and *Criamea* feels just pride in having given him birth. He was an *amplex* of virtuous and beneficent power." He was born in *Garinivi*, and in early life he spent much time in surveying the extensive estates of Lord *Xarfsta*. All school-children in the *Tunis Tadeset* know his *hathyrid* and the story of his public life. The year of his birth may be found by taking one letter each from the 8th, 12th, 30th, 42d, 54th, 76th, 80th, 85th and 88th words, counting each anagram as one word.

LILIAN PAYSON.

3.

NUMERICAL ENIGMA.

The answer, composed of 29 letters, gives the name of an historical event that occurred in February.

The 1, 2, 6, 5, 13, 7, 11 is saving.
The 14, 24, 25, 26, 3, 17 is a root known for its hot, spicy taste.
The 22, 8, 28, 16 is an exclamation.
The 4, 12, 27, 22 is one and the other.
The 10, 9, 21, 18, 19 is an axiom.
The 23, 15, 20, 29 is cut.

GILBERT FORREST.

4.

RIDDLE.

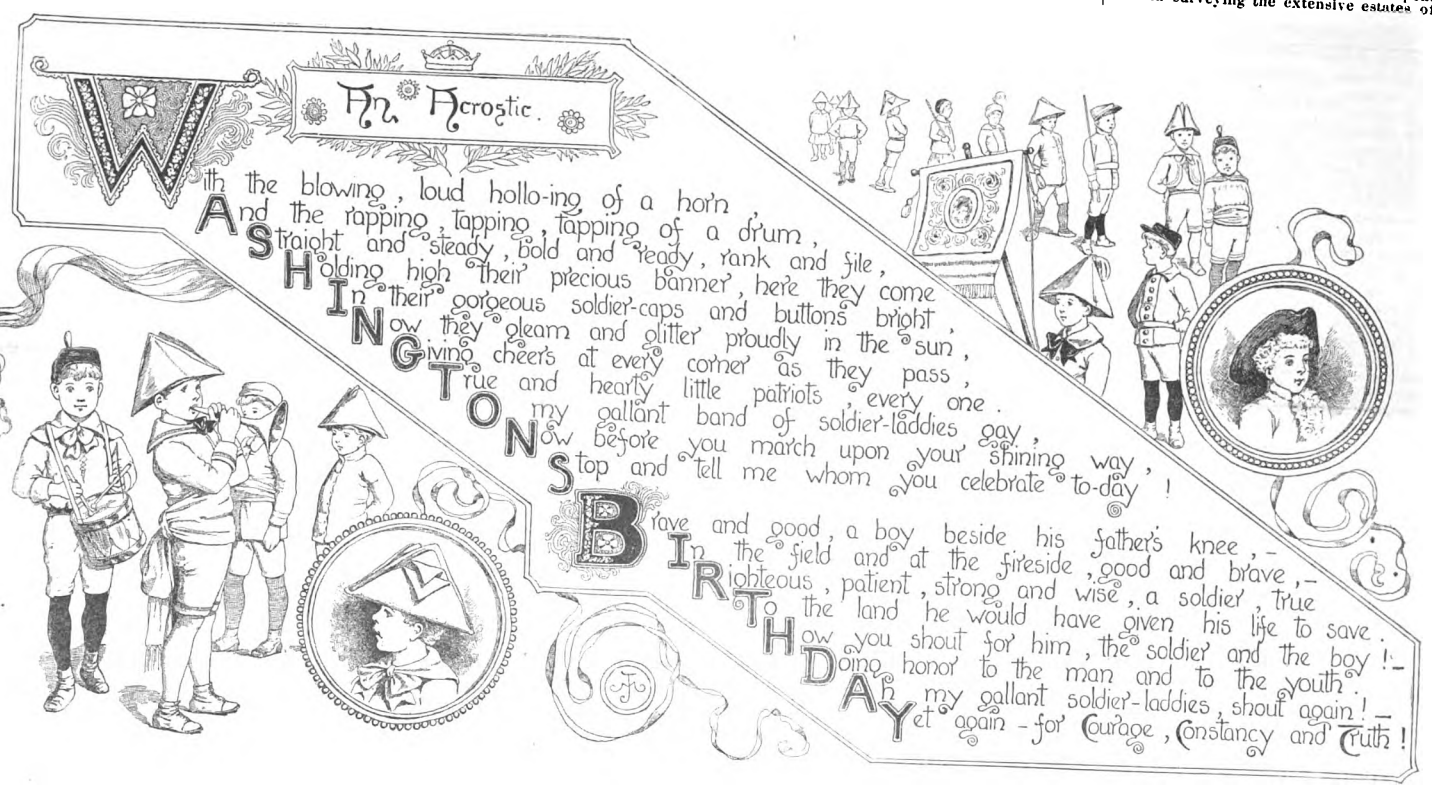
Once I was a distinguished man. I was also this man's nephew, and to me he bequeathed his home. Since then I have been a great many other men. I am a beautiful city, besides being innumerable towns, counties, and streets. I am a university, and I am a mountain. In fact I am many things, and all because I was so famous at the start.

Conundrums.

What is the greatest American ton? Washington.

Why was George Washington like a duke? He was a noble man (nobleman).

What articles of tin-ware must a man peddle in order to be a greater man than Washington? Nutmeg graters, for then he would be a "grater man."



Who may be said to have had the largest family in America? George Washington, for he was the father of his country.

What is the difference between George Washington and a school-girl who is popular with her mates? Washington was a favorite general, and the school-girl is a general favorite.

Answers to Puzzles in Last Number.

1. 1st Stanza, unravel, start. 2d Stanza, ruin, sent. 3d Stanza, rise, sister. 4th Stanza, truer, true valentines.

2. The rose is red, the violet blue,
Sugar is sweet, and so are you.

For the Companion.

FUN.

Martie gave her book a toss, and a half-dozen wrinkles grew in her face that instant.

"I wish we could do things the way other folks do!" said she, crossly.

"What's the matter now, Martie?"

That was Aunt Sue, and Martie blushed; she hadn't known Aunt Sue was anywhere in hearing.

"Why, I was thinking 'bout Washington's Birthday," said she. "Folks don't pay any 'tention to it round here; but 'most everywhere, they have a great time —"

"And fire off guns and cannons and things," put in Joe, eagerly, "so it's next thing to Fourth o' July, Aunt Sue!"

"And I think they ought to," said Martie, "such a nice man as General Washington was!"

Aunt Sue laughed merrily.

"Suppose we celebrate his birthday," said she.

"How can we, auntie?"

"We haven't got any guns," said Joe.

"Or firecrackers," added Dick.

"We don't need any," said Aunt Sue. "All we want is paper and pencils—for the first part."

So Martie fetched four pencils and four sheets of paper, and they all gathered around Grandmother Bent's claw-footed table, at which General George Washington himself had once sat down to write.

"Now," began Aunt Sue, "we'll each take some historical fact and write a couplet on it."

"What's that?" demanded Joe.

"A couplet is two lines of poetry —"

"O Aunt Sue Bent! Oh, we can't!"

"Oh, we can!" laughed Aunt Sue Bent. "Something like this:

For the Companion.

GEORGE WASHINGTON.

"How did George Washington look?" asked Nell,
"What was he like? Won't you please to tell?"
Thus I answered: "A courtly man,
Wearing his honors as heroes can;
Erect and tall, with his six feet, two;
Knee-breeches, buckles, frills, and queue;
Powdered brown hair; blue eyes, far apart;
Strong-limbed and fearless, with gentle heart:
Gracious in manner toward every one;—
Such, my Nellie, was Washington."

For the Companion.

GENERAL JIMMY.

"How I do hate this old 'rithmetic!" said Jimmy, as he looked in the book for the answer, and found he was mistaken again. "Guess I'll never get any farther than addition," he went on, while he rubbed at the wrong answer so savagely that his blackboard clattered against the wall.

"I'm glad enough there won't be any school to-morrow—there can't *possibly* be, 'cause it's Saturday, and Washington's Birthday, too. Wish I could do like Washington, and have an army of men, and train 'em with a big sword!"

"Well," said mamma, "why not play you're General Washington?"

"But, mamma, how can I? I haven't any army nor any sword, and not even a cocked hat. What can I play it with?"

"In the first place, Jimmy, you must try to do just as he would in your place. Now when he had anything to do, he stuck right to it, through thick and thin, till 'twas done."

"Oh!" said Jimmy, doubtfully.

"Why, yes," said mamma. "If he hadn't, you know, we should have had a king or queen to govern our country all this time. You see it's a good plan to stick to a thing till it's finished."

"So it is," said Jimmy, "and I'm going to."

"Now suppose," said mamma, "you play those figures on the blackboard are your soldiers. They stand in columns, you see. Some of them carry knapsacks, and some have cartridge-boxes, and some have guns over their shoulders."

"Hurrah!" said Jimmy, "so they do! and some of them carry flags, don't they?"

"Why, yes," said mamma, "and you're the general, and that chalk pencil is your big sword. Keep them in line. Just call the roll from your book now, and see if there are any deserters."

So Jimmy went carefully over the numbers in the book, comparing them with those on the blackboard. Sure enough, there were four numbers he had not set down at all.

"Four deserters, in all," said mamma. "Draw your sword and bring them to the front!"

So Jimmy flourished his chalk, and set them down at the top of the list. Then he began to add:

"3—8—12—17—26—30—three to carry."

"I can add 'em up just twice as easy when they're soldiers," said Jimmy.

And sure enough, in a very short time the battle was over, and General Jimmy had won a decided victory, for he got his answer just like the one in the book.

E. S. B.

A LITTLE girl in school said dessert was "what you eat when you've got all done eating." And an older pupil spoke of a skeleton as "a man that aint got any meat on."

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

HOLIDAYS.

The lives of the Puritan fathers were necessarily busy and earnest, while their religious convictions put them out of sympathy with active sports, and made them intensely averse to everything suggestive of the old-time Roman Catholic "holy days." As a people, therefore, we grew up with slight regard for the great hygienic law of diversion. The year was a treadmill, interrupted only by the seventh-day rest, an annual Fast and Thanksgiving, and an uproarious Fourth of July.

Things are very different now. We understand the laws of health better. We see with alarm the fatal consequences of continuous cerebral tension—increasing insanity, nervous prostration, hysteria, paralysis, apoplexy, heart-failure and softening of the brain. We are multiplying holidays with almost too great rapidity, while many of us make a considerable part of every summer one long holiday.

Reactions tend to extremes, and this matter of holidays is no exception to the rule. The London *Lancet* has an article on the subject, some of whose thoughts may be helpful to our readers.

"With a certain class of persons the holiday is the normal state of life. If they are not having a holiday, they are contemplating one. They are unsettled by the frequency of their holidays. They are never at home except when they are away from home, so that the very conception of home and rest becomes impossible to them. They are never at rest save when they are in motion. Such persons get no pleasure out of their vacations, comparable to that which those get who take them moderately.

"This restlessness is an evil which should be repressed by all sensible people.

"It is more developed still in our American friends, as it is more excusable. They sigh for an older order of things than they see around them, and in the old cities and haunts of Europe, or in the hoary pyramids of Egypt, get a temporary sense of the idea of permanence. But in them or us it is restlessness still, which needs repression and discouragement."

It is to be said, also, that holidays have their drawbacks and risks—accidents from flood and field, two-thirds of them the result of carelessness; infection of typhoid or scarlet fever; lack of sanitation in stately hotels, or in pretty-looking cottages by the sea or in the country.

The *Lancet's* picture may be somewhat overdrawn, so far as it relates to America; but we need to be on our guard against the tendency to restlessness which too frequent holidays may undoubtedly foster.

DEVELOPMENT OF DOLLS.

The talking doll of our later holiday seasons is the lineal descendant of a rude and simple ancestry. We can trace its history, with that of civilization, by the figurines of Tanagra, and the ivory figures of wealthy Rome. By a comparison of customs among the South Sea Islanders, we may satisfy ourselves that dolls were prized by children in prehistoric times.

The daughter of the savage makes her own doll, and invests it with all the graces and charms of form and disposition. Travellers tell us that the make-believe child of the little savage often consists of nothing more nearly human than an ear of corn in the husk, a long gourd or a cucumber, or even, in cases of extreme want, a fig-leaf made into a roll. This she soothes and chides, and sings to, and interests with stories of her own telling.

The ivory doll of the Roman child was too costly for the ages that followed the fall of the Empire. For many centuries dolls must have been chiefly of home manufacture. The first shop-made dolls after the Middle Ages were the jointed wooden dolls of the Netherlands. These were known in England, and in this country, too, in Colonial times, as "Flanders babies."

These "Flemish beauties" are described as having had "round black heads, with a well-defined blush on either cheek." They were of wood from crown to toe. Their legs and arms were jointed. The wig of brown hair was fastened to the head by a row of iron tacks.

Dolls of the latest pattern are now manufactured in great numbers in England and in this country. Yet these countries still continue to import some of the cheaper kinds from Germany. The extent to which dolls are manufactured in England may be judged from the statement, made a few years ago in the House of Commons, that a manufacturer had had an order for five hundred pounds' worth of dolls' eyes.

In 1889, in the State of New York and in New England, there were at least forty factories engaged in making dolls. These mills employ hundreds of persons, chiefly women. For the production of the finest specimens, however, France holds the first place.

ANCIENT CARICATURE.

The fables of Æsop prove that the ancients were not without a liking for fun. And the remains of ancient art tell the same story. Examples of artistic humor are more common than is supposed by most persons. The ancients led a jolly life on the whole, and human nature has not changed much in the course of five thousand years.

A drawing on a tile in the New York Museum represents a cat dressed as an Egyptian lady of fashion. She is seated languidly in a chair, sipping wine out of a small bowl, and being fanned and offered dainties by an abject-looking tomcat with his tail between his legs.

The cat figures largely in the ancient comic groups of animal life. In a papyrus in the British Museum a flock of geese are being driven by a cat, and a herd of goats by two wolves, with crooks and wallets. One of the wolves is playing a double pipe.

There is in the Museum of Turin a papyrus roll which displays a whole series of such comical scenes. In the first place a lion, a crocodile, and an ape are giving a vocal and instrumental concert. Next comes an ass, dressed, armed and sceptred like a Pharaoh; with majestic swagger he receives the gifts presented to him by a cat of high degree, to whom a bull acts as proud conductor.

A lion and gazelle are playing at draughts, a hippopotamus is perched in a tree, and a hawk has climbed into the tree, and is trying to dislodge him.

Another picture shows a Pharaoh in the shape of a rat, drawn in a carriage by prancing greyhounds. He is proceeding to storm a fort garrisoned by cats having no arms but teeth and claws, whereas the rats have battle-axes, shields and bows and arrows.

AGAINST PROFANITY.

On the anniversary of Washington's birthday it may be a means of grace to some young Americans to read his order against the wicked and vulgar practice of profane swearing. We print only a part of the order.

"HEADQUARTERS, MOORE'S HOUSE,
"West Point, July 29, 1779.

"Many and pointed orders have been issued against that unmeaning and abominable custom of swearing, notwithstanding which, with much regret, the General observes that it prevails, if possible, more than ever; his feelings are continually wounded by the oaths and imprecations of the soldiers whenever he is in hearing of them. The name of that Being from whose bountiful goodness we are permitted to exist and enjoy the comforts of life is incessantly imprecated and profaned in a manner as wanton as it is shocking.

"For the sake, therefore, of religion, decency and order, the General hopes and trusts that officers of every rank will use their influence and authority to check a vice which is as unprofitable as it is wicked and shameful."

SUDDEN.

Presence of mind is not always monopolized by the brave and wise, nor is it uniformly cultivated for great and good purposes.

Several of the pupils in a certain "backwoods" district determined not to study geography. The teacher believed that they were old enough to begin the subject, and accordingly called one of the oldest boys to her desk, and spoke to him about the necessity of a knowledge of his own and other countries.

"I sha'n't study g'ography till I git ready!" growled the youngster.

The teacher rose quickly, and seized him by the collar, intending to shake him, when the young rascal hastily added, "But I'm *ready now!*"

AMUSING ANSWER.

The following anecdote is from "Glances at Great and Little Men," by "Paladin:"

A lady of the court told me a funny anecdote of one of the numerous Americans who were presented at the Tuileries. He was a young man, and the Emperor had known his father in America, so the latter, wishing to be gracious, said:

"*Et, monsieur, votre père, vit-il encore?*" (Does your father yet live?)

"*Pas encore, sire.*" (Not yet, sire.)

The Emperor had much ado to refrain from laughing, and put his next question in English.

NOT READY MONEY.

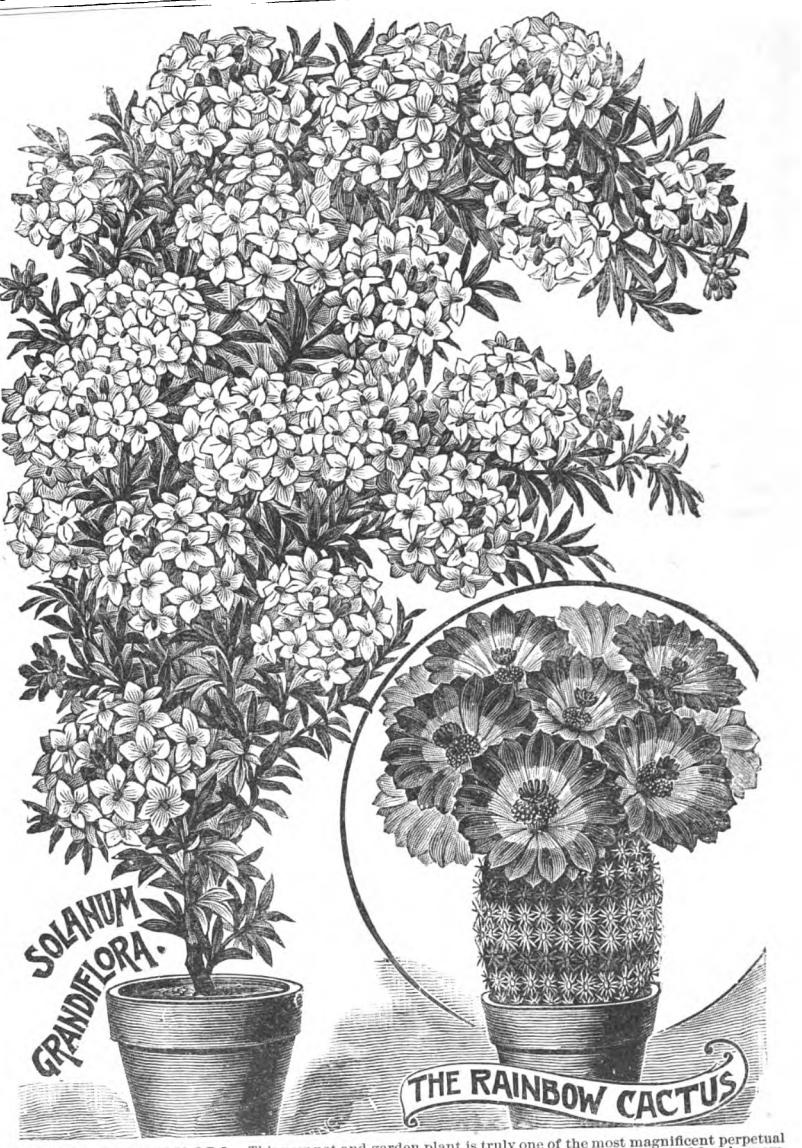
When Johnny's mother sent him to the grocery she put the money for the purchase in a safe place, and told him not to touch it.

"Well, my little man," said the grocer, "what do you want?"

"Fifteen cents' worth of molasses in this pitcher," answered Johnny.

The grocer measured out the molasses, and handed it to the boy, saying, "Where's the money?"

"It's in the pitcher," said the obedient little customer.



INSECTICIDE.

A young man from the country had been visiting the city, and was relating some of his adventures to admiring friends.

Among other things, he gave an account of how he attended mass in the cathedral. As he described the ceremonies, he noticed that one young lady seemed greatly interested, and when he mentioned the waving of the censers, she suddenly exclaimed:

"O Mr. Stroll, did you really see them burn *insects*, as people say they do?"

A CYNIC remarks that it is always pleasant to be told the truth—about other people.

SOLANUM GRANDIFLORA. This new pot and garden plant is truly one of the most magnificent perpetual bloomers ever seen. It bears by the hundred great clusters of lovely snow-white flowers, which keep perfect a month before fading, and appear at all times of the year. These great panicles of bloom are often a foot across, and are borne by the hundred both summer and winter. As a perpetual bloomer of fascinating beauty and loveliness this plant surpasses everything—even the famous Manettia Vine. It is as easily grown as a Geranium, either in pots or the garden, and requires exactly the same treatment. It can be trained up as a climber or grown in bush form, and in either way its great clusters of glorious flowers will surprise and delight all who see it. Price of strong plants, ready to bloom at once, **30** cents each; **2** for **50** cents; **5** for **$1.** by mail post-paid.

THE TRUE MANETTIA VINE. A magnificent flowering vine which is loaded with brilliant flowers every day in the year. Its charming grace and beauty is unsurpassed. We have the **true** perpetual flowering variety. Price of fine plants **ALREADY BUDDED** and **BLOOMING**, **30** cents each; **2** for **50** cents.

THE RAINBOW CACTUS. Two years ago this wonderfully beautiful Cactus sold at **$5** each. We now possess an enormous stock of magnificent plants which we offer very low. The plant is covered with a network of spines which grow in rings of different color from white to crimson, hence its name "Rainbow." It is a most beautiful plant at all times, but when in bloom its grandeur is unsurpassed, having flowers 4 inches across, bright crimson with a white centre. It blooms profusely and is of the easiest culture in pots. Large plants for immediate blooming, 30 cents each; 2 for 50 cents.

THE BUTTERFLY ORCHID. All know the beauty and value of a good Orchid. Here you can get one of the best for only 30 cents. Tied to a stick and suspended in a window it makes a most unique and beautiful object, growing freely without soil. Cultural directions in Catalogue. It produces great panicles of gay, butterfly-like flowers, which keep perfect a long time. Strong plants of blooming size, 30 cents each; 4 for $1.

THE GREAT SPIDER LILY. An elegant large bulb of the Amaryllis family, which commences to bloom soon after it is potted, sending up great spikes of lovely, large pure white blossoms of exquisite fragrance and unsurpassed beauty. It is one of the oddest, sweetest, and loveliest flowers grown. Large bulbs, which will soon bloom, **25 cents each,** post-paid.

A GREAT OFFER. For only ONE DOLLAR we will send by mail post-paid all five of the above magnificent new plants.

ALSO THE FOLLOWING EXTRA CHOICE COLLECTIONS BY MAIL POST-PAID:

12 Extra choice mixed Gladiolus, flowering bulbs,	25c.	1 Superb New Grapes, including Niagara,	50c.
6 New Double Pearl Tuberoses " "	25c.	5 Grand Lilies, 5 sorts, including Auratum,	50c.
5 Rare Chrysanthemums, 5 sorts named,	50c.	5 " Cacti, different sorts named,	50c.
5 Ornamental Flowering Shrubs, named,	50c.	Our "Introduction Collection," 20 Bulbs and 10 pkts.	
4 New Tea Roses, white, pink, yellow and scarlet,	50c.	Choice Flower Seeds, all different,	50c.

OUR BLUE CATALOGUE (a superb work of art in blue) of **FLOWER AND VEGETABLE SEEDS, BULBS, PLANTS, AND RARE FRUITS,** is the finest ever issued. 128 pages, hundreds of elegant engravings, Stipple Lithograph Covers and 5 large colored plates. We offer the finest novelties in Flowers, Vegetables and Fruits, notably: Our great Japanese Wineberry, Floral Park Plums, Butterfly Orchid, Star Phloxes, Water Plants, New Roses, Dahlias, Gladiolus, Chrysanthemums, etc. Also the greatest collection of rare Cacti and Flowering shrubs. This elegant Catalogue will be sent for only **TEN CENTS,** or if you order anything here offered and ask for a Catalogue, it will be sent **FREE.**

THE MAYFLOWER. Is a 16-page illustrated monthly paper published by us, and devoted entirely to flowers and gardening. It is the best paper of its class in the country, and has nearly 100,000 subscribers. Subscription price only **50 cents per year, or 25 cents in clubs of 5 or more,** and each subscriber gets a magnificent premium of 5 Choice Bulbs (New Gladiolus, Cinnamon Vine and Oxalis) and 2 packets of seed (rare novelties) free. Superb Club Premiums are also offered to those who will get up clubs. Full particulars given on first page of our Catalogue. The Premium List also appears in the Mayflower. A sample copy of which we will send free to all who apply. Subscribe now at 50 cents per year, or get 4 of your neighbors to join you, and send in 5 subscriptions at 25 cents each, including the fine premiums.

A Great 25c. Offer.

The Lovely Weeping Palm.

This King of Ornamental Plants, the Weeping or Filifera Palm, is stately and beautiful beyond description. It can be grown in any window as easily as a Geranium, and is a superb addition to any collection of plants. It is of a compact growth, with elegant, large fan-shaped leaves from which hang long, thread-like filaments giving the plant a most odd and beautiful appearance. In fact, there is nothing like it in cultivation, and good specimens sell for enormous prices. Plants are easily raised, as the seeds are large, germinate quickly and grow rapidly. It is a plant whose grandeur and beauty will surprise you. For **ONLY 25c. WE WILL SEND BY MAIL, POST-PAID, ALL OF THE FOLLOWING:**

5 Seeds of this lovely WEEPING FILIFERA PALM.
1 Pkt. PEACOCK PANSY, a magnificent new strain.
1 Pkt. CELESTIAL PEPPER, fine ornamental plant.
1 Pkt. PAINTED LEAF, a lovely new plant with scarlet leaves.
2 Bulbs Double EXCELSIOR PEARL TUBE ROSES.
3 Bulbs GLADIOLUS, yellow, white and scarlet.
1 Bulb of the Charming FAIRY LILY.
2 Bulbs SNOW-WHITE OXALIS, and our superb Blue Catalogue of 128 pages and 5 large colored plates.

If you already have our Catalogue for 1891, say so, and we will send something else instead. These rare bulbs and seeds (worth $1.00) will all flower this season, and we send them for 25c. only to introduce our superior stock. Get your neighbors to send with you, and we will send five of these collections for **$1. Order at once,** as this offer will not appear again.

We can supply one-year-old plants of the Weeping Palm at 20c. each, 3 for 50c.

FINAL OFFER. For only $5 we will send by mail, post-paid, everything here offered (which amounts to $6.50). Solanum, Manettia, Rainbow Cactus, Spider Lily, Orchid, Roses, Shrubs, Gladiolus, Tuberoses, Chrysanthemums, Grapes, Lilies, Cacti, Introduction Collection, The Mayflower one year and premium, the great 25c. offer, a plant of Weeping Palm, and Catalogue. **Order Now; these offers will not appear again.** Address,

JOHN LEWIS CHILDS, Floral Park, Queens Co., N. Y.

For the Companion.

THE SENATE.

By the Hon. Hannibal Hamlin,

Vice-President of the United States, 1861-1865.

The United States Senate may be regarded as one of the most distinguished of all legislative bodies. It has had in its membership thoroughly trained statesmen, skilful and learned lawyers in all the branches of the law, statute, common and international; men of great learning and culture; and others of our most noted and eloquent orators.

Its debates upon important questions have not been excelled.

It is composed of two members from each State in the Union, chosen for the term of six years by the legislatures thereof; one-third being elected every two years, thus making it a perpetual body; while the House of Representatives comes to an end every two years on the Third of March.

If there shall be a vacancy in the office of Senator when the Legislature of the State shall not be in session, the Governor of the State is authorized to appoint a person to fill the place until the next meeting of the Legislature, which will then elect a Senator to fill the vacancy for the unexpired term.

Diverse Powers of the Senate.

The Senate is clothed by the Constitution with three distinct powers and duties of a legislative, executive and judicial character. Its leading and most important power is that of legislation, in which it acts in conjunction with the House of Representatives, each having a negative vote upon the other. So all bills must be passed by a concurring vote of both Senate and House, and then receive the approval of the President, to become laws.

The executive power of the Senate consists in its action upon all nominations made by the President of persons to office. Such nominations must be submitted to the Senate for its confirmation, and without such approval they fail.

Moreover, all treaties negotiated by our government with foreign governments in like manner must be communicated to the Senate for its ratification, and a two-thirds majority is necessary to ratify the same.

The judicial power of the Senate is to try and determine all articles of impeachment found by the House and duly presented to the Senate; the House having the sole power of impeachment, and the Senate the sole power to try and determine the same, sitting as a High Court of Impeachment.

A vote of two-thirds is required to sustain an impeachment found by the House.

By the Constitution, the Vice-President of the United States presides over the deliberations of the Senate, and has the casting vote to determine all questions when the Senate shall be equally divided. In case of the absence of the Vice-President, the Senate elect a President *pro tempore*, who presides in his absence; and if the office of Vice-President becomes vacant, then the President *pro tempore* becomes the permanent presiding officer, without losing any of his rights as a Senator.

A very good estimate of the character and distinguished ability of the Senate may be formed, when we call to mind the great number of the most important positions which have been held by men of Senatorial training and experience.

A School of Statesmen.

During the first one hundred and four years of our government, commencing with a population of about three millions and now numbering more than sixty millions, twelve of the Presidents of the United States have been persons who may be said to have had senatorial experience: John Adams, Jefferson, Monroe, John Quincy Adams, Jackson, Van Buren, W. H. Harrison, Tyler, Pierce, Buchanan, Johnson and Benjamin Harrison.

Of these twelve, however, John Adams and Jefferson were never Senators, but, as Vice-President, presided over the Senate. One other, Garfield, was chosen a Senator, but became President on the day his term would have begun.

The following named persons, who had been Senators, have been chosen Vice-President of the United States: Aaron Burr, of New York; R. M. Johnson, of Kentucky; John Tyler, of Virginia; William R. King, of Alabama; John C. Breckenridge, of Kentucky; Hannibal Hamlin, of Maine; Andrew Johnson, of Tennessee; Henry Wilson, of Massachusetts; and Thomas A. Hendricks, of Indiana; nine in all.

But for a more full understanding, it should also be stated that different political organizations selected as their candidates for President from that body, or who had been of it, the following persons, but failed to elect them: Rufus King, of New York; DeWitt Clinton, of New York; William H. Crawford, of Georgia; Henry Clay, of Kentucky—a candidate three times; Hugh L. White, of Tennessee; Lewis Cass, of Michigan; John P. Hale, of New Hampshire; John C. Fremont, of California; John Bell, of Tennessee; Stephen A. Douglas, of Illinois; John C. Breckenridge, of Kentucky; James G. Blaine, of Maine. Surely a galaxy of distinguished names—perhaps the full equals of their successful opponents.

The candidates for Vice-President not elected, from the same school and training, were: C. C. Pinckney, of South Carolina; Rufus King, of New York; William Wilkins, of Pennsylvania; Theodore Frelinghuysen, of New Jersey; William L. Graham, of North Carolina; William L. Dayton, of New Jersey; Joseph Lane, of Oregon; Edward Everett, of Massachusetts; H. V. Johnson, of Georgia; B. Gratz Brown, of Missouri; John A. Logan, of Illinois; and Allen G. Thurman, of Ohio.

Seven out of Eight Candidates.

It is a singular and remarkable fact, that in the Presidential election in 1860, there were four distinct tickets in nomination for President and Vice-President: Lincoln and Hamlin, Douglas and Johnson, Bell and Everett, Breckenridge and Lane; and of all these eight candidates mentioned, there was only one who had not been a United States Senator. That one was Abraham Lincoln, who was the one elected.

But perhaps a still better judgment may be formed of the men of remarkable intellectual and acquired abilities who aided in erecting the high standard of the Senate, when we examine and see how the various Presidents have selected from them so many to fill the most important positions under our government, at home and abroad.

It has been a vast storehouse, from which the men have been taken to man and govern the old ship of State. The list would be too long to give in the space allowed for this article.

Of the offices filled by Presidential nomination and distinctively of the highest order, there have been appointed from that body, eight Justices of the Supreme Court of the United States, more than sixty-five Diplomatic Ministers to foreign governments, not including Consuls, nor Consuls-General; and the number of places held as Cabinet Ministers, under the several Presidents, is eighty-four or more.

Quite a number of Governors of the Territories could be added to the list; and many others who have been elected Governors of various States.

But enough. Certainly all this will, beyond successful controversy, determine the distinguished *personnel* of the Senate. These surely are the men to whom the country is greatly indebted for its prosperity and advancement.

Then and Now.

It is sometimes said that the high standard of the Senate has been lowered, and that it does not maintain its early and exalted renown.

Men of little more than middle age, referring to the time when the body was graced by the presence of Webster, Clay, Calhoun, Benton and others, remark that "There were giants in those days," and that it has ceased to be the body it was in the long past.

That is only in accordance with a reverence for what is old and what has passed. Time produces the same effect upon the opinions and judgment of men, that distance lends to the eye. Hence men and things in the past are measured and determined by a different rule from that applied to the present.

One of Mme. De Sévigné's correspondents said that "No man is a hero to his own valet." He knows the faults and failings of his master, better than the world who look upon him in the distance; so to his eye much of the heroic fades away.

I served in the Senate with these "giants;" and indeed they were giants.

Webster was an extraordinary and exceptional man. He was the giant of giants, and was one of the very few whom I have ever met or known whose greatness did not somewhat diminish as they were closely approached. He towered still higher as you approached and associated with him. When in his presence you felt the power of his gigantic intellect.

Excepting Mr. Webster, the Senate, in my experience of thirty years, has had, at times, more of statesmanship, scholarly acquirements, oratory and practical ability, than at the time when adorned by the giants above named.

In the First Year of the War.

At a later time, we see in the Senate contemporaneously, Chase of Ohio, afterward Secretary of the Treasury and Chief Justice of the Supreme Court; Seward, of New York; Douglas, of Illinois; Sumner, of Massachusetts; Fessenden, of Maine; Collamer, of Vermont; and others of almost equal talent.

Following them, and partly contemporaneous, were Morton, of Indiana; Conkling, of New York; Sherman and Thurman, of Ohio; Reverdy Johnson, of Maryland; and Blaine, of Maine.

On the whole, it is believed that there has been at all times, about the same degree of ability in the membership of the Senate—excepting a few years after the close of the War of the Rebellion, when the trained and long-experienced men from the South had withdrawn, and their places were not equally well filled.

It does and will vary some, at different times, but taken continuously it has been about the same. At times it may sparkle with a little more of genius than at others, yet there is diffused through the Senate just about the same degree of accomplishment and ability and statesmanship.

Yes, "there were giants in those days," as there have been since, are now, and will be in the future. Public opinion and the historian will hereafter judge of the now present as we do of the past; and do full justice to the high fame of the Senate, which will not be obscured or essentially diminished or lowered.

In the Senate there is, and always has been, a class of men whom the public judgment has regarded as most distinguished and prominent in the body, and entitled to and accredited the highest and first position therein. That opinion is generally quite correct, while it often fails to do equal justice in its estimation of many others.

But the Senate itself measures the value of its members and the standing to which they are justly entitled with greater accuracy than the general public.

It must be so. From close personal association, and in the transactions of the daily business of the Senate, and in its debates upon all questions, great and ordinary, their judgment must necessarily be more accurate than that formed by the public.

Unappreciated Senators.

There is another class of Senators who, in the public estimation, are placed in the second rank, while the Senate, well knowing their true value, will put them in the higher or first class, and who really are some of the most valuable men of the body—more so than some who rank above them.

A large number of names could be given to illustrate the point.

Daniel Webster used to say with decided emphasis that S. S. Phelps, of Vermont, was one of the soundest and ablest men who ever held a seat in the Senate. The Senate unhesitatingly placed him in the first rank, while in the public eye and ear he failed to reach it.

There were two Senators from one State, North Carolina, who, for some cause, in popular opinion did not rise to a standing in this higher classification, although they were readily assigned to it by their colleagues—Willie P. Mangum and George E. Badger.

They were both men learned in the law, and of large experience. They were both eminent men of their time. They had both been learned Justices of the Supreme Court of their State for a term of years, and each was twice elected to the Senate.

Mr. Badger was Secretary of the Navy under President William Henry Harrison, and Mr. Mangum was elected President *pro tempore* of the Senate during the administration of President Tyler, and was *ex-officio* Vice-President. These men were estimated by the Senate at their true value, and regarded as among the foremost men in it. They hardly reached, however, to leadership in the popular judgment, as they did in the judgment of the Senate itself.

Mr. Mangum.

Mr. Mangum was one of the ablest men of his time, and one of the most useful and valued members of the Senate. He was not quite so regarded by the community at large, and why, it is hardly possible to tell, as he was so able and worthy and entitled to the highest standing.

Perhaps it was largely, if not wholly, owing to his indifference to public applause. Circumstances, as in many other cases that could be named, did not conspire to produce that result. It is sometimes said that genius itself will create the circumstances. Perhaps that may be so. Circumstances beyond the power of man do conspire in producing results.

Numerous other Senators, occupying the same position as those named, could be mentioned. But one more only will be referred to, and he might be classed as a non-talking Senator.

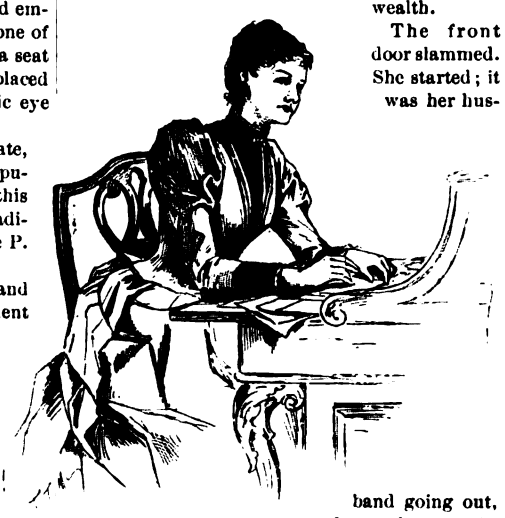
He rarely spoke or participated in the important debates, and he was a Senator for a limited time only — Dixon H. Lewis, of Alabama. He was a devoted friend and supporter of John C. Calhoun, and sustained him in all his extreme opinions and measures.

He was held by his friends in the South, and by those who knew him most intimately, as a wonderfully wise and sagacious man upon all questions and subjects. They almost worshipped him as an oracle by which they could be safely guided or directed. And when it was said that he was no speaker, his friends, in their devotion, replied dogmatically, and said: "Neither was Franklin nor Washington;" and that was all-conclusive with believers in him.

But in avoirdupois he was the greatest of all Senators. His weight was somewhere near five hundred pounds, and it was persistently claimed that his brain was relatively as large as his body, while many of his associates failed so to see or consider it.

It might be interesting to note the change in the mode and manner of the proceeding of the Senate in its earlier days and the present time; a change produced mainly by the increase of the membership of the body, and a still larger addition to its auditors.

It would also be amusing to refer to some of the quaint men who at different times have been Senators. For at times there have been all sorts, kinds, and conditions of men in the body; but sufficient space is not allowed properly to treat of them.



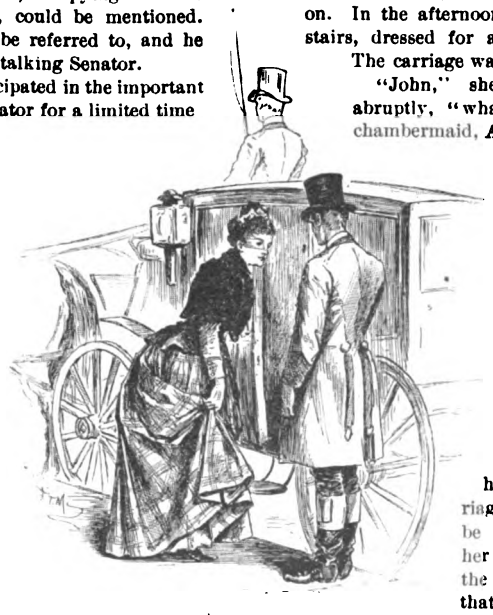
Highly eminent and famous as the Senate has been, it is marked in wonderful extremes, from a Wigfall to a Webster in Senatorial statesmanship and dignity; in learning, from men almost illiterate to a graceful and cultivated Everett or an Anthony; in eloquence and oratory, from the dullest of speakers to the stirring eloquence of a Clay or a Conkling, in "thoughts that breathe, and words that burn."

But there stands the Senate. It has spoken, and will speak for itself, and it will remain a bulwark of defence of our free government.

For the Companion.

LEFT UNDONE.

A woman nearing middle-age sat at her writing-table, which was heaped with notes, invitations, appointments of committee-meetings, and the like. Her face was full of intelligence and sensitive feeling. She was richly dressed; the dainty boudoir, the luxurious appointments of the desk told of great wealth.



The front door slammed. She started; it was her husband going out, after a late breakfast, on his way to his office. He had looked ill this morning. She had intended to sit with him, to pour his coffee, to urge him to see a physician. But these invitations must be answered, and the time had passed more quickly than she thought.

Probably she would not see him again to-day. She paused, her pen in her hand, an annoyed look on her pleasant face. She was reminded of another duty.

George, her son, had gone to school, and she had meant to have a long talk with him about his lessons, his playmates and his games. The lad had helped to achieve some great athletic victory last week at school, but she had not spoken of it to him, nor congratulated him. If she could win the boy's confidence!

But she was so driven from morning until night—charitable committees, lectures on literature, on art, on archæology—receptions, teas, balls! Homely little duties were pushed aside, and trampled out of sight.

The crowded, breathless day hurried on. In the afternoon she came down stairs, dressed for a round of visits. The carriage waited at the door.

"John," she said, stopping abruptly, "what became of the chambermaid, Ann, who was sick yesterday?"

"She went to the hospital, madam," the footman answered, touching his hat.

"The hospital! Had she no home, no friends?"

"I believe not, madam."

She paused, her foot on the carriage-step. It would be a little thing for her to do—to drive to the hospital to see that the girl was well cared for, to speak kindly to her, and let her feel that she had friends. But she entered her carriage. **The calls must be made first.**

Digitized by Google

"If I have time, I will drive to the hospital as we are coming back," she thought.

It was not until late that night, however, that she thought of Ann, whom she had quite forgotten in the hurry of the afternoon's engagements.

She was conscious that these and many other little kindnesses were left undone, but they did not cost her much uneasiness nor any loss of sleep.

A week or two later, the poor chambermaid died, alone and friendless, in the hospital.

George grew up a sufficiently respectable, well-conducted man, but with rather hard and cynical views of life. Some softening influence had been lacking in his childhood. He had a vague perception of what it was, and often said, "I never knew the better class of women when I was a boy. My mother was a busy, brilliant personage; we were never intimate, and my home was a mere boarding-house for me."

Her husband grew farther away from her, year by year. He was kind and considerate, as he was to any stranger. But the lack of the little tender cares, the watchful eye, the loving touch had gradually hardened him to indifference.

She found herself, at last, to be a most busy, important woman in the community, but without a friend. The solitude was hard to bear.

"Why am I not loved?" she asked herself, bitterly. "I have always intended to be kind—to show my love!"

The poet's words are true of the close of life, as of the day:

"It is not the things we have done here,
But the things we have left undone
That will give us a bitter heartache
At the setting of the sun!"

For the Companion.

BERTRAM.

Nathan threw himself down under a tree at the roadside, and looked up at the shifting pattern of leaves and sky. His comely, boyish face relaxed. He was a tramp, he supposed; but he was no longer beholden to any one; he was free! He felt an adventuresome satisfaction, but was impatient because his satisfaction was not complete.

He began to blink. He had walked six miles since noon, and the drowsy insect sounds made him sleepy. He ceased to think, and then ceased to know.

Something roused him suddenly. He looked up, and saw an open buggy with a woman and a boy on the seat, and some bundles and potted plants in the back. The buggy came to a stop.

"We've waked you up," the woman said, as if apologizing. "We thought at first we knew you; we thought you were Oliver Dodge."

That the good-looking boy was not Oliver Dodge, but a tramp with a bundle, seemed to astonish her.

"It's just as well you woke me up," said Nathan, getting up.

"Are you going my way? I might give you a lift," said the woman. "I guess we can make room, Bertram?"

"Yes," said Bertram. He climbed over the back of the seat very promptly, and sat down among the pots and packages. He was younger than Nathan, who noticed his smiling blue eyes and friendly look.

"We've been to the Centre," the woman said, driving on. "I had some errands; and then I saw those geraniums and had to get 'em."

"She's got a yardful now," said Bertram. "I tell her she'll have to go some other road than the florist's, if she wants to have any money left."

"Bertram says so," said the woman, laughing. "I can take you a mile. How much further are you going?"

"To Moxley," Nathan answered, warming to the friendly pair. "That's my home. I've come from Torrington to-day," he added, boyishly willing to tell his chief concern. "I've been working for Mr. Hogan since last year."

"Joseph Hogan?" said the woman. "His is a big farm, isn't it?"

"Sixty acres, and he thinks one man ought to do the whole work and not get man's wages either. I call him a mean man," said Nathan, hotly. "Well, I'll tell you just how 'twas!

"I didn't like the way he treated me. I'm willing to work, but I want to be treated fairly. I just had the brunt of everything, always. I had to work like a slave. Up at four always, and I was lucky if I got to bed by ten, busy times. We plowed till half-past ten, once; he was bound to have it done that day. I've been so tired sometimes I couldn't get to sleep. I never had a day off.

"Well, he's done other things nobody would have stood as long as I have, and I got tired of it. I've earned more than he's paid me; I've known that, and this morning I asked him to give me more, and told him I was doing a man's work for boy's wages.

"He said he'd give what he'd bargained to; and we had some words. I told him I wasn't bound out to him, anyhow, and if he couldn't deal fairly I'd leave, and I did.

"I ate my dinner and fixed up my bundle and started. I'd sent my last month's wages home, and didn't have enough for the railroad fare, and I'm going to tramp it."

"Whoa," said the woman.

Bertram was getting out of the buggy. With a parting smile he took one of the bundles and went in at the gate of a farm-house.

"I thought that was your boy," he said.

"No," the woman answered. "That's Bertram Taylor. I feel sometimes as though he was my boy. I think the world of Bertram; there never was a better boy."

"What does he do?" Nathan said, heedlessly, and feeling that his own hard case had been slighted.

"He does the best he knows how," said the woman, earnestly. "He makes the best of pretty hard circumstances. If his father had lived, he would have had some chance. But he has a step-father. George Hulbert isn't the worst man in the world if he isn't the best, and I suppose he thinks he's doing well by Bertram to give him a home.

"Bertram isn't sixteen yet, but he does as much on that place as Hulbert does—more, I believe. Now, before he's sixteen, he's doing a man's work every day of his life. It has taken him out of school all but a little while winters, and it's taken his strength. I can see myself it has fairly stunted his growth."

"That's pretty hard on him," Nathan murmured, for he felt that he must say something.

"Yes," resumed his companion, "but what he does wouldn't be so great a credit to him as it is, if he didn't do it the *way* he does. You saw him to-day; and no one ever saw him any less cheerful than that.

"Why, I overtook him on the way to town. He had started to walk both ways after hellebore for the currants; he was going to walk five miles in the hot sun, and then go to work again, I suppose. But he was whistling along cheerfully; and that's how you'll find him always.

"But he isn't doing what he wants to do; that's the worst of it.

"He wants to be a civil engineer; as his father was. He's fond of mathematics. He hasn't had much schooling, but he's picked it up himself, in a way that shows he has a wonderful turn for it. I've given him all my boys' old algebras and geometries, and he's gone through them all. When the surveyors were here putting in the new road, Bertram went and helped them, and they told him he ought to go into the business. Bertram's heart is set on it; and here he is hoeing potatoes and taking care of the pigs.

Old Gabriel.

"Folks say he isn't under obligations to Hulbert, and really owes it to himself to go away. But it's for his mother that he does it. He couldn't bear to do anything to make trouble for her, as that would. Hulbert's a strong-willed man, and he considers that Bertram belongs there.

"Then there's his little step-sister; I don't know what Lucy would ever do without him. Bertram always thinks of other people before he does of himself, and he'll do anything in the world for Lucy.

"This spring Hulbert did let him weed onions for the Longs a few days. What do you think he did with the money? He walked to town and bought a pair of buttoned shoes for Lucy that she wanted very much.

"Well, I always like to talk about him—that's my house. Sometimes I could cry, thinking how it is, and then again I feel as though there isn't anything to cry about. He's doing his duty and more than his duty, and anybody that can do that and be happy doing it isn't to be pitied, I say.

"He'll amount to something yet. He's made me think more than once of some of the great men, presidents or what not, who started out poor boys and came to something by their own efforts. Bertram will come to something yet. There's something in him, and it's bound to show. No, I oughtn't to worry about him," said the kind woman, looking at Nathan with misty eyes.

She drove into her yard without halting.

"Wait," she said, "and I'll give you some supper; it's supper-time."

Nathan attended to the horse, and then sat down, tramp-fashion, on the doorstep. But he looked at the tall pink hollyhocks and blue beehives without seeing them. His chin rested in his hands, and his foot made deep marks in the ground.

It seemed to him a long time before the woman called him in, so many were the thoughts which had passed through his sobered mind.

"You'll feel more like starting along when you've had a bite," she said.

"I guess I sha'n't start along," said Nathan. "I guess I'll start back."

"What's changed your mind?"

"That," said Nathan, slowly. "What you told me. I don't know that I know how to say it. It's made me feel mean, though, what you told—awful mean. I've thought all the time I had about the hardest time that anybody has; but I guess I don't. I guess that boy would think my job was easy, anyhow.

"I do work extra time, and I don't have things the way I want them much. I say I *do*, because I'm going back.

"It wasn't right for me to leave like that. Mr. Hogan is paying what he agreed to, and I need what he pays. They need it at home, and I didn't have any right to stop. Maybe I wouldn't get work all summer.

"I'm older than that boy, and my case isn't so hard, either. I feel like a shirk compared with him, and I'm going back!"

His thoughts had run still deeper. He felt as if he were a coward, and in his humility he saw things in a clear light. To have dwelt jealously on himself, to have stickled for his small rights and sulked over his small wrongs—it was unworthy a brave boy.

But to work with a willing spirit; to feel and to show manly concern for his employer's interests; not doggedly to study how little he could do, but how much; cheerfully to realize the truth that money truly earned is more than barely earned; and to work out a worthy destiny with strong and ready hands—that would be worth while.

He felt as does one who has made a pleasing discovery. A happy thrill passed through him.

"I'm glad," said the woman, heartily. "I wasn't thinking of you when I was talking about Bertram; but there! there! you've spoken the right words now. Sit down and eat something."

Two miles up the road, on his return trip, Nathan met a buggy with a farmer-like-looking man in it. It was Mr. Hogan. He cracked his whip at sight of Nathan, and laughed.

"I reckoned I'd overtake you along about here," he said. "Come, come, get in and go back with me! I don't want to let you go. What would your folks say? Come, I guess we can fix it up somehow. Maybe you have had to dig in harder'n you ought to; I guess you have. I'm willing to talk it over and—why, hadn't got started back, had you?"

"Yes, sir, I had," said Nathan, looking up with a smile.

EMMA A. OPPER.

For the Companion.

"OLD GABRIEL."

The death last year in Monterey County, California, of an Indian commonly known as "Old Gabriel" has closed the career of one who was, perhaps, the oldest man in the world. The exact date of his birth is unknown, but enough evidence has been adduced to satisfy the people who lived about him that he was one hundred and fifty-one years old.

It was well authenticated that Old Gabriel was a grandfather at the time of the landing of Father Junipero Serra at Monterey, about one hundred and twenty years ago. Admitting that Indian marriages sometimes take place at the age of fifteen, Gabriel could not have been a grandfather before he had attained the age of thirty-two years.

Gabriel, though ignorant, was gentle and devout, and was much attached to the early Fathers. He made adobes that were used in constructing the mission buildings at Carmelo, Soledad and San Antonio.

The Carmelo mission was erected about 1770, five years before the Revolution of the Thirteen States. Not even the ruins of these old chapels were to be seen thirty years ago.

Probably the best evidence of his extreme age is found in the fact that his son Zachariah, by his third or fourth wife, died some six or eight years ago at the advanced age of one hundred and fourteen years. It is perhaps doubtful if sufficient evidence can be obtained to prove the exact age of this son, but he is known to have been a very old man, without a tooth in his head.

If he was a son by Gabriel's third or fourth wife, it would make the father thirty or forty years older than the son. This, added to the seven or eight years which have elapsed since the son's death, would make Old Gabriel over one hundred and fifty, even if Zachariah were ten years younger than he was supposed to be.

Another fact which goes to prove the great age of Old Gabriel is furnished by José Lauriano, a Christian Indian, who died about four years ago. Lauriano said he was one hundred and ten years old, and his appearance supported his claim to very great age.

He has said that Gabriel was a grandfather as far back as he could remember, and that when Gabriel was a man considerably advanced in life, he, Lauriano, was a little boy. Lauriano was a very conscientious and devout man, and his statements were always believed.

It is said that Gabriel was a Tulare chief, and had been married to seven wives; but always married by the Church, and after the death of a former true and lawful wife. He outlived all of his immediate descendants.

His diet was of the simplest and plainest food, and his habits regular. He never used liquor, tobacco, tea or coffee. His favorite dish was "atole"—a sort of Yankee minute-pudding.

He was, however, very fond of sweets, and the people who knew him kept him well supplied with cakes and candies.

He delighted in wearing a "stove-pipe" hat, and spent much time in sewing pieces of gaudy colored cloth upon his clothes.

Old Gabriel was never known to take a bath—except a sun-bath. As he grew older the Indian characteristics seemed to assert themselves with greater force, and he delighted to stalk abroad in native dignity, with very little clothing besides his stove-pipe hat.

About nine years ago, a citizen of Salinas had the old man committed to the County Hospital, where he died of pneumonia, March 16, 1890.

Gabriel always went to bed early, and arose early. He was a sound sleeper, having none of the insomnia that often attends old age. If the air was at all cold, he slept with his head covered, in Indian fashion.

Like almost all Indians, he had small and shapely hands and feet.

Old Gabriel knew no other than his native language. It was the policy of the early missionary Fathers to discourage Indians from learning the Spanish language, for they feared that, through a knowledge of it, the natives would be contaminated with the white man's vices. The Fathers themselves learned the Indian language, and prevented, as far as possible, the presence of Mexicans around the missions.

It was very difficult to communicate with Old Gabriel except by signs; and almost all that is known of his life is what has been translated from his own lips by his friend, José Lauriano.

If Old Gabriel had been able to carry on an intelligent conversation, what interesting tales he could undoubtedly have told concerning the early settlement of California, and that far-off time when he was in the prime of manhood, fifty years before the rush for gold and the "days of '49."

A photograph of this aged Indian now hangs upon the walls of the Vatican at Rome, as the oldest man in the world. It was sent thither some years ago, accompanied with four affidavits of persons who had known Old Gabriel in their childhood.

CLARENCE URMY.

For the Companion.

WASHINGTON'S PRIVATE AFFAIRS.

We think of President Washington as a grand personage, sitting erect on a fine horse, or, clad in velvet and ruffles, receiving company in the formal manner of the olden time. But there was another kind of Washington in the President's house at Philadelphia.

During the whole of his Administration, exciting and difficult as it was, he was obliged to pay close attention to his estate, and to regulate countless details of its management. He carried it in his mind day by day, considering carefully, not merely every farm and every slave, but every field, building, fence, hedge and forest.

He regulated the rotation of the crops, and fixed the time of plowing. He thought of all and governed all as if he had been at home.

The chief reason of this was that he was served by slaves, nearly five hundred in number, of whom he wrote that he knew scarcely one on his estate fit to be trusted.

In his letters to his manager, to whom he wrote once a week, he continually expresses the most complete distrust of his negroes. Scarcely one of them, he thought, would do his duty unless he were watched. Many of them pretended to be sick when they were well; others stole produce from the farms and sold it in Alexandria, eight miles away, riding their master's horses, and often ruining his young colts by reckless usage of them.

The evil effect of slavery corrupted his white neighbors also; so that his overseers seem to have been little better than his negroes.

He generally contrived to have a competent and honest head-manager, to whom he paid five hundred dollars a year besides a house and provisions; but over each of his five farms he had an overseer drawn from the class that used to be called "white trash," and he had also a gang of negro carpenters, eight or ten in number, superintended by a white man of low character and worse habits.

He was obliged to run a mill, as well for his neighbors' use as his own, and he had on the shore of the Potomac a fishing station that required careful attention. A little neglect of his fishermen in the spring, when the fish were ascending the river, might deprive him of a hundred barrels of fish, on which he depended for varying the food of the six hundred persons directly dependent upon him for the supply of all their wants and the gratification of all their desires, food, clothes, shelter, medicine, instruction, discipline, and recreation.

Much that they wore, and nearly all that they ate, was raised upon the estate, but several articles of prime necessity had to be procured in London.

Occasionally during his Presidency, his knowledge of European politics and of the probability of war enabled him to provide in time for the clothing of his numerous and helpless family. We have a whole volume, and a large volume, too, of his letters to his manager, in which we see him buying thousands of yards of material for summer clothes months before it could be wanted; and nearly every garment worn upon the estate had to be cut and made by his own negroes.

He frequently says that no one could manage negroes unless he had had much experience with them, and he gives his manager a good deal of instruction how to tell whether a negro was shamming sick.

There was a certain Betty Davis, whom he frequently suspected of shamming. He reminds his manager that nobody can be very sick without having a fever, and that nobody can have a fever long without reducing his strength and flesh.

Some of his people, he said, would lie by idle for a month without losing an ounce of flesh, and drawing their allowance of provisions as if nothing were the matter. Several of these he mentions by name, as "Doll at the Ferry," "Ditcher Charles," "Mulatto Will," and "Carter Ben."

At the same time, he cautioned his manager to take the best possible care of the negroes when they were really unfit for work.

What made all this the more aggravating was that he was himself the most orderly, punctual, exact and faithful of men. There was nothing that gave him such pleasure, as he himself remarked, as "to see his farms in good order and everything trim, handsome and thriving about them." To this he added:

"Nothing hurts me more than to find them otherwise, and the tools and implements lying wherever they were last used, exposed to injuries from rain and sun."

He would gladly have had his whole estate in as perfect order as an estate in England, and we may say that he spent the chief energies of his life in a ceaseless endeavor to bring it a little nearer the correct standard. Considering all these things, he was a wonderfully considerate and patient master. He knew what was to be expected from ignorant negroes, and governed himself accordingly; making fair allowance for their weakness, but firmly holding them to their duty, as well for their sakes as his own.

The care and thought which he bestowed upon his farms during the most critical period of his Administration, while Congress was in session, and questions involving peace or war were pending, were most extraordinary. He insisted upon having a detailed report every week from his manager and from each of his overseers, which he thoroughly weighed and punctually answered.

Some of his letters to his manager fill as many as twelve pages of an octavo volume. He gives the most minute directions concerning fences, sheds and small repairs, as well as to more important concerns.

In one letter he says: "Several of the large stone

Digitized by Google

jugs, which were sent to the different farms with spirits in them at harvest, have never yet been returned. Call upon the several overseers to give them in immediately, or they will have to pay for them."

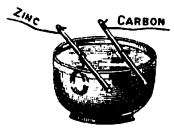
These letters present to us the picture of a wise and orderly man striving patiently to get order, beauty and prosperity from the most discordant and intractable elements—slack and dissolute overseers, thoughtless and pleasure-loving negroes, thieving neighbors, bad systems of agriculture, a low tone of morals, and the absence for long periods of the master's eye.

He did the best that was possible for himself and for his servants, but he hated the system, and lamented all his days that he could not escape from it, nor let his slaves escape without doing more harm than good.

JAMES PARTON.

For the Companion.

ELECTRO-PLATING.



Whenever a current of electricity passes through a liquid which contains a metallic salt in solution, the metal of the salt will be deposited upon the place where the current leaves the liquid. The ends of the wires which bring and carry away the current are called electrodes. The electrode which is connected with the zinc of the battery is the one which receives the deposit.

This principle lies at the foundation of the process of electro-plating, by means of which any cheap metal is covered with a thin coating of a dearer metal.

To experiment with electro-plating you will need three things—a battery, a plating bath and a means of cleaning the article which is to be plated.

For a battery, three cells of any of the batteries hitherto described will suffice. Connect the zinc of No. 1 to the copper or carbon of No. 2, the zinc of No. 2 to the carbon of No. 3, and the remaining terminals of No. 1 and No. 3 are connected with the bath.

As a receptacle for the solution, use a pint bowl—a cheap finger-bowl, or a bread and milk bowl with wide bottom, will do. Across the top of this place two bright copper or brass wires, an eighth of an inch in diameter. Connect the ends of these with the terminals of the battery.

To plate with copper, fill the bowl with a solution made by dissolving two ounces of blue vitriol in a pint of boiling water.

To plate with silver, use a solution of seventy grains each of silver cyanide and potassium cyanide in a little less than a pint of water. These salts are poisonous, and the hands should not be brought to the mouth after handling them.

Upon the wire, which is connected with the zinc of the battery, hang, by means of an S-shaped hook of bright copper wire, the article to be plated. Upon the other wire suspend in the same manner a piece of sheet copper, about the same size as the article.

In order that the article may receive an even coating of metal, it must be thoroughly cleaned. In practice, regular platers pass it through several baths. For most work it will suffice to dip, for a few minutes, in a solution of common commercial potash and water. After its removal, wash it in boiling hot water.

After this it should not be touched by the hands, but must be handled with tissue paper. The perspiration from the hands would prevent the deposit from adhering. In some cases it is necessary to dip the article, for a few moments, in nitric acid, and then thoroughly rinse with water.

After the articles have received a sufficiently thick coating, they may be removed from the bath and washed in an abundance of water. The copper needs no further attention; but silver-plated articles appear dull, and will need to be polished. This can be done with a chamois skin and any ordinary polishing powder.

QUEER CONDITIONS.

It was customary in England, two or three centuries ago, to attach some fantastic condition to the grant of lands by the king.

A Scotch gentleman, for example, who brought water in his helmet to Charles the Second when escaping from the Battle of Worcester, was granted the title of Earl and large estates on the Restoration, on condition that whenever the sovereign of England should cross his territory, he should bring water to pour over the royal hands.

On Queen Victoria's first progress through Scotland, she visited the castle of the descendant of this nobleman, who received her on bended knee, holding a golden ewer filled with water, into which she dipped her fingers.

This custom of attaching odd conditions was observed in many of the early grants and deeds given in this country.

James, Duke of York, granted the land comprising the present State of Delaware to William Penn for the yearly payment of a rose, to be sent to the Duke every Michaelmas.

The deeds to certain lots in the most valuable portions of Philadelphia require that no house shall be erected upon them of more than two stories in height, "for the preservation of pure air in the village." Several of these houses are to be seen, surrounded by blocks of massive buildings but still retaining their insignificant size, no doubt much to the disgust of their owners.

The deed to a large plantation in Maryland requires that the owner shall keep a certain grave upon it free from weeds, and "well-watered in time of drought." The grave is that of a beloved daughter of the first owner, and this provision grew out of his fond hope to keep her memory green.

Such singular interpolations in legal tenures are well worth preserving, as they throw a light, not only on some of the customs of a bygone time, but upon human nature.

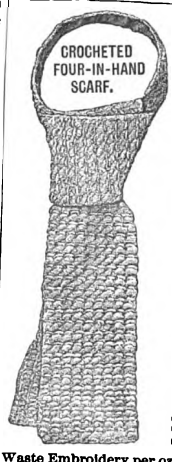
Premature Loss of the Hair, which is so common nowadays, may be entirely prevented by the use of *Burnett's Cocoaine.* It has been used in thousands of cases where the hair was coming out in handfuls, and has never failed to arrest its decay, and to promote a healthy and vigorous growth. It is at the same time unrivalled as a dressing for the hair. [Adv.

Spring, 1891.

"TOILE DU NORD"

PRODUCED BY THE

PARKHILL MFG. CO.,



FITCHBURG, MASS.,

Improved in quality and maintaining its high standard of perfection of manufacture, durability of colors and elegance of style. *It is the most desirable Wash Fabric in the country for general family use.*

Out of 252 styles of Fishing Reels, adapted to all kinds of Fishing, you can easily select one just right for your use. The Hendryx reel is offered you at a cost that will admit of throwing away your old reel and starting the season with a new outfit, and yet in no case is quality sacrificed to price.

Our Multipliers, Quadruples and Rubber, are all Screwed Reels, with interchangeable parts, and in Brass, Nickel or Rubber Plate are elegant in finish and action! All up-to-the-times dealers will supply you; if not, write us for Catalogue, and we will send any kind of Reel by mail, on receipt of price.

THE ANDREW B. HENDRYX CO. New Haven, Conn.

MATERIALS for Crocheting Scarf like this illustration: 3 spools Brainerd & Armstrong's Crochet Silk and a No. 2 Star Crochet Hook. The scarf can be made with two balls by making it a trifle narrower than the directions call for.

Other articles for which this silk is specially adapted are: **Tidies, Umbrella Cases, Crocheted Beaded Bag, Lamp Shades, Handkerchief Cases, etc.** *Full directions for crocheting any or all of above mailed to any address on receipt of* 1c. *stamp.*

Ladies, ask your storekeeper for Brainerd & Armstrong's Crochet Silk (see full-size cut of same in Companion Feb. 5th), but if unable to procure it, send direct to us, and we will send you the silk, postage paid, for 38c. a ball. **All colors warranted fast.** Crochet hooks furnished for 5c. each.

Waste Embroidery per oz. . . . 40c.
Latest Book on Art Needle Work, . . . 10c.
Arasene and Chenille, 30 skeins, assorted colors, 50c.

LATEST DISCOVERIES IN SCIENCE.

The Mound-builders.

By Professor H. W. Henshaw.

In the Middle and Southern States, and within the area drained by the Mississippi, there are a great many artificial mounds. They differ much in size, some being insignificant mounds a few yards in diameter, while others are huge earthworks, like the one in Ohio called Fort Ancient, the embankments of which extend nearly three miles in a straight line, or like the Cahokia Mound in Illinois, just across the river from St. Louis, which is one hundred feet high and covers about sixteen acres.

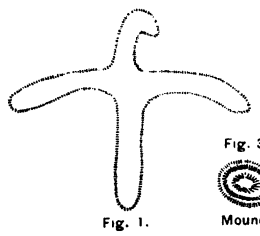

Fig. 1.

Fig. 3.

Mounds.

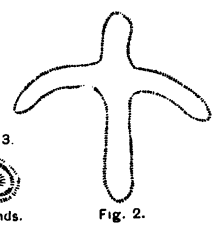

Fig. 2.

The mounds vary as much in shape as they do in size. Some are almost conical, with steep sides; others are oval or rectangular, with gently sloping sides, and others are mere terraces of earth.

Others may be mentioned which are not properly to be classed with mounds at all. They are simply figures in relief of animals and birds, made by banking up the earth in such a way as to form rude outline effigies.

Thus differing, it is evident that the mounds cannot have been erected for one purpose, but that their uses, if not so varied as their size and shape, were at least manifold.

From the earliest times of white settlement, the mounds have been objects of speculation and inquiry, and many conjectures have been made as to their origin and purpose.

For a long time they were believed to be enshrouded in mystery. When interrogated as to their origin and use, the Indians are said to have professed utter ignorance. The mounds were in the country when they came, they said; but when and by whom and for what purpose they were made, they did not know. So these ancient monuments came to be regarded as connected with a race different from the Indian, which had previously occupied the country, and for some mysterious reason had left it.

Some thought that the builders of the mounds had been exterminated by the fiercer and more savage Indian tribes; others thought it more probable that they had been driven away—some said to Mexico and Central America, where they were supposed to have become so far civilized as to be able to construct the wonderful temples and houses of that region.

But within recent years another and very different opinion respecting the mounds and their builders has gained ground, until it has nearly supplanted the old one. This is that there is nothing so very mysterious about them after all. As students came to study historical records a little more closely, it was found that not only did certain of the Indian tribes know much about the mounds, but that they were the actual builders of some of them.

Moreover, when some of the mounds were dug into and objects of European manufacture found far beneath the surface, it became evident that these must have been built since Columbus made his mistake and called our aborigines Indians because he supposed he had landed on the shores of India.

At present it is held that many of the mounds were built by the tribes which were found in possession of the country when it was discovered by Columbus, and that the older mounds about which Indian tradition was silent were simply those which were raised long ago by the ancestors of the present tribes; in short, that all the mounds are Indian mounds, and that to acquire a knowledge of their uses and the meaning of their contents we must study Indian habits and customs. To interpret these habits and customs correctly is to read the riddle of the mounds.

Thanks, then, to the earnest labors of those who have patiently explored the mounds themselves and of others who have diligently studied living tribes and searched into musty historical records, it is now possible to explain the chief motives of those who raised the mounds, as well as the uses of many of the curious implements found therein.

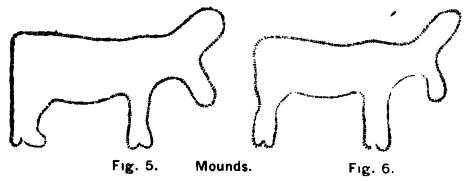

Fig. 5. Mounds. Fig. 6.

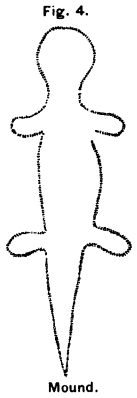
Doubtless much yet remains to be done ere the past can be fully reconstructed, and we can claim to know all the secrets of the Mound-builders, if indeed so much as this is ever to be hoped for. But, judging from the success of the past ten years, the future is full of promise.

It was soon found that a very large number of mounds were simple burial tumuli.

While the notions held by our Indians respecting a future state agreed in a general way, there were yet many minor differences. All seem to have believed that the existence of the individual did not cease with death, but that there was another life more or less closely resembling the present one.

According to Indian ideas, the present body was closely connected with this future existence, and all tribes paid great attention to the proper burial of their dead. Many tribes burned the bodies, as did the old Greeks and Romans. Others deposited them upon scaffolds out of the way of wild animals; others laid them carefully away in caves; while others still buried them in the ground.



But whatever their form of burial, all tribes paid particular attention to the care and protection of the bones. It was natural that they should, for the bones are the most imperishable part of the body, and with them is closely connected the idea of a spirit, or soul as we call it, crude though that notion is in Indian philosophy.

After much ceremony and doubtless with much lamentation and many tears—for savages are very demonstrative in their grief—the body was placed on the ground or upon a terrace of clay, and around it was gathered the property of the deceased and such articles as it was thought would be useful in his after life, such as a water-vessel or two, some food, paint for decorating the body, and so on. A fire was then built over the whole, and after it had burned long and fiercely, earth was brought in baskets and heaped over all.

Thus the heap of earth above it served two purposes; to protect the remains and as a monument. Doubtless the richer and more distinguished the deceased, the larger and more imposing the mound.

It was the habit of many tribes to bury their dead in the ground or expose them on scaffolds until the flesh disappeared; and then, perhaps at stated intervals, to gather the bones together and deposit them in an indiscriminate heap, the friends sacrificing on these occasions such objects of value as were most appropriate, or such as would best express their grief and love. Thus the mounds often mark the last resting-place of a group of persons who probably were connected by tribal or kinship ties.

Fig. 4.

Mound.

Some tribes buried the bodies outstretched in a horizontal posture; others folded the limbs tightly against the body; and others still wrapped the bones, after the flesh was removed, into a compact bundle. Some buried in stone, coffin-shaped cists; others enclosed the body in bark or in rudely woven blankets and clothing.

All of these methods appear in the burial mounds. Fortunately, when the bodies were cremated, in many cases the fire only half did its work, and many of the objects sacrificed on these occasions have been unearthed, as well as many of the skulls and half-charred bones.

The list of objects taken from the mounds includes everything dear to the Indian mind. That it was believed the deceased would need his weapons in the next world or on his way there is evident from the numerous arrow and spear heads found. Personal ornaments were deemed essential, and vast numbers of shell beads and pendants, pearls, copper trinkets, and various stone carvings of ceremonial or religious import appear in the mounds.

The Indian was always fond of athletic games as well as those of more questionable morality, such as gambling; and objects used in these games are of frequent occurrence. Everything cherished by the Indian as a protection from the evil and disease spirits, by which the Indian world was peopled, was carefully included, and charms of various sorts are commonly found with the bodies.

Many of the objects found in the mounds, such as the carvings, are finely made, and show much taste on the part of their makers. Before these had been carefully studied, it was assumed that they were finer than anything the Indian produced. This conviction strengthened the opinion that those who made the objects could not have been Indians.

But those who maintained this opinion forgot that the first and inevitable effect upon a savage people of contact with civilization, is to deteriorate their manufactures. The savage, finding the tools of civilization better, gradually ceases to make his own; and as he abandons them, he loses his old skill, and becomes indifferent to beauty and nicety of finish.

When, therefore, the most artistic and best finished objects from the mound are compared with similar ones made by Indians whose handiwork has not suffered by contact with civilization, Indian art suffers little or nothing by the comparison.

To raise such immense works as the Cahokia Mound must have required great labor, and the size of the mounds has been urged as a reason to suppose that Indians could not have produced them. But it would require no more labor for a comparatively few men and women to throw up a mound in a long time, than for many to build it in a short time; and no doubt to build such mounds as that of Cahokia must have required many years, perhaps successive generations.

Moreover, the very rude methods employed in mound-building are strikingly suggestive of Indian work. In the case of certain mounds, it has been possible to trace the successive baskets of earth as they were dumped from the shoulders of the dusky carriers.

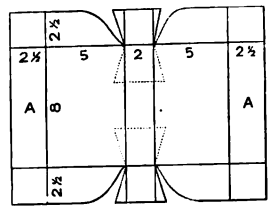


Fig. 1.

Thus far we have spoken only of burial mounds. In many places there are embankments of earth in the shape of squares or parallelograms, the appearance of which too closely suggests rude fortifications for their purpose to be mistaken. They were defensive works—places of refuge.

Such in fact was "Old Fort Ancient," which may have been the work of generations of Indians; and within its ample interior were probably gathered, in times of danger, the tribes that inhabited the neighboring valleys.

Evidences of village sites within its enclosure indicate that in troublesome times villages were established and occupied for considerable periods. Doubtless within it grounds were prepared for the celebration of such feasts, councils, games and ceremonials as always attended Indian social, religious or tribal proceedings.

There is another class of mounds of various shapes and sizes, which apparently were the sites of large houses, where dwelt together several families of the same clan, or of council or "sweat-houses," which were partly for religious and partly for social use.

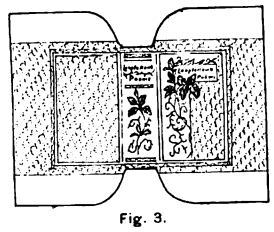

Fig. 3.

Most curious of all are the Effigy Mounds in Wisconsin, a group of which, found in Grant County, in that State, are shown in the illustrations. These relief figures of men, beasts, reptiles and birds are often made on a gigantic scale, and from the nature of their construction are necessarily so rude that they can rarely be identified as of any particular species, though the attempt to identify them has often resulted in false conclusions.

Thus one mound in Ohio long passed as the effigy of a mastodon or elephant; and as this creature has been supposed to be extinct for a considerable period, the effect of this identification was to bring the existence of the animal down to a very recent date, perhaps to historical times, or else to carry the origin of this particular mound far back into the past.

Now, however, the proboscis of the animal, upon which chiefly rested the theory of its elephantine nature, has been determined to be a slide of earth. So the effigy passes from the list of the marvellous to take its proper but prosaic place in mound history as the figure of a bear.

Figs. 1 and 2 are evidently intended for birds; but more than this cannot be said.

Fig. 3 is a small circular mound of a common type.

Figs. 5 and 6 are intended for some large, heavy-bodied animal. We may call them bears, though what are probably intended to represent the ears are enormously exaggerated.

Fig. 4 probably represents an otter, possibly a beaver. Both the bear and otter figure largely in Indian totemic and mythical lore.

As to the purpose of erecting these banks of earth in the shape of animals, students appear to be pretty well agreed. Most Indian tribes have myths by which they trace back their origin to certain animals, as bears, dogs, snakes, and birds.

The figures of these supposed ancestors become "totem" marks, and are tattooed on the persons and pictured on the houses and other property of the Indians. The well-known totem posts of the Haida Indians of Alaska are good examples.

Instead of contenting themselves by carving their totems on their houses, weapons or other property, or painting them on their skins, the Wisconsin tribes adopted a unique plan, and raised on the bosom of Mother Earth their effigy monuments, commemorative of their mythic ancestral beliefs. So inscribed, nature has kindly assisted in their preservation; and though other and more costly monuments crumble away, the effigy mounds live on, mute witnesses of the cherished beliefs of a people whose past history is a cloud-land of conjecture.

For the Companion.

HOW TO COVER BOOKS.

Many persons regard books as among their choicest possessions, and handle them with loving care, but who can refuse to lend a book? and who knows what treatment it may receive in strange hands? Innumerable hundreds of nicely bound books are received annually into the homes all over our land, and are read, handled, passed from one to another, borrowed and lent, until in many cases, when their owners welcome them back again—if they be so fortunate as to do so—scarcely a vestige of beauty is left in the bindings that were once so tasteful and pretty with their flashes of color and glints of gold. Books in dull, worn and soiled covers are all that are left to take their places on the book-shelves.

The best way to preserve books that are to be much read is to cover them before they are ever used; with thick, soft, firm paper cover them so closely that no exposed edges are left to wear out, and so neatly that even the careless will see that they must respect the protecting paper and let it be.

Once learn to cover a book in a neat and lasting manner, and form the habit of covering every newly acquired book before it is handled at all, and one has accomplished something for which he will be thankful as long as he lives to prize the collection of fresh, nice-looking books thus rescued from dullness and tatters.

If boys and girls would begin to save the books they own, would learn to cover them securely, label them with their titles on the back with pen and ink, and number them in the order in which they were acquired, they soon would be surprised to see what a nice beginning of a library they would have, and what fresh interest in it every new book would arouse. Such a collection often forms the nucleus of a large and valuable library.

A young boy, to whom it had hardly occurred that he was the owner of a dozen books, was advised by his mother to begin a library. In some surprise at the idea, he counted up his books, and found that he had nineteen.

Then he was told by his father that when he had twenty-five books, all nicely covered and kept, he should have a neat little book-case. This stimulated him both to increase the number of his books, and to cover them as soon as he had them.

That was several years ago; it seemed a small affair at the time, but the little library thus commenced now numbers over one hundred volumes, and its wide-awake, well-informed owner says its formation and growth has brought him more pleasure than all the rest of his possessions combined. It aroused a desire to obtain books that were worth keeping, and stimulated an ambition to earn the means of procuring some of them; the knowledge thus gained and the efforts made will influence for good his future life.

Are there not many children and young people among the readers of *The Youth's Companion*, who, if encouraged by a little help from their elders, would like to start a library for themselves? If so, the first thing to do, after collecting every book owned at all worthy of preservation, is to get a supply of thick, firm wrapping paper—like that used on the books in public libraries, or by tailors for large, heavy packages; having that, a pair of scissors, a tape-measure, a pencil and a rule, we are ready for work.

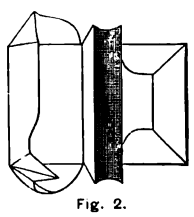

Fig. 2.

We will select a medium sized book on which to make our experiments; one eight by five, and an inch and a half thick, will do. We wish the paper to fold over two inches and a half inside the book-cover, so, drawing the tape-measure around the book from side to side across the back, and allowing it to project two inches and a half beyond both front edges, we find it takes seventeen inches—the measurement shown by the lines extending from right to left across Fig. 1.

Measuring the book lengthwise, allowing two inches and a half at top and bottom, we find thirteen inches are required—as shown by the perpendicular lines of the same figure; therefore from a corner of one of our large sheets of paper we cut a piece measuring seventeen by thirteen inches, and, with the rule and pencil, proceed to mark it off into portions according to Fig. 1, which plainly shows just where and how to shape the rounded corners and the ends of the two-inch back piece.

To fit the cover to the book, turn in the ends of the back piece as shown by the dotted lines, lay

Digitized by Google

the open book, face upward, directly in the centre; fold the portions marked A over to the inside of the covers; close the book and crease the two front edges so they will remain smoothly in position; lay the book down, turn one cover back, push the square corners of the paper in between the book cover and the paper over it, and crease it down, when it should look like the upper right-hand corner of Fig. 2. The lower corner on the same side shows the same work; it has been loosened and drawn out to show how it is folded and creased; when replaced, the *point* is to be slipped back *outside* the cover. The projecting flaps now left at top and bottom are to be folded inward, and smoothly creased down, when the finished cover will look like that at the right of Fig. 2. Treat the other side of the book in the same way, and the cover is completely adjusted; write or print the title of the book and the name of the author in plainly readable letters, upon the back with a coarse pen. The exact measurement, the underfolding at the corners, and the close creasing at the edges, all combine to fit the cover so neatly and closely that, after it has been in position a few days, one would almost as soon expect to see the leaves drop out as to find the cover unfolding or slipping off. If for any reason one wishes to secure the cover so that it cannot be removed, the spot marked by short lines at the upper left-hand corner of Fig. 2 shows where a bit of paste or mucilage may be applied just before folding in the end.

Having covered one book satisfactorily the rest may be covered very quickly, let them vary in size as they may, the only difference being in the measurements taken; of course, for small books less than two and a half inches should be turned in, and for very large ones a little more.

Fig. 3 is the same as the opposite or right side of Fig. 1; it shows how the printed paper covers — duplicates of the cover designs — that often accompany new volumes nowadays may be pasted to the outside of the home-made covers if desired, making them stronger and more attractive. Such a cover usually lasts until the volume which it protects has been its rounds as "the latest thing out," and returned "an old story," when it deserves to have its soiled working dress removed (and laid away, to be donned for future journeys) and, with binding fresh and neat, find repose behind the draperies on doors or the bookcase.

For the Companion.

WHAT THE McELROY GIRLS CAPTURED.

Elvira and Candace McElroy, girls of fifteen and seventeen years, live with their father, Joshua McElroy, a lumberman, in the northern part of Aroostook County, Me.

They keep their father's house, for their mother is dead. They support themselves besides, and turn many a slow but honest penny, doing "sale work" for the agent of a Boston clothing firm. They make a pair of pantaloons for twenty-three cents, a waistcoat for eighteen cents, and a coat for a correspondingly small sum.

Even at these very small prices, Elvira and Candace have earned a goodly sum of money during the last two years, and, besides buying and paying for two sewing-machines, have a nice sum deposited in a Bangor savings-bank. If they had left home to go to a factory or to a city store to serve as saleswomen, at six, eight, or even ten dollars a week, it is very doubtful if they would have saved any money at all during the time.

But my story is of something quite apart from sales work or bank accounts.

During the autumn and winter, the two girls are alone at their house, which is a small, new structure standing on a recently cleared tract of land almost a mile from neighbors. Their father and their only brother, Alvin, leave home early in the morning with their ox-team to go to their work in the "logging swamps," where, taking their lunch with them, they are employed all day.

The absence of their father and brother gives the girls the more time for their work, so that they are generally able to finish their "stint" by three or four o'clock in the afternoon. They do not work in the evening, but devote that time either to reading, or to entertaining or calling upon their friends and neighbors. In a cottage of but three rooms there is much less of housework than in larger houses.

They live in a wooded and somewhat wild country.

On one of the last days of last October, Elvira, glancing out at the back window as she sewed, saw a sight which startled her. The cow, with a calf, a yearling and the little flock of six sheep, was feeding in a stumpy field a few hundred yards away, near the border of the woods. There had come out of the forest and joined the little domestic herd, a black animal which seemed very much larger than the cow. Its head was carried very high, and was surmounted by a prodigious pair of antlers.

"Goodness!" Elvira exclaimed. "Come here, Can, and see this great black creature!"

Candace left her sewing-machine at the other side of the room, and hastily joined her sister at the window.

"Oh, dear!" she cried. "It will kill old Bonny and the sheep!"

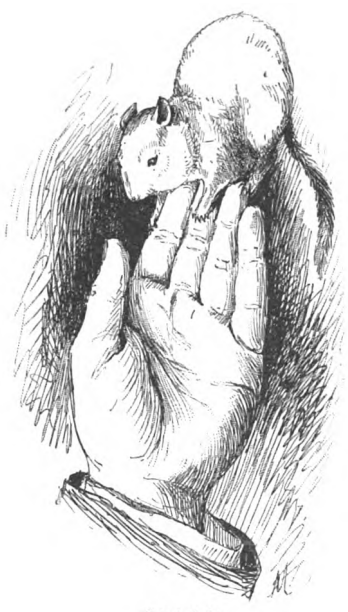
"No, they don't seem a bit afraid of it," replied Elvira. "Only look at old Bingo! He's butting it!"

Bingo was a large, horned sheep, and he had squared off valiantly at the intruder, butting at its long legs several times; but the animal took no further notice of its small adversary than to step aside a little.

The cow continued to feed upon the dry grass;

Caught by the Barn Door.

and even the calf, after smelling the new-comer curiously, showed no signs of alarm.



"It must be a moose," said Elvira. "Now, if Al was only here with his gun, he might shoot it. He would get a lot of money for it."

"His gun is here," exclaimed Candace, "and it is loaded! Would you dare try to fire it?"

"It kicks," replied Elvira. "He's got it loaded for that bear they saw, you know. There's a dreadful charge in it. I don't want to touch it."

Nor did Candace. They stood by the window and watched the animal, which was, as Elvira had surmised, a moose, and a large one. It had joined the cattle in a companionable way, and appeared inclined to stay with them.

"Do you suppose it would come up to the barn with the cow?" said Elvira.

"Quirrie."

"Perhaps," replied her sister. "I don't believe that it would go in at the little door, but it might at the big doors, if the cow and the sheep went in ahead and it saw them eating."

It happened that at this time of the year the cattle were in the habit of coming to the barn to be fed, by mid-afternoon. To lure the moose into the barn with them, the girls brought up at least a bushel of potatoes and other vegetables from the house cellar.

Stealing out very quietly, keeping out of sight of the animals, they opened the large doors of the barn, which stood in a field back of the house. With these vegetables they strewed the threshold and the barn-floor.

Then they set the doors wide open, and retired to the house window to watch. The fire was allowed to go out in the house stove for fear the smoke should alarm the moose, and prevent him from entering the barn.

For more than an hour the animal remained with the cattle, moving about the field, and sometimes approaching within a hundred yards of the two watchers at the back window.

At last "old Bonny" began, as was her wont, to feed nearer the barn, and presently came around to its front side. Seeing the doors open, she approached and began to eat the scattered vegetables. The calf, the yearling and the sheep quickly followed her, and all pressed into the barn, munching greedily.

After a moment, the moose, with rounded, wide-open eyes, looked around the corner of the barn. With antlers thrown back, he stared for awhile; then, hearing nothing but the sound of the cattle eating, he stalked slowly forward to the doors and inspected the interior loftily, as if undecided whether to bound away or take a share.

Bingo now tried to drive him away, by butting at his legs again; and this small act of jealousy appeared to settle the moose in an intention to secure some of the provender. He immediately shuffled into the barn, and went forward with the other animals.

The girls, who had been observing every movement of the animal with mingled eagerness and fear, now perceived that the time had come to act, if they had courage to do so. With hearts beating very hard and fast, they crept out to the corner of the house.

"My! who knows what he may do! I've heard that they are dreadfully savage, sometimes!" whispered Candace.

"But we must steal around and shut the two great doors before he sees us," urged Elvira. "Then he cannot get out."

By and by they succeeded in screwing their courage up to the point of starting forth. Tiptoeing out and around, they ran up, one on each side, and, each seizing one of the heavy doors, attempted to close them.

But the moose had probably scented them, if he had not seen or heard them. He turned and made a plunge to escape at the same instant.

As the doors came together, his head and antlers appeared in the narrow space between them; he was caught there, the force of his outward rush being checked, apparently, by that of the two doors striking against him. Then he pulled backward to withdraw his neck, and drew the edges of the doors still closer upon it.

The two girls, who had pushed with all their strength, but who now felt the doors stop and stick fast, glanced up and saw the moose's head almost directly over theirs.

"Oh!" Candace screamed; "he will tear us all to pieces!"

"Hold on! hold on for life! he *will*, if we let him get out!" Elvira gasped.

They braced their feet and held fast. The imprisoned animal struggled violently, first to withdraw his neck, then to push through the aperture; but he was caught at a great disadvantage, and had no opportunity to make full use of his strength to escape. Panting and in terror, the girls pushed against the doors with all their power, for they dared do nothing else. Here they remained, braced and holding fast for quite an hour, notwithstanding their fears, till their father and brother drove their ox-team into the yard after sunset.

"Oh, father, do come and help us quick!" was all that Candace could find breath to call out.

"What in the world have you got there!" exclaimed McElroy, coming forward.

"It's a moose!" gasped Elvira. The lumberman seized his axe and despatched the animal.

It was sold for fifty dollars, which the girls reckoned a very good afternoon's work for two girls.

For the Companion.

A FLYING SQUIRREL.

Some three or four years ago, I went to North Carolina to spend the winter in pursuit of health. Becoming worse instead of better, I had to take to my bed. There I remained nearly four months.

As my trouble was of the brain, I was not allowed to read, and had to console myself with sewing—fancy a man sewing!—and all sorts of ridiculous occupations, to pass away the time. I had dogs, cats, canaries, and a mocking-bird. I was very fond of them all, and my wife was always looking out for something new to amuse me.

One evening, as I lay waiting for a light, Kate was called to the door by some boys, who had something to show her. She came back, quite excited, to get her purse, and presently brought me two little, soft, gray creatures not much larger than mice.

I could see that they were squirrels, but of what kind they were I could not tell. They looked very furry along the sides—not smooth, like other squirrels. After leaving me in perplexity for some minutes, my wife told me that they were flying squirrels.

She had paid three dollars for them, which I thought rather a high price; but then, as she said, they were so pretty!

Without much objection, I put them to bed in a tin box filled with cotton, placed in an old bird-cage.

A flying squirrel is about the size and shape of a chipmunk or striped squirrel, and in color is a somewhat lighter gray than a mouse. The tail is not very full; it is about like a rat's tail flattened out, and has a thin fringe of hair along each side. It curls up over the back about half-way and then the tip curls over outward. It is not at all like the glorious plume of a red or gray squirrel, which covers its pretty owner almost like an umbrella.

The flying apparatus is very simple. You will notice in the hind leg of a dog or a horse, that, just where the thigh meets the side, there is a little piece of loose skin, which is seen better when the leg is stretched out behind; and there is a piece like it, except that it is less in size, under the forelegs of the animal.

In the flying squirrel this piece of skin projects all along its sides, between the fore and hind legs, so that, when the squirrel stretches out his legs, he is of a flat, oblong shape, with his feet sticking out at the corners.

This peculiarity enables him to make the most astonishing leaps, provided he has a high place to leap from; for, instead of falling after the force of his spring is spent, he "scales" down, as a flat piece of tin does when thrown edgewise. This is all the "flying" that he does; but he is a wonderful little jumper.

Our little squirrels were very tame. They had been taken from the nest when young, and handled and carried about in his pockets by the boy who sold them to us. I think they were hardly so large as they would have grown if they had not been caught, but I am not sure as to this.

They were fed on hickory nuts, which, however, had to be cracked for them, for flying squirrels have softer teeth than the other varieties, and cannot gnaw anything very hard, their natural food being grain, roots and soft-shelled nuts. In Southern barns and granaries they run about like rats.

We noticed that our squirrels were awake comparatively little during the day; but about dark—just when I was trying to get to sleep—they would begin to romp and jump about their cage, keeping this up until near morning. As their cage was of tin, this made a great deal of noise, and I was not sorry when one of them died.

Flying Squirrel.

I had to send the remaining one out to the other end of the house at night, and even then I could hear the *thump, thump, thump*, as he jumped to the top of his cage and then down again with the regularity and persistence of a clock.

"Quirrie," as we called him, was soon allowed his liberty during the day. He was a pretty and most interesting little rascal, and so full of mischief that I think he would have exploded like a firecracker if he had been obliged to be good for half an hour.

Quirrie found that a pocket in a night-shirt is a handy thing, though his use for the pocket in my night-shirt was as a nice warm place for a nap, and a splendid hiding-place for treasure-

Digitized by Google

trove. Many a comfortable nap he took there, and many a time he "scooted" to me and burrowed under my handkerchief as fast as he could. Then, in a minute, in would come Kate, scolding because the corks were stolen out of the medicine bottles, or some buttons or thimbles gone from her work-basket.

I knew where they were well enough; so I would take out my handkerchief, and there would be Quirrie, looking up at me saucily with his beady black eyes, and cuddling his stolen property up in his paws. When I tried to take the prey, he would turn on his back and bite and scratch like a kitten, and sometimes make his sharp little teeth meet in my finger.

His bite was like the prick of a needle, bringing a bead of blood, but leaving no hole that could be seen.

He learned a great many tricks. He would kiss me by putting one tiny paw at each corner of my mouth and then softly nibbling at my lip. He would climb up the neck of a large port-wine bottle like a little sailor, and steal the cork out of it; but I did not teach him that.

When he was playing about the room, I had only to say "Quirrie, Quirrie!" and make a hissing sound, like "tsip, tsip!" when he would answer me with the same sound. Then he would climb up on the sofa and jump to the rocking-chair, run up the back and jump to the foot of the bed, and thence spring upon my breast and come up to my face with ears and tail cocked, and such a funny, anxious look in his face that I almost expected to have him ask me some time, "Well, well; what's the matter?"

As he played in his cage, he learned to jump up and turn over without touching the top—in effect to turn a back somersault in the air. After a time I induced him to do this on my breast. I would tap him on the back, near the tail, and up he would go, and over, like a little acrobat.

Everything I ate Quirrie had to taste, and sometimes he got things—such as mustard, for instance—that he did not like.

He was very fond of milk, and when I was drinking a glass he always came up on my shoulder, put one paw on my cheek and one on the rim of the glass, and drank with me. The milk he drank did not cost me very much, for a drop or two spilled on the table was more than enough for him.

We were fearful that he would be caught by the cats, for they became much excited when they saw him. When one of them came in as we were sitting at lunch one day, I was frightened, and shouted to Kate to catch it quickly.

Quirrie was on the table, by my plate,—I was able to be up by this time,—and at the first alarm sought refuge on my head. Kate caught the kitten and was going to take it out, when Quirrie started to come down. I told her to wait and see what he would do. She sat down and held the kitten on her knee, and, to make sure, I put my hands firmly around its neck.

Quirrie sat still on my shoulder a moment, and then walked down my arm. Slowly, slowly he came, leaning over after each step and stretching his neck toward the kitten before taking the next one, until he got just within reaching distance. Then he paused, leaned slowly over a little further, nipped the cat savagely in the middle of her nose, and then scampered for my head, whence he sprang to his cage, slipped in and hid himself in his bed.

What a scamp! He knew perfectly well that he was safe.

As spring came I became stronger, and was able to sit out in a hammock the greater part of the day. That was great fun for Quirrie, who scampered up and down the ropes, turned somersaults over them, and "did circus" like a little trapeze performer.

At last, one evening, I took him out of his cage to show him to some callers, and, after showing his tricks, forgot all about him. I saw him once climbing up the curtains of a window which was open at the top, and at my call he came back, but soon wandered away again.

It was after dark, and his nocturnal instinct was at work, I suppose; at all events, I never saw him again, and I suppose he slipped out of the window. I set a trap for him—his own cage, with a "fall" set on the door—but to no purpose. I might have caught him finally, but he escaped only two days before we were to leave for the North, and though I waited over one day, that was all I could do.

It was hard work to come away and leave him. The change of climate might have killed him, but it is likely that he did not live long, for he had never learned to seek his own living.

A year after we came North, as I was looking over some old clothes to give away to a poor man, I came across the corduroy shooting-jacket that I had worn when in North Carolina. Putting my hand in the breast pocket, I found some dried scraps of hickory-nuts. It made me feel sad for two or three days.

I had always kept some nuts in that pocket, ready cracked, for the squirrel, and he knew it well. How wistfully he used to hold his little paws out to me with his plaintive "tsip, tsip!" as I went to his cage in the morning, and how eagerly he dived into that pocket when I let him out!

Poor little Quirrie! I shall never have so cunning a pet again. M. M.

A gentleman certainly looks better and feels better, with clean, well-laundered Shirt, Collars and Cuffs. These may always be obtained by using Electric Lustre Starch. All Grocers sell it. [*Adv.*

DONALD KENNEDY
Of Roxbury, Mass., says:

My Medical Discovery seldom takes hold of two people alike! Why? Because no two people have the same weak spot. Beginning at the stomach, it goes searching through the body for any hidden humor. Nine times out of ten, inward humor makes the weak spot. Perhaps it's only a little sediment left on a nerve or in a gland; the Medical Discovery slides it right along, and you find quick happiness from the first bottle. Perhaps it's a big sediment or open sore, well settled somewhere, ready to fight. The Medical Discovery begins the fight, and you think it pretty hard, but soon you thank me for making something that has reached your weak spot. Write me if you want to know more about it.

ANIMALS' TOILETS.

Many, if not most animals are provided with combs, brushes, and other means of keeping their hair smooth and their faces clean. They use these with much ingenuity, and often in a curiously characteristic manner. Seals have fixed to their front flippers a neat little comb. With this, when resting on the rocks, they carefully arrange and smooth the fur on their faces. "Brilliantine," one writer says, "is carried in a small and handy reservoir by all ducks and divers, mud serves them for cold cream and vaseline, and dust for fuller's earth and pearl powder."

"No doubt cats, large and small, make the most careful of animal toilets, with the exception of some of the opossums," writes a contributor to the *Spectator*. "Lions and tigers wash themselves in exactly the same manner as the domestic cat, wetting the dark india-rubber-like ball of the forefoot and the inner toe, and passing it over the face and behind the ears.

"One of the most charming pets we have kept, and the most particular as to its feet and fur, was a lovely brown opossum from Tasmania. It washed its face every two or three minutes, and would pay the same attention to the ears, hair or hands of any one on whose shoulder it was allowed to sit.

"Once, having upset a bottle of turpentine over its hands, it almost fretted to death because it could not remove the scent. Oddly enough, it would retire during the day to a chimney, and did not object to the soot in its fur, perhaps considering it 'clean dirt,' as children do earth.

"One small spaniel, which we allowed to live in the house, was well aware that if he returned dirty he would not be admitted indoors. About an hour before the close of the day's shooting, he used to strike work, and begin to clean himself; and if urged to do more, would slip off home and present himself neat and clean in the dining-room.

"One day the dog had been left at home, and his master returned and seated himself by the fire, wet and with half-frozen drops of ice sticking to his gaiters.

"Pan ran up and carefully licked off the frozen ice and snow, stopping now and then to give an anxious look which said, as plainly as possible, 'Dear me, if I don't get him clean quickly, he will be sent to lie in the stable.'"

WORD-SHADOWS.

Under this title a writer in the *Atlantic Monthly* discourses upon the fanciful and grotesque dialect of the Southern negro. In the "plantation *patois*" are many expressions which display genuine humor and a happy knack at picturesque statement, as, for example, when an unproductive piece of ground is called "fallery lan'," and an obedient and tractable servant an "orderly gal."

The favorite and indispensable bread of the field-hand—that made of corn meal—is "John Constant," while wheaten bread is "Billy Seldom." Our word "accuse" becomes "'scuse" in the negro's mouth. There are few of his race, alas, who have not been, at some time or other, "'scuse of a cow," "'scuse of a pig," "'scuse of a pa'r shoes," and so on down the scale.

A half-starved calf is a "calf dat's been whipped wid de churn-dasher." To keep down grass is to "fight wid Gen'al Green." A matter well accomplished is "essentially done," as, for instance, "When she cooks, she des essentially cooks good." A proud person is an "umptious somebody."

To live easily and happily is to live "jolly and wid pleadjure." To be ill is to "have a misery." To be quite well is to be "des sorter tollerble." Entertaining conversation is "mockin'-bird talk."

Lively tunes are "sinner-songs," or "reels," or "corn-hollers," "jump-up-songs," or "chunes dat skip wid de banjo." Religious songs are "member-songs" or "hymn-chunes."

Not to be a church-member is to be "settin' on de sinner-seat," "still in de open fiel'," "drinkin' de cup er damnation," and many other such phrases. To enter the church is to "jine de band," to "take up de cup er salvation," to "git a seat wid de members," to be "gethered in," to "put on a shine-line gyarment," and so on indefinitely.

WASHINGTON'S PUGNACITY.

It is related of John Adams that when Stuart exhibited his portrait of General Washington, Mr. Adams went to see it. After gazing at it for several minutes he exclaimed, "That's the portrait of a man who knew how to hold his tongue, which this old fool never did!"

The portrait does indicate that the original could be reticent, but it also shows that he could control himself. The square, massive jaw, the full, broad-based nose, and the compressed lips express pugnacity and passion, such as require a strong will to keep them in subjection.

Sometimes even Washington allowed his passion to have sway.

When Glover's Marblehead fishermen and Morgan's Virginia riflemen were engaged in a rough and tumble fight, Washington leaped his horse over the bars of the camp-fence, dashed among the rioters, threw himself off, seized two brawny riflemen by the throat, and shaking them at arm's length, subdued not only them, but the whole band.

It was the victory due to comman ding strength, presence and manner. The men saw that they must obey, and they obeyed.

NEW MOONS.

In former years, the night-watchmen of European towns, as they went their rounds, called out the hour and the state of the weather.

These watchmen were generally old men, whose infirmities, rather than their fitness, made them guardians of the night. Of one of them, a watchman of Canterbury, Cooper, the English artist, tells a story, amusingly illustrative of the mental dullness of the class.

One night it had been raining between the hours of the old man's rounds, a fact of which he was ignorant, having snoozed, as usual, in his watch-box. When he started on his next round, the rain had ceased, and the light of the moon was reflected in many pools of water. As the old man went along, he was heard to call out:

"Past eleven o'clock, a wet night, and more moons than usual!"

All the latest novelties.
An immense variety.
Seeds direct from the grower.

When you buy seeds, be careful of whom you purchase. Our record of 30 years in the Seed business is a guarantee of reliability.

JAMES J. H. GREGORY & SON,
MARBLEHEAD, MASS.

Seeds that will Grow.

That's what we all want—Seeds that will grow—Seeds that are *fresh, pure and true* to name—and that's the kind I strive to give. Some of these I grew myself, others I imported from the finest flower specialists of Germany, England and France. Many seeds are cheaper than these, but none are better. Try them yourself and see. Here's a charming collection I am selling extensively:

	Price per Pkt.
China and Japan Pinks, all colors,	**10**
Giant Mignonette,	**5**
Pansy, large flowering,	**10**
Nasturtiums, finest colors,	**5**
Escholtzia (State Flower of California)	**5**
Chrysanthemum, glorious colors,	**10**
Portulaca Grandiflora,	**5**
Asters, all kinds, a grand array,	**10**
ALSO FOUR SPLENDID NOVELTIES:	
Blanche Ferry Sweet Pea,	**10**
Little Gem Sweet Alyssum,	**10**
El Dorado Marigold,	**10**

and one more striking novelty of my own selection given as a **Special Prize,** in all **12 Packets**—costing $1.00 at retail—sent with *Catalogue* for **Only 30cts.** Be sure to get my Catalogue; it's a lovely book and will please you. Show your friends this and send their order with yours; for every such extra order I will send you a rare novelty. I shall be delighted with your order; **you** *will be delighted with the Seeds.*

Send **5c.** for same, or **17c.** and we will mail Catalogue and above **7** packages free.

JOHN A. SALZER, La Crosse, Wis.

SKINS ON FIRE

With AGONIZING ECZEMAS and other ITCHING, BURNING, SCALY, and BLOTCHY SKIN and SCALP DISEASES are relieved in the majority of cases by a single application of the **Cuticura Remedies,** and speedily, permanently, and economically cured, when physicians, hospitals, and all other remedies fail. **Cuticura Remedies** are the greatest skin cures, blood purifiers, and humor remedies of modern times, are absolutely pure, and may be used in the treatment of every humor, from the simplest facial blemishes to the severest diseases of the blood, skin, and scalp.

CUTICURA

The great Skin Cure, instantly allays the most intense itching, burning, and inflammation, permits rest and sleep, clears the scalp of crusts and scales, speedily soothes and heals raw and irritated surfaces, and restores the hair. CUTICURA SOAP, an exquisite Skin Purifier and Beautifier, is indispensable in cleansing diseased surfaces. CUTICURA RESOLVENT, the new Blood and Skin Purifier, and greatest of Humor Remedies, cleanses the blood of all impurities and poisonous elements, and thus removes the cause. Hence the CUTICURA REMEDIES cure every disease and humor of the skin, from pimples to scrofula.

☞ "HOW TO CURE DISEASES OF THE SKIN, SCALP, AND BLOOD" mailed free to any address, 64 pages, 300 Diseases, 50 Illustrations, 100 Testimonials. A book of priceless value to every sufferer.

CUTICURA REMEDIES are sold everywhere. Price, CUTICURA, 50c.; CUTICURA SOAP, 25c.; CUTICURA RESOLVENT, $1. Prepared by POTTER DRUG AND CHEMICAL CORPORATION, Boston.

An Eye for Beauty is satisfied beyond expression when it gazes upon a skin purified and beautified by **Cuticura Soap,** incomparably the greatest of skin purifiers and beautifiers, while rivalling in delicacy and surpassing in purity the most expensive of toilet and nursery soaps. *The only medicated toilet soap* and *the only preventive and cure* of inflammation and clogging of the pores, the cause of pimples, blackheads, rough, red, and oily skin, and simple humors of infants and children. Sale greater than the combined sale of all other skin soaps. **Sold everywhere.**

A REMARKABLE BOOK OFFER.

500 PICTURES

of **Animals** and **descriptions** of **them** written in a **masterly manner** by the **greatest naturalist** in **the world.**

$6 is the lowest price this book can be obtained for at **book stores.**

EVERY HOME should contain it.

FOR CHILDREN, it is one of the **Best Educators** that can be obtained.

Every page is **Interesting** and **Instructive.**

READ OUR OFFER.

For $3, we will deliver a copy to any reader of this paper, and in addition furnish a **year's subscription** to the **American Agriculturist.**

The 50th year of the American Agriculturist, beginning with January, 1891, will be more **Practical and Useful** than any of its predecessors. While all the leading features which have contributed to the marvellous success of the magazine will be maintained, the many additional improvements to be introduced, without increase of the subscription price, will easily make it the

BEST RURAL AND FAMILY PERIODICAL

in the world, also the cheapest, taking into account its large size, the excellent engravings, and the great amount of useful information contained in each number.

A Free Specimen Copy of the American Agriculturist will be mailed on application to the publishers to all who wish to examine it before subscribing.

The price of the **American Agriculturist** alone is $1.50, so that you are practically obtaining **$7.50 in value for only $3.**

WOOD'S NATURAL HISTORY,

By the Rev. J. G. WOOD, M. A., F. L. S., the recognized authority on this subject.

It is a **Mammoth Encyclopedia of the Animals of the World.**

It gives **every detail** of the **haunts, habits, diseases** and **peculiarities** of the **Animal Kingdom,** with hundreds of **vivid pictures illustrating them true to life.** These engravings give a clear idea of what the animals of the world really are, where they roam and how they live. The author gave years of his life to the compilation of the facts contained in this great volume, and was assisted by many of the leading naturalists of the world.

Every lover of nature will be **delighted** with the **information imparted** in its pages. **Thousands** of the **descriptions** of the **animals,** both domestic and wild, are accompanied with **anecdotes** relative to the species.

Magnificently bound in cloth, and embossed in gold, silver and ink. This great and mammoth work weighs over 6 lbs. It contains **five hundred magnificent illustrations** engraved by The Brothers Dalziel, from drawings by the eminent artists, Wolfe, Zwecker, Weir, Coleman, Harvey and others.

SPECIAL 30-DAY OFFER.

To any reader of the paper ordering the above within 30 days from the date of this issue, and mentioning this paper, we will also include a copy of the beautiful ten-color picture, 13x20, from

Rosa Bonheur's Famous $50,000 Painting,

"THE LION AT HOME."

This reproduction is said to be the finest ever issued in America.

The original of this magnificent painting hangs in the drawing-room of Consul Gambart at Nice, France, and cost him **$50,000.**

This creation of Rosa Bonheur's represents the tawny Asiatic Lion at rest in a cactus grove. Beside him is the magnificent reclining figure of the lioness consort, and in her eyes the gleam of pride seems to flash from the almost animate canvas as she watches the gambols of three whelps upon the ground near by. Probably no painting could possibly appeal more strongly to one's love of the vigorously beautiful, the sturdily powerful and the harmoniously accurate.

The coloring is exquisite, and the original has been followed to the letter.

Please bear in mind the above offer is limited to those ordering within 30 days.

Money Refunded in every case if you are not fully satisfied. Remit by postal note, post-office money or express order, or by registered letter. Postage stamps accepted for fractional amounts of a dollar. Address, mentioning this paper.

THE AMERICAN AGRICULTURIST, 52 LAFAYETTE PLACE, N. Y. CITY.

MASTER BROWN'S ANTAGONIST.

School-master Brown, seated in his office on the second floor of the big school-house, was listening to twelve different songs which were being sung at the same moment in the twelve school-rooms. Suddenly, mingled with this musical medley, he heard a queer, confused, jumpy tapping, accompanied by a muffled wail which evidently came from the lower story of the building. Master Brown was very sensitive in regard to any noise or confusion in the halls of his school-house, and his feelings may be imagined as the tappings and wailings increased, mingled as the tappings and wailings increased, mingled as the tappings and wailings increased, accompanied soon by a loud noise of many feet scurrying across the floor.

Hastening to quell the tumult, the school-master threw open his office door, when, in the form of a fierce-looking goat, which had invaded the school-house and was now—with frequent bleatings—charging along the entry, he saw the cause of the noise, playful pursuit of some youngsters who were taking this unusual morning exercise to be over, that they might go to their respective school-rooms.

Master Brown, though a strict disciplinarian, was not one of the hard-hearted kind. Accordingly he went quickly down and tried to drive the goat out of doors without using any violence. But Nannie declined to go; she was full of play, and as the whole affair was merely a bit of fun, and she had not yet even viewed the floor a little, she galloped once or twice, and made a pretence of butting her antagonist.

When the school-master tried to drive her in one direction, she sidled away, still bleating and shaking her head, and never got near the steps leading in the door. At last Master Brown dashed at the goat, caught her by one horn and by the tail, and Dan handled her so roughly that she bleated loudly, dove-tailed out into the playground.

Master Brown, though a strict disciplinarian, was not one of the hard-hearted kind. Accordingly he went quickly down and tried to drive the goat out of doors without using any violence. But Nannie declined to go; she was full of play, and as the whole affair was merely a bit of fun, and she had not yet even viewed the floor a little, she galloped once or twice, and made a pretence of butting her antagonist.

When the school-master tried to drive her in one direction, she sidled away, still bleating and shaking her head, and never got near the steps leading in the door. At last Master Brown dashed at the goat, caught her by one horn and by the tail, and Dan handled her so roughly that she bleated loudly, dove-tailed out into the playground.

Determined not to go, and not at the outer door either, Nannie gave a grand leap, and rushed into the basement. Here she evaded all attempts to catch her, and seemed likely to stay indefinitely.

At last Master Brown, with a long white-oak branch, which he obtained from one of the school-rooms, and with this made an attack on his enemy. After many failures, he finally got near enough to deliver a vigorous blow, which was not only heavily much appreciated, and certainly indignant at such treatment, Nannie at once dashed out of doors, leaving her antagonist master of the situation.

Master Brown hastened to extend the second outside door, and then left himself to look out at the front door, to see whether his late visitor had taken the hints offered and gone away from the premises. He had not, and Master Brown had to dig open the front door in order to pay the visitor the same visit.

Five minutes later, and to relate, the boisterous Tim Kerfan's grocery, the Gazeka story, about the goat which had driven out of Master Brown's hard-settled and disheveled, chasing up the street an ill-favored-looking goat, barring after her a mingled shower of epithets and good-sized pebbles.

MISTAKEN IDENTITY.

An American lady visiting in England one day readily alluded to Sir Henry Irving as the great actor, but it was only when he pronounced the name in a slightly horrified tone that she realized that she should have spoken of those effective hearts as "Ahtrys," or applied to them some equally euphonious title. That unfamiliarity with them is confined to their names, rather than their persons, may be guessed from the following story, which is told about a proposed entertainment of performing fleas, a long while ago, before the King of Prussia.

All the royal party had assembled about a platform, on which the exhibition was to take place, and the entertainment was called "Napoleon and his Generals."

The court sat in expectation, but the "professor" did not appear. At last he came, in a state of nervousness and rubbed his eyes in anguish, while he wrung his long hands, and searched up and down his little cage. At last he gasped:

"Napoleon is missing!"

"Sire, sire, madam," he cried, "this exhibition is a poor man's all! Without Napoleon, his generals are valueless. There can be no entertainment without him. An unfortunate mistake. Allow me!"

The princess wore an old-fashioned John. In the fraction of a second, the professor, with a long hand several of the white folds, made a capture, and then quickly returned to his treat. Arrived on the stage, he ventured to relax his hold, and examine the captive.

"Oh," he groaned, in despair, "it is a wild one!"

PROPER.

The pen is mighty, and was never mightier than to-day; but there are times when it is a vain thing for safety.

A gentleman touring through England stayed all night at a prim old lady's cottage, the village inn being full. He was very deaf, and took pains to improve the fact upon his hostess, with instructions that none one must enter his room to wake him at a certain hour, lest he should die.

On waking a good hour later than the time appointed he found that the old lady, with a commendable regard for punctuality, had slipped under his door a piece of paper on which was written:

"Sir, it is half-past seven."

Itching Pilles.
Barnett's Kalliston is a sure relief. A sample will be mailed on receipt of ten cents by Jos. Barnett & Co., 27 Central Street, Boston, Mass.

The largest mail-order business in the world is now done in

MAULE'S SEEDS

From the Atlantic to the Pacific, from the Great Lakes to the Gulf of Mexico, in every county in the U. S., they are equally popular, so much so that they have been re-supplied direct to customers at more than 15,000 Post Offices.

Our Catalogue for 1891 is announced absolutely the best seed and plant book issued; printed in the best of English, on the finest of paper, it excites the admiration of all. 400 varieties of Vegetables, Flowers, Flowering Plants, Small Fruits, Fruit and Nut-bearing Trees, Shrubs, Vines, Roses, Bulbs and Plants are described, many of them being in colors. This catalogue is mailed free to all who ordered in 1890; but as the postage on the book alone is three cents, we must ask all others who may not customer, quarter or stamps for it, which is less than cost. In addition to sending our catalogue, we will also mail you, without extra charge, a packet of the wonderful BEGONIA-FLOWERED MARGUERITE CARNATION, the most valuable vegetable novelty introduced in many years, a packet of the NEW MARGUERITE CARNATION, the floral wonder of 1891. These two packets of seeds are worth twenty-five cents, but to introduce them and our catalogue we will mail the same free as an advertisement.

A FEW SPECIAL OFFERS.

Of the thousands of varieties of Maule's Seeds, Plants and Bulbs we have space to mention more widespread than at present, we call attention to the following choice and exceedingly low-priced offers. FOR SIMPLY COVER POSTAGE, we will send to every reader of this paper will avail themselves of this opportunity of securing these choice selections: Plants, Bulbs and Seeds, at as trifling a cost as possible. **1** Beautiful Monthly Rose, all named sorts and colors, 25 cents, postpaid. **2** Choice hardy Hybrid Roses, all named, 50 cts., postpaid. **3** Rare Chrysanthemums, all named sorts, 50 cts., postpaid. **4** Choice Double Tuberous Begonias, all colors, 25 cents, postpaid. **5** Handsome flowering Shrubs, choice named sorts, 50 cents, postpaid. **6** Gladioli, a grand mixture, all colors, 25 cents, postpaid. **7** Tuberoses, Excelsior Double, large bulbs, 15 cents, postpaid. **8** Dwarf Tuberous Flowering Cape Hyacinths 25 cts., postpaid. **9** Distinct New Dahlias, all named, 50 cts., postpaid.

We will send everything offered above, together with our Floral Guide, the Marguerite Carnation and Wonderful Bush Lima Beans, and a copy of our 1891 catalogue, free to mail on receipt of $1.00. EIGHT of the above, **1** to **8**, for 50 cts., postpaid. **4** HALF DOZEN and **2** HOST Strawberries 35 cts., postpaid. THREE Pear, or SIX Peach, or FOUR Apple Trees, for only $1.00 by mail, postpaid. Five choice named Roses, all labeled, for 50 cts., postpaid. **5** Choice VEGETABLE SEEDS, making a complete garden for a small family, $1.00 postpaid. ON RECEIPT OF $10, EVERY-THING NAMED ABOVE, with a copy of Maule's Seed Catalogue, and a Packet of the New Pea—72 pages, daily bound; the best and latest work on gardening, sells at all book stores for $2.00. Remit by Bank Draft, Post-Office or Express Order, or if not in any of these ways, by Registered Letter. All orders by return mail. Address all orders to

THE LITTLE NUGGET STRIKE.

It is quite ten years since the Little Nugget Mine was opened. It is situated on Knob Mountain, ten or twelve miles from the now thriving city of Aspen. It is about eight years since the Little Nugget strike occurred, in which Ellen Lybec played so conspicuous a part that one still hears the miners speak her name with a sort of wondering reverence.

Her father, Christopher Lybec, had brought his family to Colorado several years before, and his wife had died, after many hardships in their frontier life, just before he had undertaken the superintendency of the Little Nugget Mine.

He had brought Ellen, his only child, to the mine, and there she had lived two years, taking care of his little house, and pouring in upon his lonely life the only sunshine that it knew.

It was rare sunshine for any man's life. At eighteen years of age Ellen Lybec was not what every one would call beautiful, but there was a native refinement in her features and manner quite out of keeping with the rough mining camp.

It was not often that the wives and daughters of the miners cared to deck themselves with the wild flowers that grew in the cañons and covered the borders of the Little Nugget Creek with bloom; but Ellen was rarely without some blossom tucked into the bosom of her dress, or twined in her brown hair.

It was one of many things that showed her to be of a different stamp from the few other women in the camp.

It was a lonely and a rough place for her, but there was nothing to tempt such a girl to yield herself to the moulding influences of the life around her. There was, on the contrary, everything to induce her to resist them.

What she was in her own home, she sought to be in the homes of others, and she had not been a week in the little settlement before it was plain that the camp would be better for her presence.

The superintendent's house was better than any other. It was a framed structure, well put together, with glazed windows, good stock doors, floors well laid, and with three of the rooms ceiled with plaster. There were in it many evidences of Ellen's taste. The wild vines of the cañons had been planted by the door, and trained upward over its frame and the adjoining window, and the ugly barbed-wire fence was well hidden under the same graceful covering.

John Randal's old blind mother could have told of the many long afternoons that Ellen spent in her company, making the hours pass pleasantly in the awful darkness; and when John Randal himself was laid up nearly all winter with the rheumatism, nothing eased the pain so much as Ellen's presence and gentle ministrations.

"Hogerboom's Patent Pain-Killin' and Ache-Destroyin' liniments aint nothing to Lybec's girl," John used to say, "if she only kind of comes around and looks at ye."

It was so when Mike Bender's two children were down with the measles. Mrs. Bender had no peace until Ellen came in each afternoon with fresh stories and flowers.

When Yellow Jim broke his leg down the shaft, and was brought up cursing so that even some of the men themselves were shocked, he became very quiet when Ellen spoke to him in a low voice; and when she did not leave his little cabin for two days and nights, except when her father's meals were to be got, Yellow Jim found that there were some compensations, even for a broken leg.

Discontent had been brewing among the miners in the Little Nugget. These men, who were handling so much rich ore for others, began to feel that their wages ought to be a somewhat larger share of what their labor raised from the ground. Yellow Jim was one of the foremost to stir up the discontent, and it had more than once come to the notice of Christopher Lybec that the little knots of workmen who were talking together under their breath, and broke up when he approached, were centred around Jim.

He was not much surprised when five of the men, with Jim at their head, came to the office one day and asked for an increase of pay.

Lybec knew what this meant. He had no expectation of success when he answered that he would telegraph to New York for instructions. The men did not mean to wait until word could come from directors two thousand miles away. They meant to have the money, whatever answer might be received, and to have it at once.

Lybec was a stubborn man. The insolent way in which the demand of the men was put incensed him. He declared that not a man should have an additional cent until he received definite orders from New York to pay it.

Next morning the men refused to work. Lybec mounted his horse, struck into the trail that led toward the town, and rode rapidly away.

At night he returned, and called Jim to the office.

"You may tell all the men that they may pack up to-morrow morning and be gone," he said. "I shall have no work for them. They can go where they can get more wages, if they can find the place. Take them over to the Clara; perhaps they can get work there."

Lybec laughed as he said this. Yellow Jim knew that the Clara Mine had shut down two days before.

The taunt put an idea into Jim's head. Lybec had probably engaged the miners thrown out of work at the Clara. The game was up.

Jim reported to the men, who agreed with him in his conjecture. No other explanation could be given for Lybec's prompt dismissal of his whole force, when the Little Nugget was showing a splendid output, and every day's idleness of men and machinery meant serious loss to the company.

"What do you say, men? Shall we fight it?"

It was a nearly unanimous vote to fight it.

When Lybec awoke the next morning, the narrow gulch in which the mine opened was walled across by a formidable breastwork six feet high, closing in the mine. Not a man was to be seen in the camp. Not a gun was to be found in any of the cottages.

Lybec was pale with rage, but he mounted his horse and rode away without a word.

Meanwhile the men proceeded with their undertaking. After Lybec disappeared they came out, collected all the food they could find, took one or two of the women of their families to do their cooking, sent the rest into town in charge of two of the younger miners, who were hardly more than boys, and then worked on completing their barricade.

At noon Lybec returned. Ellen met him at the door, and told him what had occurred.

She called to them to stop firing.

"What's the use of their fighting me?" he said. "They are cooped up in that hole; I have the whole universe. The sheriff will be here in an hour, and the new men, too. They have a dozen Winchesters behind the wall; we have fifty, and all the arsenals outside!"

But the reckless spirit of the mining camp did not wait upon reason. The men cared little. The Winchester was a proved arbitrator, and generally left no appeal possible. Let it be so now.

If they were not to work the Little Nugget any longer, the men were determined that no one should work it.

The sheriff and his party, with the new miners lately discharged from the Clara, arrived sooner than Lybec had expected. He and Ellen were still talking, and their hasty dinner was hardly finished before the party appeared.

A hurried consultation followed, and the sheriff looked a little discouraged when he saw the great wall that protected the strikers. He thought it might be better to starve them out.

But Ellen told them of the abundant stores taken in that morning. Indeed, nothing was left in the camp, and it would be necessary to send into town at once for provisions to feed the people in the camp itself.

The sheriff stepped out in front of his command, and called to the insurgents, in formal terms, to come peaceably forth from the mine, and deliver the same to the superintendent, Christopher Lybec.

The miners answered with a derisive shout of laughter. Then a bullet whistled over the sheriff's head.

"Give it to 'em, boys!" shouted the sheriff. "Give it to 'em!"

There was a sharp fight. The sheriff received a painful wound in the thigh, and fell to the ground. His followers got behind such shelter as they could find, leaving the sheriff where he fell.

Cabin windows flamed suddenly forth. An old hand-car sheltered one man behind it, and a hogshead half-full of water protected another. From house-corners came quick rifle reports.

An imprudent exposure brought another wounded man to the ground. At almost the same moment Christopher Lybec's left hand was pierced with a ball, and his gun fell useless from his grasp. He had been firing from the window of a cabin near his house.

As his gun dropped, Ellen sprang across the space between the houses, and was by his side.

But she did not remain long. Her face was flushed, and her breast heaved with excitement.

Before her father could stop her, she ran out again, straight into the middle space between the combatants, and stood above the body of the prostrate sheriff.

Instantly the firing ceased. There was not a man upon either side that would injure Ellen Lybec, as she stood there where an instant before the bullets had been flying.

Ellen took no notice of the wounded man at her side, but waving her hand toward the attacking party, she called out to them to stop firing. Then she turned toward the gulch and the barrier across its mouth.

"John Randal! John Randal!" she called.

The voice rang out, clear and sweet, with no tremor of fear in it. But there was no answer.

At that moment John Randal was gazing in awe-struck wonder upon the face of Yellow Jim, who returned his blank stare in equal amazement. Randal could not have answered if he had wished.

But still came the same clear voice, and when no response was given, the call changed.

"Mike Bender! Mike! Mike Bender!"

"Hello, yez! Hello, what do ye want?"

Mike's faculties were more at his command.

"Mike Bender, show yourself and talk with me. Come out! Nobody shall hurt you."

A moment later Mike's head was cautiously thrust out from the end of the wall. Then he advanced slowly, climbing over the loose bowlders, stopping to lean his rifle against the stones at one end of the barricade.

"Mike," said Ellen, "you know I would never lie to you. But what I tell you now, I want you to tell all the others. Not one of them shall be hurt, if they come out; and not a man shall go into the mine, either, until the men I choose shall decide to let him go in and work.

"Now, you tell the men in there that there's no use in fighting. There are about twenty-five of you. Out here there's a whole world. You are very foolish to fight. The only way for you to do is to make it right with my father. Talk with him; I'll talk with him, too; and then we will see who shall work the mine.

"Come out—you and all the men; or let me come in and talk there."

"No, ye'll not come in here, Miss Ellen," answered Mike. "It'll be no good at all, and nobody knows what may happen. The girl thet risked her life nussing my Nora aint going to run no more risks if I can help it. Just keep them fellows from shooting, and we'll come out."

He disappeared a few minutes, and Ellen used the interval to obtain from the sheriff's party the promise that no shot should be fired and no movement made to arrest the men, until she herself should give the signal.

Mike reappeared, and Ellen again went forward to the spot where the wounded sheriff had fallen. She had sent some of the men to remove him, and he was now in her father's cottage.

"Is it all right?" asked Mike, doubtfully.

"Yes," responded Ellen. "Let them come out.

Digitized by Google

I want to see John Randal, and Yellow Jim, and little Tom, and Nugget Dick—yes, and Beardy may as well come out, too."

They came, and ranged themselves in line, beginning with pale-faced young Tom, and ending with the giant Beardy.

Then Ellen began to talk to them. She appealed to each one of them by name; she showed them the folly of their undertaking. She told them she did not want them to go away to work elsewhere; they would not be so well off in any other camp. The Little Nugget had been their home for nearly two years. What would become of the children?

There was not a motive that she did not appeal to. Insensibly, as she spoke, she drew nearer and nearer to them.

The observers at her back lost her words as she passed away from them. They could see that she was not wasting her argument, however, for the men were now gathered about her, listening attentively, and occasionally answering. Now and then Mike could be seen gesticulating with impetuosity.

Ellen's father smiled as he noted that Yellow Jim turned away, and quickly brushed his sleeve across his eyes.

Then came a strange move. Ellen laid her hand on Mike's Winchester. He gave it to her. She took his revolver from his belt. Yellow Jim handed her his gun.

When her arms could hold no more, the other weapons were given to little Tom. The two brought them down into the camp.

In a few moments all the miners filed out from behind their barricade, and marched doggedly down the slope.

"I told them," said Ellen to her father, "that they must do it. I told them you had said you would not take one of them, but that you and I would arrange the whole business, and not one of them should be hurt. Won't you call in Mike Bender, and see what can be done?"

The following Saturday night the secret of it all was freely confessed in Mike's cabin, as he and Yellow Jim and John Randal and little Tom talked over the strike, while Beardy and two or three others sat around on kegs and boxes.

"It warn't no use. I'd 'a' fit a month before I'd 'a' given in, but when that gal stood out there, and any one of us might 'a' shot her down in an instant, and nobody ever knowed who it was, I was that scared that the cold creeps ran up and down my back. She looked just as she did the day she come in and my little Nora hed the scarlet fever. I tell ye, I'd 'a' done anything she asked!"

There was a silence of a few moments. It was broken by a half-vicious kick that Yellow Jim gave to an empty keg, which went whirling across the little room with a bang and a clatter.

"That's the leg she nussed," he said; and he took the pipe from his mouth slowly, looked with commiseration at his leg, gazed a moment into the dark recesses of the rafters, and smoked again.

"What fetched me," said Randal, "was the way she looked at me. Them big blue eyes of hern was—well, boys, my poor, old blind mother! How many days and days has she set and listened to reading thet the gal's blue eyes were doin' for her! It wouldn't a-made no difference if Ellen hed asked me to come out and be shot. I believe I'd 'a' come."

"And then the way she fixed it up! I knew she'd do something. We might have hammered away at Kit Lybec for a year, and we wouldn't have got so much out of him as she did in five minutes."

A man who had been sitting in the dark corner during the conversation, saying nothing, rose and stepped into the circle of light about the stove.

"Boys," he said, "I tell ye 'taint this one thing, nor that one thing. 'Taint the leg, nor blind mother, nor scarlet fever. I tell ye, boys, it's Ellen Lybec. It's character! God bless her!"

GEORGE E. MERRILL.

BY ACTUAL PROOF.

Dr. B. W. Richardson, the noted physician, says that he was once enabled to preach an effectual temperance lecture by means of a scientific experiment. An acquaintance was singing the praises of wine, and declared that he could not get through the day without it.

"Will you be good enough to feel my pulse, as I stand here?" asked Doctor Richardson.

The man did so.

"Count it carefully. What does it say?"

"Seventy-four."

The physician then went and lay down on a sofa, and asked the gentleman to count his pulse again.

"It has gone down to sixty-four," he said, in astonishment. "What an extraordinary thing!"

"When you lie down at night," said the physician, "that is the way nature takes to give your heart rest. You may know nothing about it, but the organ is resting to that extent; and if you reckon the rate, it involves a good deal of rest, because, in lying down, the heart is doing ten strokes less a minute.

"Multiply that by sixty, and it is six hundred; multiply it by eight hours and, within a fraction, there is a difference of five thousand strokes; and as the heart is throwing six ounces of blood at every stroke, it makes a difference of thirty thousand ounces of life during the night. When I lie down at night without any alcohol, that is the rest my heart gets.

"But when I take wine or grog, I do not allow that rest, for the influence of alcohol is to increase the number of strokes. Instead of getting repose, the man who uses alcohol puts on something like fifteen thousand extra strokes, and he rises quite unfit for the next day's work, until he has taken a little more of that 'ruddy bumper,' which he calls 'the soul of man below.'"

COMFORT OF FRIENDSHIP.

To lie in calm content
Within the gracious hollow that God made
In every human shoulder where He meant
Some tired head for comfort should be laid.

JERRY'S ACCIDENT.

Jerry was eighteen years old when his grandparents came West to make an indefinite stay with their daughter, Mrs. Blandin. John Blandin, Jerry's father, had died some six months before, and old Farmer Simmons had consented to leave his comfortable New England home, and to take charge of affairs until Jerry was old enough to assume the management.

Jerry thought this arrangement entirely unnecessary. He was old enough and knew enough, he said, to run the place already. He was indignant when he heard of the plan, and endeavored to show his mother that she was mistaken; but Mrs. Blandin had reasons for thinking differently.

"Wal, wal!" said Farmer Simmons, the morning after his arrival, as he stood in the kitchen doorway and contemplated the scene without. "I calculate things here will stand looking after a good deal!"

Indeed, it was a sad sight to the thrifty old farmer. Three or four wagons and trucks stood scattered around. Tools, some of them good and some broken; parts of machinery, wheels, pieces of boards and bits of iron and tin were strewn all over the premises adjoining the rough log-house and still rougher outbuildings.

"Maria," said Farmer Simmons to his daughter, who was in the kitchen, "I don't want to speak ill of the dead and gone, but wasn't your husband a little mite shiftless?"

"I am afraid he was not as painstaking as he needed to be, to do well," answered Mrs. Blandin; "but you should remember, father, how differently John was brought up from us. He came out into this new country in the far West with his father. They had everything to start and break in, and as they had a large property and made a good deal of money out of an extensive business, they gave little attention to small things."

"Times are changed," rejoined her father, grimly. "The country is more settled now, and folks don't have it so much their own way. Now these little things have to be looked after, or it'll tell on their pockets."

"Yes," his daughter replied. "John had complained, in his latter days, a good deal about expenses being as large as ever, while his income had grown much smaller."

"Cut 'em down! cut 'em down!" old Farmer Simmons retorted, severely.

"John had become too old and set in his ways to change much," said Mrs. Blandin, sadly, "although he tried hard at times, for Jerry's sake, to take more interest in petty details."

"Wal, wal, Jerry's young yet," said her father, kindly, "and I can make him learn all right enough."

"Don't be severe with Jerry," said Jerry's mother, pleadingly. "Remember, father, that he has not been properly taught."

"No, no, Maria," answered her father, assuringly. "Just leave it to me, daughter."

Farmer Simmons put on his wide-brimmed hat, and started out for a scrutinizing stroll around the ranch. He soon saw Jerry at work upon a piece of fencing not far distant, and walked over that way.

"Good morning, Jerry!" he said, pleasantly. "I see you're hard at work!"

"Yes," said Jerry, pleased with this appreciation of his industry. "I manage to keep pretty busy most of the time."

"Mending the fence this morning, I see," continued Farmer Simmons, scanning its dilapidated and rickety condition. "Done considerable patching on it, eh?"

"Yes," answered Jerry. "It's been lots of bother a long time past."

"How long?"

"Oh, I don't know. A long time."

"Let's see," said Farmer Simmons, musingly, as if to himself. "How long did it take me to build a fence round my big pasture? Yes, it was two weeks, just."

"Was it as troublesome as this one?" asked Jerry, interested.

"Haven't touched it, scarcely, for ten years."

"My! That must be a fence!"

"Wal, I guess it is."

"I wish I didn't have to touch this for ten years!"

"Wal, Jerry," said his grandfather, heartily, "I'll help you fix it so you won't. We'll tumble it down ourselves, for once and all, instead of having it tumbling down of itself everlastingly, and then put it up to stay. What do you say."

"I say yes!" said Jerry.

"All right," said Farmer Simmons, "it's a bargain. Now," he continued, sociably, "suppose you take me around the place a bit, and show it to me. I'm curious to see your home."

Jerry assented, thinking his grandfather a very pleasant old gentleman, with his easy, social ways and kindly interest in his doings.

"What place is that yonder?" asked Farmer Simmons, as they strode along, gazing at a distant house of neat appearance.

"That's where the Leslies live," Jerry responded. "They're old neighbors of ours."

"Ruther a tidy-looking place," said his grandfather.

"Yes; they've got some money, and are always lucky."

"Got any bigger or better property than this?"

"No."

"Any more stock?"

"Not so much."

"Forehanded with their work, I calculate?"

"Yes," said Jerry, "always. I never saw such lucky people! They seem to have everything they want, while we're hard-pressed nearly all the time, and having no end of accidents. And," he added, disconsolately, "they never seem to have any repairing to do."

Jerry had been repairing ever since he could remember, and had well-nigh despaired of ever being done.

"Perhaps," said Farmer Simmons, with a twinkle in his eye, "they keep their silver picked up."

"Their silver!" said Jerry, puzzled. "What do you mean, grandpa?"

"Wal, you can see it right here, my lad." Putting his hand into his pocket, Farmer Simmons drew out a silver quarter, and throwing it down upon the ground, picked up, in place of it, a tin dipper, that although nearly new and still good, was fast becoming worthless from rust.

Then Farmer Simmons picked up a shovel, in imminent peril of being broken by the next passing wagon, and threw down a dollar and a half. Then an axe called for more money, and it was not long before Jerry saw ten or fifteen dollars scattered around him.

"Persimmons!" cried the old farmer, stopping, breathless. "I haven't got money enough in my jeans to scatter round the worth of all I see! The wagons, for instance, must take quite a little in doctors' bills to keep 'em in good health, swelling and rusting in the rain, and shrinking and warping in the sun. There's a plowshare worth ten dollars!"

Turning to Jerry, he said, pointing at the money lying about:

"Is that silver worth picking up, or isn't it?"

"Of course it is," said Jerry, rather sheepishly.

"Wal, then, here's your truck." He pointed to the pile he had collected. "I guess we'll put them where they belong right away, eh?"

"I guess it would be as well," answered Jerry. "How queer he is!" he said to himself; "and yet it would take all that silver to replace that stuff, that's a fact. I suppose that's what he meant by the Leslies keeping their silver picked up. It does look kind of that way."

The dipper was hung up in the well-house, the tools placed in the shop, and the wagons rolled under the sheds.

Things already looked a little more tidy.

Everything that Farmer Simmons touched had to be rebuilt or renewed.

"Patchwork may do for quilts," he would say, "but that's about all."

One morning he sent Jerry to do a piece of work in the corrals.

"The bottom rail in one of the panels of the partition fence, between the rams' and the pony's yards, is broken. You'd better take down the panel, and put in a good, new pole, and then build it up again."

It was a nice, cloudy day, and Jerry had decided that it would be a good day for fishing, and that he would go and try his luck; but he could give no good reason for neglecting his duty, so he went out, rather reluctantly, to the corrals.

He stood looking at the broken rail.

"Pshaw!" he said, impatiently, talking aloud to himself. "Grandfather's too particular. I guess I can fix that pole without taking down all those heavy ones above it. I'll just take a stake and bind it with wire along the splintered part, so it will go well enough."

The stake and wire were soon procured, and propping up the broken rail on a block, and adjusting the splintered ends into each other as closely as he could, he bound the stake to it.

"There! It looks a little flimsy, but I guess it'll hold all right. And now I can go fishing."

Away he went. Two hours later Tom, Jerry's twelve-year-old brother, and his companion, Joe Leslie, were playing "stick-knife" near the corrals, when Joe, happening to look up suddenly, exclaimed:

"Oh, look! look! Old Nebuchadnezzar has got into the pony's corral!"

"Whoop!" yelled Tom, excitedly. "Now you'll see some fun! Oh, see them look at each other!"

In a high state of expectancy, the boys made a rush for the pony's paddock, and perched themselves upon the top rail of the fence.

A large, fine-looking ram, with closely-curling horns, stood just within the inclosure, near the partition which divided his quarters from those of the pony. This was old Nebuchadnezzar, who had cost a good deal of money, and was considered the finest ram in the county.

He was staring, with tawny, wide-open eyes, at the pony, which, standing in the middle of the corral, was returning the stare with interest. With head erect and ears pricked forward, he was evidently much astonished at this intrusion upon his domain.

Presently, recovering somewhat from his surprise, the pony became curious for a closer examination of the intruder. He began to advance slowly and with evident caution, stopping every few steps to take a survey.

Old Nebuchadnezzar continued to stare without moving a limb.

"Old Goggle-eyes don't know what to make of it!" cried Tom. "Wonder what he'll do?"

"Midget's tryin' to smell of him!" exclaimed Joe. "Look!"

Midget, as the little pony was called, had now approached within a few feet of his visitor, and began cautiously to stretch out his nose.

Nebuchadnezzar did not like such familiarity, and moved away, following the fence. The pony followed him playfully; the ram moved faster, and finally broke into a run.

The boys liked the fun and shouted gleefully. This only made the two animals run more swiftly. At last the ram came to bay in a corner, panting, and faced the pony, who began to approach him cautiously. At this Nebuchadnezzar made a savage dive at the pony's fore-legs.

Midget reared to ward off the blow, but he reared too high. The ram passed under the pony's fore-legs, and struck forcibly his hind-legs. Midget was thrown off his balance, and came down with all his weight upon the ram. His forefeet struck old Nebuchadnezzar full in the flank.

With a terrified snort, Midget turned and scampered to the farthest end of the corral, where he faced about, and stood trembling with pain and excitement. The ram did not attempt to rise, but lay on his side, breathing hard.

"Nebuchadnezzar's pretty badly hurt," cried Joe, beginning to feel that something serious had happened. "Let's go and see what ails him."

The boys clambered down from the fence, and ran toward the fallen ram. As they drew near, old Nebuchadnezzar struggled painfully to his feet and limped to a corner, where he stood with drooping head, gasping and coughing, and evidently in great distress.

"My!" said Tom, under his breath, "won't Jerry catch it! I heard grandpa tell him to fix the fence this morning, and he didn't, and that's how old Nebuchadnezzar got in."

"Do you think he'll get a whipping?" Joe asked.

"I don't know," said Tom. "Maybe he is too big. But we aint," he went on ruefully; "do you suppose *we'll* get a whipping for not going and telling about old Nebuchadnezzar's breakin' in?"

"*I* sha'n't," responded Joe, promptly; "I guess it's 'most time for me to go home. Dinner must be pretty near ready."

It was only ten o'clock in the forenoon, and Joe had previously accepted an invitation to dinner at the Blandins, but he felt oppressed with the gravity of the situation, and thought it best for him to take his departure.

Toward evening Jerry came home, bringing with him a fine string of fish. Being in a hurry to do his chores, he merely stepped into the pantry to lay his catch in a pan, and went out without seeing any one.

In a little while the family were gathered at the supper-table.

"H'm," said Farmer Simmons, as he helped himself to a fine, large trout; "pretty nice fish, Jerry, but served with rather a bitter sauce."

"What?" inquired Mrs. Blandin, innocently, "isn't the cream sweet, father?"

Jerry, looking up in response to his grandfather's remark addressed to himself, saw that he meant something else.

"What do you mean?" he asked, uneasily, as he noted the grim aspect.

"Oh, we've had one of those unfortunate *accidents*, that are always a-happening," replied his grandfather. "It seems that that new rail you put in the fence this morning didn't amount to much; for one of the rams worked through and had a tussle with the pony."

"And old Nebuchadnezzar got the worst of it," put in Tom, excitedly. "I saw all of it. And you ought to see the pony's legs! They're swelled up dreadfully; and grandpa says Nebuchadnezzar will die."

"Grandpa" looked sternly across the table at Tom.

"And you, young man," he said, witheringly, "ought to see the fifty cents in my jeans that were going to take somebody to the fair to-morrow, but now will help pay for a new ram."

Tom subsided, crushed. The rest of the meal passed off in uncomfortable silence.

Old Nebuchadnezzar fulfilled Farmer Simmons's prediction, for he was found dead in his pen the very next morning after his encounter with Midget.

The pony—the special property and pet of Mrs. Blandin—was crippled for a long time, but finally recovered, after Jerry, who had imposed the task upon himself as some atonement for his remissness, had bestowed ceaseless care upon him.

Digitized by Google

Old Farmer Simmons and his wife remained with their daughter for three years. At the end of that time things had much changed for the better. The stock were thriving and well-cared for; the fences were rebuilt, solidly; the outbuildings greatly improved, and the adjoining premises cleared up tidily.

"I guess," said Jerry, as he shook his grandfather's hand on the day Mr. Simmons left him, "I guess I know how to keep the silver picked up."

ELIHU QUINN.

PLUCK.

Be firm! one constant element in luck
Is genuine, solid, old Teutonic pluck;
See yon tall shaft; it felt the earthquake's thrill,
Clung to its base, and greets the sunrise still.

A PRAIRIE CATAMARAN.

The Winter Recreations of a Settler in the Far Northwest.

In Three Parts.—Part III.

A Trip to Moose-Jaw.

My old school-mate, Sidney, proved unexpectedly enterprising. During the spring and summer following our wolf-hunt in March, he not only "homesteaded" a claim midway between my place and McCausland's, but built a much larger cabin than mine, with four full-sized windows and a parlor.

Moreover, he brought up a large, highly ornamented cooking-stove from Regina; and to cap the climax of his enterprise, he ordered a handsome chamber-set, four stuffed chairs and a parlor organ from Winnipeg!

My little, one-room cabin, with its two-pane windows, three wooden chairs and home-made table, was quite overshadowed by this frontier elegance. Sidney's audacity amazed me at first, and I did not perceive his purpose in it until it was too late.

He was much nearer the McCausland place than I, and he abused his advantage. I soon learned that he and Miss Emma McCausland were engaged to be married in October!

It took me several days to recover my breath after that discovery, and I took a rather hasty resolution to make the wedding in October a double one, if Miss Alice Anderson, Miss Emma's cousin, should think well of it, and I fancied that she would.

Of course, I ought to have known better than to attempt to match a little cabin, with only one room and three wooden chairs, against a big house with two rooms, a parlor, stuffed furniture and a cabinet organ. At any rate, I know better now!

My one chance was to have sent for a piano and a horse-hair sofa—on the instalment plan, or some other plan which would produce the goods at once. Instead of enterprising measures of that sort, I went to call on the young lady, trusting solely to personal attractions. I found her packing her trunk to go to Moose-Jaw for the winter, and nothing that I could say could induce her to pause in her packing.

I returned to my little cabin badly disturbed, needing much more than three days to recover my breath this time.

I went to sell my wheat when Sidney and Emma went to Regina to be married. Emma's brother Tom and I went in the same wagon with them, and I stood up with Sidney as best man, and Miss Anderson, who had come down by train from Moose-Jaw, was bridesmaid.

A Young Settler Shot.

This somewhat personal narrative has been given in order to explain why Sidney did not sail the catamaran with me the following winter. He did not appear to take any further interest in it; but as I had nothing to take up my attention during the snowy season, I rigged it again, and for one week in January and another in March went skimming across the country, making the acquaintance of several new neighbors who had settled around us.

One of these trips, in March, made to the river and lakes described in a former sketch, was the occasion of a singular adventure.

I reached the river one noon at a point a little above the place where we had crossed in pursuit of the wolves. I saw no large game, but leaving my catamaran in the edge of the fringe of brush and timber along the east bank, went along the channel, inside the brushwood, and shot three or four ptarmigan.

Following my shot, I heard a dog bark a little way farther up the river, and going on around a bend of the shore, saw a new log-cabin among the trees a few rods from the bank. I walked leisurely to the door and knocked. The door was opened by a very comely, flaxen-haired young woman, who plainly regarded me and my gun with terror.

I assured her, in Canadian French and then in English, that I was a neighbor, on a peaceful errand. She did not understand, and continued to regard me apprehensively, but at this moment some one within spoke in a low tone. She stood aside, and in Icelandic bade me enter.

The cabin consisted of a single small room. On a bed in the corner lay a young man, who I saw at once was dangerously ill. He regarded me fixedly for a moment, and then said, in English, "Me much sick!"

I sat down beside him and felt his pulse, the young woman meantime standing by with an air of greatest concern. My sympathy was at once attracted to the pair. The young man was of strong frame and athletic proportions, and at first I was quite at a loss to understand the nature of his illness.

Noting my perplexity, he showed me a half healed wound on his left side, in the vicinity of the fourth rib, and I saw at once that his whole side bore signs of internal inflammation.

He could speak only a few words of English, and I cannot do much in Icelandic; but by signs, added to the few words which each could understand, he informed me that he had been shot.

The young settler was plainly in a bad way, and an operation was urgently needed to relieve him—one that should have been performed long before. It was an operation requiring the services of an experienced surgeon.

A Quarrel with Half-Breeds.

I learned that the young Icelander, whose name was Tholsen, had taken the logs of an old jetty on the river-bank, partly for fuel and partly to build a shed for his cow. The jetty was on the claim which he had taken, and he thought that he had a right to it.

The jetty had been built by métis, or half-breeds, who occupied it as a landing-place before the Riel Rebellion. Afterward they had been dispossessed and removed by the Dominion Government.

During February three métis, probably the former owners, had come across the country with a dog-team, and in passing took note of what Tholsen had done, and spoke angrily to him.

Rejected.

It is but natural, I suppose, that these métis should feel enmity toward the settlers who possess the lands they formerly occupied. The three half-breeds remained about for some time, threatening Tholsen, and behaved so menacingly that he at last went into his cabin and got his gun.

As he emerged at the door, one of the métis fired, and wounded him in the side. He retreated into the cabin, and the half-breeds went away with their dogs.

At Regina or Moose-Jaw the services of a surgeon might be secured; but the distance was nearly a hundred miles, and that a medical man could be induced, at that season of the year, to make such a journey was very doubtful.

It was just possible, if the wind favored, that I might reach Moose-Jaw in a few hours. It occurred to me that the best—certainly the boldest—thing I could do was to wrap him as warmly as possible, put him into my box on the catamaran, and take the shortest course to Moose-Jaw. If the doctor might not go to the patient, the patient had better go to the doctor.

An Unpleasant Encounter.

As well as I could, with signs and a few words, I explained my project to the two people, and when Tholsen understood he nodded, and said, "Ya! ya!" he would go. Fortunately, he could still walk a little distance. I drew the catamaran as near the cabin as I could get it, and then wrapped Tholsen in blankets from the bed, stowed him in the box, and set out.

I knew that Sidney would go to my house that evening, and that he would take care of my stock. He might be anxious about me, but Tholsen's case was one of life and death. I had brought some food.

We went on at a good rate from one o'clock until four, with a slowly slackening wind.

As the sun set the wind sank, as I had feared it would do. There was scarcely enough to fill the sail, and seeing a cabin not far away, I had barely enough wind to reach it before calm descended over the wide, white prairie.

The cabin was uninhabited. The settler had either abandoned it, or had gone away for the winter; but if he had made his door fast upon leaving, some one had since broken it in, for it stood ajar. There was a stove in the cabin, some chairs, a table and a bunk. In one corner there was a little fuel.

Thus far Tholsen had borne the journey quite as well as I could have hoped. I made him as comfortable as possible in the bunk, kindled a fire, melted snow, and proceeded to warm up my store of cooked food.

While thus engaged, I heard men's voices and the barking of dogs. Going out, I found that a dog-team and two men had come up from the southward.

They asked me, in métis French, if they might spend the night with me. I told them they had as good a right there as I had, and that I would be glad of their company. They unhitched their dogs and fed them, and meantime told me that they had come from Moose-Jaw that morning, and were on their way to Batoche, but that their home was to the west of Battleford. In their conversation, they mentioned each other's names, and also that of a fellow-traveller who had gone to Regina, but who intended to join them at Batoche.

They appeared to be good-natured fellows; and in return, I told them my own name and business there, remarking that I had a man inside whom I was carrying to Moose-Jaw, to see a surgeon, but that I feared he was booked for a longer journey.

The two métis brought in a kerosene lantern from their sled. Striking a match, I lighted it.

I had no sooner set the lamp on the table, than a sudden exclamation from the bunk where Tholsen lay caused me to turn sharply to look at him. He was sitting up, with a strange expression of anger on his fevered face. Shaking his fist toward the two new-comers, he cried out, partly to me, partly to them:

"Dose madars, dose maus—dey shooten me!"

The two métis stared at him in sullen surprise and silence, but did not speak.

For a moment I was quite at a loss what to do. It was out of my power to take the metis into custody, for each man carried a carbine and a knife. It seemed best to pass the matter over, for the time being.

Saying nothing more, I set the food on the table, and beckoned to them to sit up and eat. After a little delay, they did so; and I joined them, giving Tholsen a cup of tea and some toasted bread.

Scarcely a word further was exchanged between us. After they had eaten, they smoked for a time. Then they said that they were afraid their dogs would stray during the night, and that they would sleep with them in the little cow-shed adjoining the end of the cabin.

They went out, taking their lantern.

As I sat thinking, I began to grow uneasy. These half-breeds were plainly two of the party of three that had shot Tholsen, who was likely to die of the wound; and they had told me their names, and enough about themselves to make their identification easy. Dominion law, as they knew, is severe.

Two men in such a situation would be likely to do one of two things: Either they would steal away during the night, and fly as fast and far as possible, or else they would attempt to put Tholsen and me—the only witnesses against them—out of the way.

I struck a match, looked to my gun, then struck another and fastened the cabin door with props, as best I could. Then, laying my gun and cartridges on the table, I sat down beside it.

The fire went out. Not liking to make a noise at the stove, I did not replenish it, but wrapped myself in a blanket and remained quiet. After a time the wind began to blow again in fitful gusts. Several times I nodded, and fell asleep, but roused immediately.

It must have been past midnight when I was waked from one of my cat-naps, by the growling of the dogs in the shed. Shortly afterward they whined. There were other slight noises, and I was sure the métis were astir.

Presently I heard a low sound outside, as if the dog-sled of the half-breeds was being moved slowly on the snow. I stole on tiptoe to the little window of the cabin and peeped out.

As I had conjectured, they were drawing the sled softly away. It was clear starlight; and farther out on the snow-crust I could see the six dogs, harnessed together, ready to attach to the sledges.

"Good!" I said to myself. "If you will but decamp, I shall be only too glad to witness your departure, and let justice wait—till it can catch you."

A Suspicious Movement.

But instead of hitching up the dogs, they turned the sled up sidewise, on one runner, and for some moments were both out of sight behind it. One of them then came toward the house again, with his carbine and something else in his hand which I could not make out.

He disappeared past the end of the house; and I thought he had gone into the cow-shed; but after a time I heard him at the back of the cabin.

What he was doing there I could not imagine. The wind was blowing; and suddenly I smelled kerosene. I fancied it was a stray whiff from the lantern which we had burned.

Five minutes passed. Then I heard the man creep around the end of the cabin to the front side. Peeping out at the window, I saw him there. He had laid his carbine on the snow-crust, a few feet behind him, and held in his hand what looked, in the obscurity, like a can, from which he was pouring some liquid against the boards of the cabin.

Setting out for Moose-Jaw.

I now divined their purpose. The wretches meant to fire the cabin; and when we waked and ran out of doors, they would shoot us from the sled, which they had turned up as a kind of breastwork.

Evidently they had planned to fire it on the back side; but the wind, which had now risen, had probably rendered it impossible to light a match there.

I realized that I must act at once. Dashing out one of the glass panes with the muzzle of my gun, I thrust the piece within six feet of the half-breed's head, as he jumped up, and shouted, "Hands up!"

That is a salutation well known throughout the West, in every tongue. He dropped the can, raised his arms and began to beg for his life.

His comrade behind the sled fired on the instant, and the bullet smashed the other pane of glass beside my face. I leaped back, and my man jumped round the corner of the cabin and got away from me.

In a minute more they had attached their dogs, and were off at a run. The would-be incendiary had left his kerosene can and his Remington carbine on the snow beside the cabin.

The shot waked Tholsen. He called out in great alarm to know if I were hurt, and it was some time before I could calm him.

Knowing that the métis would not come back, I lay down to sleep for two or three hours until morning.

There was a rather light wind after sunrise. I did not reach Moose-Jaw until evening. There I consigned the wounded man to the care of surgeons, who assured me that, following a difficult and painful operation, he would not be able to go out for more than a week.

I went to report the affair with the métis to the Territorial police, and then toiled back home, where I found that Sidney and Emma had almost given me up for lost.

On the evening of the sixth day afterward, Tholsen came to my door on snow-shoes, having literally run away from his doctors. I accompanied him back to his own cabin, and was repaid, in the joy with which his young wife greeted him, for my trouble in his behalf. The three métis have not yet been apprehended.

PALMER F. JADWIN.

For the Companion.

STARS AND GARTERS.

One of the noblest and most ancient orders of chivalry in existence is England's Order of St. George, or the Garter, which may be said to represent the aristocracy of knighthood. The Garter dates from the middle of the fourteenth century, the reign of Edward III., and one who traces its origin may take his choice among several popular traditions which pretend to account for its name.

The story most commonly accepted tells us that, at a court festival, a noble lady, probably the Countess of Salisbury, dropped her garter, at which mishap several of the courtiers smiled. The King, frowning at their lack of courtesy, took up the garter and placed it upon his own knee, with the words, "*Honi soit qui mal y pense*" ("Shame be to him who thinks ill of it"), adding that the garter should soon be made so glorious that all England would be glad to wear it.

Another account says that the same King Edward used his garter to give the signal of onset at the battle of Crécy, and afterward bestowed it upon his chosen knights as a symbol of the glory won that day.

Still another legend asserts that Richard I., when fighting in the Holy Land, tied leathern thongs about the legs of a body of noble warriors as a reminder that they must win victory and renown. Edward III., it was said, named his order in commemoration of the event.

It is rather absurd, however, to suppose that knights of that period needed any form of "tying a string around the finger" to remind them that they were to fight honorably and to the death.

At the founding of the order, it was specified that no one should become a member who was not "a gentleman of blood, and a knight without reproach," and it is still scrupulously restricted to men of rank, or rank and merit combined.

It consisted at first of the King and twenty-five knights, but was afterward extended to admit lineal descendants of George I., even when the prescribed list should be full. Special statutes have, from time to time, provided for the bestowal of the Garter upon foreign dignitaries; but its list of membership has at all times been very small. The Prince of Wales is always one of the order; and it is interesting to note that the first royal heir thus decorated was the famous Black Prince, the son of Edward III.

In the fourteenth and fifteenth centuries women were mentioned as "Ladies of the Fraternity of St. George." They wore the robe and insignia of the order, and were, so far as possible, admitted to its celebrations and honors. Henry VIII., that royal Blue beard, abolished the custom, and it has never been revived, although three queens, Elizabeth, Anne and Victoria, have scrupulously worn the Garter insignia, or at least its badge and collar, on suitable occasions.

St. George, always the darling of the English soldier, is its patron, and in St. George's Chapel, at Windsor, may be seen the stalls where only Knights of the Garter are entitled to sit during religious services or celebrations.

Each member is allowed to place his helmet, crest, sword and banner above his stall, although at his death, when his garter and robe are returned to the sovereign, all these tokens are removed. At the back of the stall is a plate containing his arms and name, and this is left undisturbed, in perpetual memory of him.

A knight dressed in the Garter regalia is an imposing sight. He wears a blue velvet mantle, with a star embroidered on the left breast. His trunk hose, stockings and shoes are of white, his hood and surcoat of crimson. The garter, of dark blue velvet edged with gold, and bearing the motto, "*Honi soit qui mal y pense*," also in gold, is buckled about the left leg, below the knee. The heavy golden collar consists of twenty-six pieces, each in the form of a garter, bearing the motto; and from it hangs the "George," a badge which represents St. George on horseback, encountering the dragon.

The "lesser George" is a smaller badge, attached to a blue ribbon, worn over the left shoulder.

Digitized by Google

The star of the order consists of eight points, within which is the cross of St. George, encircled by the garter.

The Most Honorable Order of the Bath, which was founded by George I. in 1725, is sometimes said to be a revival of an old order of the same name. It is far more probable, however, that the

title comes from an ancient custom of making knights on great and solemn occasions, such as that of a coronation, when bathing was a usual incident of the ceremonies.

When the esquire destined to knighthood arrived at court, he was provided with "two other esquires of honor," who made ready a bath, "handsomely hung with linen both within and without, taking care that it be covered with tapestry or blankets, in respect of the coldness of the night." The esquire's hair was then cut, and he was shaven and placed in the bath. Meantime, many noble knights had advanced to the door, with music and singing, and the chief among them now entered, saying:

"Sir, be this bath of great honor to you."

Then he proceeded to instruct the esquire in the duties of knighthood, and the other knights, entering one after another, did him like service.

When the bath was concluded, the candidate held vigil that night in the chapel, and after many other observances, was presented with a sword and spurs, and declared a "Knight of the Bath."

Sir Robert Walpole was prime minister at the founding of the present institution, and it has been suggested that he inserted the old regulations of bath and vigil into the modern statutes by way of indulgence in a mild and sedate bit of fun.

Imposing as such symbolic ceremonials must once have been, they would doubtless be inconvenient, if not absurd, in the case of a modern gentleman about to be invested with the order; and for many years the rules of investiture have been practically void.

The Order of the Bath is intended to reward civil as well as military merit, and when one of its members is also decorated with the Garter he relinquishes his red ribbon for the blue. The Duke of Wellington, however, under those circumstances asked permission to keep the inferior decoration also, because many of his fellow-officers who wore it had begged him not to cheapen its value by resigning it. His petition was granted.

At first, the Order of the Bath consisted of the sovereign and thirty-six knights; but in the early part of our own century it was greatly extended, and divided into three classes—Knights Grand Cross, Knights Commanders and Companions. The badge is an eight-pointed Maltese cross of gold, bearing with many other elaborate devices, the motto, "*Tria juncta in uno*" ("Three joined in one"), and also the words "*Ich dien*" ("I serve"), the motto of the Princes of Wales.

The Most Ancient Order of the Thistle, or "St. Andrew," claims to have had its beginning in the ninth century, but really, except in the minds of those who dearly love an old legend, dates back to the reign of James II.

At this King's abdication the order fell into disuse, but was revived in 1703 by Queen Anne. The order is intended to take the place in Scotland which is held by the Garter in England. It consists of the sovereign and some of the royal princes and sixteen knights.

The badge is a figure of St. Andrew bearing the cross, and the star, which is ornamented by a thistle, is accompanied by the words, "*Nemo me impune lacessit*" ("No one annoys me without punishment").

Ireland's one order is that of St. Patrick, founded by George III. in 1783, and consists of the sovereign and members of the royal family, the viceroy of Ireland, and twenty-two knights. It is modelled on that of the Garter, and is intended only for persons of rank.

The star is an elaborate one, and the badge, which is of gold, surmounted by a wreath of shamrock, contains the motto, "*Quis separabit?*" symbolic of the harmony and union which the sovereign intended to promote by establishing the order.

In 1818 the Prince Regent, afterward George IV., founded the "Most Distinguished Order of St. Michael and St. George," for deserving British subjects in Malta, the Ionian Isles, and other parts of the Mediterranean; but in 1877, after the Ionian Isles had been ceded to Greece, all British subjects who had held high or confidential offices in colonial possessions, or had rendered service in foreign affairs, were made eligible to the dignity. The badge is a gold cross, of fourteen points, one side bearing in its centre the Archangel Michael encountering Satan, and the other showing St. George on horseback, conquering the dragon. The motto is the phrase, "*Auspicium melioris ævi*" ("A pledge of better times").

For the reward of merit among British and native subjects in India Queen Victoria has established the orders of the Star of India and the Indian Empire. The Crown of India is bestowed upon the wives of Indian dignitaries, and upon ladies distinguished by social graces or heroic qualities. Seven of these at present are native Indian ladies.

Besides the Distinguished Service Order, which rewards honorable service in war, England has also the Queen's family order, that of Victoria and Albert, which is given only to women of rank, and the Red Cross, devoted to those persons who nurse or succor wounded soldiers.

ALICE BROWN.

RECOLLECTIONS.

Ah, recollections, how ye throng and set
Time's dial back, until the bygones teem
With potent doings! How the child days seem
As dewy as a spring-time violet.

—*Richard E. Burton.*

THE ITALIAN CABINET CRISIS.

A quite unexpected "Cabinet crisis" took place in the Italian Chamber of Deputies at Rome on the last day of January. The government of Signor Crispi was defeated on an important bill by a large majority, and all the ministers resigned their offices.

Only a little more than two months had elapsed since the general election took place in Italy, which resulted in giving Signor Crispi a body of supporters comprising four-fifths of the new Chamber, and it seemed strange that so immense a majority should be converted into a minority in a short time.

The reason of Signor Crispi's downfall lay mainly in the fact that he had promised, before the election, that there should be no demand for increased taxes on account of the military armament of the Kingdom, and that, no sooner had the new Chamber met, than he proposed an increased tax on alcoholic liquors, to be used for military purposes.

With this, Signor Crispi seems also with some want of tact to have uttered a taunt about certain political blunders of the past, which offended not only many of the deputies, but some of his own colleagues in the Cabinet.

The Cabinet crisis in Italy was of great importance to the rest of Europe, since it affected, or at least seemed likely to affect, what is known as the "Triple Alliance"—that is, the alliance between Germany, Austria-Hungary and Italy, by which these powers have agreed to stand by each other in case either is attacked, and which does not expire until next year.

This alliance has imposed very heavy burdens on each of the powers, but bears heaviest of all upon Italy. So expensive has it proved to that Kingdom that the national debt now amounts to ninety dollars per head of the whole population, and necessitates an income tax of ten per cent.

The adverse vote of January Thirty-first seems to show that the Italian people feel that their financial burden is as heavy as they can sustain, and that they are unwilling that it should be increased, even if it is necessary to do so in order to maintain the alliance with the two larger powers.

The result of the vote has caused a great deal of satisfaction in France and Russia, which are the powers at which the Triple Alliance is aimed, and which it is the purpose of the alliance to restrain from making war.

Should Signor Crispi finally retire from power, the last of the original framers of the Triple Alliance will have passed from the public stage. Andrassy, the Austrian statesman who aided in concluding it, is dead, and Bismarck, who maintained and confirmed it on behalf of Germany, seems definitely to have retired from public life.

Should the resolution of the Italian Chamber, as expressed by its vote of January Thirty-first, remain unchanged, the settled condition of Europe which has been so long maintained will doubtless give place to uncertainties, and perhaps to an increased danger of war. On the other hand, it may possibly lead to a reduction of the enormous military armaments which are now so grievous a burden to all the European powers, and which in all of them are a serious check upon peaceful enterprise and industrial prosperity.

SONG OF THE BARLEY.

I was made to be eaten,
And not to be drank;
To be threshed in a barn,
Not soaked in a tank.

I come as a blessing,
When put through a mill;
As a blight and a curse
When run through a still.

—*Selected.*

THE NEW APPORTIONMENT.

One of the most important of recent proceedings of Congress is the adoption by both houses of the bill providing for the reapportionment of members of the House of Representatives under the census of 1890.

This act not only fixes the representation of the States in the lower house of Congress for a period of ten years—except as additional representation may be granted by Congress within that period—but also the representation of the States in the Electoral Colleges which shall choose the President and Vice-President of the United States in the elections of 1892, 1896 and 1900.

Beginning with the Congress to be chosen in 1892, the House of Representatives will be composed of three hundred and fifty-six members, appointed among the States according to a fixed ratio.

This ratio is found by dividing by the number three hundred and fifty-six the population of the States, leaving out of the account the population of the Territories and the District of Columbia, which have no vote for members of Congress.

This number was chosen because it is the lowest one which secures to each State at least its present representation in Congress. The ratio reached by dividing by it is about one hundred and seventy-four thousand. That is to say, one member of Congress is elected for every one hundred and seventy-four thousand people, approximately.

Of course this number does not exactly divide, without a remainder, the population of any State. In the case of each State where, after making the division by this ratio, the remainder left is more than half the divisor, an additional representative was given to that State.

As thus established, the number of members to which each State is hereafter to be entitled, is as follows, the number of electors being two more in each case:

Alabama	9	Montana	1
Arkansas	6	Nebraska	6
California	7	Nevada	1
Colorado	2	New Hampshire	2
Connecticut	4	New Jersey	8
Delaware	1	New York	34
Florida	2	North Carolina	9
Georgia	11	North Dakota	1
Idaho	1	Ohio	21
Illinois	22	Oregon	2
Indiana	13	Pennsylvania	30
Iowa	11	Rhode Island	2
Kansas	8	South Carolina	7
Kentucky	11	South Dakota	2
Louisiana	6	Tennessee	10
Maine	4	Texas	13
Maryland	6	Vermont	2
Massachusetts	13	Virginia	10
Michigan	12	Washington	2
Minnesota	7	West Virginia	4
Mississippi	7	Wisconsin	10
Missouri	15	Wyoming	1

The number of members of the House of Representatives has steadily increased since the adoption of the Constitution. The first House had only sixty-five members, and the present number of members is three hundred and thirty-two. When the last general apportionment was made the number was three hundred and twenty-five; but the six new States have added seven members to the total.

In the same time the number of people represented by a single member has increased from thirty thousand in 1789 to more than one hundred and fifty thousand in the present Congress.

The only reapportionment ever made which has decreased the number of representatives was that made in 1843, which reduced the number from two hundred and forty to two hundred and twenty-three. From 1843 until 1873 the number remained almost the same, except that the members from new States were added to the total.

Though no State actually loses a representative under the apportionment to go into effect at the next election of congressmen several, of course, have a proportionately smaller representation, since there will be twenty-four more members than in the present Congress.

The largest gainer in representation under the new apportionment is Nebraska, which will have six representatives instead of three, and eight presidential electors instead of five. Illinois, Minnesota, Pennsylvania and Texas gain two representatives each, and Alabama, Arkansas, California, Colorado, Georgia, Kansas, Massachusetts, Michigan, Missouri, New Jersey, Oregon, Washington and Wisconsin gain one each.

The electoral college to be chosen in 1892 will consist of four hundred and forty-four members, instead of four hundred and one, as in the last election, and two hundred and twenty-three votes will be required to make a majority, instead of two hundred and one.

The influence of the great State of New York in the electoral college will be somewhat diminished, as that State has no more votes in the larger electoral colleges than she had in the ones which were chosen in 1888 and 1884.

The influence of Pennsylvania in the election is proportionately increased, and the centre of political power is shifted farther westward.

TEACH THEM TO OBEY.

A story was told by a citizen of Berlin to one of the American physicians who visited that city to study the treatment of consumption by Koch, illustrative of the practical character of that now famous experimenter.

"Doctor Koch," said the German, "was our family physician when he was a medical practitioner. We had a daughter, four years old, who had an ugly habit of filling her nose with sticks, pebbles, and other rubbish.

"One day we found her shrieking in agony, with the blood streaming from her nostrils and throat. Doctor Koch was sent for, and soon relieved her.

"Placing her before him, he said, gravely, 'Fräulein Helene, as your mother and father will not teach you that you shall not do this again, *I* will,' and then laying her across his knee, he gave her a well-merited spanking."

Very few American parents of the present day would have approved of this homely preventive treatment.

An old and eminent physician remarked lately that his father, when performing surgical operations, found great powers of self-control and endurance among the children of his day.

The reason could be found in the severe training which they received at home and at school. A child, fifty years ago, was first of all taught unquestioning obedience to its parents. It might understand the reason in the command hereafter; it *must* obey now.

The rod, too, was not spared, either at school or at home.

"I do not justify its use," added this physician, "but it did teach a child to endure, and to take pride in endurance.

"My father found his little patients used to submit to authority, while I have found myself called on to explain at length to an infant of five years the reason for the blister or the dose, the immediate use of which was to save its life.

"So intolerant are the present petted generation of young people of pain, and consequently so unable to bear it, that if it were not for anæsthetics, I believe most operations now would be impracticable."

It is well that a child should be told the reason for the commands laid upon it, when its brain is mature enough to understand them, but until then implicit, unreasoning obedience is its only safety.

A SWEET PICKLE OF FOURTEEN.

A great writer speaks of "that hard, slight thing called girlishness." The phrase is one likely to recur often to the mind of any person who sees the daily behavior of many American young girls. Too frequently they do indeed appear hard; and they are apt to be hardest to those to whom of all others the most tenderness is due—their mothers.

True, the hardness is sometimes so mingled with the charming gaiety, the pretty, imperious, unconsciously selfish ways of youth that we scarcely resent its presence even when we feel that it is there.

But again some trifling event throws it into sudden prominence, and we look with wonder at the daughter who, with no sense of cruelty or unfitness, can fling to her tired mother in the tone of a challenge such a question as, "What have you done with my hat? I want it right away!" or, "Dear me! where can you have tucked away my library book *this* time?"

Or perhaps it is the mother who asks a little help in some domestic task, and receives for answer a reluctant and sullen, "Oh bother! *Must* I?"

Yet, bad as these things are, they are not always so bad as they seem. Often they indicate no lack of an affectionate disposition, but merely the lack, common in all young creatures, of judgment.

The same girl who will answer her mother, sister or brother in words that sting like a whip, will frequently lavish the tenderest affection and consideration upon a friend, a dull school-mate whom she helps, a brilliant one whom she admires, a shy and timid one who admires and clings to her.

Of course the girl's family have an infinitely greater claim upon her love and kindness than any of her mates; but odd as it sounds to say so, that is often the very reason she takes no trouble to practise these virtues at home.

The family she loves of course, and of course they know it. It can be taken for granted; and though she does not deliberately say, that therefore crossness at home matters less than ill-temper among friends, she acts as though she did.

It is true also that she cannot measure the effect of her own sharp tongue. She speaks quickly and forgets quickly what she has said, and she expects others to forget as soon. She cannot tell the difference between giving a scratch and a stab.

It is often the sharp-tongued and hard girls who are loveliest and most self-sacrificing in their friendships.

Who has not known some such sweet pickle in her teens to attach herself to another girl, gentler, prettier and more popular than herself, wait upon her, pet her, devote herself to her service, and enjoy at second-hand with touching unselfishness the praise, affection and admiration bestowed upon her friend, which she has not the gift to win for herself?

We must remember that generosity is the grace

Digitized by Google

of youth, but justice comes with maturity. Many a young girl gives away lavishly the flower of her finest traits of tenderness and devotion, before she is wise enough to know that the need of them at home is always greater than it can be anywhere else.

Her flickering gleams of good and little spurts of evil, remind one of the snapping, crackling and flinging about of spiteful sparks that goes on at the kindling of a wood-fire on the hearth, which nevertheless forgets presently all about its youthful tempers, and settles down steadfastly and quietly to be the light and joy and comfort of the house.

COMMANDED TO WORK.

In that very interesting little country, Montenegro, which, looking down on the Adriatic from its dark hills, is like a bit of mediæval Europe saved from the wreck of the past, the reigning Prince is still a sort of father to his people, and commands their actions as a parent does his children, though he would hardly venture to oppress a people so warlike and really heroic.

Recently Prince Nicholas, or Nikita, the monarch of this little domain, left his capital at Cettinje to visit France. Before he departed, he ordered the people of a large part of his little country to meet him at the village of Danilograd.

Arrived there, the Prince found the people ready to meet him, and he made to them the following remarkable speech:

"My children, you are valiant and doughty fellows, and there is not one of you who is not ready to fire on the first Turk who comes, and chop off his head.

"But when it comes to the matter of work, you are terribly lazy.

"Oh yes, you fight splendidly, but we no longer live in the times when the warrior can support himself and his family by fighting. One of the most distressing of these new ways of the world is the necessity of working for a living.

"Well, well! If the world has got to work, each one must do his part of it. I want my people to become as brave toilers as they are fighters.

"Look around at these mountains! What grows on them? Nothing at all. No sheep are here, nor is there any grass for them to eat if they were here.

"Now I want you to change all this, and you shall change it. Since the country is fit for the grape and the olive, every warrior shall plant, this very year, two hundred vine-stocks. Each chief of a brigade shall plant twenty olive-trees, each chief of a battalion, or captain, six, each inferior officer five, and each corporal one.

"I have spoken. It is for you, all of you, to go and do what I have told you to do."

The command was received with enthusiasm. The men of the country dependent upon Danilograd constitute a brigade of four thousand men, and they have taken an oath to plant, the coming year, eight hundred thousand vine-stocks and twelve hundred olive-trees.

SCARPOLOGY.

Not long ago people who had nothing better with which to amuse themselves were greatly interested in the so-called science of palmistry, by means of which they assumed to read the character of a person from the hand.

Now another and very curious character-reading "science" has been discovered or invented in Switzerland. A learned doctor of Basle has communicated to a medical journal a full account of his science of Scarpology, which consists of "knowing men by the aid of their old shoes."

Well-worn shoes, this authority maintains, afford a much better means of reading the character than the hand, the face or the handwriting. It is possible, he says, to perceive in an old shoe infallible signs of certain good or bad traits.

If the heel and the sole are worn in the same degree, the wearer of the boot is a business or business-like person, energetic and well-informed; or if a woman, either a good wife and mother or capable of becoming one.

If the shoe is "run over" toward the outer edge of the sole, the wearer, so declares this science, has a leaning toward the fantastic and adventurous. If it is "run in" or worn out upon the inner edge of the sole, irresolution and weakness are indicated.

One might obtain, no doubt, a very interesting account of himself by combining the observations of the professors of all the different character-reading "sciences."

First the phrenologist would read him according to his bumps. Then the physiognomist would look him over, and decide by his features what manner of man he was.

Next the palmister would cast his "horoscope" from an inspection of his hands. A copy of his favorite poem, written in his own handwriting, would enable the chirographist to determine all his peculiarities from his penmanship.

Last of all, he would send a pair of his old shoes to the scarpologist.

Combining all their reports, he would probably learn that he was an erratic, steady-minded, even tempered, irascible, industrious, lazy, bold-spirited, timid, affectionate, cold-blooded, and altogether contradictory sort of person.

But he probably knew that before.

SHE PREVENTED HIM.

Mr. Gladstone, when he formed his administration in 1880, made a blind man, the late Mr. Fawcett, Postmaster-General. The post had sometimes carried with it a seat in the Cabinet, but Mr. Fawcett remained outside of the council-chamber to the day of his death. His wife stood in the way.

Mr. Smalley, in his *London Letters*, explains how Mrs. Fawcett prevented her husband from entering the Cabinet.

Mr. Fawcett's blindness would have made it necessary to confide Cabinet papers and secrets to his secretary. His secretary was his wife, who was also his confidante, adviser, fellow-student, and other self. Had Mr. Gladstone made Mr. Fawcett a Cabinet Minister, he would have made Mrs. Fawcett one also. But the Prime Minister of Great Britain would not have been supported, had he extended the practice of woman's rights to the Cabinet.

LIGHTING LONDON STREETS.

Lighting the streets of a large city in olden times was a far different thing from lighting the streets at the present time. In 1661 the streets of London were directed to be lighted with candles or lanterns by every householder fronting the main road, from nightfall to nine o'clock, the hour of retiring to bed.

In the last year of King Charles II.'s reign, one Edward Hening obtained the right to light the streets with lanterns placed over every tenth door, from six o'clock on moonless evenings until midnight, between October and April.

During the reign of Queen Anne, in July, 1708, Mr. Michael Coke introduced globular glass lamps with oil burners, instead of the former glimmering lanterns. In 1716 an act was passed which enjoined every householder to furnish a light before his door from six to eleven o'clock at night, except on evenings between the seventh night of each moon and the third after it reached the full.

In a few years a company was formed to light the street from six o'clock until midnight, each householder who paid poor rates being required to contribute for this purpose six shillings a year.

Gaslight, at its introduction in the beginning of the present century, presented such a novel spectacle to the eyes of the foreign ambassadors that they were vain enough to imagine that the brilliant lamps were a part of a general illumination to celebrate their arrival.

Electricity is now taking the place of gas, but the change is made far less rapidly in London than in even the cities of comparatively small population in this country.

MR. SIMKINS'S DISAPPOINTMENT.

Mr. and Mrs. Simkins lived together in accord, but it seems that Mrs. Simkins has a habit, which has disturbed Mr. Simkins a great deal, of searching her husband's pockets after he has gone to bed at night. One afternoon a friend of Mr. Simkins met him as he was on his way home. Mr. Simkins's face wore a fierce and tragical expression, which was so very unusual with him that his friend could not help exclaiming:

"Why, what is the matter with you, Mr. Simkins?"

"What seems to be the matter with me?"

"Why, your face has a look of determination that is perfectly ferocious."

"Ha!" said Mr. Simkins, "I have resolved to be revenged upon my wife. She searches my pockets at night. To-night I am going to search her pockets!"

Next morning the same friend met Mr. Simkins. Instead of a look of fierce determination, he wore an expression of extreme weariness and languor.

"Well," said the friend, laughing, "what's the matter now?"

"Didn't sleep a wink last night."

"What! Did you find something dreadful in Mrs. Simkins's pockets?"

"Hum! I worked half the night trying to find her pockets, and couldn't find one!"

THE COLUMBUS EGG STORY IMPROVED.

"One day when I was a boy at school," says a writer in the *Tribune*, "the class had for a reading lesson the story of Columbus and the egg. In the class was a little Irish boy about my own age, whose name was Jerry Grady, and when school was out at noon, Jerry said to me:

"'Did ye mind that sthory about Columbus and the egg? Sure, that's not the way the thrick was done at all, at all. Come wid me, and I'll show ye how Columbus done it.'

"Jerry's mother kept hens, and when we reached the house he had no trouble in finding a fresh egg.

"First putting a clean plate on the table, Jerry took the egg and shook it violently for some seconds, or until the yolk and the white were thoroughly mixed, like a compound of milk and water. Then, after holding the egg upright on the plate until the mixture inside of it had settled quietly into the broad base of it, he withdrew his hand, and left the egg standing upright and alone.

"'There,' said he, 'that's the way Columbus done it,' and I have no doubt it was, for I have often done it that way, and anybody else can do it."

SMALL WAISTS.

English and American physicians, years ago, made tight-lacing unfashionable. But the mania for small waists is now so violent as to provoke the *London Times* to protest against the barbarous fashion:

"Ah! you go in for waists, I for figures," said a lady of truly artistic taste to a friend who tight-laced. When will the ladies learn that small waists have in them no beauty! The number of deformed-looking girls and women is a sorrowful sight for the artist or the doctor.

The odious custom appears to be more prevalent than ever; and what is gained for cruel torture and the loss of health? Certainly not beauty. Some of these silly barbarians are young enough to be under the authority of parents.

Surely parents who care for their children's lives should peremptorily forbid tight-lacing. The corset is in itself a perfectly needless article of apparel for straight and strong girls. You might as well brace a young poplar in a coat of mail.

A BRIGHT INTERPRETER.

It is doubtful if a dream was ever more ingeniously or more appropriately interpreted than in the following brief story, from a Scotch paper. Indeed, the story is a sermon in itself:

A laborer at the Dundee harbor lately told his wife, on awakening, a curious dream which he had during the night. He dreamed that he saw coming toward him four rats. The first one was very fat, and was followed by two lean rats, the rear rat being blind.

The dreamer, who was superstitious, was greatly perplexed as to what evil might follow, as he had been told that to dream of rats denotes coming calamity. He appealed to his wife concerning this, but she could not help him. His son, a sharp lad, who heard his father tell the story, volunteered to be the interpreter.

"The fat rat," he said, "is the man who keeps the public house, that ye gang till sae often, and the twa lean anes are me and my mither, and the blind ane is yerself, father."

A sure test of greatness is to be used as a standard, and when the country doctor or cheap city grocer tells the consumer that this or that Flavoring Extract is better than Burnett's, we consider it a victory for Burnett's. [Adv.

The Popularity of our Seeds increase year by year, and we deal direct with more Planters than any other Seed House in the World. In the busy season we receive daily from 3,000 to 5,000 letters and postal cards.

Six Choice Novelties. *Burpee's Red Etna Pepper.—New Golden Self-Blanching Celery.—Vandergaw Cabbage.—Burpee's Hard-Head Lettuce.—The Delaware Watermelon,—and The Matchless Tomato.*—One full-size packet of each, with plain directions for culture, will be mailed to any address on receipt of **25c.,** or any three of these **Choicest New Vegetables** for **16c.** (8 two-cent stamps). Our Farm Annual for 1891 will be mailed free to all favoring us with an order. All our Seeds are warranted. Write us to-day.

BURPEE'S FARM ANNUAL for 1891.

With **Colored Plates Painted from Nature,** 168 pages. Free. Full of hints to those who Know, and valuable information for those who want to know about Farm, Garden and Flower Seeds, Plants, Shrubs, Lilies, Gladioli and other Summer-Flowering Bulbs. **Rare Novelties** are described, many of which can only be had direct from us. It tells how to get valuable premiums, including Mrs. Roper's New Book, just out—Free. Write to us at once and secure free this valuable Farm Annual. Write to-day.

SUGGESTIONS

NOTED NAMES.

Make the following lists according to the best information you can command:

Name six of the foremost Nineteenth Century Generals.
Six of the greatest Inventors.
Six of the most famous Singers.
Six of the finest prose Writers.
Six of the greatest Orators.
Six who have done most for humanity.

For the Companion.

A PROPHECY.

Cousin Aurelia, bending over
Her 'broidery frame through the long still hours,
Stitching dalsies and purple clover,
And spikes of gorgeous cardinal flowers;
All the sweet bright summer unheeding,
Save when her floss by the wind is stirred,
She chides the rover, her work impeding,
By lifting eyes with weariness blurred.

What will it profit my little cousin?
Will she gain wisdom, or wealth, or fame,
In days that run into months,—a dozen,
While she bends over her 'broidery frame?
Will she be paid when friends shall praise her?
Will she regret when those less kind
With their superior skill amaze her,
Hinting at faults she cannot find?

What does she dream will be the guerdon—?
Forward and backward her needle slips;
Her work, her dreams are sure no burden,
To guess by the curve of her rose-red lips.
What does she dream—? that horn of plenty
Her magic fingers will soon complete;
Cousin Aurelia, fair and twenty,
Your work I label, "sweets from the sweet."

What does she dream, while so demurely
Stitching that tuft of tangled grass?
She will not tell—I'll guess,—now surely,
Something like this, shall come to pass:
Far in the future, dim, uncertain,
A girl of the time will yawn, some day:
"My great-grandmother made this curtain
And ruined her handsome eyes, they say."

MARGRET HOLMES.

For the Companion.

HER CHANCE LOST.

The minister in the morning had appealed to the congregation for more teachers in the Mission Sunday school, and in the afternoon Julia Worth and Hetty Lyon, two young girls who recently had become members of the church, met at the school-room door.

"Are you going to try to teach?" said Hetty, whose face was anxious and paler than usual.

"I am going to teach—yes," replied Julia, calmly. "It seems to be my duty."

The superintendent met them, and assigned to each a class of five little girls.

Julia took her seat, arranged her skirts, wrote down the names of her scholars, and listened to their recitations, all with the same air of cool civility.

It was her duty to teach these girls, and she would do it; but they were the children of washerwomen and mechanics; their faces looked stupid and their hands were grimy, and she could not be expected to take much interest in them personally.

"There really is nothing in common between them and me," she said with dignity to Hetty, as they walked home.

Hetty, the superintendent thought, would hardly make so good a teacher as Miss Worth. She did not show so much intelligence, nor so much self-command. In fact, Hetty was nervous and frightened. It seemed to her a serious undertaking to try to lead these children nearer to God, while she herself was so young and ignorant.

As she sat opposite to them, she saw how poorly clad they were. Most of them came out of wretched homes. They had been starved in both body and mind.

"They have had so little and I so much," she thought. One of them looked almost idiotic; another scowled like an untamed animal.

"Yet for them Christ came," thought Hetty, "and He means that I should tell them of Him!" Her heart beat fast, and the tears stood in her eyes.

After the lesson was over, she said a pleasant personal word to each girl, as they left the school room.

Some of the girls were dull, others pert; one was impertinent. This was unpleasant, but it did not seriously disturb her. God had given them to her to help, and they needed help so much! It seemed to her that she loved them already.

Three years later, Julia Worth and Hetty Lyon were still teachers in the same Sunday-school.

Hetty's pupils were with her still. They were dear friends. She had not helped them as much as she had hoped. Sometimes she thought she had not helped them at all, so slowly does the seed which God plants grow in a human soul.

But she did know that her teaching had kept one from committing a theft to which she was sorely tempted, and another from ruin worse than death. The others listened eagerly to her, Sunday after Sunday, but made no promises.

Only God knew what her work had done for them.

Her own face shone with a surer, higher happiness.

Julia looked at her with surprise one Sunday as they left the school. "What a bore this Sunday-school work is!" she said, yawning. "I think it my duty, and so keep at it. But the ignorance of these little wretches is so dense! I have a new set of scholars every few weeks. They get some scraps of knowledge about the history of the Jews, and the narratives of the good Book. I am sure I bore them, and they bore me.

"One of my girls died a week ago," she went on. "Mother thought I ought to go to see her. But I could not talk to her about the history of the Jews on her death-bed. I never go outside of the lesson."

"And she is dead! You have no chance now!"

"Yes, she is dead."

Julia parted from Hetty at the next corner. But she was startled and disquieted.

"Chance? Chance? What chance had she lost?" she thought. "The girl was dead now."

What chance? Out into the unseen the girl had gone to render her account to God. Who can tell what the lost "chance" meant to the disembodied soul, as it entered its eternal home?

INDIANS' NAMES.

The excitement attending the recent "ghost-dancing" among the Sioux Indians made the people of the country familiar with many Indian names, some of which sounded strangely ludicrous. Sitting Bull's name was already well known, and so were the names of Red Cloud and Rain-in-the Face, two other famous Sioux; but the public in general had not before made the acquaintance of Kicking Bear, Two Strike, Turning Bear, Bull Head, and many other "big men" of the Dakota nation. These names are, for the most part, a mystery to the American people, but the explanation of them is simple.

The names are taken by the Indians themselves in early life, after a period of fasting and seclusion, which is a part of their "medicine" or religion. With some, the first animal seen, with others, the first *thing* seen, by the Indian after rising from this period of seclusion, becomes his totem, or guardian spirit, and also his name.

It is therefore to be supposed that one Indian chief has a romantic name because a *red cloud* was the first thing which fell upon his vision after he came out of his first fasting. Another famous chief had a grotesque name because he saw, or fancied he saw, a buffalo bull in a recumbent or sitting position when he looked about for his totem.

The result of this practice is that Sioux names, perhaps without exception, are borrowed from natural objects of some kind, and do not relate to qualities of mind or to bodily characteristics.

Some illustrations of this practice among the Sioux are the names of the chiefs Big Foot, Short Bull, Gray Eagle, White Swan, Big Turkey, High Pine, Big Bad Horse, Spotted Horse, Bull Dog, White Hawk, Crazy Horse, Wounded Buffalo, American Horse and Running Antelope.

Very often these names are imperfectly translated by the interpreters, and lose much of their significance. The name of the Sioux Indian Hole-in-the-Day once caused a great deal of merriment among white people.

The name was really a romantic one, for the term which the interpreters, translating literally, made "hole in the day" was the Dakota word for eclipse. This Indian's emergence from his fasting period had been signalized by an eclipse of the sun, and this circumstance, commemorated in his name, probably helped to give him his importance among his fellows.

Fast Thunder, another Sioux, and a stanch friend of the whites, would probably be called Chain Lightning if his name had been more freely translated. He took his totem, no doubt, in the midst of a prairie storm, as did also Rain-in-the-Face.

One Sioux, who has been much heard of, is named Low Dog. This name is not so uncomplimentary in the Dakota language as it is in English. The word "low" refers to the stature of the animal, and not to its character; and as accident forced the Indian to take this animal for his totem, it is not fair to assume that the name is descriptive of the Indian himself.

Man-Afraid-of-His-Horse, another famous Indian, doubtless owes his very singular name to the same practice. The Indians' names, indeed, often bear strong testimony to the vicious character of the native horses, which were their most frequent animal companions. It is said by some authorities that, instead of Man-Afraid-of-His-Horse, this Indian's name should be translated Man-Afraid-*for*-His-Horse. This would take the suggestion of cowardice out of the name, and turn it into a suggestion of solicitude.

Indian names are not alone in "meaning something." Animals' surnames are really not uncommon among Americans, though they are inherited, and not freshly assumed. To say nothing of such names as Fox, Wolf, Hogg, and others derived directly from animals, we have names whose original significance is quite lost—as, for instance, Owen, a lamb, Griffith, a dragon, Arthur, a bear, and Everett and Evarts, both derived from a Celtic word meaning swine.

SAVED BY A BABY.

A lawyer of wide experience says that it is difficult for honest people to realize how distorted the view of a criminal often becomes. In many cases it is practically impossible for him to distinguish between good and evil. Yet there is always a bit of moral sense left at bottom. The lawyer in question was once called upon to defend two men who were accused of robbing a bank. They were evidently thorough-going rascals, but the lawyer was satisfied that in this particular case they were innocent.

They confessed that they had intended to rob the bank; that they had not only made all their plans, but that they had lain in wait for three nights to kill the night-watchman on his round. They declared, however, that they had then abandoned the whole enterprise, but the wife of one of them, who was in the secret, had told their plans to her brother. This man, as was afterward proved, carried out the scheme which they had abandoned, and then managed to throw suspicion upon them.

"Of course when they told me this story," says the narrator, "my first thought was that they were deceiving me; but in the end, though the tale did not sound very probable, I somehow came to believe it.

"The thing which puzzled me most was that they gave no adequate reason why they had not carried out their murderous plans on the three nights when they were lying in wait.

"I pressed them upon this point, telling them that they might as well trust me, for that if I found at any point of the case that they had deceived me, I would unhesitatingly throw up the defence, no matter what the result might be.

"This threat evidently frightened them thoroughly, and each tried to make the other tell. They showed so much shame-facedness, that I confess I was prepared to hear something unspeakably wicked; for I thought that anything which made such scamps ashamed, must be dreadful indeed.

"It took them half an hour to tell me; and then, between astonishment and emotion, I felt the tears spring into my eyes. For three nights they had lain in wait to kill the watchman, who lived in the top of the building; but it chanced, every time, that he was carrying his little baby up and down in his arms all through the middle of the night, and they could not make up their minds to touch him.

"I had no doubt of the truth of their story. Their shame for their soft-heartedness was unmistakable, and I learned afterward that on those particular nights the watchman's wife was ill, and he really was carrying the baby about in his arms."

For the Companion.

AT EVENING.

Eastward the hilltops show
Still where his wheels have run,
All golden in the glow
Of the departing Sun.
Burns now a single spar
In the last crimson light,—
Fades,—and, above, one star
Blooms in the night.

As 'twere a jewel-flower
Set in this garden blue,
Telling the twilight hour
When falls the silent dew;
As 'twere a lantern there
Lighting Diana's way
Through the dim realms of air,
With its pale ray.

Over yon purple line
See, her white face appears!
Breathe once the air divine
Steeped in her fragrant tears!
Out of this silver bath
Flowers shall emerge at dawn
Gracing the narrow path
Across the lawn.

Far in the tranquil deep
Tremble a million eyes.
Guarding the world asleep
Under the summer skies.
Night, like a mother mild,
Tenderly to her breast
Takes up her weary child
And gives it rest.

FRANK DEMPSTER SHERMAN.

FICTION AND FACT.

There is rarely a circumstance or character invented by the imagination that does not find its parallel in real life. A year or more ago a writer, whose name is familiar to *Companion* readers, described in a story the adventures and vicissitudes of an erring lad who ran away from home to follow the sea. The tale was pure fiction, and the author invented for his young sailor a name unlike any he had ever heard.

Soon after the story was published, its author received a pathetic letter from a sorrowing mother, saying that the sailor-boy of the story was her only son, and begging for his address.

"Tell him," she wrote, "if he will only come home I will forget and forgive all the past. I am alone in the world, and if my dear son will but return to me I shall be happy again."

It was hard to write to this poor mother that the sailor-boy of the story, whose name, adventures, and life so closely resembled her son's, was but a creature of the imagination.

"While addressing a jury in a criminal case a few years ago," said a lawyer, "I made up the following story to illustrate the need of coolness and calm judgment before condemning a man.

"A passenger train was pulling into the station of a small New England town. The engineer had seen many years of continuous service on that particular run, and had never failed to stop his engine at a certain point.

"One day a great celebration was held in the town, and when that train came in, the track ahead of the point where the engine always stopped was crowded with people. No one feared being run over, so great was the confidence in the engineer's ability to stop his engine at a particular spot.

"But alas! on this day the heavy train was not stopped, but the engine forced its way through the dense mass of humanity, killing and maiming a score of persons. At first the crowd stood aghast; and then a great wave of indignation broke forth against the engineer who had done this thing.

"'Hang him! Lynch him!' they shouted.

"The engineer stood in the door of his cab, white and speechless—helpless against the fury of the mob.

"'Wait!' cried the fireman, 'See this!' and he held up a broken bolt. 'Here is the cause of the accident—a broken bolt at the throttle!'

"I believe that I won my case on that little bit of fiction, and what do you think! After court had adjourned, a fine-appearing, gray-haired old gentleman came forward, and grasping my hand exclaimed:

"'You told that story well! I was in that crowd at the time of the accident, and saw the whole thing!'"

SWIFT OF FOOT.

"Thou art swift of foot, friend Ishak, as we have all seen, but these Europeans have done wonders. Methinks they would press even *thee* hard, if thou wert set to run a race with them." The words were addressed to a local pedestrian of Jerusalem, at noon of a summer day, and resulted in a trial of speed and endurance between the Arab and Mr. David Ker. Mr. Ker describes the adventure, and frankly expresses an opinion of it, with which the majority of his readers will, no doubt, agree.

Once fairly started, I suddenly realized the formidable task I had undertaken, nothing less than racing an active Syrian Arab (to whom one hundred and twenty degrees in the shade was quite a normal temperature) over four and a half miles of steep and broken ground, up-hill nearly all the way, in the full glare of a sun that had almost shrivelled up like tinder many a man of thrice my strength.

It is true that I was in splendid training, having just come back from "roughing it" with the Turkish invading army in one of the hottest districts of Northern Africa; but apart from the sinewy strength and endurance visible in every line of my adversary's gaunt brown limbs, I, in my thick boots and European clothes, was naturally at a great disadvantage.

There was one thing to do, and I did it. The ordinary Arab's idea of speed is neither a walk nor a run, but a long, slouching trot, kept up with a steady, unvarying tenacity that would tire a wolf, whose usual gait it closely resembles. Of fast *walking*, however, the Arab has little or no idea.

I determined, therefore, to make the pace as severe as possible from the very start, and tempt my opponent, if I could, into keeping step with me, which, from his want of science, would be the most exhausting thing that he possibly could do.

On we went, over rolling stones and gaping hollows and mounds of dust and rubbish, as recklessly as mountain goats; but worse was in store for us.

Beyond the Golden Gate we had to follow a broken, up-hill path, which was literally heaped with sharp, jagged stones, every step on which must have been torture to the barefooted Arab; but ruffian and bully though he was, he had all the indomitable courage of his race, and never flinched or made a sign of pain from first to last.

By the time we had covered two-thirds of the distance, the strain of this desperate struggle was beginning to tell with a vengeance. I felt that I had well-nigh reached the limit of my strength. The Arab still kept up with me, but by an effort too exhausting to last. Meanwhile the sun seemed to grow fiercer every moment.

I gathered the remnant of my failing strength for the final rush, which I now knew to be very near. We passed the huge gray archway of the Jaffa Gate, and there right ahead of us, not twenty yards off, stood the house that was the goal of our race, with my two English comrades standing in front of it.

Darting forward, I entered the courtyard gate a full length ahead, while exhausted Ishak fell just as he reached it, and lay on the hot pavement, with blood and foam round his gasping mouth; and I, with a red mist before my eyes and everything spinning round me, was led away by my comrades to be hastily doctored with such remedies as were to be had.

The elder of the two men, when he heard my story, merely remarked, with that freedom of speech which is the birthright of every Englishman, "Well, I always thought you were a fool, and now I'm sure of it!"

On cooler reflection, I am very much of the same opinion.

GENTLE HINTS.

In former days, doctors were occasionally diffident about charging very large fees, but they liked to be paid "on the spot," when they were called in or consulted. The devices they resorted to in order to obtain a good fee were sometimes ingenious.

Doctor Senter, of Boston, always expected a fee of ten dollars for a consultation; but the price was regarded as so exorbitant that he did not actually require it.

However, he had a little pile of ten-dollar notes left upon his office table in plain sight of his patients, and also in plain sight of his own watchful eyes. Seeing those new bills, looking as if they had been flung down one by one by previous visitors, the patient hardly had any choice but to add one to the number.

One day a merchant, known to the doctor to be wealthy but somewhat avaricious, came to consult him, and took much of his time. In rising to go, the patient handed the doctor a five-dollar bill.

Doctor Senter at once put on his spectacles, got down on his knees, and began to look about under the chairs and beside the table.

"What are you looking for?" said the patient.

"Why, for the other one," said the doctor.

"The other *what?*"

"The other bill. Ah! didn't you drop one?"

The merchant drew out a second five-dollar bill, put it down upon the table without a word, and hurried out of the room, slamming the door behind him.

CITY AND COUNTRY.

The city person, it is well known, is often as much a "greenhorn" in the country as the country person is in the city. A girl who had been accustomed to certain city squares and exclusive parks, whose high-barred gates were closed at a fixed hour every night, made her first visit to the country. She was being taken about through the lanes and fields by her mother, when the sun set.

"Say, mamma," said the little girl, "haven't we got to go in? What time do they close the country, anyway?"

It was a city boy, too, who, when taken with him by his country cousin while he dug some potatoes, watched the process of unearthing the tubers for a moment with great wonder, and then remarked:

"Is that where you keep your potatoes? I should think it would be more convenient to keep them in barrels, the way we do."

The "country greenhorn" in the city has this advantage over the "city greenhorn" in the country, that he does not put on airs of superiority on all occasions. It was a city boy in the country who, being taken to a peach-tree full of ripe and delicious fruit, and invited to help himself, remarked, somewhat loftily:

"No, I thank you. I never eat them until they are canned!"

"IF."

That deliberate, almost phlegmatic temperament which once characterized the New England Yankee in Vermont is fast being supplanted by a nervous, jerky, dyspeptic nature which is irritable to see or hear. It is with relief that one finds now and then a relic of the old-time deliberateness.

Old Uncle Maynard, of Royalton, sat on the sill of his barn-floor one Sunday afternoon, and looked quietly out over his barnyard. At that moment a wild goose, a stray bird from a flock, and evidently very tired with a long flight, flopped slowly and heavily down among the tame fowl in the yard.

Uncle Maynard did not even shift his position at this novel sight. He looked at the new-comer for at least a minute, and then said, slowly and solemnly:

"If I had a gun, and if it was loaded, and if I wasn't afraid of hitting a tame goose, and if it wasn't Sunday, and if that goose would stay as near as that, I would shoot that goose!"

By the time he had finished, the wild goose had gone, and Uncle Maynard's excitable nature was subjected to no further temptation.

BAD TASTE.

The buying of articles of dress or of household decoration at the most approved places does not insure harmonious results if the purchaser lacks the skill and art properly to combine what he has purchased. This is especially true in matters of personal adornment, as is neatly illustrated by the reply of a Frenchman to an English lady.

He had complained that he found the English women very badly dressed.

"They have no taste," he said; "no originality. They are a terror as compared to my country-women."

"I do not see how you can say that," the lady responded. "I am sure we buy almost all our clothes in Paris."

"That is very possible," the Frenchman replied; "but if you will pardon my saying it, it is you who select them."

NATURAL.

Young people who do not stop to think of the full meaning that their remarks may have, frequently utter the "things one would rather have left unsaid."

A group of young ladies were talking of their presents, when one of the party, a lady not so young as some of the others, remarked:

"My father has always given me a book on my birthday."

"Oh!" exclaimed a sixteen-year-old, "what a library you must have by this time!"

THE SPELLING LESSON.

The teacher sat in her high-backed chair,
Her chair so straight and tall;
Her eyes went flashing to and fro
Among the children small.
At last she spoke, and "Billy boy!
Now answer, Billy Bolee,
And tell me quickly, what does C-O-W spell?" quoth she.

Then up went Patty's hand,
Up went Matty's hand,
Up went Freddy's hand, too;
But poor little Billy,
He *was* so silly,
He didn't know what to do.

The teacher smiled her pleasant smile,
And shook her small, wise head.
"Be quiet, all! for I am sure
That Billy knows!" she said.
"Put on your thinking-cap, my child,
And tie it very tight;
Then C-O-W will not trouble you,
And you will say it right."

But up went Patty's hand,
Up went Matty's hand,
Up went Freddy's hand, too,
And poor little Billy
He *was* so silly,
He didn't know what to do.

But when the children 'gan to laugh,
And fun at him 'gan poke,
Poor Billy thought it might not be
So *much* worse if he spoke.
So lifting up his fearful eyes
All sad and timorously,
"Sure, C-O-W, must spell, *Sobble-you*."
Thus spoke Billy Bolee.

Then out laughed Matty,
And out laughed Patty,
And out laughed Frederick, too;
But *poor* little Billy,
He felt *so* silly,
He didn't know *what*—TO—DO!!!

LAURA E. RICHARDS.

For the Companion.

GRANDMA'S PUMPKIN-PIES.

Grandma was expecting company for dinner—the minister and his wife and little girl. So she was very busy that morning cooking all sorts of good things, and among the other things were the famous pumpkin-pies, made just as her grandma had made them.

Her grandma! Why, it almost made Nannie dizzy to think about grandma's grandma.

Nannie was standing on a chair close beside the table, helping grandma cook. She had come out in the country the day before to try and get over *La Grippe*.

"I should think," said Nannie, "that that way to make punkin-pies wouldn't be very good, 'cause it's such old style."

"Old style's the best for pies, I guess," laughed grandma. "You see if it aint. Now I suppose, child, you never do have 'em in the city, do you?"

"Only the kind that lives in cans," answered Nannie. "And papa says they can't hold a candle to yours; but I never could see why they'd want to."

"I should think they couldn't!" said grandma, decidedly. "And now, child, we are ready for the seasoning. Just hand grandma the spice-box over there, won't you?"

Nannie put her nose down to smell when the box was opened.

"Ah, how good, grandma! It smells more like Christmas than ministers' folks, I think."

"There's ginger and mustard standing right beside each other," said grandma. "That's the beauty of doing your own work, dear, 'cause they look just alike; but I could go to them in the dark, and not make a mistake."

Just then some one knocked at the sitting-room door, and grandma had to go.

"Now, dearie, don't get into mischief, will you?" she said, as she started.

And Nannie did not really intend to, but grandma was gone a long time, and by and by Nannie began to think it would be a good joke to put the mustard in the place of the ginger.

"Papa dearly loves a joke," she thought, "and so do I. How they all will laugh!"

So, quick as thought, she changed them.

"Now, p'r'aps it will be better than ginger. Maybe I'll discover something," she thought, trying to quiet her conscience.

When grandma came back, everything looked all right, and she hurriedly seasoned the pies, and put them in the oven.

"The land knows Mrs. Pipkin is the beater of a stayer," she said, as she shut the oven door, and looked at the clock.

But everything was ready when the minister's family came, and grandma's cap and Nannie's apron were stiff and spotless.

The dinner was good, and they all ate as though they enjoyed it. And grandma, who justly prided herself on her cookery, beamed with delight over the way things disappeared.

When the pies were brought on, the minister's wife said, "Now we are to have some of the famous pumpkin-pie that we have heard so much about."

Nannie's heart plumped down like lead as she looked at grandma's happy face as she handed around the great golden wedges.

But what was the matter with it?

They all took one mouthful, and then a hasty drink of water.

Grandma quickly tasted hers, then looked at Nannie's crimson face, and Nannie burst out crying:

"O grandma, it was a joke," she sobbed out.

No one laughed at all, but grandma arose and took Nannie's hand and took her upstairs and put her to bed right in broad daylight.

"O grandma," said Nannie, when they had all gone, and grandma had come upstairs, "I am degraced forever! I'll *never* play a joke again."

"It's no joke at all, when it hurts folks's feelings," said grandma.

And Nannie has been very careful ever since to remember that.

MRS. L. E. CHITTENDEN.

GOSSIP.

Two sparrows at my window
Exchanged a friendly word.
"Did you ever!" "No, I never!"
And that was all I heard.

For the Companion.

ONE MEANING OF TEMPTATION.

Jeddie was fond of the Sunday-school song, "Yield not to temptation;" he sang it very prettily.

"What is it to yield to temptation?" grandma asked.

Jeddie thought a moment, and then he said:

"Lillie builds her block-house all up high. I want to push it down, and I hold up my foot. Lillie says, 'No, no, Jeddie!' Then I put my foot out, and the blocks tumble over."

LITTLE Leo, aged three, was watching the sunset. It was very brilliant, and the clouds, all crimson and gold, had a mottled appearance. "O grandma, grandma," he cried, "do come quick and see,—the moon is melting the sky!"

THE SPELLING LESSON.

For the Companion.

KEEP STILL.

When vexing words are said to you,
Smile, and keep bravely still;
Annoying tongues will have their way,
Let you say what you will;
Then shut your lips, speak not a word,—
This is the wisest plan,
And silence hurts tormentors more
Than any answer can.

For the Companion.

TOMMY'S SHADOW.

Baby had a little playfellow come to see him almost every evening.

He was a little black boy.

When the lamps were lighted, mamma would say, "Baby, where's Tommy?"

That was baby's name for the little black boy, and it was baby's name, too.

When mamma said that, baby would begin to hunt for him.

Sometimes he would find Tommy behind him, sometimes in front. Usually he would run all around the room, calling, "Tommy! Tommy!"

When he found him, what fun they would have!

They ran races, played "hide-and-seek" and "bo-peep."

Tommy was a very quiet little boy.

One curious thing about it was, whatever baby did, Tommy did.

Whenever baby took a drink, Tommy would, too, but Tommy's cup was black.

If baby sat in a chair with a book, so did Tommy, but his chair and book were black.

Wasn't that funny? Baby liked to watch him.

One evening these two little Tommys were having so much fun that they didn't want to go to bed when the time came.

They each had a little table with dishes, and baby was watching little black Tommy set his little black table with the little black dishes, and drink out of the little black cups.

Mamma told them it was bedtime, but they both shook their heads—what naughty little boys!

After a while, mamma and papa with big sister Grace left the room. They peeped through the door to see what baby would do—but he wasn't lonesome so long as Tommy was there.

Finally, mamma turned the light down, then baby ran to his mother crying, "I go bed now, Tommy gone."

For the Companion.

CHILDREN'S SAYINGS.

One day, Willie carried his shoes to the cobbler's to have them mended. He entered the little shop unnoticed, for the minister was there talking with the cobbler. Willie heard the minister say: "So your daughter is to be married soon! Whom is she to marry?" "Mr. Winter," answered the cobbler. "Oh," spoke up Willie, with a shake of his small shoulders and a tremor in his voice, as if he were attacked by a sudden chill, "Won't she shiver!"

Eddie came walking in one morning with a very solemn face and a large rent in his little kilt skirt, and, sidling up to his mother, he asked, "Mamma, will you please glue my dress together?"

Enigmas, Charades, Puzzles, etc.

1.

PUZZLE.

Seen forwards or backwards
I'm always the same,
Spelled backwards or forwards
You can't change my name.
Never found on the mountain,
At home on the plain,
On the top of still water
I always remain.

Behead and curtail me
And what do we see?
A distant relation
To you and to me.
A beautiful creature,
But too fond of fruit
Her many descendants
Always to suit.

Behead and curtail me,
And, queerest of tricks,
Though only one letter
I'm but one less than six.
Though only one letter
I'm one-fourth of a score;
Now think till you guess me,
I can't tell you more.

2.

NUMERICAL ENIGMA.

The answer, composed of 55 letters, is a quotation from a celebrated American poet who was born in February.

The 3, 5, 21, 16, 17, 1, 24, 55 is rashness.
The 15, 4, 2, 14, 33, 35 is a poem sung by one person only.
The 31, 22, 51, 54, 6, 10, 20 is a plague among cattle.
The 11, 45, 12, 7, 46, 9, 52, 43 is spotted.
The 8, 38, 13, 41, 18, 48, 49 is to manage frugally.
The 37, 26, 27, 34, 50, 19, 32, 23 are sicknesses.
The 44, 40, 28, 47, 39, 42, 29 are collections of maps.
The 36, 30, 25, 53 is a couch.

Now write down the words having the following definitions, in regular order, one underneath the other, and you will find that the first row of letters will give you the name of the author of the above quotation; and the final one, the city of his birth and an abbreviation of the State:

1. The title of a lady.
2. A sacred drama set to music.
3. To adjoin.
4. Moving by steps.
5. Visionary.
6. An insect that lives in a perfect state one day only.
7. Act of disjoining.
8. The left side of a ship.
9. An organical structure.
10. Fees for handling goods at a wharf.

CYRIL DEANE.

3.

LILIAN PAYSON.

4.

ANAGRAMMATICAL SPELLING LESSON.

1. Fhrwasid—small.
2. Aelirefnn—pertaining to money matters
3. Taihheny—a flower.
4. Aaeiouynnttlss—immediately.
5. Rarteetllu—learning.
6. Begorhin—next.
7. Naabssleeper—divisibility.
8. Nensmyoy—one of two or more words having a similar meaning.
9. Dleerttaasnncn—beyond the bounds of experience.
10. Sugurheltseosnn—the opposite of wickedness
11. Scedsutiiiv—a regular change.

Answers to Puzzles in Last Number.

1. 1st and 2d, Cin, cin, 3d, natus } Cincinnatus.
   4th, Washing, 5th, ton } Washington.

2. *Anagrams*—George Washington, ambition, Julius Cæsar, Napoleon Bonaparte, America, example, Virginia, Fairfax, United States, birthday.

Chronosticon—BoaMinti, anD, unChallengeably, Criamea, amepleX, eXtensive, Xarfifa, TunIs Tadeset, hatbyrId.—MDCCXXXII., 1732.

3. The birthday of George Washington.

Key Words—Thrifty, ginger, shoo, both, adage, hewn.

4. Washington. George Washington, City of Washington, Washington University, Mount Washington, etc.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

THE SENSE OF SMELL.

The eye is used only for seeing, and the ear for hearing, but the nose is one of the organs that serve a double purpose. It is not only the seat of the sense of smell, but was intended to be the principal organ through which man should breathe. Its circuitous passages, warm and moist, protect the lungs by taking the chill from the inspired air and arresting irritating dust.

The whole nose is not concerned in the act of smelling. The olfactory nerves, which alone take cognizance of odors, are situated in the upper third of the nasal chambers, out of the line of ordinary inhalation. For this reason we do not usually notice odors unless they are somewhat strong; but when we sniff,—draw the air into the upper part of the nostrils and hold it there for a few moments,—we become aware of the faintest scent.

The nerves of smell extend from the great olfactory lobe or centre, in the brain, through some twenty openings in the bony arch, and then branch into a perfect network, their extremities reaching almost to the very surface of the moist, pulpy mucous membrane.

The sense of smell is naturally better developed in some persons than in others, but like the other senses,—taste, touch, sight and hearing,—it may be trained to quickness and accuracy.

Olfactory sensations are probably received from material emanations from the odoriferous substance, the emanations being absorbed by the fluid in which the microscopic ends of the olfactory nerves are constantly bathed. This moisture is so essential to the proper action of the nerves that its absence, as in certain stages of a cold, may for the time quite destroy the sense of smell.

For the same reason odors are less readily perceived in an uncommonly dry atmosphere. Certain surgical operations, too, have been found to blunt the sense of smell by inducing a dryness of the nasal mucous membrane. Catarrhal inflammation may produce a similar result by closing the narrow passages that lead to the olfactory region.

A want of quickness in the sense of smell must be caused by anything which shuts off the air from the olfactory nerves—a polypus, for example, or facial paralysis, which interferes with nasal dilation and the necessary muscular effort in smelling.

If a chronic catarrh has been brought on by working in a dusty atmosphere, the first essential of recovery is a change of occupation. After that, an experienced physician should be consulted for the securing of suitable treatment, and, if necessary, of a surgical operation.

ELECTRICITY IN AGRICULTURE.

It has long been a problem how to apply electricity to the growth of plants. Use of the electric force for such a purpose is still in the experimental stage, but enough has already been done to show that there are possibilities in the case.

In one series of experiments, as reported in *The Ironmonger*, the seeds of beans, sunflowers, and winter and spring rye were used. The seeds were soaked, electrified, and immediately sown. The plants were more fully developed, their leaves were larger, and their color brighter than those grown from non-electrified seed, but the yield was not affected.

In another series of experiments plates of copper and zinc about two feet by two feet six inches were buried at the end of the plots, and connected by their upper faces, the effect being to establish a current through the earth. The result was a larger crop, and vegetables of enormous size.

In the third series electrical collectors were mounted on insulated rods and connected by wires, the effect being to obtain a highly electrified atmosphere. Seeds of rye, corn, oats, barley, peas, clover, potatoes and flax were used. This form of application increased the yield of seed an average of one-half, and that of straw one-third, while the ripening was more rapid.

It was also found that potatoes grown by this treatment were rarely diseased, and as the beneficial effects of electricity on vines attacked by *phylloxera* have already been observed, it is possible that means have been found of combating the microscopic pests which attack vegetable growth.

SELF-ACTING PAPER-CUTTER.

A Calcutta newspaper relates an incident which illustrates the magnificent way in which the Rajahs of India—or at least those of them who remain opulent and powerful—repay a small debt. Not long ago the Rajah Holkar of Indore, in paying a visit to the Viceroy, the Marquis of Lansdowne, at Calcutta, was shown by the Marquis several of the London illustrated newspapers. In cutting the leaves of these journals, Lord Lansdowne used an ivory paper-cutter.

The Rajah had never seen a paper-cutter before, and was much interested in the little instrument.

"If your excellency will make me a present of it," he said, "I will send you another in exchange."

The Viceroy promptly gave his guest the paper-cutter, and the Rajah returned with it to his own dominions.

Lord Lansdowne had almost forgotten the incident when he received notice that the Rajah's return gift was on the way; and he was presently astonished to have brought to him a young and handsome elephant, each of whose tusks had been skilfully wrought into the shape of a paper-cutter.

A servant brought some illustrated newspapers, at which the elephant seized them with his trunk, and proceeded very skilfully to cut the leaves with his sharply-trimmed tusks. He had been trained to this accomplishment under the Rajah's orders.

The living paper-cutter, it is understood, is still in Lord Lansdowne's possession; but it is not one of the ordinary furnishings of the Viceroy's library. For his customary opening of books and newspapers, he keeps a less bulky implement.

HER SIGNAL.

Railway men—conductors, engineers and brakemen—are so accustomed to communicate with each other by means of gestures, that the habit of looking for such dumb signals becomes a kind of second nature. In the early days of one of the great Western railroads, according to a story in the Pittsburg *Dispatch*, it was so common for cattle to be run over that the manager required the engineers to report all such accidents, with full particulars as to place, time, and kind of animal.

One day a complaint was received at headquarters that a valuable cow had been killed on a certain day and by a certain engine. The case was referred to the proper department, but a reference to the files showed that the engineer had reported no such accident.

The manager sent for him, and inquired why he had omitted to report the matter.

"I didn't know I hurt the cow," he answered.

"Then you remember hitting her?"

"Oh yes, and I slowed up as she rolled over on her back; but she waved her feet to me to go ahead, and I concluded she was all right."

HOW TO SUCCEED.

The fact that success is mainly due to hard work has been expressed in many different ways, but one of the best was that recently employed by a very successful "drummer," or commercial traveller. He was talking with a companion, a rather lazy fellow, when the latter exclaimed:

"I declare, Jack, I can't understand why you always succeed in selling so many more goods than I do!"

"I'll tell you why it is," replied Jack; "but," he added, "it's a trade secret, and you mustn't 'give it away.'"

"Of course I wouldn't do such a thing!" was the answer.

"Well, then," said Jack, impressively, "I succeed because, when I'm after business, I wear out the soles of my shoes more than the seat of my trousers."

HIS FAULT.

"I understand," said Mr. Johnson, of the Orthodox church, to Mr. Jackson, of the Methodist church, "that you used to know the new minister that's coming to our church when you lived in York State."

"I did," said Mr. Jackson.

"Is he a good man?"

"I think he is a very good man."

"Well, what are his faults? He must have some fault."

"Since you press me, I know of but one grave fault in your new minister."

"What is that, please?"

"He doesn't know how to sing."

"Hum! Not a very grave fault is it, not to know how to sing?"

"No; but you see, he sings just the same as if he did know!"

WANTED IT TO FLOAT.

Timothy Sheeler had become very rich, but remained very ignorant. Having travelled about the country by land, he began to think he ought to visit the coast States and have a yacht.

He consulted his friends on the subject of the kind of boat he should buy.

"While you are about it," said one of them, "you'd better get an iron boat."

The old man saw in the suggestion only an attempt to play a joke upon him.

"What d'ye mean?" he roared. "An iron boat! Have me go sailin' 'round the world in a cook-stove, would ye?"

OF COURSE.

A little innocent misunderstanding is sometimes very useful in helping one over a hard place.

"Mabel," said the teacher, "you may spell kitten."

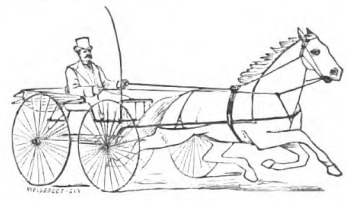
"K-double i-t-e n," said Mabel.

"Kitten has two i's, then, has it?"

"Yes, ma'am, our kitten has."—*Chicago Herald.*

A MAINE newspaper gravely informs its readers that a large number of fresh mackerel were lately caught off Portland Harbor.

"HE is very versatile," said one gentleman of another, "only his versatility is all in one direction."



"Brown's Household Panacea" will be found invaluable as a household remedy for speedily relieving pain, and healing cuts and bruises. 25 cts. a bottle. [*Adv.*

To cleanse and preserve the teeth use "*Brown's Camphorated Saponaceous Dentifrice.*" Microscopical examinations have proved that the use of soap is the only safeguard against the accumulation of animal and vegetable parasites on the teeth. Camphor strengthens and relieves soreness of the gums. Price, 25 cents a bottle. Sold at drug stores. [*Adv.*

For the Companion.

THROWN ON HER OWN RESOURCES.

What Can a Girl Do?

First Paper. — By Mrs. J. C. Croly.

Very much of our happiness, as well as of our misery, depends upon the point of view from which we look at the events which mark our lives. You, for example, have been suddenly confronted with the fact that you must, hereafter, provide for your own wants.

By a sudden turn in the wheel of fortune, or by reaching an age when it is felt that you should earn your own livelihood, you find yourself thrown upon your own resources.

This may or may not be a hardship. Whether it is or not depends wholly upon the amount and quality of your practical and mental resources. Active work is a necessity of healthful life. Are you equipped for your part in the battle? Have you courage and energy to carry out a purpose?

Under the little tremor of fear which one must feel in entering upon an untried and strange path, is there not a certain glow of satisfaction at the opportunity to exercise faculties and test their power?

But perhaps you have been wholly dependent, and have no idea of anything you can do that any one else would be willing to pay for. This is the most serious aspect of the case. To be so poorly equipped is a real misfortune, and argues a fault on the part of those who have had the care of you.

But it is useless to consider that side of the question. What you have to decide is what you can do now.

When the farmer is about to plant a new field, he begins by clearing the ground. Let us clear the ground. That is to say, let us begin by getting rid of whatever obstacles may be in the way of obtaining a correct view of the situation.

Stop looking at it as a grievance. Set aside all ideas of special interpositions and special consideration on your behalf. Take stock of yourself. What do you amount to?

What Can You Do?

You are young, reasonably strong, and interested in what is going on in the world. Perhaps you had notions of philanthropy — of setting straight the things in the world that seem crooked. But you may let those go now. Your present business is to keep out of the poor-house — to keep yourself from joining the large, miserable army of absolute dependents.

You are to become really acquainted with the world of active life and struggle; which heretofore you have seen through novels, through stories in a weekly paper, or the pages of your favorite magazine.

Teaching? You do not know anything well enough to teach it.

Sewing? That involves starvation.

Business? No capital to begin with.

The situation does look discouraging. Never mind; try again.

One of the difficulties is this, that you want to "hold your own," to keep the little position you think you occupy, and not lower yourself among your friends.

But how much of your position is your own? Did you make it? In what way does it belong to you, if you did not make it? By right of inheritance? Ah! there is something worth keeping.

But how was it gained originally? By pluck, by energy, by hard work; and now these are required to hold what they were originally employed in gaining.

Have you inherited none of these qualities? Did not they come to you with the reputation they had earned? You have not had occasion to employ them, but they are there. Yes, I am sure of it. You begin to sniff the air like a war-horse; you take a deep breath and say, "I will conquer, and live!" which is much better than, "I will conquer, or die."

Perhaps you cannot do anything thoroughly well, but there is some *one* thing you can do better than another. Whatever it is, do it — right on the spot where you are, where you are known — where honest effort will make you more, rather than less, respected.

Make a Beginning.

Just begin, that is the great point, and begin as if your heart were in it, whether it is or not. That is to say, put yourself in it. Determine that your work shall be worthy of that *you* which is to be better known, and to do a far higher kind of work, some day.

A New York girl, thrown upon her own resources, obtained a position as saleswoman in a great dry goods store. She had not cleared her ground before starting. She did not look upon her place as one of honor and trust, but she wore a grieved and dismal expression. She took every opportunity to tell her story, and to assure customers and others that she had never expected to be "reduced to anything so degrading as being a saleswoman."

One day she rehearsed her woes to a lady who came to buy articles in her department. The lady heard her patiently and sympathetically. Then she said to her:—

"I have listened with interest to your story, because real experiences are always of value; but I am sorry you take such a view of the situation, and I seriously advise you to look at it differently.

"Don't talk any more about your past. Your customers do not care to spend their time in hearing it, and if your employer should know, he might consider that you were wasting his time and send you away.

"You needed an opportunity of some kind; you have got it. Be thankful for it — make the most of it. Make yourself well acquainted with your work, with the goods you have to sell, and the tastes of buyers. You will find it interesting, and it will make you valuable."

Two or three years afterward, the lady who had said this was accosted by the active, well-paid superintendent of the real lace department of the same house — a young woman.

"You do not remember me, madam," said the young woman, "but I remember you. You once gave me a piece of advice that started me to thinking, and was the making of me. It was when I first came here. I began to study up the different kinds of materials and trimmings in my department, especially laces. I found that few of the girls knew more about them than the prices. By and by I came to have a kind of reputation for knowing about laces and trimmings, and I was transferred to the lace department at higher wages.

"I am very fond of lace, and I studied it harder than ever, until I became an authority, and last year, when the superintendent was removed, I was put in his place. This summer I am to be sent abroad as buyer."

There was nothing extraordinary about this. It was a perfectly natural evolution. But it seemed a providence as well, for a mother upon whom the little family had largely depended had proved a broken reed, and the daughter was now her mother's willing and able breadwinner.

She Would Earn Her Living.

At a brilliant entertainment once given in New York, two people were the observed of all observers. One, the gentleman, was a prominent official in the public service; the other was his wife, a young and interesting woman.

The next time I saw the lady she was an amanuensis in an office at a salary of ten dollars a week. Her husband had died. They had no fortune, and in one instant she was deprived of high position, an idolized husband, and her own means of support.

Homes were offered her, but she preferred at once to take whatever work she could get that would pay her board. She worked most loyally and faithfully in this position for several years, in the meantime doing what she could with her pen. Her writings developed brilliant and attractive qualities which soon secured attention. Orders flowed in upon her. She was sent abroad as a correspondent, and now for a long time has been recognized as one of the popular authors of the day.

Generally girls wish to "go away" when they find themselves thrown upon their own efforts. This is quite as much to gratify a craving already often felt, as to avoid humiliation among those who have known them. Distance lends enchantment, and the mirage is never so fascinating as in youth.

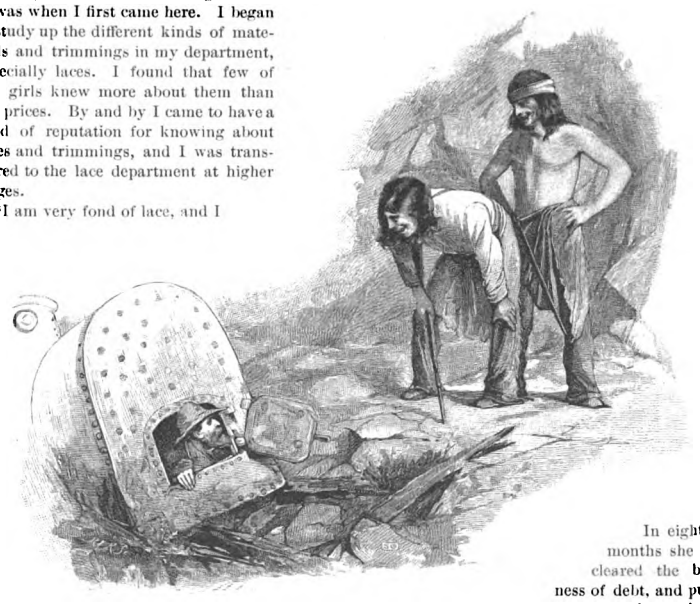
Go away by all means if you choose to, when you have earned the right to go; but if possible earn the money to do so at home. It is easier, and more likely to result in success.

This, of course, does not apply to those who are fitted for special work, and reasonably sure of success wherever they engage in it. It is not at all infrequent that such women are offered important positions at a distance, just as men are, and grow into a high place in a new community just as men do.

Wherever it is possible, a girl who wishes to make her way should begin a business for herself.

Women have a special aptitude for business, and especially for the details which men often neglect, and upon which success frequently depends.

One case known to me is that of a woman whose husband had failed to make his business successful. He had really neglected it, and he finally went West, leaving it hopelessly involved, as he thought, and his family almost destitute.



A Business Woman.

The wife was roused by the necessity staring her in the face. She was delicate in appearance, and not strong enough to take in washing or keep boarders. Besides, her home belongings were of the scantiest.

She went down to her husband's shop. She said to the workmen, "I am going to try to carry on this business, pay its debts, and retrieve its fortunes; will you help me?" They said they would, with a will, and they did.

She wrote to each of the creditors, stated her intention, begged for a little more time, and such aid and support as he might be willing to extend to her. Every one promised to wait, and some offered to continue needed supplies.

This little woman, not five feet in height, and weighing only about ninety-five pounds, was in the shop early and late. At night and on holidays she worked for her four children, the oldest of whom was about twelve years of age.

At their Mercy.

In eighteen months she had cleared the business of debt, and put it upon a paying and reputable footing. At the end of that time her husband returned, "out at elbows," and with self-confidence undiminished by his former failure undertook to carry on the business.

As before, he was shiftless and imprudent, and the result was that in a few months had almost undone all that the patient wife had accomplished.

Finally it was represented to him that he had "no head for business"; that his talents were of a higher order, and had a finer field elsewhere. He was persuaded to leave the business in his wife's hands, his name only appearing in it, and to accept a stated stipend for staying away from the "shop."

This he does, and his wife quietly manages the business that supports him.

A Girl Rescues a Business.

It is only a year ago that a testimonial was presented to a young lady of Newark, N. J., the daughter of a shoe-manufacturer, who died insolvent.

This girl, well educated, and not long out of school, had found herself compelled to undertake the support of her mother and young brother, and her only resource in the great emergency was a business burdened with many thousands of dollars of debt.

The testimonial was from the creditors, who had all been paid, as the result of the unceasing labor and persistent energy of this young girl, who took the management of the business, which she now shares with her brother, patiently disentangled it of its complications, and rescued her father's memory from any thought of dishonor that might have attached to it.

Pages might be filled with individual instances of business success all within one's own knowledge. But the most gratifying thing is the fact that women of means are now beginning to invest their money in business, as men do, in order to increase their income.

One of the well-to-do women of New York derives a large income from a laundry, which she established and built up by her own efforts. Left a widow, with a young daughter and a small income, she determined to increase it; she took this method and succeeded.

Another woman, also a widow, began by opening a small store, — a "notion store." Sometimes a novelty or an improvement on an article already in use would be submitted to her as an experiment. She had good and quick judgment, and bought some of these articles.

Her business increased and she began to manufacture. To-day she lives in her own very handsome house, and rides in her own carriage to her business, out of which she draws twenty thousand dollars a year.

JENNY JUNE.

For the Companion.

FOUND IN AN ANT-HILL.

"Fortunes are made in the West in strange ways. The main thing is to get a start. With a few thousand dollars a man may do almost anything if he is shrewd. But he must be industrious and have good judgment.

"The cash for a start is frequently made by some lucky accident. Of the men who come West, bringing money to put into business, five out of every six lose all they bring within two years. At least, that is the way it has been for the last twenty years. After they lose, if they have resolution and persistence, they may make a start, and in ten years become wealthy. I know several such instances."

As the speaker was well known to be one of these instances himself, the writer felt interested in noting down the curious story of adventure which he presently related to the little party of gentlemen in the saloon of the chair-car, as our train sped southward from El Paso to Chihuahua.

"In 1868," said he, "I was engineer and fireman, too, for the people who were operating a mine away up in the Mogollon mountains, above Florence, Arizona. They called it the Twin Mesa Mine, from two round-topped hills on the slope of one of which the mine was located.

"There was no railroad then; but they had hauled a four-stamp mill and boiler up there, with mules, and were trying to crush some pretty good quartz, for silver.

"I was twenty years old, fresh from Iowa, and could find nothing better to do than to put grease-wood under the boiler of this corporation, and try to make steam from it. In fact, I was expected to help cut the grease-wood, up a creek above the mill, and risk my scalp every day; for hostile Apaches were roaming about, and every man of us kept a gun handy, night and day.

"The mine had lost six or seven men by these Indians. It was unsafe to stir out without a strong convoy of troops or frontiersmen. The expenses of working were excessive on that account; so that, although there was good ore in the lead, the mine did not pay, and was abandoned after eighteen months.

"About six weeks before word came to stop work, I made a little discovery. The hillside up to the north of the mill sheds was of a kind of reddish loam, or gravel, packed hard, with here and there the ragged points of ledges protruding through it; while, scattered over the whole hill, were bunches of cactus and occasionally a thorn-bush. You all know how those Arizona hillocks look. And amongst the cactus and thorn-bushes were dozens of ant-hills, each about the size and shape of a bushel basket turned bottom up, though some were much larger.

"I was out here one day, not more than a hundred and fifty yards from the mill, and had sat down beside a bush to look around and rest a bit, when I happened to notice a little clear, yellowish stone in one of these ant-hills, into which I had thrust the stock of my gun.

"I picked up the stone, for it looked rather pretty, I thought, and examined it. I had no idea what it was then; but I thought it was a beautiful object, and fancied that it might have some value. It was about the size of a small plum-stone, and shone with a tawny kind of brilliancy.

"I had a dim recollection of seeing such a stone in a brooch, worn by a wealthy lady whom I had once or twice met in Iowa; but I had no great faith that this stone had any value. However, I poked over the ant-hill, and found another; and then found two others of fair size in another ant-hill close by it. There were also bits of pale blue stone which I afterwards learned were turquoises.

"Apparently the ants had worked these stones upward from the ground beneath, it may be from a considerable depth; for the whole slope was honey-combed by their tunnels and passages. They had brought out cart-loads of dirt and gravel.

"I did not show the stones or say anything about them to the other men at the mill, partly because I had some little hope that they might be valuable, and partly because I did not like to be laughed at for my ignorance.
